In the report made to the President it was stated that in the cotton schedule, of 261 items, 38 of them had been decreased, 47 of them had been increased, and 186 had been let alone. The fact is that all of the decreases in the cotton schedule were upon cotton yarns, except possibly one, and that thruout the whole range of countable cotton cloths the most startling and inexcusable increases were made, not by increasing openly the Dingley *ad valorems,* but by restating them in what purported to be equivalent specific assessments mounting on ladders. More than that, the definition of "cotton cloth" was changed, and more curious still, the color of the cloth is hereafter to be determined, not by the color of the fabric, but by the color that may appear even in a single thread superimposed upon the fabric. But worse than that, after both Houses of Congress had rejected what I had almost been tempted to call a "swindle," it reappeared in the conference report, by which the question of whether cloth was mercerized or not was settled by the appearance anywhere in the cloth of a single mercerized thread, for which we have deliberately added an assessment of 1 cent a yard.

It is vain for us to try to cover up the situation with any worn-out phrases. What is the use of talking to intelligent people about undervaluations in the cotton imports when the Treasury Department says that even if all of the undervaluations could be attributed to the *ad valorem* paragraphs—a thing that is very far from the truth when one considers that nearly all of our troubles have come from *underweights* and *false measures*—the leakage in the custom houses of the United States is only .0045 of 1 per cent. on a total importation of nearly a billion dollars. That was not the reason for the changes.

But it rests now with the public. The day is coming—it is a good deal nearer than many think—when a new sense of justice, new inspirations, new volunteer enthusiasms for good government, shall take possession of the hearts of all our people. The time is at hand when the laws will be respected; a good time coming, when this people shall so frame their statutes as to protect alike the enterprises of the rich and the poor, in the greatest market place which God has ever given to His children; and when the rule of justice, intrenched in the habits of the whole community, will put away all unseemly fears. With all my heart I hope that the old Republican party, freed from corrupt influences, emancipated from sordid leadership, will be at the helm ordering the forward movement, carrying to completion the labor of generations past, for the prosperity and welfare of the whole country. It can do it. It must do it. It shall do it.

FORT DODGE, IA.

My Recent Work, and Suzie

BY RICHARD L. GARNER

[This is the only article which has been written by Mr. Garner since his return with Suzie, his latest specimen of the Calvus chimpanzee, from the West Coast districts of Africa, where, since 1903, he was in the field uninterruptedly, pursuing the studies of apes and monkeys, which have been his life work.—EDITOR.]

SINCE my return to the United States it has been apparent that popular interest in the intellectual possibilities of all simians is as great, if not greater, than it was at the time of my departure for Africa, very nearly seven years ago. Popular curiosity and scientific study have, indeed, everything in common which is genuinely essential. It is, therefore, distinctly regrettable that scientific accuracy and popular impressions should so often be set at odds. It appears to be inevitable that some errors must creep into reports which are not actually written by the scientific student himself.

Because of the very obvious intensity of public interest in my more recent investigations, and because of the many erroneous impressions regarding them which seem to already prevail, I have prepared this brief *résumé* of some features of my work. It is necessarily fragmentary, for it is assembled without opportunity for reference to my two crates of notes or to my phonograph cylinders. But it can at least touch upon some of the more salient topics with which both scientific and popular interest seems now to be concerned.

Twenty years ago I set down in my book, "The Speech of Monkeys," certain facts and details regarding the words and sounds I had studied and interpreted in the speech of *Cebus capucinus,* or capuchin monkey, and of several others. In later years I have had reason to revise those meanings in the light of results attending study of equivalent sounds in the speech of other monkeys.

I was not wholly wrong in the original definitions. I had merely restricted too narrowly the simian sounds and had assigned to them meanings that were too definite. I am now convinced, from studies of other species of monkeys, that, while those sounds include the meanings I ascribed to them originally, they possess significances and call for interpretations which are much more comprehensive.

During the interval that has elapsed since the publication of my earlier observations, some emulative—or shall I say imitative—persons who write books about things they never studied or observed directly, have gone so far as to recast my conclusions and put them forth on their own authority. The fact that they have vouched for exactly the same errors in their deductions which I made and have since discerned in mine, has convinced me that they never studied the subject in the field at all. Two men, conducting experiments along the same lines, are very liable to arrive at the same facts; but they are not likely to coincide in the same errors.

As an example of one of these errors —which I am now prepared to revise—I may refer to a detail in the speech of the *Cebus* monkeys which I translated as "food," "hunger" or "to eat," together with the apparently equivalent word in several other dialects to which I ascribed the same meaning. I have since had reason to modify my conclusions from the fact that I find that, while the sound may embrace those meanings, it has still other meanings, and might be more exactly translated by the term "want" or "I want." In general, I find that most of the words of simian speech are much less definite—more vague—in their significance than I originally supposed. The fact remains, however, that the meanings I originally ascribed to them are included among the significations which, in these later years, I have found them to carry.

This expansion, this new multiplicity of meanings, in no way lessens my conviction that the sounds made by monkeys are really speech. On the contrary, it has strengthened that conviction.

The small number of words is capable

of covering a greater number of ideas or concepts. Previously, it appeared probable that so few sounds could not cover all of the ideas which must be imperatively associated with the exigencies of simian life. But I find now that their language meets all the requirements of their existence. I find that the full number of sounds at the command of any given species which I have had under observation actually covers a wider range of thought than I originally supposed, with the deduction obvious that those sounds are capable of meeting all the demands of the communal life of the race.

As for other simian faculties, it is worthy of remark in this connection that, many years ago, I learned quite to my satisfaction that animals of this kind can distinguish the primary colors — how many I did not then know. I learned that large, main fact by my experiments with boxes having lids of different colors and containing foods of different kinds; it was a thing assured that the monkeys soon learned to distinguish, by the color of its lid, the box containing the food they preferred. I did not, however, ascertain then how many of the colors they could distinguish, for I did not have the facilities for complete experimentation. Since I published those articles showing how I had determined that the animals can distinguish certain colors, I have discovered, by accident, a very simple and sure method for demonstrating that they are able to distinguish shades of the same color.

MR. GARNER AND HIS LATEST SIMIAN PUPIL, SUZIE.

With these brief references to the broader aspects of the results attending my recent studies, I must pass to some of the particulars, Suzie being the most proximate and, perhaps, the most interesting among them.

Suzie belongs to the patrician stock of her race, the Kulu Kamba. She is now eight months old, and is very much larger than babies of her age and species usually are, because she has been far better nourished and cared for than are her kin in the wild state. I have reared her from the time she was five weeks old, having bought her in Fernan Vaz, French Kongo, nearly 125 miles in the interior, back of Cape Lopez. My range is back from the Coast some 300 or 350 miles, and I traverse different parts of it two or three times a year in my quests for gorillas and chimpanzees.

The Kulu Kamba differs from other chimpanzees especially in its baldness, for it has almost no hair on its head, and there is no disposition in the hair to fall into a natural part. The baldness gives it its scientific designation, *Anthropopithecus calvus*. The skull appears to be a little more rounded than that of other chimpanzees and the frontal development is a little more prominent, apparently exceeding the relative occipital development.

Scientific observation has found the *calvus* to be more intelligent than any other chimpanzee. Besides Suzie, there have been only three that are of scientific record.

Two were in London, the more famous of them being Sally, with whom Professor Romanes experimented so

long and whose traits he reported so extensively. She survived there about seven years. She learned to distinguish numbers by name, and to count as high as the number 7. The other *calvus* in captivity in London died within a few months after her arrival.

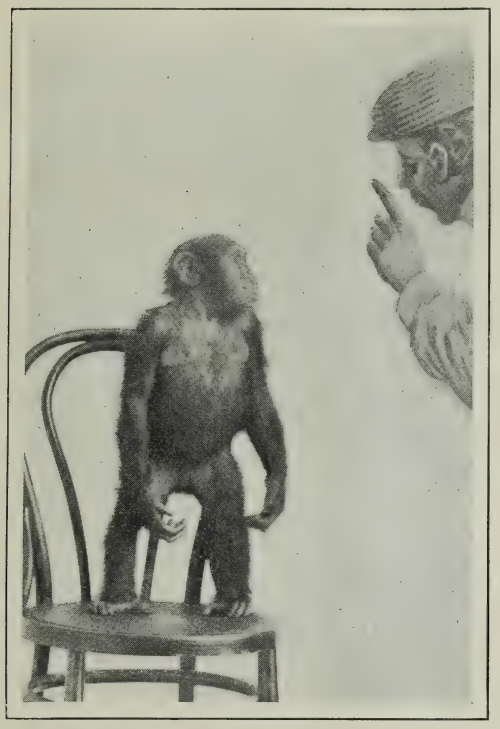
The third *calvus,* Mafuka, was studied in Berlin, long before Sally came to London. Mafuka was brought to Berlin in 1872 by Falkenstein, the great German explorer, who charted much of West Africa. Dr. Hartman studied Mafuka, and, at that time, he was in doubt as to the class to which he belonged.

It is only since Hartman's day that these chimpanzees have been known as *calvi,* because then the distinct *calvus* group had no scientifically recognized existence. But the discovery of the *calvus* and its actual classification as a distinct species go back half a century, for fifty years have elapsed since the great and long unappreciated du Chaillu described the animal and told wonderful stories about it. The *calvus* was his discovery, almost coincident wtih his discovery of the gorilla. It was he who gave to science the native name, Kulu Kamba, which is compounded of the native word "kamba," meaning "talk," and "kulu," the onomotype of the sound made by the species. "Kulu" is our orthography's pitiful apology to the *calvus's* exquisitely refined articulation, in which my ear finds the sound more closely resembling "kou-ou," the syllables being separated by the inflection which the natives imitate coarsely with the sound of the letter "l," whereas in reality it is so peculiarly liquid an *l* that it more closely resembles the *y* in "you."

Science recognizes at present two species of chimpanzees—*Anthropopithecus calvus* and *Anthropopithecus troglodytes* or *niger,* formerly *Troglodytes niger.* I have not been able to distinguish any difference in skeletons, whereas external markings and at least one general conformation would lead me to distinguish no less than four distinct types of *Anthropopithecus,* every one as well marked as the others. The two new classifications which I would make differ as much as do *calvus* and *niger.*

One of these species new to science is the Kanga Ntyigo, a dwarf chimpanzee which never grows beyond a stature of 26 to 28 inches. This chimpanzee inhabits all the upper districts of Fernan Vaz. It is fair skinned and never becomes black. I had one in captivity that died at the age of two months, one month after I acquired it. I have brought home the skeleton in a tin box, the cubic contents of which will not exceed one quart.

The other new species has three or four names among the natives, but the most common one is that of Pensi, by which it is known in the Esyira, Ndogo and Avarama dialects spoken south and southeast of the Nkama, the peoples of the Fernan Vaz. The Pensi's skin becomes a dark coffee color early in life, and later almost dead black. It has rather long hair on the top of the head,



"KISS PAPA!"

instead of the short and extremely sparse growth characteristic of the Kulu Kamba.

I should say that Kanga Ntyigo especially is a distinct species of chimpanzee, for he has many more distinctive characteristics than have the others. The Pensi may or may not be a distinct species; I am inclined to think him simply a variety of the Kulu Kamba.

Among the characteristics of the Kanga Ntyigo—the name means "Pigmy Chimpanzee"—is the trait that he never builds a "house," *i. e.*, never makes a bed at night, as do other chimpanzees. He waits invariably until a family of the larger species has prepared the family nest. If he can anticipate alertly their occupancy, well and good. If they get

"WAIT!"

in before him, he springs in upon them and fights for his place beside the young of the mother chimpanzee, whether the babies number one or more. The "man" chimpanzee always sleeps alone.

I have seen several chimpanzee "houses" or beds, those made in tree forks of sticks, branches and leaves being most common, especially in the rainy season. In the dry season the chimpanzee will often make her bed on the ground, where it is, of course, much more stable and comfortable. The chimpanzee "house" is made afresh every night. As soon as it is made, Kanga Ntyigo asserts his right to it, small as he is, and if need be, tyrannically flogs the others out of it with his hands. I have heard repeatedly that the word "Kanga" is the native corruption of the English word "King"; and, in the Tando district, southeast of Esyira, this dwarf is known as "Oga Ntyigo," which is the native phrase for "King Chimpanzee."

As to the speech of the chimpanzee, it is almost impossible to convey the sounds by means of any conventionalities of orthography. Thus, there is a certain sound which, under various circumstances, Suzie frequently makes and I assume to be equivalent to "yes." Thus, when I show her a banana and she wants it, she makes a sharp sound in a high key which could be written only approximately as "hwha," uttered nasally. Under other circumstances she utters a sound which is as emphatically a negation, and she repeats it again and again. That sound might be approximated in "oha," carrying almost the labial "w," but lacking wholly the initial aspirate of the affirmation.

Within the last two years I have positively defined the "yes" and "no" of the chimpanzee species. Another word of their language is "want," which might be exprest by the diphthong "ue" as a native Frenchman would pronounce it in the word "rue." Then, also, there are distinct words meaning protest, resentment, alarm, calling, response, affection or caressing, and content or pleasure, the last being a sound that might be written as one would write the "hwha" or "yes," but must be pronounced quite differently. Two of the words in this vocabulary, the approximate orthography of which I cannot here attempt categorically, are distinctly dissyllables when analyzed on the phonograph record, altho their superficial sound is monosyllabic.

It is possible that the vocabulary contains one other real word—"kulu," the sound that gives the *calvus* its native name. My observation leads me to believe it signifies, "What is that?" or "*Qui vive?*" or "Behold!" but with no meaning of alarm or, indeed, inquiry.

The chimpanzee language was worked out, practically in its entirety, years ago. During my recent stay in Africa I have fixed, definitely, the dialects of two other ape species—*Cercopithecus nictitans* and *Cercopithecus ludio*.

The *nictitans* are long-tailed, white-nosed monkeys of the Guenon group. I have so far recorded and interpreted seven sounds, and their vocabulary might be thus compiled:

QHUI ..... Want.
OUR'H .....Where are you?
EU-NH ..... Here.
KHI-IU ..... Look out?
KHI-IU-HOU ..... Retreat.
A-OU-HOU ..... Stampede?
CHU-H ..... Hark! What?

The "ch" is the German "ch" final.

The *ludio* is closely allied to the *nictitans* as a species, but its language is totally different. I have as yet interpreted but five words. I must draw upon the French for the vowel accents, in order to come at all close to the *ludio* inflections. This is the *ludio* dictionary:

Ekè? .....What? or "What is that?"
Ki-ûh ..... I want—
Kri-i? ..... Where?
Kû-hû ..... Here.
Ahr-r-r ..... "Danger!" or "Attention!"

Of her own native chimpanzee language, Suzie speaks now five words, including the "yes" and "no." Of human speech I estimate, roughly, that she now understands some twenty-five words and phrases—that is, she obeys or complies or comprehends that number of ideas, chiefly commands and directions, together with the names of some common objects. The list might be called her unspoken English vocabulary, altho it contains a word or so of West Coast slang. The actual number of words composing the phrases she understands would probably be more nearly fifty than twenty-five. This lingual teaching has been accomplished within six months, altho I devoted no especial time to the teaching of any particular thing. I said to her simply the common things which it is necessary for her to know. Such an understanding of words for an ape barely out of babyhood may well be esteemed remarkable when we recall the 700 or 800 words which constitute the entire vocabulary of the more ignorant among human beings in full maturity. The words and phrases she understands are these:

Go away!
Come here!
Get down!
Let go!
Give me that!
Sit down!
Put your foot down!
Take your cup!
Place your chair!
Take it with your hand!
Come on! (When she ceases to do what I want her to do—understood in the sense of "proceed!")
Bring me that! (distinguished from "Give me that!" as applying to an object to be brought from a distance.)
Get up!
Jump!
Wait!
Quick!
Drink.
Kiss.
Father. (Meaning myself.)
Shake hands! (Altho she may interpret the accompanying gesture rather than the word.)
Table.
Spoon.
Chop. (The West Coast word for "food," or "eating," as a verb or the noun.)

The words "spoon," "table" and perhaps "cup" she may have some difficulty in recalling, because of my temporary disuse of them as we traveled.

It is my purpose with Suzie to continue the study of her natural speech faculties, and, in due time, to give her a methodical course of instruction in certain simple sounds and words of human speech, with a view to determining absolutely whether or not the race can be improved by education and intimate association with human beings. My hope is to develop her faculty of speech to a much higher degree than that possessed by the chimpanzee, Moses, whom I taught seventeen years ago in Africa to pronounce the French word "*feu*"—"fire"—and to understand it, as well as any born Frenchman.

It should be kept in mind that an ape cannot be taught in one lesson to speak even a single word, or to utter even one phonetic element of human speech. In many instances it has required hundreds of lessons for the mastery of one word.

It has been averred that apes cannot be taught human language because they always inhale in their endeavor to imitate the sounds offered them. The fact is that, when the ape speaks his own language, he by no means utters his sounds by inhalation. He speaks precisely as the human does, with his vocal organs used humanly and with the air ejected thru the glottis. But in attempts to utter

human speech by imitation, apes are predisposed to inhale instead of exhale. This, however, is purely because, in attempting to move the lips as they see the teacher to move his, they do not quite grasp the *modus operandi* of what they do naturally when talking on their own account. They do not realize that the operation of the human organs of speech is the same as their own.

I hope to overcome this error in simian observation by various methods, including those now so familiar in the teaching of deaf mutes to talk.

In my researches, conducted at leisure with at least twenty-two apes of my own, some of them under study for months, I have found a great variety of mental endowment. One ape that quickly discerns and selects colors may have little or no conception of form, quantity and number. Another may have quick perception of geometrical forms, with obtuse color perception. Another will display great mechanical ingenuity, with little or no disposition to talk or to learn to talk. In brief, the range of inclination and talent is as great among apes in proportion to their intellectual scope as it is among human beings.

Suzie, in particular, shows a quick perception of color, a fair perception of geometrical form, a marvelously quick understanding, and a ready acquisition of the meanings of human sounds. But she is the least loquacious of any ape I ever owned, and, apparently, least disposed to imitate the sounds of human speech. Hence I consider that to teach her to utter words of human speech will be a very difficult task.

But the superior intelligence she has manifested along so many other lines gives me great confidence in her ability to learn anything that may be taught her when she reaches the age proper for learning. At eight months of age, she corresponds in many respects to a human child of three or three and one-half years old. In her own language she says "yes," "no," 'want," "protest" and "satisfaction" or "contempt." That represents perhaps 50 per cent. of her own language. On the whole, then, I should say that her linguistic progress is keeping pace with her general physiological development. It is difficult to say with precision that an ape of one age corresponds with a human child of another age, because in some respects it is more advanced and in others less advanced. But, roughly speaking, I would say that Suzie now corresponds in her species to a human child between three and three and one-half years old. That demonstrates that she is a superior specimen of her kind.

PHILADELPHIA, PA., August 26, 1910.

Lovers

BY ANNIE L. MUZZEY

THE love we vow, dear heart, is mean and small
If it be limited to thee and me.
Its outlook must embrace humanity.
So, loving thee, more truly I love all.
No earth-born passion doth our souls enthrall,
To no false gods do we incline the knee;
Love is the sovereign law of life, and we
Before no lower power may prostrate fall.

We love, and love is the Eternal Breath
We draw together with a single will,
The highest end of being to fulfill:
In love that knoweth neither change nor death.
We walk the open, God-lit ways of Truth,
And drink at fountains of immortal youth.

JOLIET, ILL.

TERPSICHORE AND THE GREY-DRAPED DREAMS.

The Promise of the Peterborough Pageant

BY HAZEL MACKAYE

[Our readers will recall in our last Vacation Number an historical sketch by Miss MacKaye, entitled "Outdoor Plays and Pageants in America." The following article is a description of the pageant held August 16th, 18th and 20th at Peterborough, N. H. Miss MacKaye has taken part in organizing and directing several outdoor plays and pageants. She was one of the Coburn Players whose principal production, "The Canterbury Pilgrims," was written by her brother, Percy MacKaye, the poet and playwright.—EDITOR.]

LESS than three years ago an intrepid woman and a band of loyal friends launched an undertaking of vast significance in the world of art. It was the beginning of the realization of Edward MacDowell's dream, and the reiterated request of his last illness. The composer and his wife had, years before, made their permanent home in Peterborough, N. H. Here, in the midst of a lovely country, there gradually developed a roomy house, a fragrant garden and terraced lawns; but most important of all was the erection of Mr. MacDowell's own "log cabin," a substantially built house deep in the pines. For the first time in his life, in this cabin, the composer was able to procure the uninterrupted days—the solitude—the inspiration he had so long ardently desired. It was here that he composed the "Norse" and "Keltic" sonatas, the "New England Idylls" and "Fireside Tales"; indeed, all of the music written in the last five years of his working life.

This log cabin became so precious to him, so necessary to his best output, that it made him realize intensely the influences such an environment might have upon other workers, not alone for the musician, but in every realm of art.

The so-called "artist's temperament," he knew, was usually accompanied by a

most uncertain and varying source of income. If actual living expenses were covered, there was seldom left any margin for the means of securing that seclusion and leisure so necessary to the creative mind. To quote Mrs. MacDowell's own words in speaking of artists she had encountered:

"... altho sometimes it was not so difficult for them to achieve the hall bedroom and sufficient food to keep alive the body, the mind suffered for a lack of those stimulating conditions which are necessary for any form of imaginative work."

Could no way be found to secure for promising and gifted men and women the means, for a portion of the year at least, to live in freedom from all financial worry and in an atmosphere conducive to their imaginative development? Such an arrangement would not only benefit the struggling and aspiring artist, but thru him it would enrich the world and the happiness of millions of toiling men and women.

To the solution of this problem Mr. MacDowell had given an immense amount of thought, but none had occurred to him when he was suddenly stricken ill.

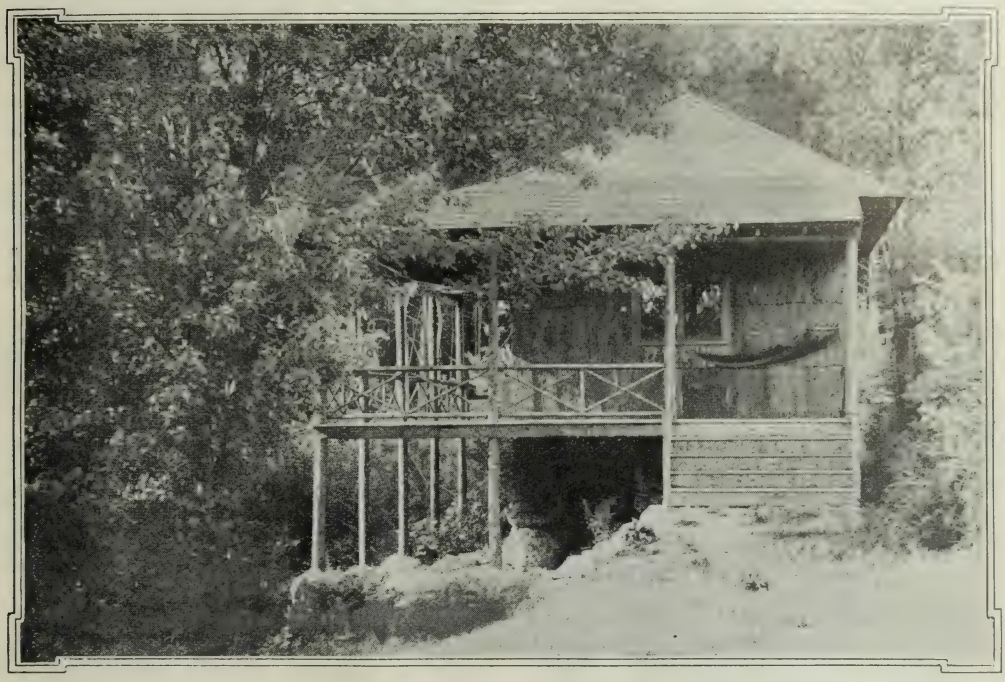
As the disease progressed, Mr. MacDowell became more and more insistent that his precious dream be realized. At last, after vainly striving to surmount the obstacles in the way of such a plan, a possible solution suggested itself to Mrs. MacDowell. It was this: To deed the Peterborough property to the New York MacDowell Club (at that time an association of a few devoted friends and pupils which has since become a powerful society numbering several hundred members), with the hope that the money necessary for such a project might eventually be forthcoming. The composer eagerly seized upon this idea and thus the beginning was made.

Today MacDowell's persistent dream is no longer a nebulous fancy. It has become a reality, and is in very active operation for six months of the year. Already four studios have been built and are in constant use; a fifth is in process of construction, and a sixth, it is hoped, will soon be commenced. The original 80 acres have increased to over 200. Mr. MacDowell's own home, the "upper house," where Mrs. MacDowell still resides, is the center of the activity and harmony of the enterprise. The "lower house" provides the common

HILLCREST.

dining hall and meeting place. Each individual has a studio to himself, where he may spend his entire time if he chooses. To secure a long, free day, meals are so arranged that lunch is brought to him, hot and appetizing, no matter in how secluded or distant a spot his cabin may be. Everything possible is done to guard him from interruption, from the clash of temperaments; in short, everything urges him on to higher and higher altitudes of achievement.

The money for such a project has been by no means plentiful. Only by



A HOUSE OF DREAMS UNTOLD
That looks out over the whispering treetops and faces the setting sun.

dint of the utmost singlemindedness and self-sacrifice has this auspicious beginning been accomplished. Since, however, this association is by no means a charitable institution, a moderate sum is asked in return for all accommodations, save where, in certain cases, equipment of a special kind is needed. The enterprise is also partially endowed, but it will have to be put upon a sound financial basis to insure its fitting development.

Not until this year has anything of a public nature been undertaken in connection with this enterprise. But early in the spring it was decided by those principally interested in the Peterborough colony to hold a musical pageant in the month of August, in which Mr. MacDowell's own music should be the background for an historical survey of Peterborough, and in which the townspeople should participate. A chorus of mixed voices had already been organized in the town, and the idea of a pageant quickly aroused the interest not only of the members of the chorus, but also of their friends and neighbors. Over two hundred people responded to the call. George P. Baker, Professor of Dramatic Literature in Harvard University, was asked to direct the pageant. H. Brooks Day, of Brooklyn, led the chorus; Chalmers Clifton, still an undergraduate at Harvard, orchestrated and conducted the music; Hermann Hagedorn, instructor in English at Harvard, composed the lyrics, and Miss Gwendolyn Valentine arranged the dances.

The place where the pageant was held was hewn out of a pine forest on the Peterborough grounds. From the raised seats, accommodating over ten hundred people, one looked down upon the level stretch of the large and well-proportioned stage. In the distance beyond, thru a cleft in the great pines, loomed the noble outline of Mt. Monadnock. These great pines, together with smaller evergreen trees, formed the background for the players. On the left of the stage were the woods themselves, thru which an avenue had been cut in order that the actors might make effective approaches, or again might leave the stage either in a solemn procession of singing pilgrims, or else a gay bride and groom with a laughing mob at their heels, or as troops of cavalry, or scarlet-cloaked horsewomen.

THE BARK STUDIO.

The pageant was named "The House of Dreams," the underlying idea being embodied in MacDowell's own words:

"A house of dreams untold,
It looks out over the whispering treetops
And faces the setting sun."

The entire pageant was conceived as a dream—the dream of the history of Peterborough. A clear horn sounding from the deeps of the woods opened the performance, and, as the orchestra took up the note, Clio, the muse of history, appeared, summoning her sister muses, each surrounded by the Dreams she inspired. To the deep-toned music, these Dreams—gray-draped, silent maidens with hidden faces—glided mysteriously about the stage in stately cadences, led by Terpsichore, a graceful, floating figure in white. Thus were we ushered into the land of dreams, where all that followed was but fancy.

Then ensued episode upon episode of the history of Peterborough, from the time of the Indians to the Civil War. A graphic picture of Indian life, with a searchingly sweet song by the Indian bride, told of conditions among the primeval savages. The pitiful poverty and oppression of the Scotch-Irish who originally settled in Peterborough were portrayed. This prefaced their voyage to America, where, in a later episode, they were seen upon their first landing. Kneeling, they gave silent thanks, and then in praisegiving song they slowly filed away thru the forest. Colonial cus-

toms were depicted, and the call to arms in 1775. The rallying of the soldiers of the Civil War was full of movement and enthusiasm. Among the lighter episodes was an enchanting dance given by Miss Valentine, to the music of MacDowell's "Autumn." The last scene of the historical survey ended with the entire cast upon the stage, singing as they marched a stirring chorus arranged from portions of the "Sonata Tragica."

The finale following this turbulent scene, came in telling contrast. After the sound of the singing multitude and the tramping of the horses hoofs had died away, the gentle, woodlike strain of "The Wild Rose" was taken up by the orchestra, and again the Dreams with their mistlike robes appeared, with the lovely Terpsichore. Together they gently led us back to dreamland, reminding us that all that had gone before had been mere fancy, and almost imperceptibly withdrawing from our gaze, they vanished into the still green wood.

The difficulties attendant upon the preparation for the pageant, its stately setting, the rehearsing and inspiriting of so large a number of untrained actors, together with the shortness of time in which it was all accomplished scarcely three weeks for the greater portion of it would fill a volume. It was a gigantic undertaking for all concerned and only the most unselfish and joyous devotion could have brought it to its successful conclusion.

But to the thoughtful onlooker it was not alone what *had* been done, but the promise of what *was* to be done that impressed itself inevitably upon the mind. Here for the first time was the promise of a permanent institution for the art of pageantry in America. True, pageantry has flourished for several years in all parts of the land. But where with the promise of permanency?* For the Peterborough "plant" is to be an important part of the working order of the whole. Here, the young aspiring student in every art will have a chance to test his powers. Here, the *master* of his special art will have the opportunity to see his vision fulfilled. Here, all forms of art will find happy co-operation. Moreover, it will help to avert the danger that threatens pageantry today. For, with our accustomed enthusiasm, we Americans have embraced the idea of pageantry with hot impetuousness. Left to itself, or thru misdirected efforts, this enthusiasm may burn itself out in a flaming procession of spasmodic and uncorrelated spectacles. But the example of this well-founded, permanent institution will arouse honest emulation thruout the country. Pageantry will be the joyously accepted recreation of the people. It will be permanent. This, then, is the promise of Peterborough.

*In California, the Bohemian Club has, for over thirty years, held its annual out-of-doors spectacle. This, however, is necessarily limited in its appeal, since, first of all, it is confined entirely to men, and, second, it is private in its nature, only accessible to members of the club and their guests.

CORNISH, N. H.

The Rune of the Rings

BY MARGARET ROOT GARVIN

WHEN Death hews the heart, like a tree,
Cleaving it thru the core,
Shall be read the rings of its growth,
Which never were read before.

Look at the lovely lines
Where the young tree swayed to the south;
Or the starveling growth, and frail,
In a famine year of drouth.

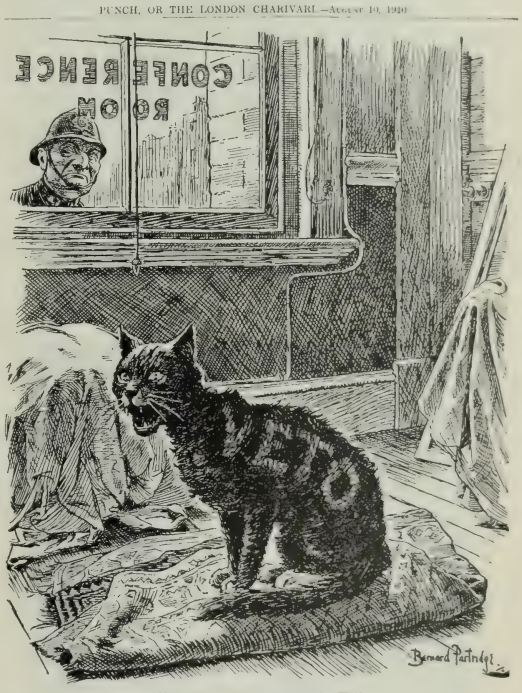
Here is an arrow's point,
Patiently over-grown;
But the careless archer's name
None but the Tree hath known.

There it was warped by the wind;
Here, it shot up in the sun;
It hath suckled a wild-wood stream,
For look, how the ripples run!

Yet even the rune of its rings
Not all of the tale hath told:
Of the buds of hope that is love,
To bury beneath the mold.

Tho the sweet sap rise no more,
And tho it be gnarled within,
Ah, well for the Heart at last
That's free from the rot of sin!

ONEIDA, N. Y.



Westminster Without a Parliament

BY JUSTIN McCARTHY

THE adjournment of both the legislative chambers is felt only as a sort of momentary relief among the inhabitants of Westminster and of all these islands. It is momentary, but only momentary, because we know full well that the great trouble is still before us, and that nothing was really done or could be attempted during the late sitting in order to give us any assurance that the trouble was being brought toward an early and settled removal. The great trouble was, as my readers of the United States well know, the constitutional struggle going on between the hereditary chamber and the legislative chamber—a struggle which must be brought to a decisive and therefore a final settlement before the business of parliamentary work in these countries can ever again proceed in its regular and recognized order. Of course, there has been the mysterious conference going on all the time between those who have been nominated to defend the cause of the peers and those who have undertaken the duty of representing the constitutional principles which must be insisted on by the House of Commons.

The number of *Punch* recently issued has a fine and full cartoon by Bernard Partridge which is intended to illustrate emblematically the real significance of the holiday. We are presented with a drawing of a large chamber, the interior of which has only one animal occupant, a huge and very dissatisfied-looking cat, which bears on its back the word "Veto" inscribed in large letters, while looking thru the one window is the helmeted head inscribed beneath as P. C. *Punch*, who is uttering the words, "Poor devil! The fuss they made of it—and now off they go and forget all about it till October."

Well, I dare say the great majority of the Commons will be only too happy if they can really forget all about the mysterious conference and the not by any means mysterious veto in their late summer holiday. But it would be very hard indeed to believe that the members of His Majesty's Government or those of His Majesty's hereditary house of peers will be in the least degree likely, however anxious, to forget all or anything about that veto while trying to behave themselves as if they were really enjoying that holiday. The veto will have to come up for dispute and even for final decision before long, and the battle will have to be fought this time to the bitter end, even if one step toward that end, bitter for the Lords, but more satisfactory and therefore sweet for the Commons, should have to be brought about by the overwhelming pronouncement of the constituencies at a general election.

"THE HOLIDAY CAT."

P.C. PUNCH. "POOR DEVIL! THE FUSS THEY MADE OF IT!—AND NOW OFF THEY GO AND FORGET ALL ABOUT IT TILL OCTOBER."

Concerning the deeds or misdeeds of the conference we as yet have learned absolutely nothing. Among the many famous secrets of which we read in his-

tory and romance, not one assuredly has been kept more closely than that which has been kept thus far so completely by this mysterious conference, all made up of mere human beings, peers and commoners, appointed to serve on this council of anonymous legislators. Perhaps they have already come to a full agreement among themselves, and the representatives of the hereditary chamber have made known their willingness to accept an absolute exclusion from any further attempt at interference with the control of the empire's finances on the part of the hereditary legislators. Now, if this is to be proclaimed as the direct and immediate result of the conference, then we shall all have to acknowledge that that mysterious council has accomplished a success which will give it an abiding place in the history of our constitutional progress. But if no such prompt way out of our troubles is opening to us, then we shall have to fall back upon our familiar and not always very welcome methods of appealing to the country at large, arranging at once for a call upon the voters in the counties, cities and boroughs to proclaim the will of the majority.

EARL SPENCER.

The session which has just been adjourned was occupied, or perhaps it might be rather said and not quite without meaning, unoccupied by a number of debates which gave little or no opportunity for the display of great legislative capacity. But of three members of the Administration, one, Mr. Asquith, fully maintained his reputation, while two others, Mr. Lloyd-George, the Chancellor of the Exchequer, and Mr. Winston Churchill, Home Secretary, positively added new fame to that which they had already and very distinctly acquired. Lloyd-George had had to bring in a new Budget in order to provide for the expenses of the coming financial year, as he had yet more lately to prepare and produce and carry the financial arrangements for a term so lately brought to an end. He now ranks distinctly as one of the greatest financial ministers the kingdom has ever welcomed, and Mr. Winston Churchill accomplished the work of his department with a success alike in the conduct of his very trying official duties and his ready power in parliamentary debate which have won for him a position such as we used to believe at one time that his gifted father, Lord Randolph, might achieve. Winston Churchill, as my United States readers will remember, spent a great part of his varied career in the service of his country as a hussar officer both in India and in South Africa, and has also acted as war correspondent for the London *Morning Post.* The reputation which he won for himself as a military officer and as a war correspondent he seems to have brilliantly sustained in the peaceful but very trying and often very perplexing work of a Home Secretary. He is still on his way to fame.

The centenary celebration of the birth of Count Cavour, who may be fairly described as the political creator of Italy's unity and independence as a kingdom, must I am sure have been welcomed in the United States as cordially as it has been welcomed thruout most parts of Europe, England of course included. Many of our London daily and other newspapers have given their full appre-

ciation of the career and their sympathy with its celebration. One writer, however, claimed for him a superiority in patriotic spirit over that of the late Prince Bismarck for a reason which does not seem to me to carry conviction with it. The argument of this writer is that, while the object of Count Cavour's policy was to create one Italy by the union of all the Italian peoples, most of whom were then under foreign dominion, into one Italian kingdom bearing the one national name, the policy of Bismarck was to exalt Prussia by warlike force and the exclusion of Austria into a German Empire supposed to represent the entire German nationality. Now, I cannot accept this definition of Bismarck's object and of its accomplishment. It would be as reasonable to insist that Cavour merely by military force converted all Italy into Sardinia and the dominion of Victor Emmanuel, as to contend that Bismarck by mere force of arms converted Prussia into the German Empire as it now is, and as it is with the approval and acceptance of the whole German population. Austria had held her position as the ruling Germanic state merely as a conqueror holds the position which he has captured, and not because of any national identity. Whatever we may think of Bismarck's policy in other fields of its exercise, it must, I maintain, be admitted by all impartial observers that it is not necessary to our appreciation of Cavour's career that we should endeavor to set it down as entirely superior in moral principle and in its adhesion to the doctrine of nationality to the spirit which guided Bismarck in his defiance of Austria.

The death of the late Earl Spencer brought many and various memories and reflections to all who had any concern with the political movement of this country during recent generations. Earl Spencer came of a family which was associated thru several centuries with the great movements recorded in English history, and had as one of its members the famous Duke of Marlborough. But the Earl Spencer who has just passed out of life is remembered by us all chiefly because of his periods of rule over Ireland and with the very different parts he had to perform during the opening and the closing periods of his vice-

FLORENCE NIGHTINGALE.

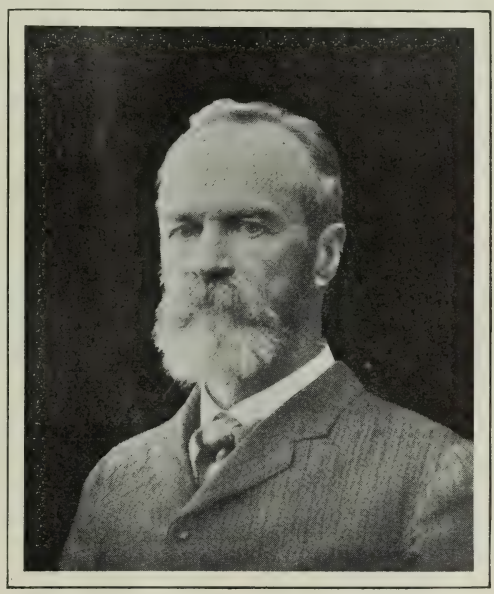
regal career. During the earlier part of that career there took place in the Phœnix Park, Dublin, the assassination of Lord Frederick Cavendish and Mr. Burke, and then Lord Spencer felt, as he afterward declared more than once, compelled to enter on a reign of downright political coercion, identifying himself in the eyes of all Irish Nationalists with a policy which had as one of its principles the association of every Irish National movement with an impulse and a license to crime. Years after, when Mr. Gladstone had adopted the noble national principle of Home Rule for Ireland and made it his own, Lord Spencer proclaimed himself an enthusiastic supporter of the great statesman in his spirited policy, and was made by him once again Lord Lieutenant of Ireland. During this part of his history Spencer, by his earnestness and his sincerity, was able to prove that he thoroly appreciated the spirit of the National movement, and had fully come to understand that no power of coercion could compel the people of Ireland to

surrender their national demand. I feel no doubt that Irish Nationalists at home and abroad will join now their words and tones and sentiments of sympathy over the grave of this man who once coerced them into regarding him as an advocate of oppression.

A brilliant light has gone out for literature and for pictorial art at once by the death of Edward Linley Sambourne, who died in London on the 3d of August. Sambourne was one of the most popular and in the artistic sense most valuable members of *Punch's* pictorial staff, on which he found a place along with Du Maurier on the retirement of Thackeray and Leech. It seems to carry us back to another period of life when we tell of an artist who was in the full flourish of his work only a few days ago succeeding to a place on a famous periodical left vacant by the retirement of Thackeray. Yet Sambourne himself could not be considered, in our present times at least, as having lived to a very advanced age, for when he died he was only in his sixty-fifth year, and I know a good many men who would be much astonished and even probably much amused if they were to be warned by friends that they must now regard their life-work as practically accomplished. Sambourne used at one time to give himself up chiefly to the task of producing humorous illustrations for the articles described as "Essence of Parliament," contributed to *Punch* by my old acquaintance and friend of past years, the late Shirley Brooks. I often had the great pleasure, and I must add the great honor, of meeting Linley Sambourne, and I found the social meetings with him always as delightful even as one could have expected from such an artist and humorist. I am glad to be able to say with full sincerity that I do not think the artistic pages of *Punch* have in any sense fallen off even from the days of Tenniel and Leech and Du Maurier, and we may therefore well hope that there will be no blank left by the passing away from this life at what I should call a distinctly early age of such an artist as Linley Sambourne. I feel quite sure that the loss to art will be appreciated quite as fully in the United States as it is in the British Islands.

In his latest novel, "The Lost Halo," published by Messrs. Methuen, Mr. Percy White has given us another of his vivid studies of character. In this novel —unlike most of his others, in which the chief interest is in the psychology of one character—the story is told in the third person. Alfred Allington, the "little saint," is a type of the religious temperament new to literature, tho true to life. There is something very original in the manner in which the period of the halo's brilliancy is begun and ended by an accidental fall, for by an accidental fall the halo is regained in the end, and the "little saint" enters the only kind of life possible to him. It is indeed one of Mr. Percy White's especial charms that he can convey the impression of a scene, of a mood, of atmosphere, most vividly and in the fewest possible words. I have left myself no space to speak of the other characters, or of the love story of Delia, Alfred Allington's sister. I have been too much interested in the "little saint" himself.

My work was here interrupted by the news, not altogether unexpected, that one of the most brilliant of what may be described as human planets has passed into another sky. Florence Nightingale, who taught the true science of hospital nursing, has died, having lived in this world for ninety years. She had devoted her life from her early girlhood to the work of hospital nursing, and devoted her knowledge, her energy and her humanity to the benefit of the wounded soldiers in the great Crimean War, where for the first time the genuine science of hospital nursing for the wounded on battlefields was made known to a welcoming and a grateful world. Her name is fame enough for her—she will find sincere mourners in every part of the world where the news can be made known that she has passed away from this world on which she had conferred and for which she has prepared so many blessings.



London, England.

William James

BY JOHN DEWEY, LL.D.

[The following article is by the American who, with Professor James, has done the most to spread the philosophy of "Pragmatism." He holds the chair of Philosophy in Columbia University.—EDITOR.]

BY the death of Prof. William James, at the age of sixty-eight, America loses its most distinguished figure in the field of philosophy and psychology. A teacher of philosophy and psychology at Harvard from 1880 to 1907 (after having taught physiology eight years in the Harvard Medical School), he was much more than the professor. Lecturer upon the Gifford Foundation at Edinburgh in 1899-1901; Hibbert lecturer at Oxford in 1908; recipient of every type of honorary degree from American and European universities; member of almost every learned academy in Europe, he was much more than the erudite scholar. He was essentially the man of letters, but the man of letters who makes literature the medium of communicating ideas for the sake of public instruction. Never didactic, he was always the teacher. Always brilliant in literary style, he never indulged in literature for its own sake. If the common people read him gladly, it was not alone for a clearness and a picturesqueness that will long be the despair of other philosophers, but because of their instinctive recognition that here at least was a philosopher who believed in life and who believed in philosophy because of his belief in life.

PROFESSOR WILLIAM JAMES.

It is a significant fact that many of his most noteworthy books originally appeared as lectures before semi-popular audiences. His "Varieties of Religious Experiences" are Gifford lectures; his "Pragmatism," Lowell lectures; his "Pluralistic Universe," Hibbert lectures; his "Human Immortality," an Ingersoll lecture; his application of psychology to education is a series of "Talks to Teachers." Of the various essays that compose his "Will to Believe," the greater number are addresses delivered before various philosophical societies. This fact is significant, I say, for it indicates how essentially Professor James's thought is a human affair. He could not help making the expression of his philosophy intelligible, because to him a philosophy that was merely technical and professional missed the point of philosophy: the illumination and enlargement of the human mind on the things that are its most vital concern. William James did not need to write a separate treatise on ethics, because in its larger sense he was everywhere and always the moralist. He believed in his ideas and in his public, and the public's eager response to his ideas justified his confidence. He is almost the only philosopher of the day whose death marks an event in the world of letters and of public affairs, as well as in the realm of university teaching and scholarship.

Mr. James first won his standing as a psychologist. In 1890 appeared his

large two-volumed "Principles of Psychology." In some of its scientific detail the book has, of course, been superseded by later experimental work; the book itself initiated a movement which is already carrying psychology away from some of the positions of the original text. Nevertheless, the book is likely to become a classic—a classic of the order of Locke's Essays or Hume's Treatise. In a review of Wundt's monumental work on physiological psychology, Mr. James exprest the opinion that it ranked after Darwin's "Origin of Species" in the variety of its original contributions to important scientific matters. I am not sure that this saying could not better be applied to Mr. James's own work. One advantage, at least, he had; he never lost sight of the forest on account of the trees. Even when dealing with details of physiological and laboratory technique, he never forgets nor allows the reader to forget that the real subject-matter is human nature, not technical details. Comparison with his brother Henry seems to be made inevitable by the popular epigram, which I think is even more inept than such supposed epigrams are wont to be. The difference between the two is not that William James was a literary man and Henry a psychologist, but that the former was concerned with human nature in its broad and common features (like Walt Whitman, he gives the average of the massed effect), while the latter is concerned with the special and peculiar coloring that the mental life takes on in different individualities.

Professionally speaking, the distinctive trait of James's psychology is its remarkable union of the physiological and laboratory attitude with the introspective method. In spite of some efforts by Bain and Spencer, James was practically the first author using the English language to base his psychology on the biological method, with which he had become familiar as medical student and teacher. The reader feels that he is following a man whose training has been in the *natural* sciences, not in the metaphysical. This alone would, however, have secured only the honor of being a pioneer on a road in which he must inevitably have soon been overtaken and surpassed. His lasting achievement is to have laid upon this firm basis of scientific method a superstructure of unrivaled introspective refinement, accuracy and breadth. After reading James one sees that most of what had been called introspection, and that had brought the method into disrepute, was not introspection at all, but simply the spinning out of certain ready-made ideas. With William James introspection meant genuine observation of genuine events, events that most persons are too conventional or too literal to note at all, even tho the facts lie close to them. He was almost a Columbus as an explorer of the inner world; even the better of those who precede him seem by comparison clumsy and coarse, or bent on supporting some preconceived theory, while the joy of James was the delight of the explorer in pure discovery. It is impossible to overstate the originality of many portions of his treatise in directions where originality means sincere, unbiased, subtle and sympathetic observation.

The decade from 1890 to 1900 marked a decline of Mr. James's direct interest in psychology, or, rather, a transfer to some applications of psychology to life. The Gifford lectures on "Varieties of Religious Experiences" signalized the fruition of his psychological method in a definite philosophic attitude; the ten remaining years of his life were courageously devoted, in spite of continual attacks of the heart trouble to which he finally succumbed, to the elaboration of this philosophy. From the standpoint of method he called it "pragmatism"; from that of substance of doctrine "radical empiricism." The germs of his pragmatism flourish in his psychology; the main ideas of his radical empiricism were outlined in his "Will to Believe," the essays of which date from the late eighties and the nineties. To understand the roots of his philosophy one must turn to the ideas dominant after 1870.

Broadly speaking, there were just two types of philosophy to choose between at that time. Darwinism had finally won a definitive victory. Herbert Spencer was the guide and philosopher, if not the friend, of an aggressive group of thinkers. On this side, there was a dogmatic, militant philosophy which claimed to speak in the name of science; and in the

name of science to banish to the unknowable all that was vague and mystical, or in any way beyond the realm of facts verifiable by the senses. This philosophy, when not materialistic, was positivistic or agnostic. Probably what turned Mr. James from it was its crudity and insensitiveness upon the esthetic side, and its somewhat blatant know-it-all air, as well as the doom it seemed to pronounce, in the name of science, upon man's ideal aims—upon all that goes, vaguely, under the name of the life of the spirit. Mr. James always had a keen eye for the under dog, and I imagine that "scientific philosophy" was so openly the upper dog of the day as to repel him.

Most of those who turned away from materialism and positivism sought refuge in German idealism. Thomas Hill Green, the Cairds, Bradley and their active disciples naturalized the thought of Kant and Hegel in England; William T. Harris, George S. Morris and others made it at home in this country. Now, Mr. James could not find satisfaction in this school any more than in positivism. His training in the methods of natural science made him find neo-Kantianism and Hegelianism rather formal and empty. They proceeded with too much respect for concepts in general and with too little for brute facts in the concrete.

But more than that, they were tarred, to his mind, with that which made the "scientific" philosophy so objectionable to him. Idealism as well as materialism were "absolutistic" in tendency; they made the universe what Mr. James called a "block universe"—a world all in one piece. Such a world left no place for genuine novelty, for real change, for adventure, for the uncertain and the vague, for choice and freedom—in short, for distinctive individuality. It made little difference to Mr. James whether the hard and fast unity to which these things were sacrificed was called Matter or Thought; the intolerable thing was that they were—or seemed to him to be—sacrificed.

One may say, with as much truth as is possible in such a summary statement, that Mr. James's philosophy took shape as a deliberate protest against the monisms that reduced everything to parts of one embracing whole, and against the absolutisms which regarded reality as having a fixed, final, unalterable character. His was the task of preserving loyalty to fact, respect for the humble particular, so long as it was concretely verifiable, against the pretentious rational formula. This loyalty constituted the empiricism he learned from science. But when "science" presumed to set fixed metes and bounds, when in the name of some general law it denied freedom and reduced individual life to a meaningless bubble, he protested that science itself was a human product whose justification was in the service it rendered in making human life freer and happier. Idealism means one thing to the technical philosopher—a theory of knowledge. To the common man it means something quite different—faith in the supremacy of moral values. This latter faith Mr. James had, but he held that idealism in this sense was a matter of will—of the will to believe—not something to be demonstrated by rationalistic formula.

It may perhaps seem strange to the layman to learn that a new and vital movement could be launched in philosophy by insisting upon novelty, plasticity or indeterminateness, variety and change as genuine traits of the world in which we live. But so fixed in the contrary sense, so intellectualistic, were the traditions of philosophy, both from the materialistic and the idealistic sides, that for a long time, for almost twenty years, in fact, Mr. James stood practically alone—a voice crying in the wilderness. He was listened to with respect and with admiration, because he said inspiring and suggestive things in a brilliant way. But few or none took him seriously as a philosopher, even when proclaiming his preeminence as a philosopher. By the beginning of this century, however, the tide had turned. The *Zeitgeist* has been visibly with Mr. James instead of against him. Somehow the temper of imagination changed; positivism and idealism had, for the time at least, exhausted themselves. The pragmatism which Mr. James urged with apostolic fervor as a *via media* between natural science and the ideal interests of morals and religion, seemed to be in the air, only waiting the word of a master to precipitate itself. Instead of being at cross purposes with his generation, as he

had been during the period when most philosophers are finding their audience and elaborating their systems, he found an eager audience waiting. The result was an immediate efflorescence. The ideas that he long entertained grew and expanded in the new genial warmth. Three books and many articles appeared in the last five years. I do not know whether there is any precedent for a man finding himself as a philosopher and presenting himself as a master after the age of sixty. Yet this is what happened in the case of Mr. James. It is characteristic of the man that one does not associate years with Mr. James, to say nothing of thinking of him as old. Even to say that he was sixty-eight is like mentioning some insignificant external fact, like his weight. His intellectual vitality, his openness of mind, his freedom from cant, his sympathetic insight into what other people were thinking of, his frank honesty, his spirit of adventure into the unknown, did more than keep him young; they made age an irrelevant matter.

Whatever fate may have in store for Mr. James's pragmatism as a system, it is a great thing for university life and for higher culture in America that Mr. James united the wise maturity of rich experience with the ardor and enthusiasm of youth, and both with the gallantry of a free soul that was all his own.

America will justify herself as long as she breeds those like William James; men who are thinkers and thinkers who are men. I love, indeed, to think that there is something profoundly American in his union of philosophy with life; in his honest acceptance of the facts of science joined to a hopeful outlook upon the future; in his courageous faith in our ability to shape the unknown future. When our country comes to itself in consciousness, when it transmutes into articulate ideas what are still obscure and blind strivings, two men, Emerson and William James, will, I think, stand out as the prophetic forerunners of the attained creed of values.

New York City.

The Religious Census

BY EDWIN M. BLISS, D.D.

[Dr. Bliss comes from a missionary family in Turkey, was the editor of the Encyclopedia of Missions, and was for some years on the editorial staff of The Independent. He has taken part in the editing of the Census Report on Religious Bodies under the lines laid down by Mr. W. C. Hunt, the Chief Statistician. It will be remembered that Dr. H. K. Carroll, who had charge of the Religious Census of 1890, had also served for a series of years as an editor of The Independent. A general summary of the statistics of the Churches was given to the public several months ago.—Editor.]

THE complete Report on Religious Bodies, prepared by the Bureau of the Census, just ready for delivery, appears in two volumes of regular Census style, with 576 and 670 pages respectively. The first volume contains the introduction, describing the method of collecting the statistics and special data; the summary of results, in which certain more prominent features are presented and discussed, and fifteen general tables, giving the statistics in varied combinations, by denominations, States and Territories, counties, and principal cities. The introduction, summary of results and the two fundamental tables are published separately as a Revised Edition of Bulletin 103 on Religious Bodies. This supplies the general information desired by most persons, except those who wish to make a special study of the separate denominations.

The report follows the same general lines as that of 1890, tho the method of securing statistics varied somewhat. In each case the denominational officers furnished lists of organizations, but in 1890 they also provided the statistics, while for the present report they were obtained by application to the individual church organizations. A considerable majority of the schedules came direct to the

bureau, but in some denominations special agents were appointed, either to supplement the direct correspondence, as in the Southern and National Baptist Conventions, Disciples of Christ, etc., or to collect the entire material, as in the Roman Catholic Church, Jewish congregations, and others; while for the completion of the figures for the colored churches of the South, representatives of the bureau were sent into the field.

The fundamental items, organizations, members, church edifices and halls, and value of church property, are on essentially the same basis in the two reports, so that comparison is easy; the only exception being in regard to the Jewish congregations. The report for 1890, while recognizing the distinction between communicants and members of the synagog, or heads of families, states that the figures are for communicants, while in the present report they are for heads of families. The single exception, however, does not materially affect the totals.

Aside from these a number of other items were called for on the schedules, which it was thought by Mr. W. C. Hunt, Chief Statistician in charge, would be of great advantage in setting forth the essential character of denominational life, and the returns fully justify his judgment. These include Sunday schools, the work or general missionary and benevolent activities of the churches, the salaries of ministers, the languages used in church services, the amount of debt on church property, the number and value of parsonages and the date of establishment of local organizations.

It was inevitable that the returns in all particulars should be more or less defective, and in order to secure accurate averages and percentages, a column is introduced in each table showing the number of organizations reporting. Thus of the 212,230 organizations listed, 186,132 reported value of church property, and 33,617 reported debt on church property, and in each case the average is based, not on the total number of organizations, but on the number reporting that particular item.

For securing the descriptive statements of history, doctrine, polity and work of the denominations, application was made to prominent persons, usually officials, in the different bodies, and a general outline was furnished covering the points it was desired to set forth. As was to be expected, the articles received varied greatly in scope and completeness. To secure harmony and proportion of presentation there was considerable correspondence with the authors and other persons especially informed on some particular points, careful study of denominational publications and general histories, and the final form was submitted to the author, or, when that was impracticable, to some one competent to pass upon it. Every means of verification was resorted to, and the results, statistical or descriptive, are believed to be as accurate as, under the conditions, was possible.

In the interpretation of these results different people, from different standpoints, will doubtless reach widely different results. Certain facts, however, may be useful in furnishing a basis for comparison.

The figures for communicants or members represent the enrolled membership of the different bodies. The only exceptions are the Armenian and Eastern Orthodox Churches and the Polish National Church, but in them the proportion of children is so small and of adult males so large that they may fairly be considered on the same basis as the Protestant bodies. In the Roman Catholic Church all children under nine years of age and in the Mormon Church all under eight years of age, are excluded. There was no attempt at reporting the membership of Chinese temples, for reasons that appear in the descriptive text.

With regard to the non-church member element it must be remembered that it includes, 1, all children; in the Roman Catholic Church under nine years of age, in the Mormon Church under eight years of age, in Protestant churches under about fifteen years of age; 2. Adults attendant on Protestant church services and contributing to Protestant church life, but not on the church rolls; 3. Adults of Protestant affiliation, but not identified with church life; 4. Adults who positively refuse to recognize any relation of any kind with any religious body. The necessity of keeping these facts in mind appears in a

comparison between the States. The State showing the smallest percentage of non-church members is New Mexico, 36.7 per cent.; the largest, Oklahoma, 81.8 per cent., while the medium is held by Connecticut with 50 per cent. That New Mexico is a greater positive force in religious life than Connecticut or even Oklahoma, would scarcely be maintained by any one.

The returns as to sex distribution were by no means complete, 91 per cent. of the denominations reporting this item, and many of them sent estimates rather than an actual count. The cases, however, where accuracy was evident were numerous enough to substantiate the estimates. In reporting debt on church property a considerable part of the organizations made no report at all, in the great majority of cases probably because there was no debt and they did not think it necessary to say so. In regard to the date of establishment it is to be remembered that the tables make note only of churches now in existence which could report that date. The number that during various periods have dropped out cannot enter into the statement. The results, however, if not complete, are interesting, as showing that there are now 3,637 churches which were organized before 1800, and that the rate of increase by periods has steadily advanced, the seven years, 1900-1906, showing the largest percentage of any period. The tables showing the languages used in church services are interesting not merely as indicating the kaleidoscopic character of the American population, but as setting forth the degree in which various bodies are interested in work among the immigrant population. Thus 72 denominations report not a single congregation using any other language than English, but they are mostly small bodies and together represent but 10.8 per cent. of the total number of organizations. On the other hand, there are 24,594 churches which use some foreign language in their services, either alone or with English, and of these 16,688 use some one of the 41 languages without English.

For some years there have been repeated requests for a setting forth of the missionary and benevolent work of the churches, and various attempts have been made to gather the facts. The great difficulty has always been that the terms used, the methods adopted and the periods covered by the different bodies were so different that to collate and arrange the material even if collected was a task of such magnitude as to be discouraging. When the arrangements for the descriptive articles were made, the schedules presented included, in addition to the history, doctrine and polity of the denominations, their work, domestic and foreign, evangelistic, educational, philanthropic and institutional. As already stated, the articles were very diverse in character, but by extended correspondence from published reports and other sources, fairly complete returns were secured. These are presented in two forms; descriptive in Part II and tabular in Part I of the report. It was not possible to include all the items in the tables, but such as could be so presented furnish some interesting material.

It is to be remembered that the figures, whether in the text or in the tables, include only those contributions which pass thru denominational channels or are given to denominational institutions, but do not include amounts for ordinary church expenses. So also no institutions are included which are not distinctly identified with denominational life. Furthermore, doubtless many gifts and not a few institutions which should be included are omitted. One of the facts brought out in the investigation was the ignorance of many in high position as to the work of their own denomination. Another serious difficulty arose from the repeated overlapping of organizations. This was especially manifest in what is known as home missionary work, including under that term direct evangelization, church erection, mission schools and orphanages, etc. It was doubtless owing to this that it was almost impossible to secure harmonious statistics even from the different societies in the same denomination. Making all allowances, however, for the various omissions and discrepancies, the figures throw a bright light on the part churches play in the uplift of the nation. That during a single year the sum of $47,420,546 was contributed thru denomina-

tional channels for missionary, educational and philanthropic work and institutions is most significant. That of this amount, $38,675,919, or 81.6 per cent., was for the United States and only $8,744,627 for other lands should convince the most skeptical that American Christians are not forgetful of their obligations to their own country.

Space will not permit an extended survey of this part of the report, but a few facts should be noted. No contributions are reported for the Roman Catholic Church for either of its departments. The only figures available were those for a partial contribution to the Society for the Propagation of the Faith, and it was felt that to present them would be practically to misrepresent that body. An idea of its activity, however, is furnished by the figures for benevolent and philanthropic institutions in the United States. They show 1,011 colleges, academies, etc., almost 40 per cent. of the entire number, and 878 hospitals, asylums, etc., or 47.2 per cent. of the total. The explanation of the situation is found in the peculiar methods of the Church, which are set forth in detail in the text. Other interesting facts are that the Jews contributed during the year $4,304,172 for their philanthropic enterprises, and that the Japanese Buddhists gave $3,861 for evangelistic work. The report sums up the situation as follows:

"Perhaps the most important result of a study of these tables would be that the various religious bodies should come to realize the desirability of keeping a complete record of their benevolences, so that a clear statement of them in every particular may be available. There is an increasing demand for definite financial statements in every department of activity, including the benevolences of the people and particularly of the churches. That those in charge of these benevolences were not only willing but glad to make such statements is abundantly evident from the correspondence in connection with the tables. Not less evident, however, is the fact that there is not yet enough uniformity or even harmony of presentation to enable one not personally acquainted with denominational methods to gain an accurate conception of the work the religious bodies are doing."

The general descriptive statements of the denominations in Part II together make the most complete setting forth of denominational history, belief and organization, as well as work, that has ever been published. While following the same general lines as in the report of 1890, they go more into detail, giving so much of the pre-American history as seemed necessary to explain the nature of their influence on American life, and tracing the principal events in their development. The conditions that have led to the various branches of Lutherans, Baptists and Methodists are given, while the story of the Evangelical Union of Bohemian and Moravian Brethren carries the reader back to the times of John Huss, even beyond the days of Zinzendorf. The story of the Jewish congregations, of the Russian Church, of the Bahais, will give an idea of the newer influences at work upon American religious life, while the detailed description of the ecclesiastical organizations of those bodies, as well as of the Protestant Episcopal, Methodist, Presbyterian, Baptist and Congregational churches, will raise some question as to the feasibility of organic Church union.

Whatever general conclusions any one may reach on a careful study of this report, one can scarcely fail to achieve a genuine respect for even those forms of religious life with which he may be least in sympathy. It is no slight thing that such a proportion of American citizens unite in the recognition of the claims of religious life, and while their conception of that life may vary, there is, after all, a common ground and a common purpose, which must inevitably have a mighty effect on the welfare of the nation.

WASHINGTON, D. C.

Literature

The Circuit Rider's Wife*

Our readers know Corra Harris well as Mrs. L. H. Harris, of Nashville, Tenn. She had experience as a Methodist preacher's wife in her native State of Georgia before her husband was called to serve as teacher in Methodist institutions, and as an official in the ecclesiastical center at Nashville. She is able to write such a book as this from much experience and observation, and she has given such a book of the humbler life of the holy craft as has not before been written.

We are not surprised that it has immediately attracted attention and admiration. Yet it is not strictly a story. It has no plot running thru it. One event does not grow out of another. Nothing piques curiosity. It is simply a succession of scenes, graphically described, but they are scenes of psychological interest, such as might appear in a circuit rider's life, but viewed in the constantly contrasting spiritual atmosphere of the mystical, unworldly, heavenly minded husband, and his admiring, worshipful, but practical and earthly wife, who believed it all in him, but did not accept his strict theology and who was satisfied with the simple goodness of God. But the tale of these spiritual experiences—for it is all humanly religious with the wife and supernaturally religious with the husband—is told with a simplicity and a humor that make the book as fascinating as if it were a real romance. We think Mrs. Harris must have drawn her characters from real life, with not very much invention, but with the flash of radiance which illumines dull facts. Nothing could be more jejune, more dry and barren than much she has found, but they are types such as may be found in any walk of life, and the reader will say that he has met just such men and women. It surprises us that there is so little local color, only spiritual color. To be sure, the circuit rider's wife is born in Middle Georgia, and her husband was a preacher in the Southern Methodist Church, but that is all; for it is all the study of experience, the study of types of character, mean, sweet, beautiful, tyrannical, all in the Church or in its confines.

Mrs. Harris has a characteristic and poetic, not to say unconventional, style that at times rises to genius. One is struck by telling and unusual figures or phrases. This is what she says of the "witness of the spirit," which William usually had, but which she could not understand:

> "The conclusion I came to was this, that we are not all called to do the same things; that William was called to preach and pray, and the witness of his spirit approved when he did right. And I was called to look after William, to see that he did not pray too much or preach too long. And I always had that sweet inward glow which he called his witness when I attended most carefully to his needs. It may be a narrow way to look at it, but you could not live with William with any peace of mind without this witness of the spirit. It would have made him unhappy to live with a person who could not claim it, and I've had mine these thirty years without having to fast or pray to get it—a tender eye in me that regarded him and a heart that prayed for him."

Children loved William:

> "Whenever I have seen a particularly good person whom children avoided I have always known that there was something rancid about his piety, something cankered in his mercy-seat faculties. They are not higher critics—children are not—but they are infallible natural critics."

Or take this from the wife of a threadbare preacher:

> "After you are dead it does not matter if you were not successful in a business way. No man has yet had the courage to memorialize his wealth on his tomb-stone. A dollar mark would not look well there."

We would like to quote the whole delightful page which tells how the wife by a politic stroke of human wit brought back to church the rich member who had been angered by a sermon on Dives, and William made it an answer to prayer; or the description of the revivalist who

*The Circuit Rider's Wife. *By Corra Harris.* With Illustrations by William H. Everett. 12mo. Pp. 336. Philadelphia: Henry Altemus Co.

brought his own hymn books, which proved to be nursery rhymes of salvation set to what may be described as lightly spinning dicky-bird music"; but we must refrain. The temper of the book is not flippant, but serious; yet it is genial, humorous, critical and provocative of thought. It is as analytically keen as one of Meredith's stories, but it has no more plot than "David Harum." It simply gives lively pictures of experiences of him and her from their wedding to his burial. We commend it heartily to the reader.

The Negro

If the negro problem would only yield to the method of treatment by oblivion it would add greatly to our national peace of mind. But the volumes on this subject that annually roll from the press serve as a constant reminder that the issue will not allow itself to be forgotten.

In the volumes now before us we have set forth clearly two contrasted schools of thought. The one approaches the race problem from a physiological, the other from a psychological standpoint. In *Through Afro-America*[1] we have the impressions of an Englishman, who, after the manner of the car-window sociologists, has written a book on the race problem after a few weeks' sojourn in the States. Mr. Archer frankly confesses his own personal feeling of race repugnance:

"Does any one really believe that the genius of Cæsar and Napoleon, of Milton and Goethe had nothing to do with their facial angle, and could have found an equally convenient habitation behind thick lips and under woolly skulls?"

Again we read:

"What I *think* about the color question . . . may be foolish; but there is a certain evidential value in what I *feel*."

Altho feeling may lie deeper than thought, it is nevertheless subject to such caprices of mood and manifestation as to become much less safe as a guiding principle. The zealot persecuting unbelievers, the fanatic burning heretics, the Mussulman murdering Christians, can find abundant justification, once allowed to fall back upon "the evidential value of feeling." Even where capable of the severest self-examination, one may be fundamentally mistaken in his diagnosis. When Mr. H. G. Wells professes, as he does in "The Tragedy of Color," a mighty liking for these "gentle, human, dark-skinned people," Mr. Archer challenges "the evidential value" of his feeling by accusing him of dogmatic impatience of race distinctions. A good rule ought to work both ways. It would tax the resources of modern psychology to determine the distinction between natural antipathy and stimulated animosity. Indeed, the political, social and religious conflicts of history have been as deep and as bitter as the antagonism of race and have not infrequently run across racial lines. And if race antipathy is innate, like the original sin of the old theological dogma, for the crimes and outrages which flow from it can justly be pleaded extenuation thru "inevitability." This ingenious method of "casting our burdens on the Lord" seeks divine sanction for sins too atrocious for the sensitive human conscience. But our progress in civilization is measured by the advance we make from the brute law of enmity to the higher law of amity.

The student of the subject will find that insistence on natural racial antipathy is the only significant feature of the book. The author recognizes this in the dedication. Finding himself at such vital variance with Professor Royce, who regards race prejudice as a "caprice," and with his distinguished fellow Englishman, who holds it to be a vicious cult, he seeks to appease the feelings of the one whom he assures us he greatly admires by the inscription: "To H. G. Wells, with whom I so rarely disagree that when I do so I must needs write a book about it."

Dr. H. Paul Douglass, the author of *Christian Reconstruction*,[2] is the administrative secretary of the American Missionary Association, which for the past fifty years has been the most effective single philanthropic agency at work in the solution of the tangle of our national

[1] Through Afro-America. *By William Archer.* New York: E. P. Dutton & Co. $3.

[2] Christian Reconstruction in the South. *By H. Paul Douglass.* Boston: Pilgrim Press. $1.50.

race problems. The purpose of the book is to set forth the history, work and attitude of this organization. The philosophy of the American Missionary Association is based upon the psychological principle that race antagonism is a stimulated vice, easily evoked by the unscruplous, and that obvious race distinctions act as the exciting occasion, rather than as the fundamental cause. Dr. Douglass declares that it is "absolutely unproven that nature interposes or intends to interpose any physical or mental barrier." The psychological school, of which Dr. Douglass is a high exponent, maintains that intellectual, moral and spiritual kinship transcends all physical relations, and that the advanced races of mankind are related to the backward and retarded ones as is the elder brother to the younger members of the family. Those extreme physiologists, like Governor Vardaman, who rely upon the "evidental value of feeling," oftener than not because they are incapable of appreciating any other, would wave Dr. Douglass aside with the left hand as being a fanatical doctrinaire.

Mr. Archer's glorification of a "monochrome" civilization naturally leads to the idea of a monochrome heaven. He tells us "there are many earnest and sincere Christians in the South who will scarcely be at ease in heaven unless they enter it like a Southern railway, thru a gateway marked 'For Whites.'" But Mr. Archer is frightened at the conclusion of his own logic when he confesses: "I am wholly unable to discover how the system of race discrimination is reconcilable with the precepts of Christianity."

The physiological school inevitably leads its devotees into this dilemma; for Christianity and caste are as antithetic as God and Mammon. On the other hand, Dr. Douglass's philosophy is logical thruout. His ideals apply on earth as in heaven; for he makes the success of his democracy "depend upon the domination of common ideals, the vigor and health of the spiritual forces of social control." "By one spirit are we all baptized into one body." Let the enlightened conscience of mankind determine whether Dr. Douglass or Mr. Archer has chosen the better part.

Dr. Booker T. Washington does not concern himself with philosophical theories. He deals gently with the present manifestation of race prejudice, as a prudent man whose hand is in the lion's mouth best does. He never strokes the beast the wrong way, nor does he argue as to the origin of his ferocity, whether it be innate or acquired, but utilizes all of his resources in extricating himself from a perilous situation.

The *Story of the Negro*[3] is intended as a sequel to "Up from Slavery." Dr. Washington's literary power shows to best advantage when he is depicting his own nature or describing his own deeds. All his books portray the shadow of his own personality enveloped in the penumbra of Tuskegee. This work covers the entire traceable range of Afro-American life, both in the continent of nativity and in that of sojourn. And yet it must not be regarded as a historical treatise, either in purpose, method or spirit. There are innumerable fragments of facts and tidbits of information and of narrative, treated with the author's well-known simplicity and directness. He does not propound a philosophy, but promotes a propaganda. The *Story of the Negro* follows the selective principle; those facts chiefly are utilized which make a pleasant story, and more space is devoted to a description of the kindly patriarchal relation between master and slave, as it prevailed on the plantation of Jefferson Davis, than to the discussion of the Emancipation Proclamation.

Dr. Washington is so delicately related to things that he avoids all heated and controversial issues between the races; or, if he touches them at all, he does so with a salutary caution and diplomatic deftness. For this reason his doctrine is professedly limited and incomplete; his method, altho efficient, is not sufficient. Dr. Douglass characterizes Dr. Washington's buoyancy, which he affects to regard him as maintaining by ignoring disagreeable conditions, as "unconvincing optimism." But all the world loves an optimist. And Booker Washington has, beyond denial, captured the American imagination.

[3] THE STORY OF THE NEGRO. *By Booker T. Washington.* New York: Doubleday, Page & Co. $3.50.

The Science of Happiness. By Henry Smith Williams, M. D., LL. D. New York: Harper & Bros. $2.

But for abundant internal evidence that Dr. Williams is fully acquainted with all recent developments of sanitary science and of preventive medicine, the reader might imagine on taking up this volume that he had in his hand a beautiful modern reprint of some early Victorian collection of homilies. It is certainly a misnomer for Dr. Williams to have called his book *The Science of Happiness.* There is nothing either scientific or philosophical about his treatment of his subject. It would have been more suitable had he used as his title "The Art of Happiness," for each chapter consists of a series of *obiter dicta,* ranging from the commonplace to the banal, indicating the best way of living in order to enjoy a healthy body and a contented mind. Dr. Williams has, in fact, brought Poor Richard up to date, and edited the precepts of Benjamin Franklin in the light of modern hygiene and medicine. The whole book is founded on the idea, which Dr. Williams appears to conceive is universally accepted, that "there is no desire but the desire for happiness." To sustain this thesis, which is as old as the beginnings of human philosophy, but which has never yet been able to hold uncontested possession of the field, Dr. Williams takes the hedonist explanation of pain, which he explains as existing only to make pleasure possible. He makes use of the familiar forced explanations of heroism and self-sacrifice, as being the deliberate choice of higher forms of happiness. He states that "no less truly, if less directly and therefore less obviously, seekers of pleasure are the mother sacrificing herself for her child, the patriot risking his life for his country, the devotee voluntarily suffering martyrdom." "The chief hope for the individual," he says, speaking of the human race in general without reservation, "is to evade the harder side of life, so far as he may." Such an explanation of life, while it will undoubtedly be accepted by many, must always be entirely unsatisfactory to a large section of the thinking world, and neither to those who accept his underlying theory, nor to those who reject it, does Dr. Williams offer anything whatever of philosophic value. There are, however, scattered thru his pages, many sensible practical hints concerning the preservation of a sane mind in a healthy body, which may be of use even to those who utterly refuse to assent to the proposition that "the only problem is the problem of happiness."

Elizabeth, Queen of Bohemia. By Mary Ann Everett Green. New York: Dutton & Co. $3.50.

More than half a century ago, Mrs. Everett Green published in her series on the Princesses of England a life of Elizabeth of Bohemia, daughter of James I of England and wife of Frederic, Count Palatine of the Rhine, unhappy king of Bohemia, and champion of Protestant interests in Germany during the tempestuous age of the Thirty Years' War. Mrs. Green was well fitted for this task, combining a profound knowledge of historical records (printed and manuscript) with a fine sympathy for the subject of her biography. The republication of this volume will meet the approval of all students of that period of European history—made all too dull by the dreary recital of the battles and the bloody deeds of that bloody times. As the distinguished scholar, Dr. A. W. Ward, says in his prefatory note, one finds in Mrs. Green's conscientious pages, "in which no source of trustworthy information has been left unexplored and no problem presented by the narrative has been left unsifted, no fancy picture of the Queen of Hearts." Moreover, the value of the original text is enhanced by an introduction and notes from the pen of Mrs. Green's niece, Mrs. Lomas, who discusses with critical skill and proper editorial reserve the points of the narrative which have been affected by scholarly researches since the publication of the first edition. Those who have a sympathy for princesses and court ladies, but do not care for the scandalous gossip of fishwives pleasantly disguised as court memoirs, will find the story of this unhappy queen (forty of whose sixty-five years were spent in exile), readable romance and sound history besides.

My Life in China and America. By Yung Wing. New York: Henry Holt & Co. $2 net.

Yung Wing, now in his eighty-second year, is most decidedly "A Maker of the New Orient," which title has already been given to the American missionary, S. R. Brown, one of his first and perhaps the greatest of his instructors. We remember Yung Wing as he stood in his flowing white silk costume, thirty-six years ago, on the deck of a steamer bound for America at Yokohama. With gleeful face and snapping fingers, he cried out, "Old China is waking up. She is going to surprise the world." He had secured imperial permission to send one hundred and twenty students from China to America. Today, in hale old age, living at Hartford, Conn., he sees that China is rushing up the hill, against all difficulty, as if to catch a railway train and beat the world in traveling fast—with imminent risk of heart disease. And yet his narrative is almost jovial in its youthfulness, and tells the calm and modest story of a beautiful life. The boy's first meeting, in Macao, in 1835, with Mrs. Gutzlaff, who was dressed in summer white, with the large globe sleeves then fashionable, is vividly described. He was half dazed at her personality and his new environment. Under her instruction and that of her nieces, who were sisters of the future minister, Sir Harry Parks, he learned the first rudiments of Occidental civiiization. When this boy's school was broken up, his father having died, Yung Wing returned to his native village and helped his mother by hawking candy from 3 A. M. to 6 P. M. daily. His later education was continued at the Morrison School—founded in a "Layman's Movement"—under Dr. and Mrs. S. R. Brown. In 1846 Dr. Brown returned to America, taking three students with him to Munson, Mass. Thence Yung Wing entered Yale College, winning the prize in English composition above the American students. Returning to China, he had various experiences in business, making a trip into the tea district and visiting the Taipings, meanwhile brooding over his plan to get a number of his young countrymen to America for study. His interviews with the viceroy Tsang are told with graphic clearness. Thru him, Yung Wing ordered from America the machinery which furnished one of the greatest arsenals east of the Cape of Good Hope. He returned to America to buy more machinery, and was finally enabled, after his business of importing Gatling guns to China was over, to carry out his educational scheme. He gives a striking account of the *coup d'état* of 1898, and adds as an appendix an address by Rev. J. Twichell concerning China and his own life. The book has a good index. The frankness of the biography is refreshing.

The Wicker Work Woman. By Anatole France. Translated by M. P. Willcocks. New York: John Lane Co. $2.

The Elm Tree on the Mall. By the same.

These two volumes, the latest additions to the English Anatole France, are more familiar as *Le Mannequin d'Osier* and *L'Orme du Mail*. On the physical side, these books are as beautiful as their predecessors; they are well worth their two dollars per volume and ought to sell (within the limits of their five hundred copies) "like bread." And yet, rereading these books in Miss Willcocks's correct but undistinguished English, one realizes much better than before, not merely that M. France is the most effective representative of modern French culture, but also, alas! how truly that culture is one of disintegration and despair. One finds beauties, not beauty, in the disillusion of this Lost Leader. But in the translation of their Lost Leader, even the beauties are dimmed. Tho it goes without saying that the present volumes, constituting half of the Bergeret series, are among those dearest to M. France's amateurs, one remembers the proverb, *traduttorre, traditore*. The bloom is gone from this exquisitely cynical *Histoire contemporaine*. Fortunately, the yellow-backed copy remains, and we go back to it with new zest from these elegant volumes. Is it fortunate, perhaps, that in returning one realizes how much more M. France's greatness lies is his virtuosity than in anything translatable?

Literary Notes

....The death of Florence Nightingale reminds us of the nobility of her life; and of this we may read in the memoir by Sarah A. Tooley, now in its seventh edition (Macmillan).

....Among the American books announced for issue, in French, by the Paris publishers, is *The Severed Mantle*, a romance of Provence, by William Lindsay, of Boston. The story was first published last autumn by the Houghton Mifflin Co. Mr. Lindsay's translator is Henry Davray, of the *Mercure de France*, a correspondent of the London *Times* and translator of Oscar Wilde and Maurice Hewlett.

....The Smithsonian Institution has contributed to the new science of aeronautics in two ways: first by Professor Langley's experiments, which however were contemptuously treated by Congress and the public; and second by the publication of the *Bibliography of Aeronautics* just issued as volume LV of the Smithsonian Miscellaneous Collections. It contains 13,500 references arranged alphabetically by authors, subjects and titles.

....A committee of Spanish residents of Mexico plans to provide New York with an exhibition of Spanish art early in the coming winter, if possible, in the Hispanic Museum. This same committee organized the exhibition of Spanish art which opened in Mexico City on September 1, in connection with the Mexican centennial. The New York exhibition will, it is said, include about a thousand numbers, chiefly paintings and sculpture, and altogether of modern work. Besides Sorolla and Zuloaga, Benedito, Garnello, Chicharro, Bilbao, Nogales and Martinez are to be represented.

....All too many sheets of white paper have been blackened in praise or ridicule of *Chantecler*. The first "scientific" study of the language and versification to be composed is, however, that recently read before the Academy of Nimes by Prof. Jules Poinso. The critic points out numerous weak and false rhymes (*Pau* and *pot; n'effrayes* and *orcilles; ébalie* and *cabayi*, and several faults in syntax besides. Prof. Poinso adds that M. Rostand's vocabulary is five times greater than that of any other French poet. Meanwhile, other writers have signalized the analogy between certain passages in *Chantecler* and the sacred books of India. The "Hymn to the Sun" is, notably one of these. A German professor, writing in the *Vossiche Zeitung*, calls attention to a passage in Eckermann's "Conversations with Goethe" in which may be found a striking hint for *Chantecler*. Here is the passage: "There was, in the East, a man who, each morning, assembled people about him and did not let them go to their work until after commanding the sun to rise. But he took the precaution not to give this order till the very moment when the sun was indeed on the point of appearing." We now have the English prose translation of this much bruited play, by Gertrude Hall (New York: Duffield & Co.) Thanks to the blessings of publicity, this work will no doubt attain a commercial success: already it is reported among the "Books in Demand" at the New York Public Library.

Pebbles

THE BREAKFAST HOUR.

Good morning, Father, did you sleep all right
up on the roof?
And have no trouble now the top has been
made anchor-proof?
Those gay O'Tooles are "fly-by-nights" in
more ways than in one,
And I'll be glad when once the laws restrict
the midnight run.

Yes, Bridget, we are ready: bring the coffee
right in hot—
Are you sure you baked the napkins and that
you've not forgot
To sterilize your gloves? Now, take the tongs
to pass the plate—
I wonder what's the matter that Edwina's
always late!

I fear, my dear, you'll have to make a date for
that dear child
For operation on her brain, she drives me
nearly wild!
She's never up in time for school, she never
hears the bell:
A clot of blood must rest upon her "punctual"
brain cell.

Her teacher sent me word last night 'twas
time the thing was done,
And while her head was opened up 'twould
be a simple one
To change the set of nerves attached to her
unruly tongue,
And tighten up the chords a bit—'tis now too
loosely hung.

And, by the way, while you are in the doctor's shop just see
If he has found the leg he said he'd have just
right for me.
Now, what's the use of talking, John! I can't
go to the ball
In that sheath gown when my right leg don't
match my left at all!

I don't care if it does come high, I've got, I
think, some right!
Pray tell me what you had to pay for hiring,
Tuesday night,
The stomach for the dinner, that was ready
to go home
To Mrs. Vanderastor? Oh, you have no need
to foam!

I'll never tell—but, by the way, when will
they have yours done?
Injecting pre-digested food makes you so cross
and glum!
Oh—now you're off! Say—don't forget, that
leg must be good strength,
And measure two feet round the top and two
feet four in length.

—*Life.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The New Nationalism

THE world loves a leader, and Mr. Roosevelt is perfectly willing to be its leader. Just now he fills the stage, quite eclipsing, for the hour, the official chosen leader of this country. In his Osawatomie speech he has laid down his political creed and has called the country to follow his banner full high advanced. And they are following it enthusiastically in the progressive West, and with somewhat less eagerness in the East.

With the banner and the man who lifts it aloft we have much in sympathy, and yet we must mitigate a bit our praise of the man whom we so much admire. It is not a fatal lack—it often goes with intense earnestness—but we wish he had a better sense of humor. It is natural—he has been seven years President, and he has received ovations all over the civilized world, but we wish he would somewhat less obtrude his own personality, as if these insurgent doctrines were his sole patent. It comes near being amusing, but he does not see it. And why does he not say a good word now and then, as he used to, for President Taft, who has done so much on the same lines in carrying on his policies? It would be much prettier if he did, and his eloquent silence gives occasion for captious people to say that he is trying to supplant the President, while it makes the judicious grieve. And once more, his reply to the *Evening Post* lacks good taste. It is more likely to make one smile than agree, to hear such long reverberating thunders, such heated and repeated charges of wilful falsehood; for even cold malignity will always get the better of irascible heat. But enough in the way of unwilling restraint of praise.

Mr. Roosevelt is criticised for his lack of reverence for the Supreme Court. He thinks it not awake to the ethical demands of the times. It protects money rather than men. It stickles too much, he thinks, for the letter of the Constitution, and is unwilling to go a step beyond the narrowest reading of its articles. He would have Congress free to legislate in any matter not definitely denied to it. We think he is nearly right. The Constitution was made to help, not impede our progress. There ought to be no neutral ground tabooed to both the State and the nation, but left free for wealth to exploit. Courts have erred and do err, even our venerated Supreme Court. We learned that in the Dred Scott decision, which told us that a black man has no rights which a white man is bound to respect. But the Supreme Court, from the time of the Civil War, has again and again somewhat forced the Constitution to give us the liberty of legislation which we ought to have, a liberty which would have amazed the early strict constructionists.

We have given elsewhere the seventeen heads under which Mr. Roosevelt enumerates his policies. We find little in them to object to. We notice that before giving them he lays down a principle which might easily be interpreted as the basis of pure Socialism, such as he evidently does not accept. He says:

> "The essence of any struggle for healthy liberty has always been and must always be to take from some one man or class of men the right to enjoy power, or wealth, or position, or immunity, which has not been earned by service to his or their fellows."

That principle carried out would destroy all right of inheritance and merge

all wealth finally in the State, which is far from Mr. Roosevelt's creed, as the Mayor of Milwaukee well knows. So the statement that "no man should receive a dollar unless that dollar has been fairly earned" would carry Mr. Roosevelt farther than he would be willing to go.

To Mr. Roosevelt's articles of faith he gives the name of the New Nationalism. He is dead right in saying that it all centers in the principles that the highest purpose of government is to protect men rather than money. This doctrine had been excellently proclaimed by President Hadley in his discussion of the Dartmouth College decision, in which, like Mr. Roosevelt, he ventured to criticise a decision of the Supreme Court. The applications of this principle which Mr. Roosevelt lays down are not new, for they have all been urged by progressive men, but it is impressive to see them thus massed together. It will be a new era when they are adopted in legislation. Publicity of corporate affairs, supervision of capitalization, physical valuation of personal and corporate property, limited franchises with compensation to the public, the control of corporations that supply such necessaries of life as meat, oil and coal—all these are reasonable and have been often urged.

He would have officers and directors of corporations held personally responsible for infractions of law; why not? He would have an expert tariff commission to recommend successive amendments to the tariff law, for all purposes, precisely the President's policy; for he has secured a tariff board and he asks Congress to take up one schedule at a time. Here Roosevelt follows Taft—without mentioning him. The graduated income tax and the graduated inheritance tax are commonplaces in other countries, and have been introduced in part in our own. For the revision of our financial system President Taft has given us a commission such as Mr. Roosevelt approves. The direct primary and the recall, with a corrupt practices act, are already adopted and only need extension.

So we find little to question in Mr. Roosevelt's program. They are his, and he claims them, his by adoption, and now his by possession. We have ten thousand men urging one or more of these reforms. Many of them have gone into platforms, some into laws, for we are wealthy in plans of reform as well as in schemes for wealth. We are glad now to have Mr. Roosevelt gather them and name them the New Nationalism; and if some are trembling lest we shall centralize too much, they must learn that it is the very nature of railways and telegraphs and all intercommunication of physical and intellectual movements to bring us together, to create common interests and necessarily to centralize government. The Constitution will yet be respected, but it will not stand in the way.

The Goulden Pension Bill

If the history of the past twenty years discloses a tendency in the treatment of old age, the significance is emphatic when we say that the only civilized nations of the world which do not provide for the superannuated employees of their respective governments are the states of Venezuela and Colombia, the black republic of Haiti and the great United States. Calling attention to this vital defect of our government, President Taft firmly stated the principle:

> "I am strongly in favor of the merit system of appointment in all Government positions. It fell to my lot in the Philippines to institute a system even more rigid in many regards than the system adopted by the federal Government. A necessary concomitant of that system, however, a logical accompaniment, is a provision for those who have become too old to render proper service to the Government. . . . I am in hearty sympathy with those who are seeking to find a satisfactory solution, recognizing the necessity for adding to our merit system some method by which those who thru disease or age, after long service, are unable to render to the Government the services for which they were compensated when they were in active life and able to give to the Government that which the Government paid for."

Out of 147,185 employees in the executive civil service on July 1, 1903, there were 8,993, or 6 per cent., between the ages of sixty and seventy years, and 1,504, or 1.2 per cent., seventy years of age and over. Some of these employees

are wheeled in invalid chairs to the various offices of the executive departments, where they establish their rights to draw their salaries by a tacit presence during a few hours of the day. Yet, as President Taft has said: "You cannot get men with good red blood and the milk of human kindness in their hearts to discharge men over sixty because they are inefficient." In this matter as well as in other regards, there is a far-sighted policy as well as a short-sighted policy possible in the management of great business enterprises. Long ago, great corporations adopted the far-sighted policy in the treatment of their employees.

The far-sighted policy adopted by the leading corporations and all civilized nations except two inferior states, and the black republic of Haiti and the United States, provides for a retirement list on account of disability by sickness or accident and on account of old age at a stated rate of compensation. The officers of the army and navy are retired on three-fourths of their highest pay on attaining a certain age, or on becoming physically disabled. Why should not the employees of the civil service receive as equitable a treatment at the hands of the Government as the men of the army and the navy in time of peace? Surely disablement by tuberculosis in the postal service is as unfortunate as infection by typhoid at an army post.

The beneficent principle of the old age pension is not fully comprehended in the United States. Yet it is both simple and economically sound. Why should each one of 147,185 employees of the Government be compelled to save from insufficient salaries year after year against old age when only 1,504 will reach this age, using the statistics of 1903? To attempt to save the amount of the entire possible need in the case of a risk which is one in one hundred is economically unsound. To insure this vast number and charge collection and bookkeeping fees against the funds is economically wasteful. No voluntary system will produce the result. The cheapest method is to establish a retirement list. To retire 1,500 men at seventy out of 147,000 at full pay is equivalent to adding only 1 per cent. at the maximum to the payroll.

Cost.	Gains.
One per cent. of the payroll.	Increased efficiency. Fidelity to the service. Good will.

When these employees of impaired efficiency are deducted, the efficiency loss is not 1 per cent., but possibly ½ or ¼ of 1 per cent. The actual cost to society is insignificant. Students of philanthropy and sociology clearly appreciate that much of the vast misery, inadequately reached by the countless millions expended by the charities, both public and private, is a debit charge against industries which should have been borne at the time by the industry, and not at a later date by society at large. If the necessary cost of a "murderous occupation" is the maiming and blinding of an established percentage of the employees, why should society be taxed to carry the burden which the "murderous occupation" has caused. Fixing sharply the responsibility on the industry is the surest method of reducing the percentage.

If the handling of the mails is accompanied by an established percentage of tuberculosis among postal employees, disability from tuberculosis should be a charge upon the postal service, and not upon the States and municipalities. To some extent all occupations are "murderous." The post offices are said to be in many instances unsanitary and infected with tuberculosis. The statistics which must be kept for the administration of a retirement list would effectually disclose and fix responsibility as well as locality for such conditions of infection. To render sanitary and healthful the Federal buildings thruout the United States is a field for faithful work on the part of a properly organized National Department of Health.

Death, accident, sickness and old age are the chief causes of social misery. A National Department of Health should perform three functions: Prevention of the causes of death, accident and sickness by gathering and disseminating correct information among the people; by sanitary inspection; and by regulation of all institutions which are intended to ameliorate the effects of the wastes of nations, such as the institutions of public and private charities, asylums,

hospitals, insurance companies, and houses of correction, jails and prisons.

The Pension Bureau in the Department of the Interior should be reorganized into a Bureau of Retirement and Insurance. As a first step, the Goulden bill should be passed by Congress. The Goulden bill, which has the unanimous support of those who have given this subject careful attention, would establish a retirement list for all employees of the classified civil service at seventy. The rate of compensation is based jointly upon the years of faithful service to the Government and the age of retirement. The following table discloses the arrangement:

At the age of	For a service of	Retirement pay would be
Sixty years	Thirty years	75 per cent. of average pay for last five years
Sixty-two years	Twenty-five to thirty years	50 per cent.
Sixty-five years	Twenty to twenty-five years	40 per cent.
Disablement at any age for five	to ten years' service	30 per cent.
	Ten to twenty years	40 per cent.
	Twenty to twenty-five years	50 per cent.
	Twenty-six years and over	75 per cent.

The plan is somewhat similar to the retirement system of the Pennsylvania Railroad Company. The magnitude of that undertaking affords an instructive comparison, because the total number of employees of the Pennsylvania system is not far from the number of civil service employees of the Government. In 1907, $507,461 was paid to 2,020 on the retired list, with 128,490 employees all told. No less than eighty leading corporations in the United States have equivalent systems of equitable retirement in actual operation as a business proposition. For, as President Taft when Secretary of War testified before the Congressional committee, this is a business, not a charitable proposition. Among other things, he said:

"The Pennsylvania Railroad Corporation, for instance, retires its men. It does not do that for purely charitable purposes. It is a great corporation. . . . It finds it is to its interest, first, to assure its employees that they have something on which they can rely when they do right; second, by retiring people when they cease to be efficient, they can get more efficient people to take their places."

Mr. Littauer: "Your argument has been in behalf of a clear civil pension."

Secretary Taft: "That is what it amounts to."

Mr. Littauer: "That is what it amounts to in the Pennsylvania Railroad Company, and it works to the advantage of the company."

Secretary Taft: "Mr. Cassatt told me so."

When we remember that the average remuneration of Government employees has remained stationary for twenty years, and the cost of living has steadily advanced, the importance of this feature of President Taft's legislative program is plainly evident. The Goulden bill should be passed.

Fortifying the Canal

We cannot be expected to approve Mr. Roosevelt's urgent plea at Omaha for the fortifying of the Panama Canal by our Government. We have opposed it previously, and we oppose it still. He said last week:

"We are in honor bound to fortify it ourselves, and only by so doing can we effectively guarantee that it shall not be used against us. The chief material advantage—certainly one of the chief material advantages—which we shall gain by its construction is the way in which it will, for defensive purposes, double the power of the United States Navy. To refuse to fortify it, and, above all, to consider for a moment such an act of utter weakness and folly as to invite other nations to step in and guarantee the neutrality of this purely American work (and thereby really to make it certain that in the event of war we should find the canal used against us, as our fleets would be forbidden to pass thru it, or else our opponents' fleets permitted to), would be to incur, and quite rightfully, the contempt of the world; it would mean the complete abandonment of the Monroe Doctrine; it would be a wicked blow to our prestige on the Pacific; and, moreover, it would be in its essence treason to the destiny of the republic."

That is strong language. Treason is a strong word, like the word *lie*. We see no treason in it, nor are we afraid to incur "the contempt of the world" in that way. It is rather a question whether we might not incur the contempt of the world by fortifying the Canal.

We can hardly suppose that Mr. Roosevelt did not recall the history of the treaties with Great Britain when he made this speech. He remembers the Clayton-Bulwer Treaty, when the two nations proposed to dig the Canal, and they agreed that it should be free to all

nations in peace and war and should never be fortified. But under that treaty the Canal was never made, and the Hay-Pauncefote Treaty was agreed to when we undertook the task. Again it was agreed that the Canal should be, like the Suez Canal, free to all nations equally in war and peace, without preference to any:

"1. The Canal shall be free and open to the vessels of commerce and of war of all nations observing these rules, so that there shall be no discrimination against any such nation. . . .

"2. The Canal shall never be blockaded, nor shall any right of war be exercised, nor any act of hostility be committed within it. The United States, however, shall be at liberty to maintain such military police along the Canal as may be necessary to protect it against lawlessness and disorder."

That agreement is binding on us. It does not look like fortifying, which would cost at least $50,000,000 and require a constant force, not police, of 10,000 men, and a blockade in case the forts fired a gun. We admit that it is not specified that it shall not be fortified and this was purposely omitted, but such is the fair hope and implication.

Further, there is no need of fortifying the Canal. We have this treaty with Great Britain; and we can have similar treaties with Germany, France and Japan. That would make a sufficient international safeguard. There would then be no possible excuse for fortifications, not near so much as for the unfortified Suez Canal, which belongs to Great Britain.

Now let us think for a moment what the danger is. There is absolutely no danger of our going to war with Great Britain. That is excluded. We refuse to admit the contingency. We have this treaty, and any difficulty we would settle by diplomacy or arbitration.

Then France or Germany. The likelihood is only a little less remote. But we would have every advantage. They would have to bring their fleet from the Atlantic side, and we, having the Canal, could concentrate easily our Atlantic and Pacific fleets to meet them. But they would have no occasion to attack the Canal, and if they did the fight would have to be in the open sea, not at the forts. But who imagines that with them, neither of which Powers would wish a war any more than we, any difficulties would not be settled by arbitration?

The only other Power that needs to be considered is Japan. Now let us suppose that our people had provoked, by some act of indignity, the Japanese people to such a pitch of passion that they would wish to be revenged by war, what could be done? Why, we hold the only stopping place where they can coal, the Hawaiian Islands. We are fortifying our base there at enormous cost. Now suppose that a Japanese fleet should miraculously cross the Pacific by dodging Hawaii; what would they do? Go clear down to Panama? Not at all, but to San Francisco or Seattle or Portland, and there our fleet would have to meet them crippled by the exhaustion of their coal The likelihood, even in the case of improbable war, is so small that the Canal would be the object of attack, that it is quite negligible; and this quite apart from the rapid substitution of arbitration for war.

So we object strongly to this effort unnecessarily to strengthen the war equipment and the war spirit of the country. Great Britain might not justly charge us with bad faith if we fortify; but if we follow the example of the unfortified Suez Canal we honor ourselves, we honor other nations, we give a new impetus to the spirit of peace and good will, we add a new field to the enlarging area of international neutralization, which already includes the Suez Canal, the Black Sea, the Danube River, the Straits of Magellan; and, on land, Switzerland, which has no forts, Belgium, Luxemburg, Norway and Honduras. In this way stands honor, not contempt.

New York

If one may judge by newspaper editorial comment from all States of the Union, upon the Census Bureau's announcement that New York City has 4,766,883 inhabitants, the astonishment with which the people of other cities have received the news is quite as interesting as the 38 7-10 percent. of growth which New York's population has made in ten years.

Ever since Chicago was burned up and rebuilt, there has been a curious idea west of the Alleghenies that some interior city of this continent must in the nature of things become the American metropolis. The argument apparently has been that a great city must be the distributing center for a highly prosperous country on all sides of it, and that New York has no such "back country" as the towns of the Mississippi Valley can count on. The East, it has been argued, has been losing its best men and its industries, as well as its crops, by migrations to the West. The entire reasoning has been a naïve piece of "home-market" philosophy. The fact that New York is so placed as to have the United States and Europe combined for its "back country" our trans-Appalachian countrymen have always found difficulty in grasping.

They have "taken it in" at last. New York is not only the second city of the world, but also its rate of growth and the shaping of trade conditions indicate that, within another generation, it will almost certainly be the first city of the world. London still leads with a population of 7,429,740, but this is the population of an area under police supervision which is larger than the County of London, or London proper. To make the comparison entirely fair, the population of Greater New York should be compared with the County of London, which does not greatly exceed 5,000,000; or the London population under police supervision, that is to say, the population which has grown about a single commercial center, should be compared with the entire population about New York Bay, including Jersey City, Hoboken, Newark and Elizabeth. There is no doubt at all that within a few years the entire urban population which has its approximate center in lower Manhattan will exceed in numbers any other continuous urban population in the world. Mr. Durand's prediction that by 1940 the population of Greater New York will be 10,000,000 is probably conservative.

These figures, we must acknowledge, are staggering. The first question that they suggest, Where will so many people live? is not so important as a second one, How will they live? and a third one, What manner of life will they lead?

Where they will live is pretty clearly indicated by the figures just given out. The "lower east side" and "Hell's Kitchen" on the middle west side are no longer the most crowded areas, as they were when the census of 1900 was taken. The east side district north of 100th street is now probably the most congested area in the world. The most rapidly growing sections are the Bronx and Queens. Western Long Island is destined to be a densely populated district. Manhattan Island is destined to become, like the old "city" of London, a business center only, inhabited by day and deserted at night, except for purposes of amusement.

Possibly the question how the people of New York will live in coming years is answered in part by the certainty that they will have their domiciles beyond the limits of Manhattan Island. With improved facilities for going and coming they can spread out a little more, and, we may hope, enjoy more comforts than can be obtained for any ordinary income between the two rivers. One thing always to be remembered is that the population of any great city increases because, on the whole, the city offers more opportunities for getting a living, and more "life" of one kind or another in exchange for one's income, than can be found elsewhere.

But what manner of life shall it be for these millions, present and prospective, of New York citizens? We do not wonder that our neighbors in other towns are asking the question whether we are destined to be the wickedest as well as the biggest aggregation of mankind on the globe. The problem of obtaining from the average human nature and intelligence of so mixed a multitude, a clean and efficient municipal government, and a consistent policy of municipal improvement, is undoubtedly a difficult one. But encouragement may be found in the undeniable fact that, as great cities go, New York is, on the whole, both public-spirited and reasonably well governed and well behaved. The one thing that would do more than another to make life in New York as fine in quality as it is rich in variety and opportunity, would be a proper degree of attention to the artistic arrangement

of streets and public places, and to the architectural character of public buildings. These are the only agencies sufficiently majestic and conspicuous to create in the minds of vast multitudes of human beings a continuous impression of the excellence and importance of things higher than money making, personal display and lobster suppers. But here we open up a big subject, to which we shall have to return at another time. For the present it is enough to say that to the discerning there already appear adequate forces in operation to make the New York of the future the center of the world's civilization, as it will certainly be the center of the world's commerce.

President Taft at St. Paul

It is hard to make the American people comprehend the fact that there is anything on this continent that an individual cannot take possession of to preempt it as his own, if he gets the first chance. That we own anything as a people, and that this must be held by the people, for the common good, is not recognized in the individualistic creed of a native Yankee. President Taft undertook to impress this fact on the public in his address before the National Conservation Congress. He frankly allows the credit of inaugurating a conservation policy to his predecessor, Roosevelt, whom he proposes to follow rigidly along this line. Conservation of national wealth is not a question of politics or of factions or of persons. It is a question that affects the vital welfare of all of us—of our children and our children's children.

The public domain at present amounts to only about 700,000,000 acres outside of Alaska; but the whole area of the United States amounts to only 1,800,000,000 of acres. The national forest reserves embrace 140,000,000. Now, what President Taft wishes to accomplish is this, to so dispose of agricultural lands to homesteaders that the Government shall still hold any coal that may be discovered beneath the surface. The last Congress enacted a law to this effect. He opposes the granting of national aid to the States or to private owners, to assist in the draining of swamp lands, and he would only allow the surplus water, collected in the great Government reservoirs, and not needed for Government land, to pass over to private uses. As most of the mineral lands have been disposed of, he would not have the Government enter on a policy of leasing what it holds, or imposing royalties. So far as forestry is concerned, he considers no further legislation necessary except to increase the fire protection, and an act vesting the Executive with full power to make forest reservations, where Government land is timber covered, or is needed for forestry purposes.

The President's discussion of the coal question may be considered exhaustive. He concludes, with the Geological Survey, that there is remaining a supply of about three thousand billions of tons of coal; and of this one thousand billions are within the public domain. He advocates a change from the absolute grant system to a leasing system, limiting the amount leased to 2,500 acres to a single party. He would issue permits to oil prospectors over tracts of Government land for two years. If oil be discovered, the prospector is to acquire a title to a certain tract, as compensation. The phosphate lands have been dealt with so wastefully that here again he would introduce a leasing system.

He holds it to be the plain duty of the Government to see to it that the utilization and development of its water power shall be so handled as to preserve it from monopolists and extortionate charges to settlers. This is a difficult problem to handle, as Wisconsin, Oregon, California and some other States have already found out. It is sharply contended by a rather large party that the Government has no power to exercise police jurisdiction over the use of power in a river owned by any State. Mr. Smith, Director of our Geological Survey, urges that this matter of transmitting water power into electricity, which can be carried all over the country, is a matter that ought to be retained by the general Government. On the other hand, it is urged that the control of the water power site and the control of the water should be left to the same party. Bills have been introduced in Congress, providing that whenever State authorities deem a water power useful, they may apply to the Government for a grant to the State of the adjacent land for a water power site,

and that this grant shall in all cases allow of a lease for a term of years not exceeding fifty. The President will not take his stand between these two parties.

Mr. Taft cannot conceal a certain tenderness, if not soreness, over the criticisms with which his administration has been visited. He says that, in his opinion, the time has come "for a halt in general rhapsodies over conservation, making the word mean every known good in the world." He would not have an arousing of emotions on a subject like this, while only dim outlines are formed in the minds of the people; for in that case the whole movement, he thinks, would die for want of practical direction. The address is valuable in that it states clearly and succinctly the conservation problem in its different sections. The subject matter is dry enough, to any one who has not yet got waked up to the fact that our nation has impoverished itself by astounding wastefulness and recklessness. It does not seem likely that too much emotion will be exprest in any quarter on this subject.

Mr. Taft, in closing, made it clear that the withdrawals of Government land from entering under homestead and other laws, does not mean a permanent withdrawal of all these lands from productive value. It is not a final step in the course of conservation, nor is it a putting off to remote generations to decide what ought to be done with these means of promoting human comfort. Real conservation, te tells us, involves non-wastefulness in the present generation, with preservation for succeeding generations. The problem is how to save and how to utilize, but still to go on developing. The President insists that when men come forward to talk in general terms on conservation, they should be requested to point out *specific* evils and *specific* remedies.

Legislation Demanded

We said in a late issue that of the five measures asked by the National Independent Political League all "are good, but the enforcement of them all by national legislation would require amendments to the Constitution." Prof. W. E. B. DuBois — and there are few men we respect more—does not agree with us. As to the first, laws to stop disfranchisement and peonage, this, he says, can be done under the Thirteenth, Fourteenth and Fifteenth Amendments, by legislation:

> The forcible "control" of black laborers in large parts of the rural South today stops all freedom of contract, forces down wages, brings in the evils of the "company stores" system and of child labor and puts the punishment of crime in private hands for purposes of gain. A State has a right to regulate the suffrage, but it has no right to divide laborers into classes on account of race and color and then to make different requirements for each in order to vote. This the South is doing and these things Congress can and should remedy.

There are laws against peonage, and the Southern States have no laws that specify color as affecting suffrage. They have carefully avoided it, and the Supreme Court has not been able to declare them unconstitutional. The crime is in their purpose and the way they are enforced.

Next, the League would have a national anti-Jim Crow law—here we agree heartily—for interstate transportation.

The third demand is for national aid to education. Professor DuBois says:

> The campaign of negro disfranchisement in the South has been followed by a quiet but determined attempt in the South to destroy the efficiency of the negro public schools. In the Gulf States the negro public-school system is today worse than it was ten years ago. The national Government should so increase its present aids to popular education as to wipe out illiteracy.

When there was some hope for such a law we favored it, but it is hopeless now. The obligation must be put on the States, on the negroes themselves and on their friends in the North.

The next demand is for laws against lynching and mob law, and Professor DuBois says:

> Lawlessness is becoming nation wide. A man accused of crime today is not certain of a fair trial. Congress should enact such legislation as would help bring to justice those who persistently violate a plain mandate of the Constitution. That this is a matter of national action is indicated by the position taken by the Supreme Court in the Chattanooga lynching case.

We see no way in which Congress can constitutionally enact laws against public violence within the States, nor do we see

that the Chattanooga case gives us any light.

The last demand is for the restoration of the Brownsville negro soldiers.

"There is not in the history of the American Government a more monstrous piece of injustice than the deliberate punishment of over one hundred admittedly innocent men for the sake of punishing a few others whose guilt has never been proven and is to many minds highly improbable. Congress should direct the President to restore to the army with all arrearages in pay all soldiers who have not been proven guilty of crime."

We should have preferred to believe that the "shooting up" of Brownsville was by irresponsible white hoodlums of the town; but investigations put it on the soldiers, and we confess that there were great provocations. There may have been injustice; there doubtless was injustice to some soldiers, but under military rule we cannot condemn the discharge of the soldiers after the result of the inquiry. Often the innocent must suffer for the guilty, and we fear some were guilty.

We regret that we cannot withdraw our judgment that the enactment of legislation on all these five matters would require constitutional amendments.

Taft and Roosevelt

With all courtesy President Taft, in his address at St. Paul, has recognized the good work initiated for conservation by his predecessor and which he has carried on. Of course those who are belittling Mr. Roosevelt try to find in the President's words veiled attacks on Mr. Roosevelt, but they have to be interpreted in, particularly in this passage:

"I am liberal in the construction of the Constitution with reference to Federal power; but I am firmly convinced that the only safe course for us to pursue is to hold fast to the limitations of the Constitution and to regard as sacred the powers of the States. We have made wonderful progress and at the same time have preserved with judicial exactness the restrictions of the Constitution. There is an easy way in which the Constitution can be violated by Congress without judicial inhibition, to wit, by appropriations from the national treasury for unconstitutional purposes. It will be a sorry day for this country if the time ever comes when our fundamental compact shall be habitually disregarded in this manner."

But Mr. Roosevelt could not but agree with all this. As to the control of water sites, whether by the Federal Government or by the States on guarded leases, the President does not decide; and here Mr. Roosevelt would apply the New Federalism; but there is no occasion for serious difference. Both equally would serve the great public rather than monopolies.

Ohio's Way with Lynchers

Newark, Ohio, is in the center of the State, only an hour's ride from the capital. It is close under Governor Harmon's eyes. It was there that a mob caught and murdered a man who had been active in enforcing the law shutting up their saloons. This was on the 8th of July. The mayor was in sympathy with the lynchers. He did nothing to prevent their work. He saw them assaulting the jail and went home to bed. The chief of police saw the mob battering the jail doors, gave no orders to the police to protect the jail, but went to a nearby saloon for a game of cards. The sheriff deserted his post, afraid to do his duty. So the mob, with no one to hinder them, entered the jail, took their prisoner and hanged him at the corner of the courthouse square. Mayor, sheriff and chief of police have been removed, and now the grand jury has indicted twenty-five men for murder in the first degree, twenty-one for rioting, ten for assault and battery, and ten for perjury. And that is not all. They will be tried, and a number of them will go to prison. There will be no nonsense about it. Ohio will give us an example of justice, as she has given us an illustration of shame. It will not be said that these lynchers were "the best citizens" of the locality and must be saved from punishment. Let the whole country take a lesson.

Smuggling

We are not of those who are indignant that the inspectors are strict in examining the baggage of tourists to detect smuggling. On the ethical side it is quite as bad to steal from a corporation or from the corporate government of the nation as it is to steal from an individual. If it is contemptible to be a shop-

lifter or a highwayman, it is equally contemptible and criminal to rob the country. That ought to be clear on its face, and yet otherwise decent people will boast if they manage to get personal goods thru the custom house free by concealment and lies. Doubtless the Poughkeepsie lady who is the last detected smuggler, of one of the wealthiest families in the city, who lied so brazenly, thinks herself a good woman as well as a leader in society, and it may be in the Church, but this experience shows her guilty of such a fraud as sends persons to the State's prison, and it is hard to think that her husband is not equally guilty. Particularly mean is such an action in the case of manufacturers whose wealth depends in part on a tariff which protects their wares. They ask Congress to put on the tariff, to raise it as high as the people will bear, gather in all the profit they can, and when the general public has enriched them by the tariff, they proceed to cheat the tariff when it happens to touch them adversely. There might be some apology for a poor man, but only indignation and contempt for a rich man whose wealth has been enhanced by the tariff. We know of but one defense for smuggling, and that is that we are not robbing the country, but the country is robbing us; that we bought and paid for the diamonds and they are ours, and the officers on the pier are holding us up and robbing us. That defense is the next thing to treason.

"Evangelization in a Century"

An old missionary, than whom few have done more effective service, writes us that he would like to see the cry changed from "Evangelization of the world in this generation" to "The Christianizatinon of the world in this century." Evangelization is only the beginning of the task. You can preach the Gospel and even get the converts without their being Christianized. Says our correspondent:

> "Christianity has had its freest field in America and presumably has exerted its noblest influence there—and yet, *mirabile dictu*, an ex-Governor of one of the States (Hoke Smith of Georgia) may seriously say to the people, 'You must stop negro education,' a sentiment worthy of only such a man as Abdul Hamid. Yet it shows that such sentiments are quite possible in high places in the United States. And this would seem to mean that while the United States has been evangelized it has not been fully Christianized during the past century. Christianity does not mean the possession of the knowledge of the truth, but the possession of a character conforming to that truth. For the development of that character not merely the proclamation of the truth is needed, but the establishment of such institutions in churches, schools, hospitals and other benevolent institutions as will serve for the inculcation of that truth as the basis of character. That cannot be done in one generation nor yet in three."

We cannot better express the serious truth, and we commend it to those who at the meeting of the National Missionary Congress in Chicago last May voted so enthusiastically for evangelization in this generation. When one has, like Dr. Chambers, of Adana, seen success and massacre, carried on the truly Christianizing work of the Relief Commission, and heard the Moslem Governor beg him to organize a worthy hospital—but who will give the $30,000 needed?—he has the right to speak for something more than hasty evangelization.

Confirmation at Seven Years

From states and hierarchies, from modernists and scholars, from the family and Christian Socialist, Pius X turns to the children. The Sacred Congregation of the Sacraments has just ordained that first communion is to be given to children at the age of seven years. Success has not followed the other steps of His Holiness; it remains to be seen how this new regulation will turn out. It is *new* and much more. The Council of Trent and many Popes since then, notably Benedict XIV, probably the most learned man who has sat in St. Peter's chair, left the age of children in regard to making first communion to the confessor. It was his exclusive right. Now if this new decree is to be looked upon as such, and not as a suggestion, the confessor is in a measure put aside, for he will think twice before running up against a Papal document. The main reason alleged for giving the communion to a child at seven and not waiting until he is eleven or twelve is the danger of the little one losing his inno-

cence. It is our observation that children are about as good at eleven as they were at seven. The new rule is intended as a precautionary measure. Where, however, are the parents? How about the lauded influence of the Catholic home and of Catholic training? Furthermore there is a sly rap at one of the most popular fêtes in French life, namely, first communion day. On Thursdays and Sundays the visitor to that pleasant land will see everywhere boys in black suits with white ribbons on the arm, and girls dressed as brides, wearing a long dress for the first time. Their parents, godparents and other friends, good and bad Catholics alike, are with them, making the day as happy as possible. Now the Pope in this latest surprising decree declares all this happiness "tainted with the Jansenistic error." In other words, the greatest ceremony, perhaps, in the French Church is labeled officially as a Jansenist tare. His Holiness hopes to find the wheat in bringing seven year old infants to the altar. Pius X thus aims "to restore all things in Christ."

How female suffrage works to unify the home is explained by Governor Brooks, of Wyoming, in a way that may surprise its opponents:

"Nothing can be so far from the truth as the idea that woman suffrage has the slightest tendency to disrupt the home. Indeed, it has the very opposite effect. As a result of it politics is talked freely in the family circle and political questions are settled by intelligent discussion. This has a great and good influence on the growing generation; children grow up in an atmosphere that encourages intelligent consideration and debate of public problems and are thus better equipped to deal with public questions when they reach voting age."

No one thinks of questioning its advantage there.

The prospects of a separation of Church and State in Germany are exceedingly meager in view of the fact that recent statistics report only about one hundred thousand Protestants in the land of Luther who have organized themselves into "free" churches. And these again constitute seven different organizations, some of which antagonize each other as bitterly as they do the "Babylon" of the State churches. These seven independent churches range from that of Breslau, with a membership of 58,570 souls and 88 pastors, down to that of Hermannsburg-Hamburg, with only five puny congregations. One of these free churches, that of Saxony, with 15 congregations, is the spiritual child of the most conservative and largest Lutheran synod in America, that of Missouri and other States.

It is one thing to be Patriarch of Venice and another thing to become Pope at the Vatican. It is announced that the seminary at Perugia has been closed by orders from the Pope because the seminarians were guilty of acclaiming the King and Queen of Italy on the occasion of their late visit to Perugia. Were a prelate in Austria or Spain to be guilty of such an insult to his king he would be likely to suffer for it, but the Pope is irresponsible and immune. Already the Church longs for the better days of Leo XIII.

There is meat and meaning, more than appears, in the following from *The Catholic Citizen*, of Milwaukee:

"That wealthy Presbyterian, the late Mr. Kennedy, of New York, who left by will $25,000,000 to the missions of his Church, has brought great relief to the brethren. Collections for the foreign missions may henceforth and hereafter be omitted. Now what good Catholic American millionaire will please die and leave $5,000,000 for the conversion of Italy (the fund to be supervised by American priests)? We lay the suggestion gently, but firmly, before you, Thomas Fortune Ryan."

Any one could see that our shrewd contemporary is edited by a layman.

Here is another triumph for Madame Curie, who has isolated pure radium, in very minute quantities, of course. It is a white metal and rapidly oxidizes in water, and burns paper. In France Madame Curie can teach in the University, but cannot vote.

At last, in an address at Sioux Falls, N. Dak., Mr. Roosevelt has made appreciative, if belated, mention of the President and his advocacy of the tariff commission.

Insurance

Against the New Workmen's Compensation Acts

September 2, 1910.

To the Editor of The Independent:

In this week's INDEPENDENT in the article in the insurance columns entitled "The New Workmen's Compensation Acts," the employers' liability and workmen's compensation laws of New York State which became effective September 1st are praised highly, and the opinion is expressed that they will decrease litigation and will ultimately lower the insurance rates.

There is little reason, unfortunately, for believing that these highly desirable ends will be accomplished by the new laws.

As respects decrease of litigation, the outlook is not hopeful. Relatively few employments are covered by the compulsory workmen's compensation law, and even in these employments the employees may elect whether they will accept compensation or will sue for damages under the common law and employers' liability act instead. The possible large recoveries to be obtained by suit will probably tempt workmen in most cases of serious injury to forego the smaller tho certain compensation and to take a chance and sue. The situation is no better in those employments to which the elective or permissive workmen's compensation law applies. The employers' liability law was radically amended by practically destroying the fellow-servant and assumption-of-risk defenses and putting the burden of proof of contributory negligence on the employer, evidently with the intention of driving employers into making compensation agreements with their workmen. But the method prescribed for obtaining and recording consents to these agreements is so cumbersome that it is not practical, and even if this were not so, employees would be slow to resign the advantages the new law gives them. A similar law has been on the statute books of the State of Massachusetts for over two years and nothing has come of it.

As respects rates, they will be higher, not lower. The burden that has hitherto rested on the employees is now transferred to the employers. As the law has stood heretofore, but one workman in eight recovered anything, now under the compulsory workmen's compensation any workman disabled for a period longer than two weeks is entitled to compensation. The radical changes in the employers' liability laws by which the employers' defenses are largely taken away will also necessarily result in larger payments and payments in more numerous cases.

Instead of these complicated and unsatisfactory laws, which lack clearness and precision, and will give rise to no end of litigation, it would have been far better to cut off entirely from employees any rights of action under the common law and employers' liability act and give in lieu thereof adequate benefits under a workmen's compensation law. Such an arrangement would put a stop almost completely to litigation and the great waste consequent upon it. But there are constitutional difficulties that probably could not be overcome.

The movement for the prevention of industrial accidents has been proceeding at an accelerating pace for many years. It was a matter of study and experiment by employers and insurance companies twenty years or more ago Much has been accomplished and much remains to be accomplished. But when all has been done, it is inevitable that accidents shall continue to occur and proper compensation for these will be costly.

Yours respectfully,

THE FIDELITY AND CASUALTY COMPANY OF NEW YORK,

By FRANK E. LAW,
Assistant Secretary and Actuary.

THE "hobble" skirt has been added to insurance hazards. The other day a well-known lady in this town tripped on this newest of skirt creations and was severely cut and bruised. A similar accident took place in Philadelphia, at the Pennsylvania Railroad station there, but fortunately the "hobble" skirt wearer was caught in falling, and so escaped what might easily have been a serious injury. Keeping up with fashion's vagaries is a hazard that ought always to be covered by accident insurance.

A WOMAN who was cleaning a window in this city not long ago accidentally pushed a pane of glass out of its sash. The glass fell, edge downward, according to *The New York Times*. In its descent it struck and almost entirely severed the head of another woman who chanced to be passing as it fell. It was one of the strangest of fatalities and one not at all likely to happen, but it did happen. The struck woman, who was on her way to market, had no warning of her fate, and the hospital doctor who attended her is reported to have said that she never had the slightest idea of what struck her. This is one more case where an accident policy would have been an excellent thing for the killed woman's dependents.

Financial

The Velocity of Money

The Wall Street Journal has called attention to some recent figures regarding the velocity of money, or the number of times a given coin or banknote is used for payments in a given interval of time. The tendency of money to take unto itself wings and fly away has long been known, but the speed with which it passes from hand to hand has not been so clear. The subject is, however, one that has engaged the attention of financiers for more than a century. Only recently has it been possible to assemble sufficiently complete data satisfactorily to determine the velocity of money. In 1893 Professor Jevons wrote:

"If we knew the amount of exchanges effected and the quantity of currency used, we might get, by division, the average number of times the currency is turned over; but the data are quite wanting."

In 1894 the data that Professor Jevons lacked was obtained and the velocity of money was determined and published. The figures showed the passing of money units from hand to hand to be 51.4 times a year, or approximately once a week.

Since then, the extension of the railway, telegraph and telephone systems, not here to mention anything else as a contributing cause, has so greatly increased the velocity of money that it is safe to say that it will reach 60 during the present year in the United States. This result has been ascertained by means of the employment of the factors contemplated by Professor Jevons, viz., the total of exchanges and the quantity of currency in circulation. The first, according to *The Wall Street Journal*, being computed at $186,000,000,000, as derived from Clearing House figures, and the latter at $3,100,000,000, as reported by the Treasury. The bearing that the velocity of money has upon its efficiency, when aided by the modern devices of credit, is exceedingly interesting when viewed under the influence of its velocity as thus set forth. The various functions of money are, of course, considerably affected by its velocity, and as it ranges from slow to fast, so is its power diminished and increased.

*

....The area of the African cotton fields increased from 8,975 acres, in 1909, to 12,567 in 1910.

....The net market value of the estate of the late Marshall Field, according to a recent decree of the County Court in Chicago, was $79,262,658.

....British investments in Canadian undertakings, according to a Toronto financial journal, in the last five years have amounted to $605,453,000.

....The Geological Survey reports that the expenditures in 128 cities during the calendar year 1909 in building operations were $930,520,713.

....It is estimated at Washington that the postal savings bank system, after it has been fully developed, will require 10,000,000 pass books and not less than 80,000 ledgers.

....The tobacco crop in Connecticut this season will be the largest in some years. This is due in great measure to the adoption by growers of advanced methods suggested by Government experts.

....A popular movement is on foot looking toward the pardon of C. W. Morse. This has taken the form of a petition asking for his pardon to which 800,000 signatures have already been obtained. An effort will be made to increase the number to 1,000,000.

....An inheritance tax of $675,000 has been paid upon the estate left by the late Edward H. Harriman, the value of which was estimated to be $71,000,000. From the estates of Mr. Harriman, J. Stewart Kennedy and Henry H. Rogers, the State of New York has received in inheritance taxes $2,176,000.

The Independent

VOL. LXIX NEW YORK, THURSDAY, SEPTEMBER 15, 1910 No. 3224

Survey of the World

The Fisheries Decision

On September 7 the International Court of Arbitration gave its decision in the Newfoundland Fisheries case, submitted by the United States and Great Britain, but involving the governments of Canada and Newfoundland as well. The issue was presented in the form of seven questions, and the tribunal supports the United States in five instances, Great Britain in the other two. These last are regarded as of the highest importance, and it is understood that the British Colonial Office is satisfied with the outcome. On No. 1, however, the United States has raised questions of equity which will be submitted to a special commission for determination. The court was unanimous on all questions except the fifth. From the decision of this Luis Drago, the member from Argentina, dissented, largely supporting the American contentions. The question was,

"From where must be measured the three marine miles of any of the coasts, bays, creeks or harbors referred to in article one of the American-British treaty of 1818?"

United States fishermen claimed the right to take the measure from any part of the British North American shore, and therefore the liberty to fish in the middle of any Canadian or Newfoundland bay or estuary having a radius of more than three miles. The British contention was that the limit should be measured from an imaginary line connecting the headlands. The other point upon which Great Britain was sustained embodies the question whether local laws adopted by a British colony, as ordinances in respect to the hours, days or seasons when fish may be taken on the treaty coasts, or the means and implements to be used in fishing, must be submitted for approval to a foreign Power having a treaty on a similar subject with the Imperial Government. Regarding this point (Question 1) the tribunal holds that the right of Great Britain to make fishing regulations without the consent of America is inherent in the former's sovereignty, but in the exercise of the right to make limited regulations the latter must not violate the treaty of 1818, or be so framed as to give the local fishermen an advantage over the Americans. The provisions of the award apply not only to future legislation by the Imperial Government and the colonies, but require that the existing statutes and regulations to which the Americans have objected be submitted to a commission which shall judge of their reasonableness and necessity in the light of the principles laid down. This commission will consist of three specialists, one each to be named by the United States and Great Britain, within one month, to whom is added Dr. Hoek, official scientific adviser in regard to fisheries to the government of the Netherlands. The commission will submit its report to the Hague tribunal, which, if the decision is unanimous, will incorporate it in its present award. If the commission fails of unanimity, the Hague tribunal will adjudicate the matter. Senator Root states that the decision upon this question, which he regards as the principal one, gives to the United States "practically the relief for which she contends." The questions decided absolutely in our favor are as follows:

Have the inhabitants of the United States a right to employ as members of the fishing crews of their vessels persons not inhabitants of the United States?

Can the exercise by the inhabitants of the United States of the liberties referred to in the said article be subjected, without the consent of the United States, to the requirements of entry or report at custom houses or the payment of light or harbor or other dues, or to any other similar requirement?

Under the provision of the said article that

the American fishermen shall be admitted to enter certain bays or harbors for shelter, repairs, wood or water, and for no other purpose whatever, but that they shall be under such restrictions as may be necessary to prevent their taking, drying or curing fish, therein, or in any other manner whatever abusing the privileges thereby reserved to them, is it permissible to impose restrictions making the exercise of such privileges conditional upon the payment of light or harbor or other dues, or entering or reporting at custom houses or any similar conditions?

Have the inhabitants of the United States liberty to take fish in the bays, harbors and creeks on that part of the southern coast of Newfoundland which extends from Cape Ray to Rameau Islands, or on the western and northern coasts of Newfoundland from Cape Ray to Quirpon Islands, or on the Magdalen Islands?

Are the inhabitants of the United States whose vessels resort to the treaty coasts entitled to have for their vessels, when duly authorized by the United States in that behalf, the commercial privileges on the treaty coasts accorded by agreement or otherwise to United States trading vessels generally?

Dr. Heinrich Lammasch, of Austria, was the umpire of the court rendering the decision in the fisheries controversy. The agent of Great Britain was A. B. Aylesworth, Minister of Justice of Canada, and the American agent was Chandler P. Anderson. The United States counsel were Senator Elihu Root, George Turner and Samuel J. Elder. Associated with them were James Brown Scott, solicitor for the Department of State; Charles B. Warren and Robert Lansing. News of the decision of the international court has been received with mixed feelings by Gloucester fishing interests. The Newfoundland herring business will, however, be pursued from the port of Gloucester on as large a scale as ever during the coming winter. No fear is exprest that Sir Edward Morris, the Premier of Newfoundland, will attempt in any way to hamper the fleet in securing catches. The dispute relates entirely to the winter herring fishery on the west coast of Newfoundland as pursued under the treaty of 1818. The controversy dates from the establishment of American independence.

Mr. Roosevelt's Speeches

Mr. Roosevelt continued his tour thru the past week, and was everywhere thruout the West received with great applause. He had the platform at the Conservation Congress in St. Paul the day after President Taft. He began with the recognition of the President's position:

"What I have to say will be but a repetition of what was so admirably said on this very platform by the President of the United States yesterday. All friends of conservation should be in hearty sympathy with that part of the President's address in which he referred to coal, oil and phosphate lands. And I am glad to say that at the last session Congress finally completed the work of separating the surface of the land from the minerals beneath it."

Mr. Roosevelt spoke very warmly of the work achieved by the Conference of Governors at the White House in 1908, and then referred sharply to the action of Congressman Tawney, of Minnesota, Chairman of the Committee of Appropriations, who had secured the passage of an amendment forbidding any payment for the expenses of any commission not provided for by law, such as that on conservation. He said:

"By the advice of the Governors the meeting was followed by the appointment of a national conservation commission. . . .

"But at the moment when the commission was ready to begin the campaign for putting its program into effect an amendment to the sundry civil service bill was introduced by a Congressman from Minnesota with the purpose of putting a stop to the work so admirably begun. Congress passed the amendment. Its object was to put an end to a number of commissions which had been appointed by the President and whose contribution to the public welfare had been simply incalculable."

This amendment he condemned, when he signed the bill, as unconstitutional, and he declared that if he had remained in office he would have treated it as a nullity. Mr. Roosevelt strongly favored Federal control of water power, a point on which the President had reserved his opinion. The audience was immense, the largest that he has yet met, and he was vociferously applauded by them. Among those on the platform was the railroad magnate J. J. Hill, who repeatedly clapped his approval. At Freeport Mr. Roosevelt spoke of his future in a way that was thought to look to a future entrance into political life:

"I don't suppose I shall ever be in public life again, but if I am there is always a chance that some time it may come up when I shall make my words good.

"No corporation, no politician must ever sup-

port me for anything under the idea that I will pardon that corporation or that politician if it or he is corrupt. If either corporation or politician, if either one or the other, helps to put me in a position of influence, let them remember that if they are corrupt, if they encourage corruption in others or benefit by it themselves, they help me at their peril, for I will hurt them if I get the chance."

The event of Mr. Roosevelt's visit to Chicago was his refusal to attend a dinner given by the Hamilton Club, when he was informed that Senator Lorimer was to be one of the guests. A delegation from the club, where Mr. Roosevelt had previously been received, met him at Freeport. When he asked who would be at the dinner he smiled at the mention of Speaker Cannon's name; and when Senator Lorimer's name was mentioned he said:

"Then I shall decline to go. If Lorimer comes you can count me out of it. It would be the same to have him there as to have others who are now under indictment present."

The delegation tried to persuade him, but he refused, and the delegation sent this message to Senator Lorimer:

"Colonel Roosevelt positively declines to sit at the same table with you. Our invitation to you this evening is therefore withdrawn."

Accordingly Senator Lorimer did not attend. It will be remembered that four men are under indictment for bribery in securing Lorimer's election as Senator, and four others made confessions. In his address Mr. Roosevelt treated of corruption in the country and Illinois. He said:

"I was advised by a kind friend today not to talk of this subject, because it was a delicate subject. My friend added that no one had been convicted.

"Public honesty is a sham if we limit the word honesty to mere law honesty. There are big men whom I count as the worst enemies against the real welfare of the public, altho these men have been so well advised as not to be convicted. There are some of them in New York.

"When you have read the confessions of the four men in Illinois; when you have read what the State Attorneys developed about the four men whose indictments they secured, I defy any man not to come to the conclusion that that sort of corruption is a most infamous treason against American institutions.

"I am a good party man, but I'm an American first."

He concluded by an appeal to the men of Illinois to purify their politics. It is made clearly evident by the shouts of approval that he had the approval of those present. On Friday he spoke to a large audience in the Music Hall. His address was along the line of the New Nationalism, and the duty of depending on the central Government and not on the States for control of waterways, mines, etc. With this he took occasion to praise the action of President Taft on two matters. He said that the Ohio and the Mississippi ought to be made to give a national waterway to the Gulf, and the handling of conservation problems should be by non-partisan boards:

"At last we have a bureau of mines established by Congress; a most important bureau. Like the waterways, it must be treated in connection with the development and the use of other natural resources, and President Taft has recently appointed as the head of the bureau the best man that could possibly have been chosen to fill the place. Mr. Holmes is a man whom I know in connection with his professional work well enough to testify how admirably fit he is for the office, but whom I do not know any other way well enough even to know what his politics is. . . .

"And I am exceedingly glad that the President has appointed a commission with Mr. Hadley of Yale at the head to look into that question. You will find some worthy people who will say, 'Oh, capitalization; yes, look into it perhaps, but it should be left to the States.' Now, if your traffic goes down from Cincinnati to New Orleans you will be passing thru or on the edge of a dozen different States. You cannot have the capitalization looked after in each State."

At the reception in the evening at Congressman Longworth's house he met all the Republican leaders, including Boss Cox. He said he did not object to meet him, as Mr. Cox held no public office and was under no charges of corruption. At Columbus, Ohio, Mr. Roosevelt put aside the speech he had prepared on law and order, and spoke very vigorously and extemporaneously on the duties of officers and laboring men in such a disturbance as that which has been marked by riots in Columbus. He defended unions, declared that a man has the right to keep out of unions, that to discharge workmen because they either asked for increased wages or organized a union was outrageous, condemned severely the mob violence, and the practice of bailing out those caught rioting. He said, in the presence of the chief lawyer employed to bail them out:

"I do not know whether it is true or not, but it has been alleged to me that the attorneys of the strikers habitually appear for every miscreant who is arrested for assault or other disorders and furnish him bail. If that is true, in order to maintain their good name wage earners should get rid of those attorneys. [Cheers.] They should get rid of the attorneys who by such action cast doubt upon the sincerity of the expression of the men who disclaim responsibility for or sympathy with those outrages."

At Pittsburg he spoke also on the scandals that had lately made the city notorious, the use of the banks by politicians which led to the conviction of the chief offenders. He warmly congratulated the city on what had been done. With the end of the week Mr. Roosevelt reached his home in Oyster Bay, and will now give his attention to New York politics.

The Ballinger Report

The Congressional investigating committee on the Ballinger-Pinchot charges met in Minneapolis on the 7th. The five members who constitute the minority of the committee were present, including the four Democrats and Congressman Madison, insurgent Republican from Kansas; but of the seven Republicans who constitute the majority in favor of sustaining Secretary Ballinger, only three were present, and this gave the power to his opponents. When a vote was called two absented themselves, leaving the committee without a quorum voting. The motion adopted by the five is as follows:

"First—That the charges made by L. R. Glavis against Secretary Ballinger should be sustained; that in the matter of the disposition of the Cunningham coal lands, Mr. Ballinger was not a faithful trustee of the interests of the people and did not perform his duty in such a manner as to properly protect such interests.

"Second—that the charges made by Mr. Pinchot should be sustained; that Mr. Ballinger's course in the administration of the Department of the Interior has been characterized by a lack of fidelity to the public interests; that this has been shown in his treatment of the Cunningham coal claims, the restoration of the water power sites to entry without intention to rewithdraw, and in his administration of the reclamation service, the latter resulting in unnecessary humiliation to the director and tending toward the disintegration of the service; that he has not shown himself to be that character of friend to the policy of conservation of our natural resources that the man should be who occupies the important post of Secretary of the Interior in our Government, and that he should no longer be retained in that office."

This decision is not final, and at a subsequent time the seven will sign a report exonerating the Secretary. Those of them who arrived later declined to attend a further meeting and have denounced the action of the five as a trick for the political purpose of getting the minority report before the country in advance of the majority report.

Political Items

The first direct primary in New Hampshire was a victory for the insurgent element in the Republican party. Robert P. Bass was selected as Republican candidate for Governor. The issues have been the domination of the Boston & Maine Railroad, and Cannonism. Senator Gallinger was defeated as delegate to the State convention. The Democrats have nominated Clarence E. Carr for Governor.——The election in Vermont remains in September, as also does that in the State of Maine. The Republicans carried the State last week by a majority of nearly 18,000, which is less than the average majority of 21,000. There was some disaffection and the day was rainy. Lieut.-Gov. John A. Mead, of Rutland, was chosen Governor, and the usual Republican majority in the Legislature ensures the re-election of Carroll H. Page as United States Senator.——The Connecticut Democrats have nominated ex-Chief Justice Simeon E. Baldwin as Governor, the one negative vote of 600 delegates being cast by Prof. Willard C. Fisher, of Wesleyan University. In his address Judge Baldwin declared that "the people are tired of its sweet content in living on the canned reputation of what it was half a century ago." He severely criticised Mr. Roosevelt's desire to enlarge the power of the central Government. The platform adopted favors ratification of the income tax amendment, popular election of Senators, an elective public utilities commission, local self-government for counties, cities and towns, and the direct primary for nominations.——The Wisconsin Republican primary has gone overwhelmingly for La Follette as Senator. Of the three Republicans named

for Governor two were opposed to local option, and the cities gave them both a large plurality over the county option candidate.——In Michigan also the insurgents were far ahead of the regular Republican. Senator Burrows has been defeated for renomination by Congressman Charles E. Townsend. The candidate for Governor will be Chase A. Osborne.——The Republican convention of California met last week, having for its only duty to provide a platform and select the State committee, as the nomination had been made by the direct primary system. The insurgents were in full control and the platform endorses Taft and Roosevelt, favors the tariff commission, condemns the domination of corporations, declares for election of United States Senators by popular vote, approves the Pinchot system of conservation, and promises to submit to the voters a constitutional amendment allowing woman suffrage.——The election of delegates to construct a constitution for New Mexico has resulted in the choice of sixty-four Republicans and twenty-seven Democrats. The convention will meet at Santa Fé October 4.——The report has been spread in Panama that the United States would annex that country if the election for President should not be pleasing at Washington, and R. O. Marsh, Chargé d'Affaires at Panama, was reported in the papers as having spoken to that effect in an interview. Our State Department directed him to repudiate the alleged interview. Accordingly he visited the President of Panama and informed him that he regretted he had misunderstood his duty and offered his apology. This action has relieved the tension there.——United States Senator Lorimer has sent in a very short and curt letter of resignation from the Hamilton Club of Chicago, following the announcement of the refusal of Mr. Roosevelt to dine with him. It is not yet known whether his resignation will be accepted, as he has many friends in the club who are much displeased at the withdrawal of the invitation to him after it had been particularly prest on him.——Maine on Monday elected F. W. Plaisted Governor by about 9,000 majority, and three Democratic Congressmen. This is the first Democratic victory in thirty years.——The census of Boston shows a population of 670,585, an increase in ten years of 19.6 per cent. Boston still remains the fifth city in size in the Union, the order being New York, Chicago, Philadelphia, St. Louis and Boston.

The Panama Elections

"The United States has to overcome among the Latins of America a deeply rooted, inveterate distrust which two eminent Brazilian writers, Eduardo Prado and Oliveira Lima, have pointed out, and for which they have given reasons justifying its existence, the former in his book 'L'Illusion Americaine,' the latter in his recent article in the *Deutsche Revue.*" These words were recently written by the editor of the *Temps* in a leading article on Pan-Americanism, apropos of the late Congress (see the "Survey" of September 8):

> "The dismemberment of Mexico and the partition of Panama are historical facts of a nature to render the policy of the United States ever open to a suspicion of imperialism and of a spirit of conquest in the eyes of Latin America."

It was since the writing of these lines (presumably by M. André Tardieu) that the United States Chargé d'Affaires at Panama, as reported above, went out of his way to intensify Latin-American distrust in stating that if the young republic did not, at the coming election, choose a Vice-President agreeable to the United States, annexation would follow.

Socialists and Trade Unionists

Forty Socialistic meetings were lately held in various quarters of Berlin, at which resolutions were adopted strongly condemning the Kaiser for his "divine right" speech and demanding that the Reichstag strengthen the safeguards of the Constitution. Meantime Herr Ledebor, a member of the Reichstag, denounced Colonel Roosevelt before the International Socialist Convention, then in session at Copenhagen. There he severely arraigned the ex-President for his jingo tendencies and, specifically, for his Guildhall speech on the British rule in Egypt. He dubbed Colonel Roosevelt "a political drummer,"

invoking the shades of Washington and Franklin to condemn "this shameful, wicked son of America." Earlier, Keir Hardie, one of the British delegates, sensationally demanded a general international strike in the event of war breaking out between Great Britain and Germany, thus making hostilities impracticable. He was unsympathetically heard, and his resolution was referred to the International Socialist Bureau for discussion at the next congress. These sessions have been more than stormy. Violent altercations have occurred between British and German delegates. The correspondent of the Paris *Temps* writes that

"to trust only apearances, it would seem in effect that international socialism was only an organization on paper."

He finds, however, a growing preoccupation with actual problems, as opposed to pure theory.

The Papal Pronouncements

European journals are much taken up for the last few weeks with the utterances of the Vatican. Since the opening of the difficulty with Spain and the protest of the Vatican over the two Royal Orders, of which one interprets more liberally the Spanish law as to dissenting houses of worship, and the other relates to the limitation of unauthorized congregations of monks and nuns, the Pope has issued a condemnation of the *Sillon,* described by its founder on another page, and has also issued a *"motu proprio,"* devoted to the education of students for the priesthood. The letter of the Pope to cardinals and bishops on the *Sillon* begins with declaring that it began hopefully, but had wandered into dangerous paths. Its founders were young, enthusiastic, but untrained in historical science, philosophy and theology. It is due to seminarians and priests liable to be led astray that their errors should be condemned. Their first error, he says, is that they have undertaken to be their own guides while in a field that does not belong to them, but to the Church. He says:

"We must not at all forget in these times of intellectual and social anarchy, when everybody thinks himself a teacher or a legislator, that the city cannot be built except as God has built it; that society cannot be erected except as the Church lays the foundation and directs its construction; that civilization is not now to be invented, nor the new city built in the clouds. It has been built; it exists; it is the Christian civilization; it is the Catholic city."

The ideal of the *Sillon* is thus described:

"A political and social organization founded on the durable base of liberty and equality (to which will soon be added fraternity), and this they call democracy."

He says that the *Sillon* "places authority primarily in the people, from whom it is derived, and then in the rulers in a measure, so long as it continues to reside in them." But this doctrine, it says, is contrary to the traditional teaching of the Church and was formally condemned by Leo XIII. It sows erroneous teachings among Catholic youth, destructive of authority, liberty and obedience. It regards all inequality of conditions as an injustice, and so breeds jealousy and subverts social order. He says that the *Sillon* which began so well has been "captured by the modern enemies of the Church, and has become a branch in the great movement of apostacy everywhere organized for the establishment of a universal Church which will have no dogmas or hierarchy, no rule for the spirit, no bridle for the passions, but which, under the pretext of liberty" will establish a rule of oppression and violence. He therefore bids the members to give up their present organization, and to put themselves under the direction of their several bishops, to reorganize as "Catholic Sillonists" in their separate dioceses, with no national union, but separate units. The founder and head of the *Sillon,* M. Sangnier, submits. He says that with its new constitution he is only one man in its administration; that it is evidently forbidden and must be dissolved. In the journal he edits he will avoid with the greatest care anything against the teachings of the Church. He regrets that he has to suffer for the cause to which he has devoted his life, in his desire to give to the republic a moral inspiration and a Christian soul. He says:

"Henceforth I will cease to direct the movement for public education which, under the name of the Sillon, guides young Catholics for the civil life, and tends to develop in them the moral virtues and the Catholic faith."

But personally he will continue his service in speaking and propagating his po-

THE NEW KING OF A NEW KINGDOM.

Two weeks ago we alluded to the elevation of Prince Nicholas, of Montenegro, to the kingship. Following the festivities of the coronation, the Czar of Russia appointed the new King field-marshal, his Crown Prince major-general, and Prince Mirko lieutenant-general in the Russian army. The creation of the kingdom was coincidental with the reduction of the Korean Empire to the status of a Japanese province.

THE FIRST QUEEN OF MONTENEGRO.

The Queen of Montenegro is the mother of Queen Helena of Italy. The coronation at Cettinje took place on the day when Nicholas and his queen were celebrating their golden wedding. In the evening the new King's youthful production, "The Emperor of the Balkans," was performed on the stage of the Belgrade Theater. The streets of the village capital presented a most picturesque spectacle.

---

litical and social faith; for, he says, the words of the Pope cannot be interpreted as a prohibition to the Catholics to be republicans and democrats." Since this order from the Pope has been promulgated he has issued another document, in which he directs the bishops and directors of seminaries for priests to be more careful to protect their students against current errors, and forbids seminarians to read newspapers and periodicals, so that they may not be distracted from their studies. Every new professor and every parish priest or other ecclesiastic, before taking office, must make an oath of loyalty to Catholic discipline. As the text of this last order is not yet received, it may be that it is only those newspapers which are not obedient to the Church whose reading is forbidden.

The Coal Resources of Alaska

BY GEN. JAMES H. WILSON, LL.D.

[General Wilson graduated from West Point in 1860 and served thru the Civil War, reaching the grade of Major-General. He retired in 1870 to civil life, but returned for service in the Spanish War and in the capture of Peking. He is author of a number of volumes on the life and services of soldiers in the Civil War, and has had much experience as an engineer. At the request of Mr. Jacob H. Schiff, he lately visited Alaska to report on its resources. The following article is thus the result of personal investigation. Present discussions give special timeliness to this article.—EDITOR.]

WHILE much has been said of agriculture, it may be safely asserted that Alaska will never become a farming country. Suitable land is not only too scarce, but too widely scattered, and the growing season is too short or too cold for the profitable production of grain. Watery vegetables, such as potatoes, radishes, turnips, carrots, beets and salad plants, can probably be grown in sufficient quantities, tho but little has been done in that direction as yet. The native grasses will support some horses and cattle, but by far the largest part of the food required by the people will have to come from the "outside" for many years, if not always. This circumstance may, however, be regarded as favorable rather than unfavorable to the railroad, as it will tend to equalize incoming and outgoing traffic.

The timber of the country, while widely distributed along the southern coast, is generally undersized and unfit for cutting into building lumber. An unlimited number of telegraph poles and some pole cross-ties can be had for export, but it is safe to say there is no timber worth conserving anywhere in the interior. The Forest Reserves, from Cook Inlet to Controller Bay, and from Yakutat Bay to Dry Point, are fanciful if not absurd. Those in the Panhandle south of Skagway and Cape Spencer contain some merchantable timber, but the demand for it will be limited for many years to come. By far the larger part of the forest growth, where there is any such growth at all, is fit only for firewood, and when the small and widely distributed population is considered, it may well be admitted that there is an inexhaustible supply of that, such as it is, within reach of all, south of the Yukon.

The simple fact is that there is nothing in any part of Alaska, except the Panhandle, worth going after except gold, copper and coal. Its coastal waters are the paradise of cod, halibut and salmon, the catch of which amounts to about $10,000,000 per year, and finds a ready market in many countries of the world. While the catch seems to vary somewhat from year to year, there is reason to believe that the measures adopted by the national Government will maintain the supply indefinitely.

From the "Advance Chapter, Bulletin 442-A, Mineral Resources of Alaska," from the United States Geological Survey, it appears that by far the largest and most valuable resource of Alaska is found in its coal deposits. They cover an aggregate of about 12,667 square miles, with a practicable mining area of 1,202 square miles.

The coal consists of 83 square miles of high-grade anthracite, semi-anthracite and semi-bituminous, mostly on the southern or Pacific slope, together with 164 square miles of bituminous, 260 square miles of sub-bituminous, and 694 square miles of lignite.

The coal measures are widely distributed, both north of the Arctic Circle and in Southern Alaska, from the southeastern end of the Panhandle around the Gulf of Alaska, to Chignik Bay half way down the Alaskan peninsula. Smaller deposits of lignite or inferior coal are found also on the Yukon, the Tanana and their tributaries. Discoveries have been reported in various other regions, but their extent and value cannot be even approximated till the country fills up and becomes more developed.

For the purpose of this communication we may throw out all the measures except those of Matanuska, reached

from Seward, on Cook's Inlet, by a railroad of which 70 miles have been built, and those of the Bering River, which will be probably reached by a branch line leaving the Copper River and Northwestern Railroad near the head of the Copper River delta. These two fields, containing only high-class anthracite, semi-anthracite and bituminous coals, will be the easiest reached, for they are nearest to tidewater and to the markets of the Pacific Coast.

But as the railroad from Seward to the Matanuska field has already come to a standstill for lack of money, with but 70 of 184 miles completed, it seems more than probable that the Bering River field, only 25 miles northeast of Controller Bay, and about the same distance from the Copper River Railroad, will be the first to send out high-class coal in sufficient quantity to meet the demands of the market.

The surveyed parts of this field contain 22 square miles of anthracite and 285 square miles of semi-anthracite and semi-bituminous coal, the beds of which are from 3 to 25 feet thick, with local folds or swellings where they are much thicker. It should be noted that these beds trend northeast into the higher ranges, where there may be other extensive deposits, proving that the surveyed field is but a small fraction of the whole.

It is understood that claims of 160 acres each, under existing laws, have been located and filed, covering the entire field of 50 square miles, but owing to charges of collusion and fraud, which have been under Congressional investigation, none of these claims has "passed to entry." Altho the laws in force appear to have been fully complied with, all patents have been withheld by the President, and all operations for the exploitation of this coal field are in abeyance.

The so-called Cunningham claims, thirty-three in number, covering 5,280 acres, or 8.25 square miles, are included in this suspension. They are under an option of purchase by a company whose share capital is fixed at $500,000, half of which goes to Cunningham and his associates as purchase money, but is to be used in developing the coal, which is to be sold to the railroad company f. o. b. at $1.75 per ton. Should $250,000 not be sufficient to develop the mines, the purchasers are to lend $100,000 more for that purpose—and have the right to sell coal to outside purchasers at not less than $2.25 per ton.

Just what the conditions precedent are in this case or just what the relations between the parties in interest are to be hereafter, I cannot state, but it is greatly to be regretted that a *modus vivendi* could not be arranged which would protect the interests of all concerned, including the public, and permit this coal field to be opened without further delay. The *impasse* described above continues unbroken to this date, and all efforts to develop this coal field are at a standstill, with coal brought from British Columbia selling at $12 per ton at Cordova. While the quantity sold is not great, the price seems to be highly favorable to the production and sale of Bering River coal, not only to the railroads and steamships, but to all consumers as far south as Seattle.

Much has been said about the quantity of coal in this field and about its value in the ground as well as in the markets open to it. So animated has been the discussion that the experts connected with the Government surveys have felt called upon to give their estimates and to express their views upon all branches of the subject.

In the chapter above referred to, page 33 *et seq.*, is given a full discussion of this subject, together with an estimate of the minimum tonnage of the Alaska coal lands which have been surveyed, to wit:

	Short tons.
Anthracite	1,611,700,000
Semi-anthracite	517,000,000
Semi-bituminous	1,492,000,000
Total high grade	3,621,400,000
Bituminous	18,500,000
Sub-bituminous	4,060,300,000
Lignite	7,404,300,000
Total low grade	11,483,100,000
Grand total	15,104,500,000

These estimates cover only 1,202 square miles, which with reasonable certainty are underlain by workable coal beds.

If the same tonnage per acre prevails thruout the 12,667 square miles which

are mapped as coal fields, it will be seen that the minimum tonnage of the Alaska coal fields should be placed at 150,000,000,000, and perhaps at many times that amount. It is worthy of note that these figures indicate for Alaska a probable supply far in excess of Pennsylvania's original deposits, with this difference, that all of Pennsylvania's coal is of high grade, while over half of Alaska's is lignite.

In respect to the latter it is to be observed that improved methods of burning may ultimately make it worth as much per ton as coal of the higher grades.

With an almost illimitable amount of coal in the ground, it is a curious circumstance that less than 3,000 tons was mined last year in the whole of Alaska. This was due in part to the advances made in the production and use of petroleum from the California fields, which last year yielded 45,000,000 barrels, 40,000,000 of which were used for fuel in the neighboring States.

But by far the most serious handicap upon the production of coal in Alaska has been the policy of conservation under which the coal land laws have been suspended so completely that for the last decade to the present date not a single entry of coal land has gone to patent. Under this state of affairs both individuals and corporations are compelled to suspend all plans and operations for the development of Alaskan coal lands.

In order that the necessity of this course may be clearly understood it should be remembered that an Act of Congress, passed June 6, 1900, simply extended the coal land laws of the United States to Alaska, so that subdivided lands could be taken up; but as no lands had yet been surveyed in that Territory, none could be entered. This was remedied by the Act of April 28, 1904, which allowed special surveys to be made at the expense of the entryman, but this provision was defeated by the further proviso that "only tracts of 160 acres could be taken up." No recognition was given to the fact that effective developments were impossible on the basis of such small units. But withal, many claims were staked out and surveyed for patents, doubtless with the intention of grouping them into larger tracts after the patents had been issued. When this became known the conservationists raised the contention that all such combinations were illegal. Thereupon remedial legislation was sought and obtained, and the law of May 28, 1908, was enacted, permitting claims staked prior to November 12, 1906, to be consolidated into tracts of 2,560 acres. But one clause of this law invalidated the title if any corporation or individual at any future time should own any interest whatever in more than one tract. Manifestly titles under this act were regarded by all prudent men as far too insecure to warrant large investments for mining developments.

Meanwhile much clamor has been raised against all Alaska coal claimants, whether private or corporate, real or dummy, resident or non-resident, and whether the entries are made in person or by power of attorney, neither of which is inhibited by the strict letter of the law. Congress has investigated the whole subject, and pending the report of its committee, all entries are tied up and suspended, while both the railroads and private consumers are forced to buy their coal and petroleum from the outside. In face of the demand for cheaper coal, this condition of affairs is discreditable to the Government and injurious to the people.

As there has been practically no high-grade Alaskan coal mined and brought to market, there is but little information on which the cost of production can be estimated. The only way in which an approximation can be arrived at is based on the experience in the States. The condition in the Bering River coal field is on the whole more favorable than that in the Matanuska field, which, as before stated, is farther from tidewater.

In the coal fields of British Columbia and the State of Washington the cost of mining varies from $1.26 a ton to $2.16 It will, therefore, not be safe to place the cost of mining in the Bering River field at less than $2 per ton, tho experts have placed it with all overhead charges at from $1.93 to $1.96 a ton. Mr. Steven Birch, on the other hand, estimates the cost of mining at $1.75 per

ton, while Mr. Falcon Joslin places it at $2 per ton.

Mr. Finley estimates the cost of bituminous coal mining in Pennsylvania at $1.03 a ton and anthracite coal mining at from $1.60 a ton to $1.93 a ton for coal actually marketed.

Mr. Atkinson estimates the cost of mining bituminous coal in Western Kentucky at from 75 to 80 cents per ton. The average yearly increase of output has been about 10 per cent., and the average annual profit has been 10 cents per ton, for the last thirty-five years.

While both anthracite and bituminous coal are found in the Bering River field, it is obvious that there will be no such difference in the cost of mining as is found in Pennsylvania.

The cost of transportation is an important item, which from the Bering River field will depend largely upon the volume of coal to be moved. By the shortest line from the nearest point of the Copper River and Northwestern Railway to the coal fields the haul will be from 58 to 60 miles, and as the average cost of hauling bituminous coal in the States is about 7 mills per ton mile, with the Copper River road nearly level all the way, it may be safely assumed that if moved in considerable volume, 50 cents per ton will pay all proper charges and bring the entire cost of coal at tidewater within $2.50. As ocean freight can be had from Cordova to Seattle for 85 cents per ton, allowing 15 cents per ton for other charges, coal from this field ought to be delivered at the ports of Puget Sound for $3.50 per ton.

The Government report previously alluded to shows that in 1909 the average price of coal per ton at California ports was about $7.23, at Oregon ports $5.79, at Puget Sound ports about $4, at Alaska ports about $11.62, and at Hawaiian ports $7.85. Not counting Alaska or Hawaii, the average was $5.68, which is more than double the price on the Atlantic seaboard. If the foregoing figures are correct, it is easy to see that, while the development of the coal trade has not yet begun from Alaska, the Alaskan coals will be able to meet competition from the coals of other fields, not only for all Alaskan ports, but for the entire Western coast of North America.

While it is reasonably certain, as it has been explained, that $2.50 will cover all proper cost of mining, transporting and handling the coal from the mines to tidewater, including overhead charges, it is obvious that this cost will be increased proportionately, if the lands are sold, or the mining royalties are fixed, at unusual figures. In other words, if 50 cents per ton is charged for the value of the coal itself, the cost at tidewater would be $3 instead of $2.50 f. o. b.

And this brings us to the value of Alaskan coal lands. In considering this question we may for the present throw out the lignites, as they will not be used to any extent till the higher grade coals are exhausted. As it has been shown that the Bering River coals will reach tidewater with a much shorter haul than those from the Matanuska field, we may also leave the latter out of consideration.

From long experience and wide observation in the coal fields of the Middle West, I am enabled to say that mining rights, as well as the fee simple of eligibly situated land, have been bought and sold for hundreds of thousands of acres in West Virginia, Kentucky and Illinois at from $5 to $25 per acre, and that the royalties upon the coal itself in most cases amount to but the fraction of a cent. It may be safely said, as a general proposition, if a coal field cannot be made accessible by railroad or steamship, it has only a future or speculative value. Even in Pennsylvania, with the anthracite coal fields invaded by railroads from all directions, it is well known that the acquisition of a large body of land by one of the principal corporations resulted in the bankruptcy of that corporation because it could not pay interest upon the large aggregate of capital which the transaction tied up. No fact in economics is better known than that the present value of any natural product which is not to be utilized for a half century is practically *nil*, and all coal fields which are not to be utilized for any such period of years must be classed as having no monetary value. It has been well said that such coal fields must be classed simply as assets of mankind at large.

valuable only when those which are nearer at hand and better situated are exhausted. An excellent summary of the whole subject is found in the chapter heretofore mentioned, page 63 *et seq.*, in which the writer roughly estimates the accessible coal of the Bering field as having a value of only a half cent a ton in the ground.

It may be added that while exception has been taken to this valuation, principally by those who think of the value of coal in terms of its retail price to the consumer, to such persons the valuation of half a cent appears as merely another way to express the thought that such lands have no value at all. I quote the language of the writer as follows:

"This is, however, far from being the case, for half a cent a ton is higher than the value of most of the Eastern coal lands, in spite of the fact that they are close to the centers of population and hence to the market. In fact, in some of the well-developed Eastern fields good bituminous coal has recently sold for as low as one-thirteenth of a cent per ton in the ground.

"If this ton value is transposed to a basis of so much per acre, it will admit more readily of comparison. Few tonnage estimates have been made on the Bering River and Matanuska coal fields, but the best information available indicates that these lands will yield between 10,000 and 100,000 tons to the acre. This means that some of the land will yield only 10,000 tons to the acre; others may yield as much as 100,000 tons. Multiplying this acre tonnage by half a cent (the estimated value of the coal in the ground), indicates that these lands are worth from $50 to $500 per acre. Such values are far above the average of the bituminous coal lands in the United States. Altho the lands containing the coking coals of Pennsylvania have sold for $800 to $2,000 an acre [for immediate use], in the other Appalachian fields the average values are $10 to $386, in the central fields $10 to $200, and in the Rocky Mountain fields $10 to $500. It is evident, therefore, that the valuation of a half a cent a ton for coal in the ground, far from being too low, is higher than the average in the States and it is at least an open question whether purchasers at this rate can be found."

In support of the foregoing conclusions, I may add that 50,000 acres in the best Illinois coal field and 100,000 acres in the best Kentucky coal field can now be had at $25 per acre.

The report from which I have just quoted gives an estimate of the present demand for Alaskan coal in the following tabulated statement:

Without Competition.	Tons.
Local railways	50,000
Local towns	20,000
Local mines	10,000
Local smelters	10,000
Local and southbound steamers	30,000
	120,000
Under Competition Strongly Favoring Alaska Coal.	
United States Navy	150,000
Blacksmith coal	25,000
Anthracite	50,000
Coking coal (estimated at one-half of that now used)	100,000
Northbound steamers to Alaska Pacific ports	25,000
	350,000
Under Competitive Conditions About Even.	
Seward Peninsula, Alaska	25,000
Coking coal (one-half now used)	100,000
Steamers to Bering Sea	25,000
Trans-Pacific steamers	250,000
California ports	600,000
	1,000,000
Approximate total of coal now required per year	1,470,000

From these estimates it is probable that there is at present a market for something like a half million tons of Alaskan coal which would have little if any competition, while for say a million tons more there is a market beyond, in which Alaskan coal would have at least an equal chance with the coal from other fields.

When it is remembered that the coals included in the two classes just enumerated show less than a third of the total coal consumed on the Pacific Coast, it becomes strikingly evident that the outlook for Alaskan coal, if mined and handled with sufficient capital, must be regarded as most favorable.

In view of this statement, which is fully confirmed by my own observations, it must be concluded that the policy of conservation, with reference to Alaska at least, is a most unfortunate one, not only for those who are interested in developing that country, but for the people of the United States at large.

Surely if private individuals owned Alaska they would feel fully justified not only in giving the Copper River & Northwestern Railroad all the coal it

could use free of cost, but in offering it every inducement to extend its lines to the Bering River coal fields as well as to the copper mines and important centers of development northward, and to bring coal in such quantities from the coal fields as fully to supply both the local and competitive markets.

WILMINGTON, DEL.

Owning an Automobile

[We herewith print some letters in response to our recent request for personal experiences in automobile keeping. They represent in a general way, we believe, all the letters received. —EDITOR.]

My car is a four-cylinder, 16-horse-power runabout (Ford Model R), seating two people; could as well carry three or four by addition of rumble seat, power being ample. It was purchased in 1907, and the record below is from November 1, 1908, to October 30, 1909—in its second and third year of use. The record is accurate.

General overhauling and replacement of worn parts at beginning of year	$52.00
Repainting and improvements to body	42.00
Gasoline	24.55
Lubricants	4.80
Tires, including repairs	41.75
Repairs at shop	16.60
Replacement of worn parts	9.65
Batteries and recharging	4.20
New accessories and tools	7.95
Insurance	10.00
License	5.00
Taxes	7.00
Miscellaneous expense	9.00
Total for the year	$234.50
Total per month	19.54

Mileage, 3,550 miles; cost per mile for two passengers, 6⅔ cents.

No allowance is made here for depreciation. Most of the depreciation of an automobile occurs the first year, yes, even the first month, when it becomes "second-hand." After that, if well cared for, it loses value but slowly. As an offset to depreciation is the considerable sum in railway and car fares saved, and the amount that would have been spent in some other mode of recreation. For comparison, it costs, in the suburb in which I live, $25 to $30 a month to keep a single horse and surrey.

2. I average half to three-fourths hour in cleaning and adjusting after a longer trip of twenty-five to fifty miles. Nothing at all after short ride, or when car is idle, as in winter or bad weather.

3. This car looks almost as well and actually runs better now, at the end of its third year and 11,000 miles of travel, than during the first six months. It will doubtless continue to give service for years yet.

4. I perceive no nervous strain from operating the auto, and my journeyings in it are no more overshadowed by fear of accident than when in railway or street car. On the other hand, I have received from this delightful out door exercise much good health and happiness—but you do not ask about that.

5. My hours of leisure are the same now as in previous years; the automobile has made no difference. JAMES R. BETTIS.

ST. LOUIS, MO.

1. Car. Maxwell Touring 1909.

Cost, with full equipment		$2,100.00
Cash value, probably		800.00
Depreciation		$1,300.00
Maintenance April 23, '09, to Dec. 24, '09.		$362.00
Tires	$255.00	
Repairs	72.00	
Gasoline	60.00	
Insurance and supplies	75.00	
	$362.00	
Ran, per speedometer	6588.8 miles	
Maintenance, March 22, '10, to Aug. 1, '10.		$258.00
Overhauling	$88.55	
Painting	35.00	
All other expenses, except insurance	134.48	
	$258.03	
Ran, per speedometer	2740.4 miles	

2. Do not employ professional chauffeur. Car is run by a "general utility" man. In my opinion he does not give as much time to actual care of the car as would the ordinary stableman to two horses with incidental carriages and harnesses.

3. Car has not yet gone to the junk heap.

4. Not conscious of any nervous wear and tear.

5. Car saves time, does not cause me to waste it. W. P. W.

OHIO.

My automobile, an $1,800, two-seated, 4-cylinder, 20-horse-power car, for which I paid $1,650 cash, was delivered June 21, 1905, five years and two months ago. During these sixty-two months the car has seen thirty-two months of actual service, since I never use it in winter. Estimating the number of miles the car has traveled from the beginning by the number of miles it has traveled since the purchase of my speedometer, I can safely say the car has gone 12,500 miles.

These 12,500 miles and thirty-two months of usage represent a cash outlay of $850, which includes everything but storage and time spent in cleaning the car and keeping it in service-

able condition. No charge is made for these since I have my own garage and my man and I do not neglect other work to look after the car. I do all my own driving. If during these sixty-two months my car had been in one of the public garages and had been given the care my man and I have given it, my expense would have been increased by $650. This is a careful estimate based on the charges of the garage which I patronize for the needs of the car. Thus the car might have cost me during sixty-two months $1,500.

An item that possibly ought to be considered is interest, which at the rate of 5 per cent. and based on the yearly invoice value of the car, amounts to $250. Putting a value of $500 on my car today, which is very conservative, let me figure both actual and possible expense.

Cost of car	$1,650
Expenses	850
	$2,500
Actual value of car	500
Cost of running car 62 months	$2,000

Adding to the $2,000 the $650 of possible garage expense and the $250 interest, we have $2,900. If we take the first figure, $2,000, the cost per mile has been 16 cents and per month, $62. The second figure, $2,900, makes the cost 23 cents and $90 respectively.

Let me next briefly consider the five points given in the editorial.

1. This all depends on the owner, the driver and the car.

2. Ordinarily, from two to four hours' work ought to be sufficient to keep an average-sized car in good condition for each hundred miles. Of course breaks or accidents demand more time.

3. With ordinary care I believe a car ought to run from 25,000 to 75,000 miles.

4. There is no wear and tear on nerves unless one speeds. And speeding causes most of the breakdowns.

5. I take possibly the same time from productive effort since owning a car that I did when we had horses.

In conclusion, let me say that my expenses have not exceeded my expectations. My automobile experience has been worth to me $2,000 or even $2,900, and I shall not hesitate to set aside this amount for the next five years. E. I. ANTRIM.

VAN WERT, OHIO.

In response to your request for actual figures from experience in driving autos I will give the following:

Country doctor, average roads, eight years auto driving, three cars, gasoline.

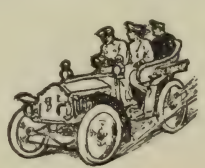
First car, maintenance and repairs first year, 25 per cent. of its cost; second year, 35 per cent.; third year, little used, repairs 20 per cent., and sold it for 20 per cent. of cost. Running expenses, 15 cents a mile (about).

Second car. Maintenance and repairs first year, 20 per cent. of cost; second year, 25 per cent.; third year, 30 per cent., and sold it for 20 per cent. Running costs, about 10 cents per mile; total mileage, 28,900.

Third car. Repairs and maintenance first year, 10 per cent. of cost; second year, 25 per cent., now running well and would sell for 30 per cent. of cost. Mileage, 24,600. Cost of running, gasoline, oils, cleaning, etc., about 8 cents per mile. Care for car myself, except occasional rough work. Average time for its care not less than one hour per day. "Nerve strain" variable, depending on urgency and if car is balky or not. Car saves me one-fourth of my working day by increased speed over horses and my mileage has increased almost half since driving one. My estimate is that in actual cost including interest on investment, depreciation and repairs with running expenses, a car will cost four times that of teams and buggy for the same amount of work in the long run. There are times, however, when the ability to cover twenty-five miles of road in an hour is worth all it costs and more, but it costs.

If one can comfortably afford the luxury, and if one does not expect too much of it, the auto is a fine thing. It has its troubles. If in his business the time actually saved is worth the cost and expense to the owner then it is a necessity to him, but to others it is a delusion and a snare. DOCTOR.

SANTA CRUZ, CAL.



I paid $1,250 for a "Jackson"; have run it just sixteen (16) months. This is a good country for autoing, roads fairly good. Country level. I drive on an average not more than twenty (20) miles a day, and from 12 to 15 miles per hour. Total cost for the 16 months just $500, or $31.25 per month, or a little over $1 per day. I calculate that my machine will last, with careful driving, about three (3) years. J. E. MCCOMAS.

POMONA, CAL.

I wanted to keep a record of the cost after purchase, but got scared—and quit. Furthermore, I was mad—not at the machine—but at my wife, who predicted these very facts—and I was piqued at the accuracy of her prophecy.

It is not so much the upkeep of the machine, as it is multiplied trips, extra travel, time, entertainment of friends in treats, trips, and troubles from accidents, that run up the cost of this luxury. STANLEY L. KREBS.

The Imperial University of Peking

BY CHARLES F. THWING, LL.D.

[This is the third article by the president of Western Reserve University and Adelbert College on the great Oriental universities. The University of Cairo was discussed in our issue of June 23, and the University of Calcutta on July 7. The concluding article on the University of Tokio will follow next month.—EDITOR.]

THE Imperial University of Peking is neither an ideal nor an achievement. It is not even a growth. It is not a well-ordered plan inspired by a lofty purpose, nor a high purpose supported by a well-ordered plan. An achievement no one would presume to call it. Nor as a growth even should it be interpreted, for growth implies laws and harmonious relationships. It is rather a process, a becoming, a becoming of some sort, tho of what sort it is hard to say. The indefiniteness of the character of the Imperial University of Peking is in part at least a reflection of the nondescript character of Chinese civilization and government. A singular union of absolutism and liberty, of aristocracy and fraternity, of conservatism and of progress is Chinese civilization, and the Chinese Imperial University.

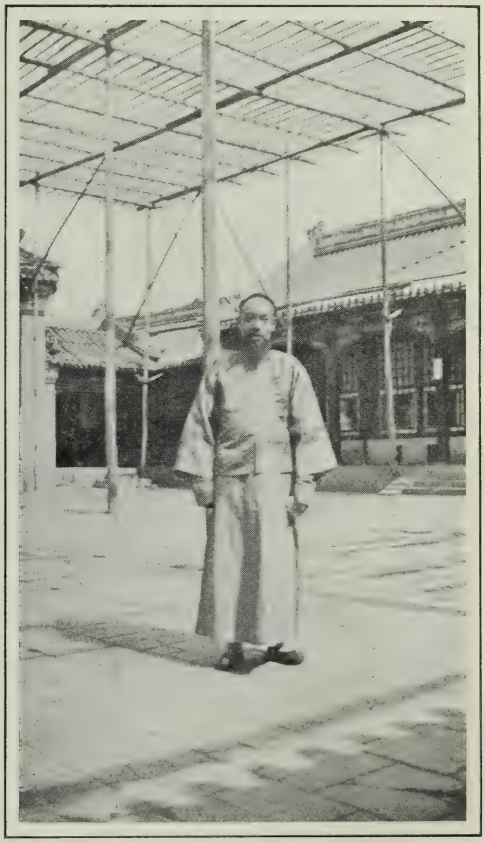
Closely hugging the gray walls of the yellow-tiled Forbidden City lie the low, rambling buildings of the Imperial University of Peking. The verb "lie" more accurately describes the condition than it would most university structures. For, like Chinese houses, these buildings are usually of one story, seldom of more than two, built about small, square courts which open upon each other thru broad gateways. Within these gray brick walls are found simple rooms for the giving and hearing of lectures, provided with desks and benches, and also rooms fitted up as elementary laboratories of science. Museums, too, of a simple character are here established, and a library, filled up largely with the soft, thin, many-leaved volumes of the Chinese classics. These buildings, like the older buildings of so many German universities, were not made for university purposes, but were built as palaces, simple and unostentatious. As I wandered thru these stone-paved courts and

DR. W. A. P. MARTIN,
Who reorganized the University of Pekin.

along these cloisters on a golden October day, and met the blue-gowned students walking in small companies or singly, I was borne over seas to the universities on the Isis and the Cam. How unlike the gardens and the green, velvety quadrangle and ivy-covered towers of Oxford and Cambridge were the simple stone floors, the courts and the low brick walls of the Chinese university! Yet somehow the general impression and impressiveness of scholarly leisure and the dignified pursuit of learning were the same.

The domestic or household character of these buildings is historically significant of the form of Chinese education. For Chinese education has never consisted of many youths summoned into great halls to receive instruction from many teachers. Rather, Chinese education approaches closely to the type embodied in Garfield's well-hewn remark of Mark Hopkins and the log. It has been education individual, personal, domestic; the student seeking the teacher and listening in rapt attention to the interpretations of truth which the teacher gives.

The student, the teacher, the teaching, these in Peking, as in every other university, are the supreme trinity.



The Chinese student, physically, is not robust. He has the scholar's stoop and the scholar's paleness of complexion. To him, as to his nation, tuberculosis is a grave peril—tuberculosis affecting other organs as well as the lungs. His life is not wholesome. He sleeps in a small room, unventilated, and probably with two or three chums. He exercises little. His food is not of that nutritious type which most American students eat. Athletic sports he indulges in, but not largely. Association football he plays, and fairly well. As I write I hold in my left hand a program of intercollegiate sports which includes a 100-yard dash, the high jump, the pole vault, 220-yard run and the broad jump, as well as a football game.

The mind of the student is by nature better than his body. The Chinese mind is, in its original constitution, one of fairly good strength and fiber, but its original forces have been impaired by centuries of unreasoning education and of enslaving customs. It is a mind given to forms, steeped in formalism, subjected to precedents, devoid of originality, as the will is of initiative, absorbing fact and fable and fancy, as well as truth, thru vast energy and retentive memory. It is a mind of the medieval type, mighty in memory, as it is strong in acquisition. It is a mind literary, not scientific. For two thousand years the Chinese have not studied science. The student has small liking for mathematics; he prefers chemistry to physics; and his liking for physics is measured by the small amount of mathematics included—a condition, perhaps, which is characteristic of other minds than the Chinese. This mind is not, moreover, an accurate mind. It is, like the Chinese mechanic, content with being and with doing things "about right." It is, be it said, a laborious mind. Thirty or more lectures a week the student attends and

takes notes of. The six days of each week, without any Saturday whole or half holiday, are filled with lectures; and the evenings and Sunday are the only time left for reading, studying notes or reflection. The learning and the understanding and the physical writing of his dreadful language is a form of his education to which he must give much time and heedfulness. A bottomless pit is this language, for its characters seem endless; and a wide pit it is, for its characters can be combined with each other, like German words, to represent new ideas and conceptions. If a Romanized Mandarin script could be adopted, Chinese education would go forward far less slowly. The Chinese mind would rejoice and sing in its consequent freedom and growth. Most orderly is the student, perhaps too orderly; polite and reverent toward his teacher he always is. The ordinary Chinese man has in his veins tiger's blood; but within university courts neither quarrelsomeness nor nonsense of any sort emerges. The Chinese student is ambitious. He desires personal advancement. Society is individualistic. Its members desire to become famous. There are two words which represent what the Chinese nation, as a nation, wish above all else to embody. They are rich and strong; rich in material goods; strong in martial power. The individual is sympathetic with the national concept. His ambition leads him to aspire for influential place. Material wealth and governmental position are at once symbols, means, result of such a place. Such ambition has both its narrow and its broad side. Said a Chinese student to me, burning with desire to serve his people: "It makes one feel good and thankful to be a Chinaman." The better side of this ambitiousness is, I believe, becoming dominant.

The Chinese student, like his people, is loyal to China. He believes in China for the Chinese. He also believes in the Chinese for China. He believes in Western learning less on the whole, tho still much, for the sake of the worth of the Western learning than for the sake of the development of China. He would have his nation build railroads, introduce water systems into the great cities, make the telegraph cheap and the telephone common, wipe out the universal grafting, reform taxation, create a constitution, transform the government into a democracy, as society is already democratic; but he would have all of these methods adopted and these results effected in order to save China unto herself. He would have China become international in order that she may become yet more national. He is both a patriot and an individualist.

Under these conditions the teachers in the Imperial University of Peking and its affiliated schools are gathered from all parts of the world. England, Germany, Japan, the United States, provide the larger number of foreigners. These men are called to teach subjects which are foreign to the Chinese mind. The Chinese have a belief that topics foreign to them can best be taught by foreign teachers, as they similarly believe that their official foreign office should 'be

PROFESSOR CHENG,
Department of Agriculture.

built in a foreign style of architecture. English is therefore taught by those who speak English, German by those who speak German, and the sciences and medieval history, also foreign, by foreigners. Be it said that the Chinese teachers are held in higher honor than the foreign, tho the salary of the native is only one-sixth as great. The number of foreign teachers is today smaller than a decade ago, when the great Martin gathered about himself as the head of the university a noble faculty. The rising of 1900 scattered the staff; one, James, was killed. The insurrection put an end to the work which Dr. Martin had in his enthusiasm and wisdom inaugurated.

The range of the course of study committed to the teachers and students is not large. There is not in Northern China any institution which takes its students beyond the point of learning or of culture represented by the close of the Sophomore year in the better American college. Most of the subjects, except Chinese language and literature, are elementary, and are presented in an elementary way. In respect to the advancement in learning, the Imperial University of Peking is in no sense a university. The general order and relationships of the courses of study are, however, quite unlike the order and relationships maintained in the American college or English university. This result arises in large part from the exclusion of Latin and Greek. I have heard a lecture on international law given to a Freshman class; and, what is more, the subject seemed to be understood and appreciated. The wealth of the Chinese classics, which the Chinese mind has stored up for purposes of comparison, interpretation, to be used in writing and in talk is enormous. In other subjects the instruction is more elementary. The character of this elementary instruction is indicated by examination papers which were recently set in the university. These examinations are of the modern type. They represent the type usually now prescribed in the higher institutions. The old examination system upon Confucianism, of unnumbered centuries, has passed away. Whether it has passed away never to be recalled is one of those problems which is as uncertain as many other problems touching the future of China.

MUSEUM.

SCHOOL OF LANGUAGES DORMITORY.

The following questions were submitted to a first-year class in history:

"1. What lands were recovered to the Roman Empire under Justinian?
2. What did Justinian do for the Roman law?
3. What were the calamities of his reign?
4. What was the condition of Arabia before the time of Mohammed?
5. Give the chief events in Mohammed's life.
6. What was the Hegira?
7. What lands did the Mohammedans conquer in the first century after the death of Mohammed?
8. Who defeated the Mohammedans at the battle of Tours?"

The following questions were submitted in jurisprudence and history:

"1. The word 'law' being used to denote things so entirely different as *law of gravitation* and *law of England,* explain the two principal meanings of the word and give Holland's definition of the proper sense of the term as used in the science of jurisprudence.
2. Give a short account, with dates, of the voyages and discoveries of Columbus, Vasco de Gama, and Magellan. Who was Amerigo Vespucci? What portions of the American continent have been named after Columbus, and serve to perpetuate his fame?
3. Give a short sketch of the Protestant Reformation and of the counter reform initiated by the Council of Trent.
4. State what you know of the Treaty of Westphalia, and compare it with the great settlement made in 1815 after the conclusion of the Napoleonic wars."

The following questions were submitted in international law in September, 1907:

"1. Distinguish military occupation from conquest. Compare the law on this subject at the time of Frederick the Great with the rules of The Hague Conference of 1899.
2. Give a short history of the Republic of Genoa during the Napoleonic wars.
3. What is the *right of search?* Does it exist in time of peace? Distinguish *ransom* from *salvage.* Explain the phrases: *free ships, free goods, enemy ships, enemy goods,* and state whether they correctly express the international practice of the present day.
4. Trace the history of the movement in favor of exempting private property at sea from capture, and bring your answer up to date by stating what nations supported, and what nations opposed, the movement at the second Peace Conference of The Hague, which met on July 20, 1907."

Perhaps the least worthy instruction given in the higher education in China is found in medicine. The medievalism of China receives its most impressive illustration in the character of this teaching. A single fact is profoundly and harrowingly significant. It is the fact that never in this vast and ancient empire has the human body been dissected for scientific purposes. What more could be said! The reason is manifold. But one cause lies in the superstition that

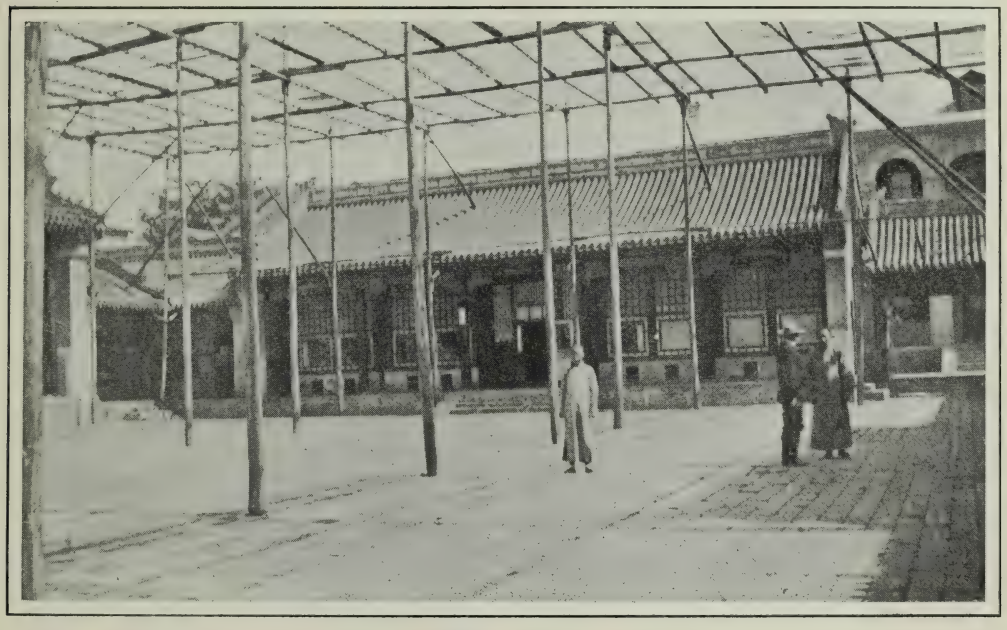
CHEMICAL LABORATORY.

to those who dissect a human body the disembodied spirit might return to afflict and to torture. The medicine which is taught is largely Chinese medicine, and Chinese medicine is a compound of superstitions. It must be confest that the few attempts made to teach Western medicine have not been conceived in a spirit of scientific or personal honesty. A friend of mine was elected professor in the Imperial University. He was called to teach the three subjects of English, mathematics and Western medicine. He was told that while he was engaged in his room in teaching Western medicine, in the room adjoining a Chinese professor would be teaching Chinese medicine. While he himself was trying to teach physiology, the Chinese associate would be declaring that man has nine pulses and two hearts. I asked my friend, "Why did they want you to teach Western medicine?" "Show," was his laconic answer. He declined the chair.

One great influence is now emerging to cause the Imperial University of Peking to enlarge and improve its course of instruction. The colleges and schools established by the various mission boards represent honesty in intention, accuracy, and a good degree of intellectual attainment. Speaking of one missionary institution, Sir Robert Hart said: "It is the best thing of its kind in China." The recently inaugurated Union Medical College—its beautiful building standing near the noble arch marking the spot where Von Kettler fell—has in its first years greatly promoted the cause of medical tuition. Already has the Imperial Board of Education given especial advantages to this school.

As one considers the Imperial University of Peking and its relation to the cause of the higher education in China, several needs emerge in peculiar significance.

First, the Imperial Board of Education, which controls educational affairs thruout the empire, should maintain a consistent policy regarding the cause of higher education. Policies of all sorts change rapidly in China. Most things in the Middle Kingdom are tortuous. Old institutions are continued under new names. New officers like to symbolize their advent and to emphasize the importance of their work by impressive changes. Changes which do not affect fundamental principles, but which do affect administrative methods, are frequently made. Such changes interrupt the progress of the cause of education. The highest ideals of one year should be made to obtain consistently and constantly.



Second, a higher appreciation of the worth of learning which is not Chinese should be made. This need is symptomatic of other fields than the educational. China still believes that she is the giant of the world, and that other nations are dwarfs. She needs to be taught humility—intellectual, ethical, religious. This lesson she is learning, but constant reiteration of the teaching is essential. Every Chinese student return

ing from England or Germany or America helps to inculcate the lesson, as does also every mission college established in Shanghai or Hankow.

Third, the need of honesty is primary. Chinese education should learn the lesson of accepting and of presenting things as they are. This need is fundamental. Politically, China is a nation of grafters. The spirit which prompts men to wear spectacles, sign of the scholar, who have no need of spectacles, is significant of general conditions. Education should and does teach ethical honesty.

Fourth, there is need of especial instruction in at least four subjects:

First, in the sciences, and in particular in training engineers. China has a few, and only a few, good native engineers. These men were largely trained abroad. The demand for good engineers is tremendous, and the opportunity of rendering effective service rich. Second, there is also need of special training in psychology. A proper psychology would free the mind from its network of unreasoning superstition. Confucius has dominated, and many would say enslaved, the Chinese mind for more than two thousand years. With all the noble results which can be justly attributed to him, it may be said that his books should occupy a less absorbing place in the Chinese curriculum. The books of Ladd, of James, of Sully, are now more important to Chinese than the books of Confucius. Third, there is also great need of instruction in medicine of all branches; and fourth, the need of teaching in the history of education, and in the history of education in its relation to morals and religion, is urgent. To this need the Chinese mind is awakening. In an examination held in Peking in October, 1907, candidates were asked: "To name all the oldest educational books that you know in the world." And also, "What have you to say about the Bible as a teaching book?" "Are not the Confucian ethics sufficient for teaching?" In this same examination was also put this general and searching question: "In the evidence of character, what have you to say as to (a) punishments, (b) moral precepts, (c) then what forms of instruction are really operative on the life and character of a pupil?" These four needs are of especial significance in the present crisis.

COURT FOUR.
Physics Laboratory in background. Foreign Recitation Hall thru gateway at right.

The higher education is always sym-

pathetic with the civilization of which it is a part. The higher education is the product of civilization, and in turn it helps to create civilization. The educational needs of China are also in kind the needs of Chinese civilization itself. If the Chinese people, with or without the help of other nations, can fill these needs, the civilization—mixture of civilization, semi-civilization and barbarism—which the people represent and embody, will become enlarged, ennobled and enriched. In such an enlargement the University of Peking will prove to be a wise and progressive leader.

CLEVELAND, OHIO.

The Saturday Afternoon Town

BY RUBE BOROUGH

IT'S a Saturday afternoon. You are imprest with the transformation!

Yesterday you stood here at the end of a paved Main street and you were oppress with the drowsiness of the scene before you. Half way down the block you saw the country editor turning leisurely into his print shop; over there, tilted back in their chairs in front of the corner cigar store, three or four idlers whose subject of conversation was probably the weather; farther on, a half dozen farmers, some entering, some leaving a hardware and implement store, whither they had gone for machine repairs; close at hand, a solitary woman untieing her horse after a brief shopping tour in town. Up this side street you saw three teams, lumber wagons behind them, tied to heavy tamarack posts in the shade of a row of maples. For the rest, there was no indication of activity, past, present and future. Your most distinct impression was that the sun was beating down viciously on the brick pavement and the cement sidewalks.

The listless indolence of the scene saturated your mind, but you nevertheless couldn't escape the inquiry that environment forced in upon you: "Why these two quarter-mile rows of buildings, these glaring red brick and ramshackle wooden structures?"

Today you understand. You are in the midst of the whirl of the periodic week-end activity. Main street on both sides is lined its entire length with teams. The almost continuous rows of hitching posts connected with iron railings are on duty today after their six days' rest. And the sidewalks—yesterday you thought the "Broadways" the only thorofares in America ever blocked by crowds. But you reconsider today after you have elbowed your way past Burnam's Emporium, after you have ducked and dodged around groups of farmers and their wives and children for three whole blocks.

You pause for a moment in front of several of the stores, and in each instance you note the eager activity of the affable proprietor. He may be "doing up" groceries or taking down from the shelves bolts of gingham or calico while he chats with his customer. But you feel sure he has an eye on those two or three clerks. And they hustle!

"It's a great little Saturday Afternoon Town," enthusiastically exclaims the traveling salesman with whom you happen to fall in. "This afternoon's hay time for the merchants here. It wouldn't be safe for me to try to talk to one of them. For they won't have a moment of leisure until 9 or 10 o'clock tonight. I'll wager you that more goods will leave their store shelves and repository floors this afternoon than were sold during all the rest of the week. And it's the same much of the year thru. I "make" a number of these small towns and some of them are mighty prosperous. They draw their wealth entirely from the trade with the farmers in their vicinities."

This, then, is a Saturday Afternoon Town—a center of population that owes its existence primarily to the week-end

buying activity of the tillers of the soil.

The particular center we are considering happens to have a population of 1,500, but the type may be smaller or larger. It may be a mere village at the country cross roads or it may number within its limits as many as 8,000 souls. It is not size, but function, that determines its class. You may go anywhere you like in this town and you will find few, if any, factories in operation. For the town has no industrial character; it is not a link in the process of production. It is a link—and the final one—in the process of distribution. Thru it the vast rural population, still comprising over half of the nation's total, draws its sustenance.

Economically and socially the Saturday Afternoon Town is void of effective contrasts. Here are no dazzling accumulations of wealth on the one hand and nothing of the wretchedness of extreme poverty on the other hand. Here are no clearly defined economic classes nor sharp social antagonisms.

A "revolutionary" Socialist hailing from Chicago came to the Saturday Afternoon Town and found employment as a cigarmaker in one of the very small shops. Intent upon "the political organization of the working class," he mounted a soap box upon the corner and began an extended harangue upon the modern exploitation of labor. For two hours he spouted, finally succeeding in attaining to a fury of eloquence. He closed his appeal with the exhortation of one Karl Marx:

"Workingmen of the world, unite. You have nothing to lose but your chains. You have a world to gain."

He made his speech on a Saturday night, starting in an hour before store-closing time. And he finally succeeded in attracting the attention of about fifty persons, some of them in overalls, who heard him thru to the end. They regarded him somewhat suspiciously, admiringly wondering, nevertheless, at his intermingled flow of polysyllabic English and utterly foreign shop slang.

Did they crowd around the speaker at his final climax to congratulate him? Not much; he hadn't told their story. His remarks might have been eagerly accepted and vociferously applauded by an audience of workingmen in the city, where the boss was rich and never soiled his hands or clothing by physical toil; where life for employer and employed ran in separate channels. But here the audience consisted of farmers and farmhands who had labored together under the blazing summer suns in hay and harvest fields; a blacksmith or two and his helpers, who a few hours before had bent over the same anvil as they forged the irons on some job of wagon repairing; the town's two rival implement men and their "road" men; and a number of store clerks, who up to a few minutes ago had stood behind the same counters with the proprietors "waiting on the trade." In this small town ownership of property did not mean exemption from labor, not even from actual physical toil, and there was consequently no prevalent sentiment against it.

And here, too, were no hard and fast lines of social cleavage. For social exclusiveness is impossible to the small-town business man.

"For the past year my wife and I have wanted an automobile," confessed a successful small-town merchant to me not long ago. "I am one of perhaps a half dozen men in the town who can really afford to have one. And yet I hesitate to make the purchase. I know that people here are more or less prejudiced against the machine. To them it stands as a symbol of social exclusiveness, as the special insignia of the snobbish wealth and leisure of the nation. And I am afraid I should get the reputation of feeling just a little better than other people if I went to driving a car around. I'm afraid I'd lose trade by it. I think I'll let my competitor buy first."

Invariably the more successful among the retailers is the "good mixer," the man of the easy democracy of manners. He is the sort of fellow who has the reputation of being "nice to everybody." And you often hear it said of him: "He's always the same, pleasant and common, and speaks to you, no matter when or where you find him." He may "go regularly" to the best attended church in the town, or, if not, he probably "belongs" to the lodges. At one place or the other he labors faithfully to keep on good terms with as many peo-

ple, prospective customers, as he possibly can.

Morally, the typical Saturday Afternoon Town tends to conform to the ideas of the farming community in which it is located. Economically dependent upon the territory immediately surrounding it, it comes to reflect faithfully, particularly in its civic life, the sentiments of the tillers of the soil. Thus, last year in Ohio, when the question of local prohibition of the liquor traffic was an issue in the elections of the small towns and villages of the State, arguments that carried great weight were those relating to the effect of the change upon the farmer. The farmer will, or the farmer won't, trade in a "dry" town—this sort of talk was common before the elections. So much importance was attached to this phase of the discussion that the "drys" at Loudenville, Ohio, circulated prohibition petitions among the farmers within trading distance of the town, securing several hundred signatures, which, together with the text of the petitions, were published shortly before the election. The "drys" themselves regarded the publication of these signed petitions as the most effective stroke in their successful campaign and to it largely attributed their victory. For it left no doubt in the minds of the town people that the town's regular week-end visitors wanted the saloons closed.

Limited today to a career of trade, many of the small towns and villages of the nation once boasted a vigorous industrial life. I talked with a lifelong resident of M——, a typical trade center of 5,000 population, and he unfolded before me a most interesting town history of past industrial activity on a small scale. Twenty years ago the town recorded a population of 8,000. It numbered among its industries at that time a casket factory, a furniture factory, a windmill factory, a farm wagon factory, a hoe handle factory, and a mill for crushing stone. And the repair shops of one of the State's big railroad lines were located there. Since that time the railroad shops have been moved to a hustling manufacturing center 40 miles away. "Hard times" have put the wagon and windmill factories out of business. The casket and furniture industries sold out, according to popular report, to the "trust," while exhaustion of the supply of raw material—stone and timber, once plentiful about this town—has wiped out the hoe handle and stone crushing industries.

This fact, then, is worthy of emphasis —the small centers of population no longer occupy a position of importance in the industrial world. They no longer enter the nation's markets as aggressive competitors. The sum total of their industrial outputs is so small when compared to the outputs of the heavily capitalized industries of the cities as to be properly regarded as negligible. The efficiently organized sales forces of the big city's giant corporations seize upon the more profitable markets of the nation. The small manufacturer of the small town worries along, frugally existing on the small profits of the left-over territory.

For this reason capital is slow to invest in small manufacturing enterprises. A millionaire who made his fortune in the patent medicine business and who lives in a typical Saturday Afternoon Town has within the last ten years, out of a spirit of loyalty to the place of his nativity, backed a number of its small manufacturing ventures. So far only one investment of the number has brought him returns, and this little more than interest on his money.

The lifelong resident of the Saturday Afternoon Town who told me the story of the industrial decline of M—— was of the opinion that his town was a special case, that lack of enterprise was the cause of the downward trend. "Lots of retired farmers here," he informed me, "and they wouldn't help build up the place." But from inquiry in and observation of over two hundred small towns visited in the past year, I am convinced that the diminution of small-town industrial power is a general process having its root in the undeniable economies of production on a large scale, and that every period of so-called "hard times," of restricted buying on the part of the masses, helps to hasten this general process, strikes down and carries off the commercial field its full quota of small-town manufacturers, with the re-

sult that when normal consumption resumes the big corporate producer of the city finds himself emerging upon a wider market and a more secure economic position.

A comparison of the pure trade centers and the larger manufacturing centers, however, reveals the fact that the former have more of a general financial and commercial stability than the latter. The retailers of the former depend for their patronage upon the farmer, while the retailers of the latter depend upon wage-paid factory and office workers. And the farmers' economic position is more secure than that of the wage-workers. During the panic of 1907-08 traveling salesmen were everywhere heard to complain of the business of the large towns, but they readily admitted that the small centers of population were very slightly, if at all, affected. "I have cut out the big towns," a clothing salesman told me at that time, "and I am 'making' towns that I have long regarded as too small for me to bother with. As a result I am getting business. But the big towns are dead; nothing doing there at all."

During this same "panic" a village merchant—he was proprietor of a general store—made the interesting claim in my presence that his business was slightly stimulated by the closing down, partial or complete, of factories in the cities. "It brings the young fellows back home, onto the farms. And they've got to eat—their wants have got to be satisfied. The movement of the population during good times is from the farms and small villages to the big cities, but let there come a period of depression, and father and mother—the old folks at home—sooner or later have some visitors. It's prosperity that cleans out the rural districts."

However, it cannot be denied that the capacity of the American farmer for wealth-consumption, particularly in the West and Middle West, has increased tremendously within the past fifteen or twenty years. And because of this the small-town middle-man has prospered, growing daily firmer in the belief that he has a right to his prosperity, that he performs for a reasonable return a service for the tiller of the soil which could be obtained as satisfactorily from no other agency. And the more aggressive of these middle-men lose no opportunity to press their contention home to the consciousness of the rural consumer.

"Do you carry repairs for the G—— plow?" a farmer recently asked an implement, vehicle and hardware dealer in my presence.

"Yes," was the curt reply.

"Got Number So-and-So? I've got to have the piece quick, broke it about an hour ago and I want to get that field finished today."

"Just out—I let Johnson, a neighbor of yours, have the last piece of that number last night."

The farmer turned away. And within a half hour that dealer dug out the same repair piece for another farmer who had suffered a similar accident.

"I want it to soak into these fellows' brains," explained the dealer to me, "that I am in business to help those who patronize me. The first farmer is a good customer of the catalog house—bought a catalog house buggy for his son this spring. His cook stove, many of his wife's kitchen utensils, his house furniture, and even his 'Sunday' suit of clothes are from the catalog house. The second farmer buys practically all of his goods in town. Among other things, I have sold him during the past year a set of work-harness, a buggy and a cream separator. The first farmer I have refused to accommodate a number of times and I'm going to continue to refuse. The reason will dawn upon him some day. He ought to suspect it now for he's heard me express myself on the subject a number of times."

Generally middle-men are of the opinion that if they can educate their trade to demand quality, they will have little to fear from the desertion of the farmer to "direct-from-the-producer" buying. Their contention is that the catalog houses make their biggest inroads in the "cheap" districts where buying is not discriminative—where price is the governing consideration.

Small-town tradesmen handling certain lines of goods, however, will admit that their profits have been cut into within recent years by the big town de-

partment stores wherever these have been brought within easy-access of the village and country people by the modern interurban electric road. For there is something about the widely varied stock assortment of these big retail establishments that makes an irresistible appeal to the average woman shopper. Every Saturday afternoon and evening the interurban brings home to the village and the small town its scores and its hundreds of bundle-laden shoppers.

Of course, the department stores are alive to the value of this influx of rural buyers and they work to keep the shopping interest constantly stimulated. Wherever they can they run their advertising into the small-town daily and the country weekly. And if the newspapers are restrained from using out-of-town advertising by the threats of vigilant local merchants, the big stores often fall back upon the bill-board sign and the house-to-house distribution of handbills.

"I can, and do, sell cheaper—lower rents," the merchant of The Saturday Afternoon Town declares to the buying public.

"I can, and do, sell cheaper—volume of business and big-scale buying," retorts the head of the department store. But he knows that isn't the point really vital to the public.

And the merchant of The Saturday Afternoon Town knows it, too. For he remembers that he overheard Mrs. B— saying to her companion as the two got off the car together last Saturday night:

"Weren't those new shades of gray we saw at Robison's exquisite?"

And he knew they hadn't bought any of the "new shades"—looked more like a yard of baby ribbon or a dozen hair pins.

MARSHALL, MICH.

The Question

BY VIRGINIA HERBERT

Is this thing life, dear father.
  This cruel force that goes
Like some huge beast whose jaws must feast
  Upon the best that grows;
Who ruthless kills, nor cares, so long
  As he repletion knows?

And is this life, sweet mother,
  This maze in which we turn,
Where right seems wrong, and weakness strong,
  And cold like heat can burn;
Where pedagogs declare the things
  Themselves did never learn?

Is life a bird, good comrade,
  That sings but for a day,
That bursts its throat upon the note
  That bears its soul away;
That troubles not of creeds or forms,
  Nor of the prayers men pray?

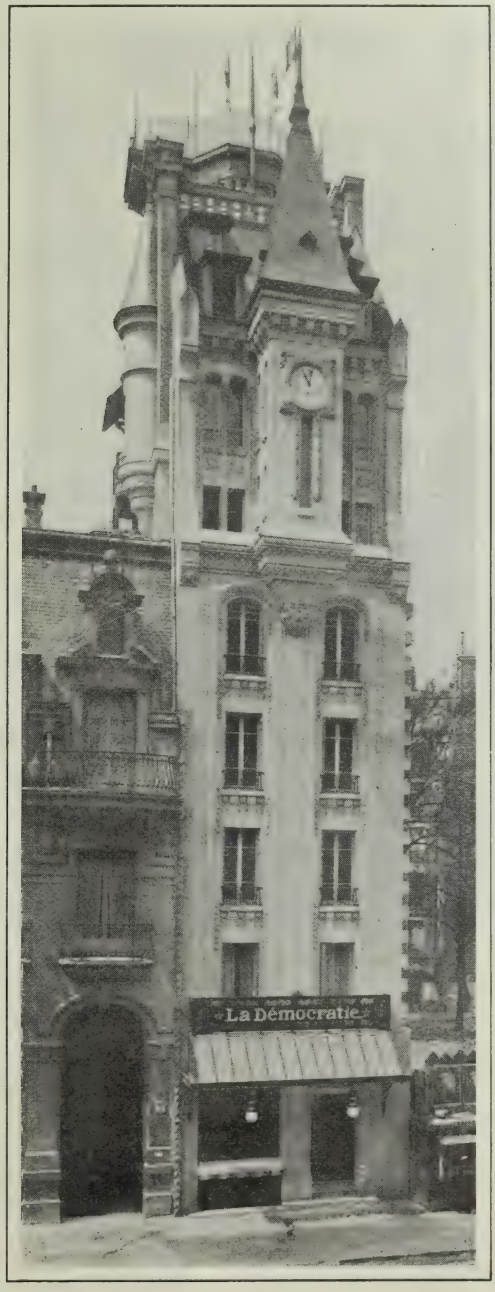
Oh, who will solve this riddle,
  Oh, who the answer give?
Like lights in mist do we exist
  Or do we really live;
And are men mixed upon the earth
  Like ashes in a sieve?

Alas! since none will tell me
  If death is life's last goal,
And if the way is really gay
  Or joy but hides its dole;
Since none without will answer me,
  Do thou reply, my soul!

Nay, ask me not the reason
  Humanity must plod;
Seek not to see this mystery,
  Frail product of the sod,
For he who looks Life in the eyes
  Looks in the eyes of God!

WASHINGTON, D. C.

Le Sillon



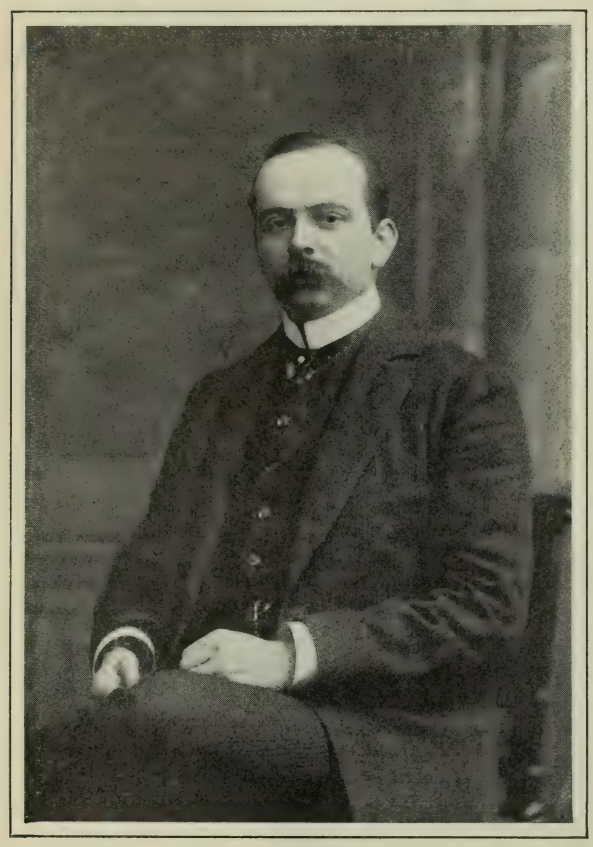
BY MARC SANGNIER

[The author of the following article is the founder of the Sillon Movement. It has been translated for us by André Tridon. We speak elsewhere of its late condemnation by the Vatican, and of Mr. Sangnier's submission and retirement, which has caused no little discussion in France.—EDITOR.]

Le Sillon (the Furrow) is an association, whose growth is not hampered by an iron-bound constitution. It is a live organism. It voices the aspirations of generations of young Frenchmen who, born since the war of 1870, turned their eyes toward the future in order to gather new courage and conceived the dream of making their country the world's initiatrix in social endeavor.

Le Sillon had very humble beginnings; its cradle was a vault in one of the buildings of the Stanislas High School, where, in the early part of 1894, some of the students were allowed to hold meetings during the recess hour.

We had then no definite aim; we only knew that we were not born for a humdrum existence, barren of enthusiasm, with nothing to look forward to except passing examinations and settling down in some office. We resolved to devote our efforts to bringing about more justice on earth and more fraternity among men. Religious convictions, our strongest incentive, made us consider the Christian idea as a well-spring of energy which it was our duty not to reserve selfishly for ourselves, but at which we should invite every man to quench his thirst.



THE NEW BUILDING OF LE SILLON. RECENTLY DEDICATED.

Apostolate, social and religious, is the term that best characterizes the activity of our original membership. After graduating from the high school every one of us took with him a spark of that divine fire. At the Ecole Polytechnique, which I entered in November, 1895, with several of my schoolmates, we won new recruits, and we organized meetings, some strictly private, at which we read the gospels and recited prayers, and some at which we discussed the solutions of the moral problems confronting military and

civil engineers in the course of their career.*

After 1897 our meetings were no longer held in the Stanislas vault; we met from time to time with our friends and acquaintances in various halls. We invited speakers representing all shades of opinions to address us. For instance, in March and April, 1898, Father Janvier, who was to preach later at Notre Dame de Paris, discussed with us "The Rôle of Theology in the Questions of the Hour"; on December 20, 1897, M. Keufer, a printer and a member of the Supreme Council of Labor, spoke to us on "Woman in the Printing Trades."

MARC SANGNIER.

In January, 1899, *Le Sillon,* a little magazine conducted along literary lines, was founded by our friend, Paul Renaudin, and became the organ of our movement, so vague as yet in its scope, but so clearly defined in its expression of a certain frame of mind.

This publication, which is now in the seventeenth year of its existence, gave its name to the considerable effort which was to spread so widely over the country and to permeate so deeply the young generations of Frenchmen.

An officer in the Engineer Corps, I kept up for a couple of years my work of social organization, with the support of Major Jaeger, who entrusted me with the moral direction of his battalion. At the end of 1899, however, I decided to resign from the army and to devote myself entirely to a mission of which I had by that time a more definite conception.

It was then that I launched the idea of "study circles" in Catholic parochial clubs. Their aim was to train a thinking and active élite, able to exert a certain moral influence, and to lead a vigorous social propaganda.

My efforts were very successful, for congresses-of-study circles met with increasing frequency. People's institutes were founded to give the leaders a chance to spread their influence and to conquer new adherents. The clergy showed itself, from the very first, enthusiastic over the idea. On the occasion of the second national congress of the study-circles of people's institutes, Le Sillon received from Cardinal Rampolla, Secretary of State to Pope Leo XIII, as well as from all the French cardinals and from many bishops, letters praising our work very highly. In 1904 Pope Pius received with affectionate greetings a pilgrimage of Sillon members.

Our campaign of propaganda was extremely active; our meetings were attended by huge crowds; *Le Temps* estimates at ten thousand the audience which filled the big tent sheltering the eighth national congress of the Sillon held in Paris in 1909.

We organized interesting debates, among others one with M. Buisson at the Alcazar d'Italie on November 26, 1903,

*The Ecole Polytechnique prepares for those positions exclusively.—Translator.

and one with Jules Guesde in Roubaix on March 9, 1905. Our meetings were sometimes held under difficult circumstances. On May 23, 1903, at a time when rioters had been causing grave disturbances in Paris churches, we organized a meeting at the Salle des Mille Colonnes; "Apaches" attacked our friends as they left the hall and a pitched battle was fought, in the course of which some hundred people were injured.

While the outward activity of Le Sillon was developing in a gratifying way, its political and economic ideas were whipped into a more definite creed thru their contact with life.

Le Sillon considers democracy as a social system that tends to increase to its maximum the civic conscience and the feeling of responsibility of the individual; and it has given itself as its aim the development in France of a true republic along political and economic lines.

Its program of action is threefold:

1.—Legislative action. Legislation must correct as far as possible the abuses of our present capitalistic system and guarantee to the workers a material and intellectual existence such as will make them free and thinking citizens able to assume the responsibilities of the community.

2.—Economic action. Labor must work out its own emancipation and look upon cooperative or syndical enterprises not only as a remedy for present ills, but as a means of social transformation.

3.—Moral action. Neither legislation nor propaganda will avail unless a spiritual factor imparts them life. The stumbling block at present is the conflict between private interest and public interest. Moral factors only will bring about the subordination of private to public interest.

Christianity is a wonderful source of democratic energy, since it reconciles individual welfare and public welfare; for it teaches that unless we strive to realize justice in ourselves and in our environment we shall not enjoy its blessings in the other world.

Thru some of its members, the Sillon has exerted a deep influence on labor exchanges and on certain syndicates of the "General Confederation of Labor," which we tried to save from the domination of anarchistic ringleaders. We have not confined ourselves to expounding theories; we have fought the sweating system, not only on the platform, but by organizing a co-operative clothing store; we have fought night work in bakeries by establishing co-operative bakeries; thru many congresses and conferences we have succeeded in enlarging considerably our sphere of action and influence until the Sillon has become *"Le Plus Grand Sillon"*—The Greater Sillon.

We have received from many quarters much valued expressions of sympathy; at the same time, however, we have had to contend with a bitter opposition. The Royalists have attacked us more than once, and have tried to discredit us in the minds of Catholics by questioning our orthodoxy or our attitude toward the religious hierarchy. Vainly did the Sillonists reply that while the Sillon had been founded and was directed by faithful Catholics, it was, nevertheless, a lay organization aiming at temporal results. The attacks continued.

Even the friendly intervention of Monsignor Mignot, Archbishop of Albi, the eloquent and learned advocate of the Sillon, failed to settle controversies of that kind, which have caused many Catholics and several bishops to withdraw their support. Nothing, however, could damp the ardor of the Sillonists or stop their activity.

Sillonists are recruited mostly from the ranks of the working classes. Statistics gathered in 1906 show that in every hundred Sillonists there were 46 laborers (33 urban and 13 agricultural laborers), 27 clerks, 12 professional men (several of them university professors), 9 priests, 3 employers of labor and 3 persons of independent means.

The Sillon is now devising ways and means to publish a daily paper, which will be called *La Democratie*. It has taken a good deal of energy, not to say heroism, to gather the necessary 250,000 francs and take subscriptions payable before the date was even set for the appearance of the first issue.

La Democratie will be edited, printed

and distributed by Sillonists exclusively. None of the manual or intellectual workers employed on this paper will receive any regular salary. If all our friends were financially independent they would certainly make it their duty to work for the cause without any remuneration; this is what a few well-to-do friends of ours are doing for *La Democratie* and for *Le Sillon Central.* Indeed, they only follow the example set by the rank and file of Sillonists, who, in their leisure hours or on Sundays, sell our literature, put up posters, organize meetings, attend to the correspondence, and instead of demanding a salary turn over to the Sillon whatever money they are able to put aside. If a man of independent means works for *La Democratie,* not only will he receive no pay, but he will be expected, as a matter of course, to contribute to the cause. Still it would not be reasonable or democratic to refuse employment on this daily to men without personal resources. Therefore, as our friends must live, those who devote all their time to the common enterprise should receive, if not a salary, at least a living wage.

Such a remuneration cannot be calculated according to the market value of the services rendered, but according to the man's needs. The living wage will, therefore, age and family conditions being equal, be the same for all; the man who sweeps the floors and delivers papers is to receive as much as the editor in chief; he will receive even more if he is married and the editor single, for his living expenses are bound to be heavier.

We consider that the remuneration should be sufficient to supply every individual not only with what he needs personally, but with what is necessary for the upkeep of his family. Therefore the remuneration will increase when a comrade marries or becomes a father.

The fact that the Sillon has constantly been extending its activities over new fields has obliged us to introduce more system into our organization. Thus far there had not been any real organization. Groups sprung up spontaneously; national congresses, quarterly conferences of out of town leaders, "Sillon days" during which, in meditation, study and prayer, we planned for the development of the movement, were the only bonds that united individual efforts, theoretically independent, but welded together in reality by a constant unanimity of purpose.

The time has come, however, when we must divide our work into distinct departments, which would not function properly unless sharp lines were drawn between them.

For instance, the "Union for Civic Education," whose aim is to assist young Catholics in preparing themselves for good citizenship in republican and democratic France, and the "Democratic Committee for Social Action" have become autonomous bodies, practically independent of the Sillon.

In the near future a "League for Republican Action" will enable our friends to collaborate in the political field with men who come perhaps from other philosophical and religious camps, but who are willing to lend their help to the creation of a new party, the Democratic Republican party. This party will stand for radical reforms, will be resolutely idealistic, and will respect all moral and religious factors.

The Sillon is very young yet, altho its history extends over the past fourteen years. Thru all the different forms of Sillonist propaganda, however, something stands out permanently, which is the justification of its existence, and explains the fecundity of its action: I mean the spontaneous and lasting friendship which unites and characterizes Sillonists, the thing which at the very dawn of our movement, in the warm and brotherly intimacy of our little high school vault, our comrades called: "The common soul of the Sillon."

PARIS, FRANCE.

Mr. Newberry and Navy Yard Management

BY REAR-ADMIRAL CASPAR F. GOODRICH, U.S.N.

THE subject of the organization and administration of our naval establishments on shore has received much attention of late thru the measures of reform introduced by Mr. Secretary Newberry, thru the steps taken by Mr. Secretary Meyer to give effect to his own views on this important topic, and thru the investigations by the House Naval Committee, now accessible to the public in a volume entitled "Hearings on the Proposed Reorganization of the Navy Department Before the Committee on Naval Affairs of the House of Representatives." Much was done by Mr. Newberry, who with one stroke abolished the multiplicity of shops and gathered all operations of like nature under one head and substantially under one roof. For reasons which he has announced in several places and on several occasions, Mr. Meyer has thought best to create two main divisions of navy yard activity, one dealing with the "hulls" of vessels, the other with their "machinery." This action on Mr. Meyer's part has served to make more clear than before the necessity of developing a body of skilled "shop managers." So far as the navy on shore is concerned, this has been and still remains a pressing want.

Only those who are familiar with mechanical processes and the ways of our largest and most prosperous manufacturing corporations can realize that a man whose knowledge, training and personal force enable him to get out of machinery and employees the maximum of profit is almost beyond price. The writer, on one occasion, when seeking a competent superintendent for a great constructional branch of the Government, applied for help to a certain well-known captain of industry. This was the answer received:

"What pay can you give him? If $25,000 a year, I know your man; if $15,000, there are two or three who might serve; if only $5,000, the woods are full of them. I give my superintendent $50,000 and make money It would be poor economy to hire a $10,000 man and lose money. If Mr. Blank wanted $100,000 a year he could get it for the asking."

How can the navy hold its own against such men as Mr. Blank? Let us see how the case stands before giving up all hope. In the first place Congress cannot, if it would, sanction any such compensation as is required to secure the one man whom the writer's friend had in mind. With difficulty is it induced to grant even so much as $3,000 per annum. Since the skilled talent the navy needs of this nature may not be purchased in the open market, recourse must be had to intelligent officers subject to the department's authority. In them it has, to begin with, loyalty, ambition and marked capacity, a most promising foundation upon which to build its edifice of training. What, speaking generally, does this expression "training" imply?

While there are various schools or methods of shop management, all which deserve study or adoption are based upon actual knowledge of what work any machine or any mechanic is capable

of turning out in a given time. The day of rough guessing and of the rule of thumb is passed; that of exact scientific direction has dawned. The machine is so geared and driven as to be crowded to the limit of its power under minute specific instructions governing every step of the operation. These instructions are issued from an office wherein are kept the records of countless observations and computations, which result in a perfect understanding of what any given tool may be made to accomplish. Nothing is left to the judgment of the employee. However competent, his wisdom cannot rival, much less exceed, the combined wisdom of many investigators acting for long periods of time on a well-defined plan, and measuring, counting and tabulating the phenomena they witness without prejudice or favor. This instance is but one of many, none of which can be neglected if we seek to secure the best results. The care, speed and tension of belts, the change in methods necessitated by change of the metal to be cut, since wrought iron, cast iron, brass and steel (according to its quality) each demands its own peculiar treatment; the value of the various kinds of tool steel for each class of work; the way to fashion wood with rapidity and without undue waste; the number of rivets which can be well driven in a stated time; the number of square feet a painter may cover with each kind of pigment applied to diverse surfaces; the number of tons of coal or sand a well-taught laborer may shovel in a day; the number of cubic yards of soil he can excavate, whether clay, loam or hard pan; the economic handling of weights to avoid retracing their path; the latest improvements and devices in machinery, etc., may be mentioned as part of what a manager must learn to reach the high-water mark in his proficiency. Now these things can only be acquired after long experience by a man who, making them his particular aim, devotes to them time, thought and patient industry. Books, pamphlets and articles in the technical journals must be conned over and their applicability to the work in hand determined; other shops must be visited for the lessons they teach or for the warnings they convey; from intelligent and successful superintendents hints must be extracted as to the best ways of laying out and carrying on the different classes of undertakings. These things combine to form a school whose sessions never cease and from which the student will gain in proportion to his own mastery of the subjects taught. Above all, he must keep in touch with those who make shop management in its broadest sense their individual specialty.

What the expert in this respect can accomplish may be seen in a few only of the many cases that might be cited. In the first place, his methods are grounded on a universal skepticism. He takes nothing for granted; whatever is, may be right or it may be wrong; analysis and demonstration alone will show. Every operation, whether manual or mechanical, he holds to be governed by some law which it is his duty to determine. For example, nothing would be simpler than to pick up pigs of iron from a pile alongside a railroad track, carry them up a gangplank and stack them on a platform car; yet this handling is subject to a physical law so manifest after explanation that we wonder its importance has not before been generally realized. After carrying a number of pigs, in the manner described, the laborer feels fatigue and in consequence he slackens his speed. What has happened? The muscles of his arms, back and legs have been depleted of their vital tissue in spite of the fact that his blood circulation has been greatly stimulated. The waste, it appears, is greater than the supply. Let him rest a few moments, the waste will be quickly repaired and the man will be quite fresh and vigorous again. Since he is paid by the ton, he is, naturally, unwilling to stop in his work lest, as he fears, he may suffer in pocket. After some persuasion, one such laborer was induced to move for a whole day under specific orders from an expert who stood by him with stop watch and recording tablet in hand. To the workman's surprise, his tons had multiplied in number and yet at the end of the day he was no more tired than he had been previously when toiling after his own fashion. It seems hardly credible, altho it is true, that with only a good average laborer engaged on this job, the

amount of iron thus moved habitually has risen from twelve and a half tons to forty-seven and a half tons in ten hours.

In the case of a machine, guess-work is eliminated. The expert counts the teeth in its gears, measures its parts and ascertains the strains and stresses it can bear. Then he adjusts the width and tension of the driving belt so that the latter furnishes the maximum power which the machine can utilize without risk of damage. When a piece of metal has to be reduced in size thru turning or planing, he solves, by a peculiar graphic appliance, an equation which represents mathematically the character of this particular mechanism and the work it is called upon to do. This equation contains sometimes as many as nine variable quantities. The expert gets, as his result, the speed at which the machine should be driven, the depth of cut and the rate of the feed to the cutting tool. Using these figures, the mechanic obtains at once the utmost of which that particular apparatus is capable with safety. In one admirably equipped factory under an excellent manager of the old school, the expert took the latter's best man and best lathe, worked out his little equation and immediately more than doubled the output. Extending his investigations thruout the works, he increased the product of every machine not less than twice and in some instances nine times; all this thru the substitution of science for empiricism.

Under the new order of things, the employees' interest is aroused and his cooperation enlisted by assuring him, first of all, the standard daily wage of his neighborhood, and, secondly, by paying him a liberal bonus for doing any job in less than the time allotted by the detailed written instructions he receives. It is quite customary for a man to get 30 per cent. extra in his pay envelope at the end of the week, while not infrequently his bonus runs up to 50 per cent. or even 60 per cent. Is it astonishing that the operatives themselves welcome such a system?

Nor can the human element be ignored. A firm yet tactful dealing with his employees is no less essential than a full understanding of machinery. In this respect, men differ as widely as the poles. To some this important faculty comes by intuition; to others, as the consequence of study and experience; to more again, it can never come at all. The métier of the last is by nature distinctly not that of the shop manager. The mere holding of a commission in the navy will, therefore, not suffice, whether it be in the line or in the corps of constructors. Some of the requirements in this connection are absolutely mandatory, viz.: Natural aptitude for the calling; a broad groundwork of technical knowledge; some shop experience, wherein quality rather than quantity counts (for too much time passed in a poorly fitted out and slackly administered shop may easily be worse than none at all); entire devotion to this pursuit, to the exclusion, for the time being, of all other ambitions. It would also appear as if extended assignments to this duty were unavoidable. It is only in meeting these exacting conditions unreservedly that the navy can hope to achieve industrial results comparable with those reached daily in private establishments. As the logical outcome of his deliberations on this question, Mr. Secretary Newberry found himself driven to look to the naval constructors to develop into trained, scientific managers (for these officers never go to sea), yet, even among their number, some, he knew, would prove deficient in those traits of character which the true shop manager must possess, and so they would gradually drift into other professional employment where their abilities would be equally valuable to the Government. Thru this weeding out of such of the constructors as gave no hope of becoming good managers, a competent and skilful staff would, he expected, remain to push on the navy's work on shore and introduce those economies which all recognize as large and yet attainable.

From what has been said it may be seen that a good organization having been established in our navy yards, much still remains to be done to develop, under the system finally adopted as on the whole best suited to the Government's needs, a set of men able to make that organization thoroly efficient. That this will be the eventual outcome cannot be doubted

by those aware of the earnestness and energy with which other correlated problems have been attacked. But the road is long and toilsome, calling for courage, perseverance and faithful labor on the part of all entering upon it and justly demanding patience and a suspended judgment from others who, watching these efforts toward better things, hope that they may speedily be crowned with complete success. None the less, a right comprehension of the ultimate end, of the best means to that end and of the difficulties that must be encountered and overcome seems not only prudent but indispensable.

Mr. Newberry's grasp of the situation, his share in bringing about a better state of things and his proposed solution of this knotty problem are too important not to warrant study and recognition.

POMFRET, CONN.

The Early Worm

BY MAY ELLIOTT HUTSON

THE early bird catches the worm; that fact
Has been into every young cranium pack'd
  It's really absurd
  The talk that is heard
  Of the wonderful thrift of that wonderful bird.
But not the least mention is made of the worm
That equally early set out on a squirm,
Except that within that most provident bird
The poor little fellow was early interred.

It seems there's a word on both sides to be said,
For had he but snugly remained in his bed,
  And taken a nap,
  Or curled up in the lap
  Of Mother Earth sleeping, the poor little chap
Would doubtless have lived to Methuselah's age,
And another tale figured on history's page.
Now why did they never instruct us at school
That the worm was eaten for being a fool?

MORAL.

Don't trust to adages; look and discern,
Then draw your deductions, and truth you will learn.
  The maxims and rules
  That are taught in the schools
  Are excellent truly for governing fools.
But you? Of your actions let brains be the source.
And if you're a bird, get up early, of course,
But if you're a worm, don't be so absurd
As to get up at dawn, to be caught by a bird.

MCPHERSONVILLE, S. C.

Literature

Books About Books

THE nature of the work cryptically entitled by its author *Literary Criticism from the Elizabethan Dramatists,*[1] is suggested in the "Introductory Note" contributed by Professor Spingarn:

"The author of this monograph has collected all the utterances of the Elizabethan dramatists on the subject of their own art into a *corpus* which is certain to be of service to the students of the history of criticism and literary theory. He has grouped these casual utterances (for most of them are casual enough) according to a classification of his own, which gives an appearance of unity and completeness to the Elizabethan theory of poetry that the dramatists themselves should not be held wholly responsible for."

In short, we have here a compilation that will prove very helpful in the hands of the discreet student and which would be likely to give a slightly distorted view to the more careless reader. For that matter, the more careless reader will not care to sample Dr. Klein. A brief bibliography is supplied, but the index which should follow one looks for in vain.

Another addition to the vast literature of Shakespeareana is made by Henry Frank, author of "Modern Light on Immortality" and other sober essays, in *The Tragedy of Hamlet: A Psychological Study.*[2] "I call the play of 'Hamlet' a psychological drama," writes Mr. Frank, "because, as it appears to me, the author therein seems to depict the development of a singular mind, thru various stages of transformation." By this definition the best of tragedies, the best of dramas, are without exception "psychological." And so they are, in faith. Considerable learning is displayed by the author of these chapters on The Purpose of the Ghost; Hamlet; Mental Transformation; Meditation on Suicide; Ophelia's Fate; The Study of Shakespeare as a Liberal Education; Was Hamlet Insane? etc. The utility of such writings, nowadays, is another question. Frankly, we are most interested here in the fine pictures, showing the principal interpreters of the greal rôle, from David Garrick down to Forbes Robertson.

Albert H. Tolman, associate professor at the University of Chicago, is the author of two little volumes entitled *Questions on Shakespeare,*[3] that one does well to take up after Dr. Klein's book. Here is a work for use in the schools and colleges; in some college classes it will doubtless be placed in the hands of students, but it should form a useful book for the teacher in the secondary school to lean upon, rather than to prescribe. The well-selected list of books for reading is one of the features which may recommend Dr. Tolman to readers outside the schools, and to women's clubs. Successively, the critic considers Shakespeare's language, his versification, and his commentators, then examines four historical plays, the early poems and four of the comedies. So far as it goes, Dr. Tolman's study of his subject is unexceptionable.

It is something of a jump from a distinctly academic work like Professor Tolman's to Prof. W. P. Trent's volume of *Longfellow and Other Essays,*[4] altho there is nothing superficial even in these studies. The spirit is, however, that of the scholar who has shut the door of the classroom and opened that of his study—where he talks genially and not too late upon some of the books that lodge there: Spenser, Milton, Scott, the Relations of History and Literature (a paper to read twice), thoughts upon Dr. Johnson's bicentenary, Poe, Thackeray's Verse, Daudet and his Tartarin. The choice of subjects is no more catholic than the taste

[1] LITERARY CRITICISM FROM THE ELIZABETHAN DRAMATISTS: REPERTORY AND SYNTHESIS. *By David Klein, Ph.D., Instructor in English Language and Literature, College of the City of New York.* New York: Sturgis & Walton Co. $1.50.

[2] THE TRAGEDY OF HAMLET: A PSYCHOLOGICAL STUDY. *By Henry Frank.* Boston: Sherman, French & Co. $1.50.

[3] QUESTIONS ON SHAKESPEARE. *By Albert H. Tolman.* Two volumes. Chicago: University of Chicago Press. $2.

[4] LONGFELLOW AND OTHER ESSAYS. *By William P. Trent.* New York: T. Y. Crowell & Co. $1.50.

of the author. And he is a pleasant guide to the good things of his library. Some of the papers have appeared elsewhere—as prefaces or in the literary press; the opening essay, on Longfellow, was read at the unveiling of a bust of the poet at the University of Illinois, in 1907.

The volume *Studies in Dickens*[5] is, like Professor Trent's *Longfellow,* a volume of essays; but essays by divers hands. The volume is edited for the Chautauqua Home Reading Series, and has, no doubt, its place. Andrew Lang, Mr. Chesterton, Forster, James T. Fields, the poet Hood, Bret Harte—these are only a few of the writers whose criticisms or personal impressions have been laid under contribution. Obviously, a compilation like this quite escapes criticism. Not so such a volume as Charles S. Olcott's *George Eliot.*[6] This is a book written expressly for the fiction reader who must know just what everything in a tale stands for; and cannot enjoy "Scenes from Clerical Life" till he knows that Milby Church was Nuneaton. The earlier chapters of Mr. Olcott's somewhat elaborate book, plentifully illustrated from photographs, will prove altogether interesting to George Eliot's enthusiasts, if any such remain. His chapter in defense of her relations with Lewes is no doubt fair enough, but yet less grateful reading. Why not let those matters stand? Is George Eliot the better novelist for being revealed as *bourgeoise* in her ideals? Somewhat scrappy, both internally and as constituting a whole, these chapters are a mine of casual information.

In the last of these books about books, we return again to the outspoken academic. Dr. Harrison, of Kenyon College, is our lecturer upon Emerson's Masters.[7] "The aim of this work," writes Dr. Harrison, "is to show the essentially Platonic quality of Emerson's thought." Incidentally, it seeks to discredit the notion that his transcendentalism stood rooted in German philosophy and his mysticism in the Vedas. "A careful study has convinced the author that Greek thought has been the most important factor." How well, as a matter of fact, did Emerson read German? when he took out books from the Athenaeum library, in Boston, he read more of French than of German; altho in the index to the present volume the only French names to be found are Cousin, De Gérando, and Montaigne. We do not remember to have found, in the text, any mention of Jean-Jacques Rousseau. Obviously, this is a book with a thesis to prove (who knows? perhaps it *is* a "thesis"); and this explains many things. In the meantime, Professor Harrison's book is well timed; for it is sure to be read with interest at a season when the volumes of the Emerson Journals are dropping from the Cambridge press like autumn leaves.

[5] STUDIES IN DICKENS. *Edited by Mabell S. C. Smith.* Chautauqua, N. Y.: Chautauqua Press.

[6] GEORGE ELIOT: SCENES AND PEOPLE IN THE NOVELS. *By Charles S. Olcott.* New York: Thos. Y. Crowell & Co. $2.

Celt and Saxon

AN uncompleted novel by George Meredith* was bound to be caught up and published for an eager world. Had it stood in manuscript for twice twenty years, not crying loud enough for its finishing? Was it, on the contrary, a *dernier mot,* never finally accented, and marked only by "senile sprightliness"? Not both, certainly; yet in either case overpoweringly Meredithian.

Himself the Celt in birth and temper, Meredith was fascinated by the Celtic contradictions. Interior contradictions, these, but brought into relief by conflict with the British setting. We know in what verses, at the very end, he sang of Ireland:

"You read her as a land distraught,
Where bitterest rebel passions seethe.
Look with a care of heart in thought,
For so is known the truth beneath.
She came to you a loathing bride,
And it has been no happy bed.
Believe in her as friend, allied
By bonds as close as those who wed."

But his breathing out this appeal with his last breath is no argument for the present novel being a later work than of forty years syne. Also, this tale is unclouded by the suffrage; its ardent females aim at nothing higher than philanthropic steam laundries; they under-

*CELT AND SAXON. *By George Meredith.* New York: Chas. Scribner's Sons. $1.50.

take at most a revolution in a shaky principality, like that of Harry Richmond's father's patron, which gave the signal for all your modern storytellers' Zendas. The subject of this book can tell us nothing of its period: Meredith was always fascinated by the Celtic problem. Here is, at any rate, a fine gallery of that problem's types: glowing Captain Conn, a Thackerayan caricature; Conn's cousins Phil and Patrick, highly differentiated yet always equal in mettle, we suspect; the dimmer Kathleen, for whom the author planned more than he carried out. One at least of these—the poet-agitator, who never winged a verse—is a volcano of vernal rhetoric, heedless of bulls and overshot with metaphor. His is a Meredithian knack for telling phrase, tinged consciously with the color of his own wet landscape. "They're incapable of understanding a complaint a yard beyond their noses. The Englishman has an island mind, and when he's out of it he's at sea," says Captain Conn. For this is a great book for nationalistic generalizations: a youthful, perilous exercise. There is even a whole dull chapter "Of the Great Mr. Bull"—not in the best of style. Patrick O'Donnell himself reeks of aphorisms; an Hibernian Sir Austin quite before his time. An English moralist, his host, speaks the same idiom, thoughtfully mitigated; Welsh women, he avers, are all wind and water. Here is, in short, a fine monotony of wit. Perhaps it ended by wearying the humorist. For, tho a brilliant scene is set, and the characters all talk promisingly, they don't know just how to act. Perhaps it is because they have not room to turn round in—this fragment runs to less than 300 pages. And, so far as we get, it is all exposition.

Meredith's characters find talking as easy as breathing: it is affirmed by him who best knew them. Unhappily, the reading is not invariably so facile. In spite of the rich contrasts—human nature and chilled convention (Britannia a matron before she was a maid), Catholic and Protestant—the formless bulk of it all ends in a certain weariness of futility. Not even the hitting off of journalism's fickleness, or the figure of a certain adventurer-of-letters, "who was compelled to swim perpetually without a ship to give him a rest or land in view," quite reconciles the reader. A somewhat sparkling, broken toy—that is your *Celt and Saxon.* A toy out of Mr. Meredith's shop—there's the consolation. We place it somewhere near "Sandra Belloni" and that story's sequel. Had it been deleted and completed, it would compare with "Richmond." As it stands it cannot, surely, add to the dead man's fame. For the unappeased Meredithian it does, none the less, strike intermittent fire. Such a reader will like to notice how the novelist has borrowed from his fragmentary novel in favor of those that he bore with to the very end.

Personal Power: Counsels to College Men. By William Jewett Tucker. Boston: Houghton Mifflin Co. $1.50.

The college exists for the quickening of "personal power," says Dr. Tucker, late president of Dartmouth College. How this personal power differs from that quickened in Wall Street and in the mining centers and at the headquarters of the "unions," Dr. Tucker tries indirectly to show in a dozen lectures on his leading theme. A careful reading of the lectures somehow does not make quite clear any definite directions to be taken in college teachings beyond the most general pressure toward an honest, upright life, an unbiased mind, and such mental and moral activity as may make for righteousness. This is enough, one would readily say—quite enough. It has been beautifully said a thousand times, and in wonderfully beautiful scripture texts that have rung thru all time since the year 1 of the Christian era, but as Dr. Chalmers said, with a woful face: "It has all been said; now it remains to be done." Dr. Tucker's sermons—for they all bear their appropriate texts, and were intended to be in the nature of sermons, half lay, half pulpit—would be more serviceable if they had been more sharply pointed. They are, however, earnest in their teaching, hopeful in tone, broad in their tolerance—how broad, in contrast with what would once have been considered a proper spirit of tolerance

in that remote quarter of New England may be seen in a paragraph of the first lecture:

"Some of you have been brought up in a church ancient and venerable, the home of authority, which has witnessed many revolts from its order and faith, but which abides in power. Let no motive short of a perfectly assured advance lead you away. It is no advantage to religion, no advantage whatever to any opposing form of religion, that any one of you should cease to be a devout and loyal son of the Catholic Church."

This certainly leaves the way open to faith. It is also left open to works, as is shown in this paragraph of a closing address on "The Religion of the Educator." The work of the educator is "in mind and in truth the two great realities." Something of it "goes over into character, something of it goes into the increase of knowledge, something of it goes into the general progress of the world, and something is put on deposit, enlarging the foundations of institutions." How sweet must be the music of this last clause in the ears of our multimillionaires!

The Mountain that was God. By John H. Williams. Tacoma: Published by the Author. Library edition. $1.

This little volume's subtitle is as long as a 17th century sermon's, *Being a Little Book About the Great Peak Which the Indians Call Tacoma but Which Is Officially Named Rainier.* Mr. Williams essays "to show the grandest and most accessible of our extinct volcanos." His title and some of his matter are reprinted from the New York *Evening Post.* As, in spite of its historical chapters, the book is predominatingly descriptive, purposing to guide readers "to delightful days of recreation and adventure," the illustrations are, very properly, numerous. Beautiful, also, in many instances—if one excepts those in color.

Lake George and Lake Champlain. By W. Max Reid. New York: G. P. Putnam's Sons. $3.50.

This is a good summer book for all those who visit the historic Champlain district. The legendary and historic lore of that region is treated at length; there are attractive descriptions of scenery, and nearly a hundred excellent illustrations and two maps are given. No region in America has been the scene of so many struggles. Ticonderoga, Crown Point and Plattsburg are names dear to every schoolboy. Mohawk and Algonquin, French and English and American have all battled for empire about its waters or among its wooded hills, and its history includes the exploits of men such as Champlain, Sir William Johnson, Montcalm, Dieskau, Lords Abercrombie, Howe and Amherst, Israel Putnam, Benedict Arnold, Ethan Allen, John Burgoyne and Thomas Macdonough. In the varied grandeur of scenery the region is also noted. All of this will be found in the volume in a series of sketches suited for desultory reading.

Deep Sea Warriors. By Basil Lubbock. New York: Dodd, Mead & Co. $1.50.

Those who have read Mr. Lubbock's *Round the Horn* will be eager for his latest volume. Few writers give so realistic and so engaging a picture of life on big sailing ships. It is a life that not many of us would want for ourselves, but which, for all that, makes fascinating reading. Rough, hard-working and hard-fighting seamen, brutal and tyrannical officers, dirty and insufficient food, human actions which range from the pusillanimous to the dare-devil heroic, alternations of fierce storms and blissful calms, are the author's materials; and he weaves them into a narrative that grants the reader no pause until the end. It is all the more impressive in that no literary effect is aimed at, for the note of reality rings thru it all. The present narrative has to do with the author's "signing on" at Calcutta in a vessel bound for England via the Cape of Good Hope. The crew is a motley one from all quarters. The author does not get to England on that trip. A stroke of lightning—but let the reader find out for himself.

Soil Fertility and Permanent Agriculture. By Cyril George Hopkins. New York: Ginn & Co. $2.25.

In a paper before the British Association for the Advancement of Science, a few years ago, Sir William Crookes prophesied that at no very remote period

the world's wheat supply would become inadequate through the exhaustion of the soil. However this may be, in our own country the soils of the older Eastern States have been greatly depleted, and, as a result, agriculture has to a great extent been abandoned. Some parts of the West, notably the corn belt, have not profited by the experience of the East and will ultimately be threatened by the same condition. A solution of the great problem is offered in *Soil Fertility and Permanent Agriculture,* by Dr. Cyril Hopkins. Beginning with a consideration of mathematics and chemistry, the exact sciences involved in the study of soil fertility, the author gives some "foundation facts and principles" concerning the composition of the soil and of the sources of plant food. In a "system of permanent agriculture" phosphorus and decaying organic matter are the two substances that are the key to continued fertility in most of the normal soils of America. Rotation systems and live stock farming are also considered, but the author contends that nitrogen and phosphorus are better applied in the form of commercial fertilizers. In Part III soil investigations by culture experiments are described, and in a fourth part the author's important deductions are stated and applications are made. The fertilizers, crop stimulants, losses of plant food from plants and soils, analyzing and testing soils are treated, as well, as factors of success in farming. This is a serious work, replete with concrete examples and experiments intended for careful study. The subject is a vital one in these days when the slogan "back to the land" is dinning in our ears.

Around the World with a Business Man. By Leander A. Bigger. 4 volumes. Philadelphia: John C. Winston Co.

These rather showy volumes, plentifully illustrated from conventional photographs, make the record of a commonplace tour, which covered great distances, but whose interest is chiefly for the traveler and his private circle. Generalizations about nationalities are inevitably dangerous; there is a good deal of superficial generalization here, with all which that implies. Most of these pages are written in the style of the American business man incarnate; and what does good Mr. Bigger mean by remarking, "French cooking is par excellence"? Just this and nothing more? To pick out the errors in fact contained in four fat volumes of the caliber of *Around the World* would be an exercise both futile and ungrateful.

Strikes: When to Strike and How to Strike. By Oscar T. Crosby. New York: G. P. Putnam's Sons. $1.25.

If the buyers and sellers of labor, to whom this thoughtful book of suggestions is offered, could be persuaded to read it, the bitterness and stupidity of industrial conflict would be abated. Observing with judicial aloofness the causes, incidents and results of strikes, the author finds that, with the exception of the sympathetic strike, strikes usually pay; but that the concomitant violence and lying are baneful. While the union, in the opinion of the author, is so valuable as to be worth striking for, to compel the employer not only to deal with union, but to exclude free labor is too drastic. Tho workmen should continually struggle for higher pay, shorter hours and better conditions of labor, since the surplus income of employers, spent on maintaining diamond cutters, aigrette hunters, automobile makers and the like, would be more wisely expended for the race if given as extra wages to the laborer, yet the laborer must remember that he alone, by steady application, unhampered by rules that favor malingering or under-exertion, can increase the national dividend perceptibly and make much higher wages for himself possible. To picket and to boycott is moral and should be legal, the writer concludes. The law against conspiracies in restraint of trade as applied to labor disputes inevitably works injustice. Two or three financiers, over coffee and cigars, can secretly conspire to ruin a competitor or a union, whereas ten thousand workmen are bound to publish their determination to boycott and therefore to incur the penalty of the law. Since the law cannot be applied impartially it should be repealed. Nothing is said about the secondary boycott—the ruin brought upon persons having no

connection with the dispute, no power to affect the employer against whom the strike is made and sometimes unable to comply with the demands of the boycotters without violating contracts. Secondary boycotts are surely as unjustifiable as sympathetic strikes. Seldom are views so favorable to unions set forth so temperately and appealingly by one not officially identified with their side.

A Writer of Books in His Genesis. By Denton J. Snider. Chicago: A. C. McClurg & Co. $1.50.

The author of "The American Ten Years' War" (reviewed in THE INDEPENDENT of March 14, 1907), and of "The Shakespearean Drama," publishes a first instalment of his autobiography. Mr. Snider was for a time a soldier in Rosecrans's army, but was invalided and sent home. Afterward he taught school in St. Louis, which since 1864 has been his home. His list of publications shows him to be a prolific writer, whose subjects embrace an extraordinarily wide scope. A good part of the present volume is taken up with the story of Mr. Snider's discipleship to Henry C. Brockmeyer, an original and unique character and for many years the head of the philosophical movement in St. Louis. Another considerable part is taken up with verse written many years ago. Much of Mr. Snider's work deserves a far greater recognition than it has won, such a book as "The American Ten Years' War" entitling him to a high place in American letters. But the verse included in the present volume need not have been republished.

George Sand. Some Aspects of Her Life and Work. By René Doumic, of the French Academy. Translated by Alys Hallard. With Eighteen Portraits and a Facsimile. New York: G. P. Putnam's Sons. $2.75.

The life of George Sand was so intimately and often tragically connected with many of her great contemporaries, and her genius so related to literature in a genetic and fructifying way, that her career has a many-sided and very lively interest. M. Doumic has not attempted to give a detailed account of this remarkable woman, but has sought to find and describe the conditions and forces which produced her character and entered into her writings. At different stages of her life she wrought into her literary productions her sufferings, her protests as a woman against social institutions as she found them, and withal her dreams as an artist. To understand her work, then, one must know her peculiar personal endowments, her checkered career among her many lovers, her sensitiveness to the charm of nature in its various moods and aspects, and her idealistic visions. This task of relating the life to the literary work the author has performed with much insight and appreciation, and the reader follows with interest the keen criticism based upon the results. The book is not a biography, altho a good deal of biographical material is used in a discriminating way. To M. Doumic the ancestry and early life of Madame Dudevant formed a fitting and necessary prelude to her future. Her "matrimonial mishap," unfortunate enough in itself, was exaggerated and magnified until it became of social value, and gave color to all her early novels, into the heroines of which she put always something of herself. In "Indiana," "Valentine" and "Jacques" our author finds "the whole of the feminist program of today." That they are eloquent, he declares, cannot be denied, but they are nevertheless "novels for the vulgarization of the feminist theory." In like manner her later work partook of the nature of her experiences and poetic dreams, for, in spite of her social programs and revolts, and her energetic and seemingly unwearied activities, George Sand was essentially a poetic dreamer. "She was a poet herself who had lost her way and come into our century of prose, and she continued singing." The pastoral romances, like "Jeanne" and "La Mare au Diable," M. Doumic regards as George Sand's *chef d'œuvre,* and among "the finest gems of French literature. This was George Sand's real style, and the note in literature which was peculiarly her own." She knew the country and loved it. To her Nature and those dominated most by it revealed their secrets, which she enshrined in immortal imagery. In so doing "she gave to the novel a breadth and a range which it had never hitherto had. She celebrated the hymn of Nature, of

love, and the goodness in it." The illustrations are well chosen and add materially to the attractiveness of the book.

La Nacion: 1810-1910. Buenos Aires: At the press of La Nacion.

North America is so smugly ignorant of the great lands to her south, where is rivaled the greatness of her own problems and future, that we welcome the mammoth volume issued in honor of Argentina's centennial of independence by the leading newspaper of Buenos Aires, running as it does to 336 pages, fully illustrated. Here one finds a mine of topographical and historical information. First of all is given a Survey of the Century. This is followed by an Historical Resumé, a discussion of the Constitution (with a quotation from Lecky at its top as a motto), a Financial Sketch, an account of Foreign Relations, a short history of Educational Progress, others of Military and Naval. The Influence of Immigration, Railways, Industries, The Sciences, Literature, The Arts, The Church—here are the subjects of further chapters. There are long poems, also, by Ruben Dario and other Argentinians. Interspersed are articles in German and in French on the share of Germany and France in developing the land; and, in a sort of English, signed by a Mr. K. McHanna, we find a paper called "Excursions in Liberty." This last is a kind of dialog. One individual asks leading questions about the South American Republic; the other answers him to this effect:

"You can choose and find what you want. . . . You can gather wool of the vicuña, the guanaco, or from the sheep; or the pelts of the seal. You can grow rubber, sugar, coffee, tobacco, maize, wheat, linseed, barley, oats. You can make wine, produce oil, cultivate fruits and vegetables. In fact, if I may say shortly to one so eager to know everything, as you are, whatever climate the world has, it can be found here; whatever the world produces, it can be produced here; whatever a man findeth within himself to do, the same can be done here."

"But suppose," queries the interlocutor, "I have no money?" "You will be received with open arms," is the reply:

"You will be housed and fed and supplied with implements and seed; but you and yours must labor, and when your crop has grown you must harvest it, and . . . you will get half what it sells for."

We are glad of this last clause. Otherwise we should have confounded this land of plenty with Franklin's *Pays de Cocagne,* where the streets are paved with half-baked loaves, the houses tiled with pancakes, and fowls fly ready roasted, crying, "Come eat me!"

Literary Notes

....We envy the Germans their much enlarged translation of Prof. Morris Jastrow's *Religion of Babylonia and Assyria,* published by Alfred Töpelmann, of Giessen. The fifteenth part (a mark and a half) is devoted to omens of the sun, moon and planets.

....The second edition of Arthur Huntington Nason's *Short Themes: A Freshman Manual for the First Semester* (published by the author; $1.25 net) has reached us. The changes incorporated consist chiefly of minor additions.

....Uniform with *Cape Cod* and *The Maine Woods* is now published in the Messrs. Crowell's handsome illustrated edition of Thoreau the great *Walden* ($2 net). The many photographs reproduced here were taken by the indefatigable Mr. Clifton Johnson, who contributes a brief introduction.

....It seems as if every day in the year were a centenary, and had been for some eighteen months. The next is Mrs. Gaskell's—Mrs. Gaskell being remembered only for her *Cranford,* tho she wrote many other novels and also a biography of Charlotte Brontë. Her anniversary falls on September 29.

....Maurice Maeterlinck contributes to the September *Forum* an article on "The Insect's Homer," J. H. Fabre, whose eighty-seventh birthday has lately been kept at Orange and Sérignan, in Provence. More of us are more likely to read the fifteen pages by the author of *The Bees* than the half-score of volumes entitled *Souvenirs Entomologiques.*

....The recent report by the Oxford University Hebdomadal Council, which met to consider Chancellor Lord Curzon's letter urging reform, has just been published. The abolition of Greek as a compulsory subject in the entrance examinations is advocated, and also increased facilities for the admission of the poor. A diploma course for students contemplating a commercial career is recommended.

....Dr. Bernard Hollander is the author of a handbook of *Hypnotism and Suggestion in Daily Life, Education, and Medical Practice,* promised for autumn issue thru the Putnams. The Putnams, as the American representatives of the Cambridge University Press, announce the publication of a biographical sketch of Frederick William Maitland, Downing Professor of the Laws of England. Mr. H. A. L. Fisher, the author, treats of Maitland not only as historian, political philosopher and teacher, but also as a man of notable simplicity and wistfulness, full of endearment.

....From Harper & Bros. we receive two small square volumes from the works of Thomas Hardy: *A Laodicean* and *The Hand of Ethelberta.* This is the Thin Paper Edition—the paper of which just falls short of perfect opaqueness. Each volume has a frontispiece; the price is $1.25 for the cloth, $1.25 net for the leather binding.

....Among the memoirs promised for issue this autumn by Little, Brown & Co. are a biography of *Louise Chandler Moulton, Poet and Friend,* by Lilian Whiting; *Heroes of California,* by George Wharton James; *A Lawyer's Recollections in and out of Court,* by George A. Torrey; *The Women Napoleon Loved,* by Tighe Hopkins; and *Reminiscences of a K. C.,* by Thomas Edward Crispe.

....*McClure's* published, not long ago, a play by Arnold Bennett; *Hampton's* a prose version of *Chantecler.* And now the *American Magazine* enters the play-publishing field, occupied in London by the *English Review,* in printing Mr. Galsworthy's *Justice.* This is the play which, it has been said, decided Mr. Winston Churchill to undertake certain penal reforms, to which we have alluded editorially. In France, the publication of plays, periodically, as well as in book form, is no novelty; here it must impress the average reader as a daring innovation.

....*By the Way* is the title of "Travel Letters written during several journeys abroad, describing sojourns in England, Scotland, Ireland, France, Germany, Austria-Hungary, Italy, Greece, and European and Asiatic Turkey." The author is Agnes Greene Foster: the publisher of this new and enlarged edition, Paul Elder & Co. For those paying their first or even their second visit to some of the lands named, this should be a pleasant book to glance at before fixing upon the route. We do not admire the no doubt highly æsthetic paper; the illustrations, however, are numerous and beautiful. Errors in French accents and in respect to French châteaux are not fatal to the book's modest, inconsequential charm.

....In the *Theater Magazine* appears an interview with the late Henry Irving on the subject of Maurice Maeterlinck. He was as hearty in denunciation as Dr. Johnson was when Bozzy named Jean Jacques. "There may be a class of people on this earth," he said, "who have some use for this man's books in the library. No doubt, there are such people—but on the stage, never!" Maeterlinck's *Sister Beatrice* was seen last spring at the New Theater, it will be remembered; his *Blue Bird* is promised for this season. Maeterlinck is no longer a novelty, strictly speaking, except for the provincials of Broadway. But there is something finely Anglo-Saxon about the vigorous words attributed to the great actor:

"There has been always a class of people in Paris who followed these freaks and fads, calling them a new art—blasphemy, I say it is, sir, blasphemy! Maeterlinck's works are not dramas. A coterie of French symbolists may see or pretend to see something in these 'Ah's' and 'Oh's'—but for us in England, for you here in America—impossible. I tell you he is impossible."

Pebbles

BRIGGS—They say the French are deteriorating.

Griggs—I know it. The last time I was over in France I couldn't even make them understand their own language.—*Life.*

POET—Will you accept this poem at your regular rates?

Editor—I guess so—it appears to contain nothing objectionable. Go to the advertising department and ask them what the rates are. How many times do you wish it inserted?—Cleveland *Leader.*

NAN—The trouble in trying to entertain Clarence is his painful bashfulness. After you have talked yourself out there comes the inevitable awkward pause——

Fan—Awkward pause? I should say so! Why, if he even so much as touches your hair it all comes tumbling down!—Chicago *Tribune.*

A FEMALE lion tamer, young and fair, beckoned to a big lion, and it came and took a piece of sugar out of her mouth.

"Why, I could do that trick!" exclaimed a gentleman in the front row.

"What! You?" retorted the fair performer.

"Certainly—just as well as the lion."—*Lippincott's.*

YOUNG FEATHERLY—Of Shakespeare's plays I think I prefer "Richelieu."

Miss Clara—Er—but Shakespeare did not write "Richelieu," Mr. Featherley.

Young Featherley (with an amused smile)—Ah! I see, Miss Clara, you are one of the few left who believe that Bacon wrote Shakespeare's plays. I wonder if the question will ever be satisfactorily settled?—New York *Times.*

THERE was once a playwright who sat in the front row at the first night of a new piece of his own. This piece failed. It failed dreadfully. As the playwright sat, pale and sad, amid the hisses, a woman behind him leaned forward and said:

"Excuse me, sir, but knowing you to be the author of this play, I took the liberty, at the beginning of the performance, of snipping off a lock of your hair. Allow me now to return it to you."—*Tit-Bits.*

RECENTLY one of our most fastidious young men bought a pair of overalls and found in them the name of the sewing girl who made them. He very promptly wrote her a letter with all the effusiveness necessary in such a case, and in due time received a reply, which, however, was void of the romance usual in such cases. Here it is: "I am a working girl, it is true, but I make a good living and do not care to support a husband, as I would do if I married some silly noodle who gets mashed on a girl he never saw. Permit me to say that I do not know how my card got in that pair of overalls, and that when I do marry, if ever, it will be some fellow who can afford somehing better than a 47-cent pair of breeches."—Mystic (Conn.) *Times.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Reform by Social Ostracism

EX-PRESIDENT ROOSEVELT has done what President Hadley, of Yale, several years ago advised. It seemed a quixotic way of punishing rich criminals, whose money could hire shrewd attorneys to keep them out of the meshes of the law, to refuse to invite them to dinner, as President Hadley recommended; and yet, after all, what is more effective than social ostracism? What worse punishment can there be to a man than to hem him about in a walking prison, and have the finger of scorn pointed ever at him, and for him to know that respectable people will not associate with him?

Now this is just what Mr. Roosevelt has done. He told the Chicago gentlemen that he would not attend a dinner at which Senator Lorimer was to be a guest; he would not sit down at the same table with him any more than he would with the four legislators who had been indicted for bribery and the four other legislators who confest that they had accepted a bribe to vote for this Lorimer for United States Senator. And more than this, he required the gentlemen who had brought the invitation to telegraph the Senator that Mr. Roosevelt had so refused, and that the invitation given Lorimer to attend was therefore recalled. So Lorimer stayed away, directed to stay away; and when at the dinner Mr. Roosevelt referred to the incident—which is much more than an incident—those present applauded wildly.

Now, Lorimer had not been convicted. He was not wearing stripes. He was free, walking the streets, conducting his business, is still the accredited Senator from the proud State of Illinois. But when it was proved that the Democratic votes that had elected him had been got by purchase he made scant defense, showed no quick indignation or surprise. They got the money and he had got the office. It was not difficult to put the two things together and to conclude that he was responsible for this damnable corruption. His case was just one of those for which President Hadley had made his quixotic provision. The offense was of that sort which Mr. Roosevelt had been denouncing all thru his present campaign.

The delegation of the Hamilton Club that carried the dinner invitation to Mr. Roosevelt were amazed at his refusal to sit at table with an unconvicted briber, and Chicago was aghast. But why should they have been surprised? This social courtesy is a very strange thing. A multitude of people in Washington, and south of it, were shocked when President Roosevelt took his lunch one day with a certain cultured gentleman from Alabama. They thought he was off color; and yet he was no thief, no briber, no debaucher of the State; he was a reputable man, a distinguished teacher. It was unpardonable that the President should take a bite with that citizen of Alabama. It never had occurred to them that the same Mr. Roosevelt should object to take his coffee with a United States Senator, a man of wealth, a Chicago politician, for no other reason than that he had got his position in the Senate by bribery which several legislators have confest and for which several others may quite likely go to prison.

But this had not occurred to them. The invitation had been sent to Mr. Lorimer as a mere matter of course. Was he not a Senator? Had he been convicted? Possibly they thought the

Senator's presence at the guest table would shut Mr. Roosevelt's mouth. But Mr. Roosevelt has presented to them another code of the ethics of courtesy which they will not forget. He has never preached a finer sermon to the country than when he said, "No, I will not" to that deputation of the Hamilton Club, and that categorical negative was thundered thru the country and reverberated around the world.

It is an old story. The Apostle John said of certain corrupters of the Church that good people should not receive them into their houses nor give them a courteous greeting. This act of Mr. Roosevelt will be a precedent; it will be historical. It is a scene for the painter. Other occasions there will be in the future, many of them, for this same sort of ostracism; and evil men of name and fame and shame will fail to be received in social relations out of respect to the decent members of the company, with the authority of Mr. Roosevelt's example. When Congress meets in December we shall see who are those who will suffer similar ostracism—those who have bought their seats, those who have robbed the Indians. We have such proved miscreants in the legislative halls of New York; and for bribery a Pennsylvania Congressman has been compelled to withdraw. But worse than political defeat is that social ostracism which may be exprest in Mr. Roosevelt's words to the president of the Hamilton Club: "Then I cannot be present—I must decline to sit at the table with him."

The Seminaries and the Sillon

In July the Alliance of Grand Seminaries held its fifth annual congress at the Catholic Institute of Paris; fifty-eight dioceses were represented and sixty-three seminaries. This was not by any means a large assembly, as the full quota of the Alliance counts ninety-three seminaries and they are found in eighty of the eighty-four dioceses of France. Loyal to Roman ways, the Alliance has a Cardinal protector at the Vatican, no less a personage than the Spaniard Vives y Tuto.

The report of the secretary gave the number of seminarians in France as 6,530, of whom 830 wore the uniform in barracks, for since 1905 seminarians, like all other youths, must do conscript duty.

Now the foregoing figures—6,530—are less by one-half the number in 1905. In five years, therefore, the seminaries have dwindled enormously. The secretary passed over the causes which led to this shrinkage. But we may turn to them for a moment. A great source of leakage is the barracks. After serving time in the army many seminarians never return to the soutane. The percentage of such loss is unknown because unpublished. The condemnation of Modernism is of course a greater cause of the lack of vocations. In France this is coupled with the *Sillon* or Catholic Republican movement, likewise condemned. In a seminary of Western France, the archbishop of the diocese, in unison with its superior, resolved to weed out all suspects. To their amazement they found Modernism and Sillonism so widespread that if they carried out Papal instructions, the place would be empty. Hence they quietly dropped the matter. The late official condemnation from Rome of the *Sillon* must further affect the seminaries, together with the yet later edict forbidding seminarians to read the newspapers.

As to the means of supplying the lack of priestly vocations the secretary laid chief stress upon the work of the petit seminaries or apostolic schools. So optimistic was he that he thought not more than six or seven years were needed in order to catch up to the quota of Concordat days. The petit seminaries are steadily increasing in numbers and, of course, in scholars. It seems, however, that no data were published. *La Croix,* the organ of the notorious Assumptionists, has an appeal for another sort of school. It is for *vocations tardives* and it is not clear whether this school is included among the petit seminaries. They are for persons, aged from sixteen to thirty, who have followed only the primary branches; hence the expression *late vocations.* In them the six years course of the petit seminary is cut down to three years. Special teachers, moreover, are provided to help the *tardives* along:

"The object in view being to make two classes in one year, it is easily understood that the course of studies must put aside certain subjects. Hence are suppressed Greek, Latin verse, living languages [English or German] and in the higher classes geometry and algebra."—(La Croix, July 24, 1910.)

One year is given to philosophy, during which efforts are made to improve the *tardives* in Latin. It requires no great effort to read between the lines that here we have the vernacular course in philosophy and no doubt in theology. At least the explanations of the professors must be in the vernacular, if in philosophy efforts are made to improve the Latin of such seminarians. It appears that in France are two such schools, one at Nice and the other at Versailles. At the latter are *fourteen* students.

There is still another sort of training. Bishop Ronard of Nantes, in a pastoral letter to his clergy, appeals to them to have at their own homes youths in preparation for the priesthood and refers in praise to a few of his clergy who have already received such candidates. A priest may thus take in one or two, whose training and education are pretty sure to be haphazard.

What is of interest to us is the fact that the seminaries of France are not only open but untrammeled by civil authority and this, notwithstanding the opposite statements of Cardinal Gibbons and the many mass-meetings held in our country to protest against separation in France. The Government merely shut out the seminarians and their teachers from buildings built and owned by France. The domicile was changed. No better example can be found than the seminary of Paris. It was built under Napoleon, we believe, and occupied by the Sulpicians. When Separation came, they had to leave the building. Shortly after they sued the Government for the twenty odd thousand volumes, which they took a century to gather. On proving their case, the State restored the volumes. In leaving Paris the Sulpicians, who are an approved congregation, altho now forbidden to teach, brought the seminary to their own property at Issy, a suburb.

The professors are not now technically Sulpicians, but diocesan priests. A curious rule of this company is that its members are never canonically detached from their dioceses. They are mere loans. This unusual status explains how professors in the many seminaries of France, formerly in Sulpician hands, are now diocesan priests. Hence the Society of St. Sulpice really retains the direction and teaching of most French seminaries. Apropos of the subject, we may add that the Irish College in Paris —a seminary for Irish priests—was not affected by Separation. It is in full service,

The City Majestic

THE growth of the population of Greater New York, upon which we commented a week ago, is proceeding at a rate and thru the operation of causes which leave no reasonable doubt in the minds of statistical experts that New York City will be, within another generation, the greatest aggregation of urban dwellers on the globe, and the focus of the world's business. Washington, doubtless, will continue and should continue to be the capital of this nation. New York will be the capital of the world.

Neither the New Yorker himself, nor his fellow-American elsewhere, is quite awake as yet to the tremendous significance of this fact. However it may be with the fellow-American, the New Yorker cannot too soon get his wits together and begin to think about the ways and means by which his town can be made in all respects worthy of the wonderful destiny upon which it is entering.

Much has been written within a few years past, about "the city beautiful," and in a practical way much has been done to awaken interest in all American cities in the possibility of making beauty appear where now we see too much of sordidness and disorder. Outwardly some progress has been made here and there. Washington, especially, has been planned and is being developed with an eye to beautiful effects in detail, and dignity of ensemble. The mind of the American people, too, is beginning to apprehend the relation between beauty and character. Great masses of men fall easily to a low moral level if their idealism is not continually stimulated; and the stimuli must be such as can make deep

and continuous impression upon men and women that are of ordinary ability, and whose educational advantages have been meager. The stimuli must be concrete, appealing to eye and imagination. Attractions of philosophy and the precepts of the "Poor Richards" accomplish small results in uplifting multitudes. If the thoughts of men are to be centered upon things higher than the commonplace and vulgar, beautiful things must stand forth before them in their daily life. The city beautiful should be created not only because beauty is good in itself, but also because, without it, men will in the long run fail to attain the best in conduct and in character.

But New York, as the capital of the world, must be more than the city beautiful. It must be made the city majestic. It is not only because nothing less than majesty can possibly be in keeping with the coming commercial and political importance of the town that its lines and material proportions must be majestic, but also because the immensity of its buildings, already erected and yet to be erected, is wholly inconsistent with that sort of beauty which is allied to mere prettiness or to excessive decoration. New York conditions call for mass, simplicity of outline, depth and richness of color. Fussiness, excessive detail, freakishness and a confusion of colors, an offense in any place, are intolerable in association with the vastness of scale upon which everything in New York must be attempted.

The present age is characterized by an almost pathological passion for the startling, the staccato, the freakish, the bizarre. These are the qualities of the newspaper headline, of the electric advertisement, of the skyscraper office building, of the monstrous apartment house. The office building and the apartment house on Manhattan Island must be reared to dizzy hights, but they need not be adorned with fantastical or meaningless accessories, or shock the eye with contrasts of color where harmony is called for.

We believe that this abnormal taste will have its day, and give way to a love of what is essentially dignified and suitable. Superb examples of the sort of buildings which New York should have are now appearing in nearly every part of the town. We cannot doubt that these, rather than the freakish and bizarre will win popular approval. And when they do, New York will begin to be what we are confident it can and should be, not only in mere dimensions and activity, the greatest city that has as yet existed, but also, as the capital of a world more wonderful than the world that has been, a city more majestic than ever has been, or imagined.

To Strengthen the "Oregon Plan"

THE "Oregon Plan," which has already achieved so great a notoriety as an interesting experiment in democracy, is likely to be extended still further if the plans of the "People's Power League of Oregon" carry. The League proposes to amend the legislative article of the State Constitution so as to secure the following changes:

1. A six-year term for all members of the Legislature, abolishing the hold-over system for Senators.

2. Election of Senators and Representatives by a system of proportional representation.

3. Power vested in the voters to recall any member, or the whole Senate, or the whole House of Representatives, or the whole Legislature.

4. The presiding officers of the two chambers of the Legislature not to be members of the Legislature; to appoint no committees, and to have no voice or vote.

5. Making the life of a bill six years, if necessary, so that it may be acted upon at any time within that period without dying a natural death because of adjournment.

6. Giving a majority of the members of each chamber the power to call a special session of the Legislature.

7. Limiting the power of the Legislature to use the "emergency clause" in passing a bill, so as to prevent the filing of a referendum petition.

8. Amending the oath of office so as to prevent or minimize log-rolling.

In arguing for the changes the League avers that its purpose is to insure 85 cents of legislation and Legislature for every $1 expended, if $1 is not to be had.

Under the proposed proportional rep-

resentation provision of the amendment any one-sixtieth of the voters of the State will be able to elect a member of the House, and any one-thirtieth a member of the Senate (for there are to be, as now, thirty Senators and sixty Representatives), but while candidates for the Legislature are to be nominated in districts, as at present, they will be elected by the voters of the State at large. This plan is designed to put an end to the system by which, in 1906, 50,000 Republican voters in Oregon elected fifty-nine members of the House of Representatives, while the 40,000 other voters elected only one member.

Under the present initiative and referendum provision of the Constitution, the Legislature has the right to enact urgency or emergency laws by declaring that an emergency exists, and prohibits the filing of a referendum petition against a law enacted with the emergency clause attached. That has given machine legislators ample opportunity to commit legislative outrages by tacking the emergency clause to all sorts of laws so as to shut off the referendum. Under the proposed amendment, three-fourths of all the members elected to each chamber must vote, on roll call, for an emergency section, apart from the vote on the bill. A bill thus passed does not go to the Governor, but is filed with the Secretary of State. A referendum petition may be filed against it, but the law remains in force until the people approve or reject it. The amendment provides, further, that no statute, ordinance or resolution approved by vote of the people shall be amended or repealed by the Legislature or a city council except by a three-fourths vote of all the members elected taken by yeas and nays, which is a good provision, seeing that the representatives in two cases repealed laws enacted by the people. Whether that was done ignorantly or maliciously is not of much consequence so far as the result is concerned. The purpose of this amendment, in the words of the People's Power League, is to make the people's power fence "horse high, pig tight and bull strong" in case a Legislature may try to get thru it or over it or to push it down

The effort to apply the principle of the recall to the members of Legislature and of Congress will, if the amendments are adopted, be watched with keen interest. It will enable the people of Oregon, to use the words of one advocate, "to snuff out a good deal of what one of the justices of the Oregon Supreme Court piously calls 'damned insolence in office.'"

Railways and the Poets

Wreckers have, during the summer, commenced their work of demolishing the old Grand Central, in New York—a structure which, at its erection, forty years ago, was the "last word" in railway stations. That "deepo," as the public used to call it, sheltered fifteen tracks beneath its smoke-wreathed shed. A hundred trains arrived daily, and daily departed. Yesterday eight times a hundred trains were handled there. Hence the new "terminal," which, for several years, has been constructing in the shadow of the walls that fall. Hence the demolition of Commodore Vanderbilt's pride.

And while the wreckers have been busy in Forty-second street, the workmen in Seventh and Eighth avenues have put the finishing touches to another monument of progress. They have completed the tubes that other workingmen have bored beneath East River and North, providing them with an outlet. More than that, they have raised a great palace or temple of transportation—an eight-acre palace of marble and granite, with statues to deck it out and elevators such as former palace-builders never dreamed of. Thus is celebrated the arrival of one more great railway at the heart of New York.

In the past it was fashionable, among the elect, to sneer at the "deepo," as, later, at the skyscraper. Similarly, it was customary for railway managers to deprecate artistic collaboration. Watts, in England, offered to paint a railway station (we have Mr. Chesterton's word for it); and, "with a splendid and truly religious imagination, asked permission to decorate Euston." But permission to do so was refused him. Since Watts's day, both artists and magnates have undergone a change of heart.

Yes, there is an appreciation of the fact that railway stations have their moving beauty, notwithstanding Ruskin.

Nor was the scorn of the railway and Philistinism ever universal, even in Ruskin's day. Baudelaire and Verlaine, in France, painted "Le paysage dans le cadre des portières"; and as great a painter as Monet has recorded the hazy picturesqueness of Montparnasse and Charing Cross.

Painters and poets have looked less and less to woods and vernal fields for inspiration; there is even a tendency to exaggerate the city's value as a well-spring. For the Frenchmen have their American imitators or disciples; and many the artist in words or pigments who phrases the mysterious, romantic charm of the smoky train shed, or the disquieting monstrosity of office buildings whose noses prick the clouds.

There is nothing startlingly new in all this. Lamartine, without himself exploiting the vein, was strong, as Ticknor writes, in the faith "that the present improvements in material life, like steam and railroads, have their poetical side, and will be used for poetical purposes with success." Logically we Americans, natives of a land proud of its eminence in these material improvements, should carry this poetry to its highest pitch. And already we have a subway school of poets, and an elevated *cénacle*. Who knows? Perhaps the completion of the two terminal stations we have spoken of may be the signal for an outburst of native lyricism on the one hand, and an outpouring of ultra-American pigments. For Dr. Bode, he of the Lucas-Leonardo, has been disappointed at the failure of our arts to depict "the throbbing life of New York harbor or that of San Francisco, the maelstrom of this hustle and bustle of our great cities, forests of smokestacks telling of mighty industrial development."

Guarding Our Game

THE Department of Agriculture has sent out Circular No. 73, in which the protection of birds and animals from destruction is mixed up with the establishment of game preserves. We cannot see that it is possible to turn any large amount of our food-producing lands into ranges for the pleasure of those who choose to hunt game. Private preserves of this sort, if limited to a few acres, are not objectionable, but the American people will never consent to having any large part of their domain under the control of companies who use the land strictly for shooting purposes.

The opposition to private preserves is exceedingly strong in Illinois, as it is also in California. A game association of Schenectady has established a game *farm* of 54 acres, a movement to which no one can object so long as the preserve is a real farm, and of very limited extent. It becomes, however, quite another question when we are told that a shooting club of Wisconsin has leased exclusive privileges of several hundred acres; and that a tract of 4,000 acres has been leased by another hunting company in California; and that another has leased 700 acres in Idaho. This sort of business may grow on our hands, just at the time when we need immensely to increase the food production of the United States. There is no adequate compensation in the way of game placed on the market by these hunting companies. Most of it never is marketed. Let the States keep this matter of preserves in their own hands, instead of renting large tracts of public property to private associations.

Right alongside this drift must be placed the fact that the "back to the land cry" has brought a good many heavy capitalists out into the country, who are more interested in exploiting their wealth than in developing the land. We can show farm after farm that, in this manner has been picked up, discharged of its farmers or of its tenants, and put to practical waste. It is no compensation in this case that some portion of the thousands of acres is planted to forest trees, or even turned into a beautiful landscape. Large estates that cannot be used to add to our food production are not desirable in this country. This is by no means to overlook the practical advantages of the beautiful. In reality every well cultivated farm, brought to its best under scientific tillage, is an expression of the most beautiful. Nothing more is gained, even from the esthetic standpoint, by withdrawing splendid valley acres and fertile hillsides from cultivation and devoting them to "art." The American

people must hold themselves very jealous of any such subversion of the original purpose of soil. We gain nothing by this sort of country home-making. It stands in the way of the very movement that it seems to patronize. It reduces the homing area of the people.

We are much more interested in the fact, which we learn from the same circular, that the last year has shown a great deal of progress in the way of State laws for the preservation of our most useful birds, and the animals that were likely to become extinct. The national bison range was occupied late in 1909 with thirty-seven buffalo. This new herd is about twice as large as that which was placed in the Yellowstone Park in 1909, and nearly three times as large as that placed in the Wichita Game Preserve in 1907. It is in charge of a special warden, and has a range of 20,000 acres. Twenty-six bird reservations were created during the past year, making a present total of fifty-one. The reservations in Florida are particularly successful in restoring birds that were nearly obliterated. Nearly half a million birds were imported into the United States during the year, including a large number of European partridges. Colorado and Wyoming passed laws providing for the feeding of big game during severe winter weather.

It is interesting also to know that changes in the laws of several States practically eliminate antelope from the game list. The hunting of mountain sheep is also tolerated at present only in three or four of the Northwestern States. It is beginning to be more thoroly understood that the distinction between game birds and non-game birds is not so easily drawn. Some of the game birds are the most important allies of the farmer; quite as much so as the song birds. The quail destroys more insects than any other bird or fowl, and if made thoroly at home becomes nearly as important a factor of farm life as the barnyard fowl. A Florida correspondent summons them to his doors, and would not part with them any more willingly than with the birds of song; and a Southern naturalist writes that he has them on his porches and window sills, along with the cardinal birds and mocking birds, when he throws them handfuls of corn.

There is no more reason for killing a quail than there is for killing a robin; both of them make, when fat, good food. Such birds, whether robins or quails, so far as not under the care of the State, should be the private property of the owner of the land where they nest. We have no reason for breeding a small section of community to carry guns, with the privilege of shooting our property, whenever it happens to fly over our boundary lines. Nor is there any consolation in the case when this hunting class is restricted to six or eight months of the year. We are told that tens of thousands of robins are being murdered every year while in their passage from the Gulf States to their Northern homes. This we can believe, because the robins are evidently less abundant than they were ten years ago.

In some directions, however, the protection of non-game birds is making notable progress. We note with pleasure that Governor Hughes has signed the bill drawn up by the Audubon societies and passed by the Legislature of New York. North Dakota and Oklahoma have enacted a law, also drawn up by the Audubon societies, as a model, while California has established a Bird Day in connection with Arbor Day. A growing sentiment is reported from the Pacific Coast to prohibit the sale or possession of bird plumage. This is millinery righteousness. The stores of Oregon have not sold the plumage of native birds for two years past, and the State of Washington has recently followed the example, while California promises the same sort of trade honesty.

Audubon societies everywhere are redoubling their work and meeting with marked success. They are waking up a public enthusiasm in favor of bird protection, and giving information concerning bird alliance, which, until recently has been stupidly neglected by the farmer. The agriculturist begins to comprehend that his success with nearly every crop depends largely upon the friendship he establishes with the birds. He can everywhere afford to count them into his family, as he does his horse and his cows, and he can afford to feed them liberally.

The balances which Nature sets up must not be easily trifled with. Destroy your birds and you must manage to do their work in some other way. Still we must read such records as "One hundred and twenty thousand robins were killed in one Tennessee hamlet during the past winter, and sold at five cents a dozen."

The Eucharistic Congress

THE Eucharistic Congress being held in Montreal has given an admirable occasion for the French Catholics to express their love for their Church, and for Canadian Protestants to utter their good will and their respect for the largest branch of the Christian Church. We could assure Cardinal Vannutelli that were the next great Eucharistic Congress to be called for New York or Boston it would awaken equal devotion and receive equal honor from nearly all our citizens, certainly from Protestant Christians. We have passed the day when those of us who are Protestants hurl bad names at Catholics. King George V no longer insults them in his coronation oath, and if certain Episcopal or Presbyterian so-called Articles have not yet been reformed they have yet passed out of knowledge and are obsolete. We may criticise, and we do criticise, doings of the Catholic Church, just as we do of the Protestant denominations, for even Popes may err, but a respect for the Church is a duty; and the more we know of each other the more we shall honor the faith and zeal uttered on both sides. There are phases of the Catholic spirit that deserve all praise, such as their earnestness to instruct their children in the faith and the conduct of their missions in our great cities, where they call back the backsliders. We are glad to see them try to bring lapsed Protestants into their fold, just as we are glad to see lapsed Catholics brought into Protestant churches, for either form of the Christian religion is better than no religion at all.

The purpose of the great Eucharistic Congress held in Montreal is not to discuss questions of belief or government, but to express the honor of the Catholic Church for the greatest of the seven sacraments, and the loyalty of its members for the Church and its Pontiff. It has been a magnificent demonstration of the unity of the Catholic Church thruout the world. The message of approval sent to King George for the reform in the coronation oath was very fitting and was appreciated by the King. If there were no questions to be debated, there was yet occasion to press the principles of the Church, of common morality which will bear constant repetition and emphatic restatement. Very helpful is such a subject as that which Father Vaughan, of England has taken for his own in his denunciation of social vices. His address was devoted to the attack on racial suicide, and he declared that good Catholics in obeying the laws of God and the command given to Adam and Eve would in the very nature of things gain the numerical advantage over Protestants and infidels who limit parenthood. He would call on France to have as its motto "*Liberté, Egalité, Maternité.*" Racial suicide, he declared, is "constructive treason against God." What he anticipates he thus expresses:

> "If racial suicide is not checked among non-Catholics their numbers must necssarily decrease, till at length, the death rate becoming greater that the birth rate, there will be an appreciable shrinkage in the non-Catholic population."

Yet it must be admitted that the most notable case of shrinkage thus far observed is with the Catholic population of France.

Mr. Ballinger's Position

In a case like this of Secretary Ballinger, in which five of the jury of twelve declare, after careful investigation, that he is not a suitable man to be retained in the Cabinet, and five will support him, and perhaps seven, we may conclude that the charges are "not proven," but his case very suspicious. The President may not think it just to ask him to retire, for he is a lawyer and a judge, and it is not his temper to hold a man guilty till he is so proved. But this is clear, that Mr. Ballinger's presence in the Cabinet does not strengthen the Administration or the party, but distinctly weakens them. Presuming the charges against Secretary Ballinger to be

unjust and he the most faithful and competent of officials, it is yet a fact that he is a detriment to those he desires to serve, and the people have largely lost confidence in him; and he would serve his country best by resigning. It would be a sacrifice, but it might be so done as distinctly to show that resignation is not a confession, but an act of generous self-immolation. Let him remember Curtius. Then perhaps the chasm might close.

The Fishery Decision

It was perfectly impossible to get the American people aroused to any fever of heat over the Newfoundland fishery rights, such as was excited in the old days of "Fifty-four forty or fight." And in those days Oregon was far away and its eponymous river heard no sound save its own dashings, while Newfoundland has been near us all these years that have protracted the conflict for over a century. At last it is settled in a civilized way, and where it goes against us the American arbitrator voted with the majority, and equally so did the British arbitrator where the verdict was against the British contention. That is the best part of it, that we can settle a quarrel like sensible people and that the judges can put off all partisanship like Christians. We give the conclusions on another page; and altho on the most important of all the points in discussion, that which shuts out our vessels from fishing within the bays three miles from land, it goes against us, it is better to have the decision adverse than to have the question remain a bone of contention. The three marine mile limit must be measured from headland to headland, but it is incredible that the principle would apply to vast bays like Hudson's Bay. Thus once more arbitration wins against war. And yet we are told that we must have a mighty navy to prepare for war; we must fortify the Panama Canal. Is not war now already obsolete?

The Washington Prison Conference

When the quinquennial International Prison Congress, made up of delegates from various European countries, meets in Washington October 2, its members will have been conducted from New York to Chicago and thence to Washington, and will have visited all the prisons and reformatories of note en route. The best that America has to show, penologically, will be exhibited to our foreign guests, who will come with critical eyes, but with a sympathetic purpose. They are truly anxious to see what we have that is better than they may have, and it is to be hoped their American friends will be equally ready to profit by any good ideas brought from other shores. The thing that will startle these strangers most will be to see the difference of administration in different States; more than that, to learn that each State has as many systems as it has counties. This latter difficulty could be overcome if each State would unify its systems and have centralization in the capital. For the States it would be impossible to have a great central Federal prison bureau, as they might have in France or Belgium or Holland. That is not necessary, but there certainly should be greater uniformity of laws. It is absurd to have such widely different methods of dealing with crime in adjacent States, or even in States far apart. If the principles underlying such useful methods as probation, the indeterminate sentence, conditional liberation and juvenile courts for minor delinquents were adopted in all the States, uniformity of practice would slowly develop. What is justice in one State would be justice in another. The papers prepared for the International Congress show that more uniformity is found between many of the European nations than between Texas and Massachusetts, for instance. One of the objects of such a congress is to call public attention to the need of reform everywhere, instead of in spots.

Half Timers at School

At this time the public schools are opening, and it is a shame that in our largest and richest cities there are not school buildings enough for the children. When the population of New York increases by over 100,000 a year, there should be enough new buildings every year to accommodate and to provide for their boys and girls. The failure to do this

compels some sixty thousand children in New York to be put on half time, the scholars being put in shifts, a part in the forenoon and a part in the afternoon. What can teachers do in this way? What lessons in order and study can the children learn? What better way is there to teach the boys to be street loafers? We are pleased to learn that in Philadelphia the number of "half timers" is being reduced; 16,000 two years ago, now 10,000, and next year there will be less than 5,000. In this respect, as in so many others, the country has the advantage of the city, for in our Northern States, at least, there are very few country children that cannot have all-day schooling, and in the more favored portions those who live at a distance are carried in school wagons. This is one of the ways in which the country rather than the city grows a better class of citizens.

The Last Pre-Raphaelite

William Holman Hunt, the English painter who died last week at the age of eighty-three years, was, with Millais, a charter member of the Pre-Raphaelite Brotherhood. Thus the first was the last as well; tho in these last years there has been a kind of second return to the primitives under the auspices of Matisse and other extravagant practitioners, who, if equally zealous to escape "the canker of corruption," are tainted with an Orientalism largely foreign to the earlier reactionaries. Holman Hunt, unlike Millais, was to the end faithful to the principles which they thought to have discovered in turning the leaves of a book of engravings of the frescoes of the Pisa Campo Santo. He never surrendered to the British demand for mere prettiness. Tho his work has fewer admirers today than twenty or thirty years since, copies of such religious pieces as his "Light of the World," showing Christ lighting His way thru the night to the door of a hut, and there knocking, hang on the walls of many a home in this land and his own. Born in 1827, and denied educational advantages, the artist's rise was effected only thru industry and perseverance. He was a clerk before he became an avowed painter, and he was largely self-taught. This explains in some measure defects of technique with which it would be ungrateful, at this hour, to upbraid him. Shortly before his death Hunt branded as false the legend that Dante Gabriel Rossetti was one of the original Pre-Raphaelites, and denied that Rossetti and he had jointly occupied a studio. Hunt was, indeed, the master, Rossetti the pupil; and the pupil it was who caused the breaking up of the original brotherhood by revealing the mystic significance of the initials, P-R-B, which the brothers had affixed to their canvases. Later, Hunt became the leader of the *cénacle*

WILLIAM HOLMAN HUNT.

whose membership included William Morris and Burne-Jones. It is not easy to recall today the harshness of the criticism which was, in these early days, showered upon the Pre-Raphaelites. What was worse than critical hostility was the indifference of the buying public. It will be remembered that Holman Hunt was one of the earlier painters of religious subjects to visit the scenes of sacred history. In the early fifties he

traveled in Palestine, and then gained the inspiration for such paintings as "The Finding of the Saviour in the Temple" (1860), "The Shadow of the Cross" (1869-1873), "The Triumph of the Innocents" (1885), and "Christ Among the Doctors" (1890)—all painted in the Holy Land or after studies made on the spot.

A Strange Delusion

A plant grown in the dark grows pale, weak and spindling. A man educated out of the reach of free discussion can never grow intellectually strong. Says Milton:

> "He that can apprehend and consider vice with all her baits and seeming pleasures, and yet abstain, and yet distinguish, and yet prefer that which is truly better, he is the true warfaring Christian. I cannot praise a fugitive and cloistered virtue unexercised and unbreathed, that never sallies out and seeks her adversary, but sinks out of the race, where that immortal garland is to be run for, not without dust and heat."

But that is not the way in which Pius X requires that his clergy must be educated. By his late *motu proprio* he forbids seminarians to read the newspapers and magazines, so the news reads, and every candidate for orders and every teacher must swear a solemn oath that he will never deviate from the strict path laid down, while all who receive the degree of Doctor of Sacred Scripture by an earlier decree must swear that they will accept every Biblical interpretation that has been, or may hereafter be, laid down by the Biblical Commission. And now the Sillon is condemned, altho its one purpose was to make the Christian faith acceptable to French workmen, because it teaches equality and fraternity, and so verges on Socialism. Because the Catholic Church is the largest branch of Christianity, and because it has done so much good and is capable of doing so much more, we deeply regret that under the present Pope it is fighting enlightenment, is trying to keep the faith by shutting out the light, and is, with the best intentions, setting all Catholic Europe at war with him. Perhaps it may be explained from the fact that the present Pope is no scholar, does not even know French, and, as Dr. Phelan, editor of *The Western Watchman*, says after a visit to Rome, on his accession to the seat of St. Peter he put aside from positions of trust and counsel all the close advisers of his predecessor and chose a new circle for himself. Thus did Rehoboam with the result of much secession.

After the British Budget

We remember the tale of robbery and disaster that was to follow the passage of Lloyd-George's Budget. Prosperity was to be checked and poverty was to stare even the prosperous in the face. Those forebodings have not been verified by the result. Indeed, there has been a striking revival of trade. Less than half as many are unemployed as a year ago. In the seven months of 1910 British exports increased $150,000,000, or 14 per cent., and the Bankers' Clearing House dealt with $3,500,000,000 more business than in the corresponding period of 1909. Postmaster-General Samuel gibes the Tories who had all gone over to tariff reform over the failure of their prophecies. He said in a late speech that if tariff reform had been established the Conservatives would have gaily claimed all this improvement to the credit of themselves and their policy. Their posters would run: "First results of tariff reform; exports up £30,000,000 in seven months. Conservative Government in power; confidence restored. Bankers do £700,000,000 more business. Free trade ended. Unemployment halved." All these happy results have followed not the triumph of tariff reform, but the rejection of it; not the end of free trade, but the vindication of it; not the destruction of Mr. Lloyd-George's budget, but the passage of it into law. We may conclude that Mr. Chamberlain's and Mr. Balfour's movement for preferential protection has been defeated for at least five years, and Great Britain will remain a free trade country.

The latest sensation in San Francisco is a letter of Mayor McCarthy to the supervisors, in which he says he had a big surprise last spring when he and his delegation interviewed President Taft in regard to the Hetch-Hetchy grant. He had supposed that San Francisco was possessed of all the right and title necessary for the damming of Hetch-Hetchy. But, he writes, "President Taft showed

your representatives quite clearly that the permit issued by Secretary Garfield was not worth the paper on which it was written." That is wholesome doctrine! THE INDEPENDENT has maintained from the start that it ought to be held invalid because it was contrary to the public interest. Mayor McCarthy advises the application of the $45,000,000 Hetch-Hetchy bond issue to the purchase of the local water company's reservoirs and distributing system, and the use of the surplus for needed extensions. That is a step in the right direction.

When George Ticknor traveled thru Pennsylvania a good many years ago he had something to say of the Pennsylvania Germans. An "inchoate mass," the professor of Romance Literature found them; tho his admiration for the native German was considerable. The failure of the Germans to be assimilated in Pennsylvania is one of the strangest phenomena of all this land. But when the Pennsylvania German who is the Democratic candidate for the Governorship attempts vote-getting on a platform of opposition to modern sanitation, we learn the full possibilities of Keystone medievalism. Says former State Senator Webster Grim, the candidate in question:

"He [the Health Commissioner] objects to having your barnyard drain into your rivulet for fear some germ will contaminate the creek."

Preposterous Health Commissioner! Enlightened Pennsylvania!

After Hodgson, Professor James whispers back to the world from his astral body, if that is the proper designation in modern patois to give to the wandering soul. He is a bit confused, so he tells us thru the very willing and experienced medium who will kindly tutor him along until he can more freely tell her what he thinks of things where he is. He can only promise now, and tells us:

"I have awakened to a life far beyond my highest conception while a denizen of earth.

"Tell my brothers that I will transmit a message thru this instrument that will prove my individuality when I can manifest more clearly than at this time. I did not realize how difficult it would be to manifest from this place of life to the mortal place.

"There is much for me to learn and many conditions to overcome."

The "control" seems to have affected his style, but he will recover when he has "caught on," we hope.

So one of the men indicted for bribery in the case of the election to the United States Senate of Mr. Lorimer has been acquitted. It will be remembered how difficult it was to get a jury that had not been approached. On the first ballot eight men voted to acquit and four to convict; the four, after holding out for twenty-four hours, yielded to persuasion. The evidence that was strong enough to convince the four has convinced the people; but they say that his constituents will re-elect him to the State Legislature, and thus give him a clean bill of health. So, as Mr. Roosevelt reminds us, they "vindicated" Boss Tweed.

The Mexican War ended July 4, 1848, and the Mexican War Veterans' Association has disbanded, because its members are too old and too few to continue their meetings this side of the other world. There is a real sadness in such an announcement. The Mexican War was concluded seventeen years before the end of the Civil War, and this reminds us how short is the time in which we can honor veterans during their lives. We would particularly urge parents to encourage their young children to listen to stories of their adventures from the veterans who will have passed away when they are old enough to appreciate the opportunity they now have.

We have received a communication signed by a dozen negroes of position born in Liberia, who represent an organization of Liberians in this country for the purpose of protecting their native land against foreign aggression. They wish to express to the people of the United States, to President Taft, to the commission which he sent to Liberia and to other active friends their profound thanks for the decision of the United States to aid and protect them. The danger has been most imminent, and the relief from bitter anxiety is most grateful. We wish we were able to print the entire communication. Our Government has seldom done a worthier act.

Insurance

The Savings Element in Life Insurance

One often hears "savings" and "insurance" spoken of as if they were mutually exclusive ideas. They are only so when by insurance we mean the bare cost of protection against the loss of capital (in its broadest sense) due to some risk that it undergoes. This is seen most easily in the case of fire insurance. If a man insures his house for three years and his house doesn't burn down within that time, any one would recognize the absurdity of his demanding back at the end of the three years the premiums that he had paid. Those premiums represent the value of the protection that he enjoyed.

In the case of life insurance the question is complicated by the fact that, while the chance of a house burning down (the construction and surroundings remaining unchanged) remains the same from year to year, the chance of death within a year increases (in the case of adults) with the age. If the risk of loss from death is paid for each year without the accumulation of a fund to meet future increase of the risk, the premium payable will increase in proportion. The savings element, from the policyholder's point of view, is introduced when a larger premium is charged at the commencement than is necessary to cover the risk of death.

Thus what is called the "reserve" is built up and it is the possession of this reserve that distinguishes old line from assessment insurance. This reserve, representing accumulated savings, may of course be drawn upon later if the policy is continued in force so long that the premium is insufficient to cover the increased cost of carrying the risk. From the company's point of view (for the company is always looking toward the future) the reserve represents the sum which, with the present value of future premiums, is equal to the present value of future payments to the insured. The cash value of a policy is the tangible effect to the insured of this method of meeting the increasing risk, and the greater the cash value the greater the investment element. It may be argued that the granting of cash or loan values (the latter answering the same purpose indirectly that the former do directly) is not one of the essential features of a life insurance policy, but as the granting of loan values is compulsory in several States after three years' premiums have been paid and is a feature of all up-to-date contracts, this question can hardly be considered a practical one.

The investment element reaches a maximum in the case of a short term endowment.

Hence it is seen that an old line life insurance company is really a combination of a savings bank and an insurance company, which insures the policyholder from year to year, the amount of the risk incurred by the company being the sum insured less the reserve held against the policy, so that the greater the reserve the less the amount at risk; or, in other words, the greater the investment element the less the insurance element. This should be borne in mind by the prospective policyholder who is about to take out a policy sharing in the profits of the company. From the annual statement of the company it is easy to calculate approximately the effective rate of interest earned by the company on its investments. The excess of this effective rate over the rate assumed in the calculation of premiums and reserves, when applied to the reserve in hand, forms part of the dividend. It then becomes a question of judgment as to whether this effective rate is so much smaller than what could be earned by the prospective policyholder in securities of his own choosing that it would be inadvisable for him to insure on a high premium plan, where the investment element enters to a large extent.

Financial

Opening of the Great Pennsylvania Tunnel

THE Pennsylvania Railroad tunnel beneath two rivers and Manhattan Island, to connect New Jersey and Long Island with New York by continuous trackage, was opened last week in so far as the section from Manhattan to Long Island City was concerned. In our issue of January 20 we printed some account of this great undertaking, which will forever remain as a monument to the late A. J. Cassatt, sometime president of the Pennsylvania system. The new terminal greatly reduces the running time to Long Island points and opens up a large additional suburban settlement near New York. The following table shows the time gained by means of the tunnel:

Station.	7th Av. and 34th St. (old way). Min.	Penn. Station (new way). Min.
MAIN LINE.		
Jamaica	44	19
Hollis	50	25
Floral Park	54	30
Mineola	56	37
Garden City	59	40
Hempstead	63	40
Hicksville	65	47
Greenport	192	152
MONTAUK DIVISION.		
St. Albans	52	26
Valley Stream	61	35
Lynbrook	68	41
Rockville Centre	69	43
Freeport	77	51
Amityville	81	58
Babylon	85	60
Bayshore	86	63
Patchogue	119	96
Westhampton	127	111
Montauk	246	229
LONG BEACH BRANCH.		
East Rockaway	68	36
Long Beach	79	45
FAR ROCKAWAY BRANCH.		
Arverne	53	30
Far Rockaway	60	37
OYSTER BAY BRANCH.		
Roslyn	64	42
Sea Cliff	74	52
Glen Cove	77	55
Oyster Bay	89	67
WADING RIVER BRANCH.		
Huntington	74	57
Northport	99	82
Port Jefferson	127	115
Wading River	139	124
NORTH SIDE DIVISION.		
Woodside	31	9
Elmhurst	38	15
Corona	41	18
College Point	50	27
Flushing (Main st.)	39	18
Bayside	50	29
Great Neck	59	38
Port Washington	71	50

The opening of the tunnel, as the table shows, is a long stride forward in the matter of local rapid transit and more than justifies the Cassatt dream. The tunnel has been eight years in building and has called for the expenditure of $90,000,000. The new terminal in Manhattan is unique among the railway stations of the world as regards magnitude and general arrangements. It covers eight acres. Some of the more important figures regarding this tunnel are given in condensed form as follows:

NEW PENNSYLVANIA TERMINAL FIGURES.

Area of terminal (station and yard), 28 acres.

Length of trackage, 16 miles.

Weight of station building, steel, 27,000 tons.

Length of retaining walls, 7,800 feet.

Weight of steel in service building, 2,437 tons.

Total excavation required, 3,000,000 cubic yards.

Dimensions of passenger station building, 784 feet long, 430 feet wide.

Dimensions of main waiting room, 277 feet long, 103 feet wide, 150 feet high.

Dimensions of concourse, 340 feet long, 210 feet wide.

Concrete used, 160,000 cubic yards.

Number of supporting columns, 650.

Greatest weight on one column, 1,658 tons

Number of buildings removed on terminal area, about 500.

Number of electric lights, 30,000.

Storage capacity of tracks, 386 cars.

Proposed initial daily service of Pennsylvania Railroad trains, 400.

Proposed initial daily service of Long Island Railroad trains, 600.

Length of river (tube) tunnels (single track miles), 6.8 miles.

Length of land tunnels (single track, miles), 6.8 miles.

Length of run, Bergen Portal to Long Island Portal, 5.3 miles.

Total length of track in tunnels, 16.5 miles.

Length of run, Harrison to Terminal Station, 8.6 miles.

Length of run, Jamaica to Terminal Station, 11.85 miles.

The Independent

VOL. LXIX NEW YORK, THURSDAY, SEPTEMBER 22, 1910 No. 3225

Survey of the World

Custom House Frauds

At the trial, last week, in New York, of Charles D. Drew and Charles H. Wardell, formerly custom house weighers, and George E. Bedell, formerly Deputy Surveyor of the Custom House, for fraudulent weighing and the taking of bribes from importers, four men who had been weighers testified that they had weighed fraudulently and been paid for it. One named six Italian firms of importers that had bribed him; another named eight. One of the confessing men is Register of Deeds for Passaic County, N. J. Another, who was a weigher for eighteen years, said he began to weigh fraudulently with his first cargo. The bribe was from $50 to $250 per shipment, and the Government was usually robbed of about half of the duties. Thomas Doyle, formerly dock superintendent for Arbuckle Brothers, the sugar refiners (who recently paid the Government $695,000 in restitution), said his superior officers paid, thru him, salaries of $100 a month to the custom house weighers, and that two of the defendants had been so paid. George Lunny, a go-between for importers, named six weighers whom he had bribed. He had never found a weigher, he said, who would not weigh dishonestly if he were paid for doing so. Otto Westervelt, formerly the head of an old importing house (which retired from business a few years ago), said he, following the example of others in the trade, had paid weighers, using Lunny as an agent.——Ernest W. Gerbracht, formerly superintendent of the Sugar Trust's largest refinery, who was found guilty in June of defrauding the Government by dishonest weighing, has been sentenced to be imprisoned two years and to pay a fine of $5,000.

Beef Trust Officers Indicted

The leading officers of the great beef companies in Chicago were indicted there on the 12th by a Federal grand jury for violation of the Sherman Anti-Trust law. It is noticeable that in this case there was no indictment of a corporation or firm. The responsible officers themselves must meet the charges. If convicted, they may be imprisoned for one year. The list is as follows:

J. Ogden Armour, president of Armour & Co.; Arthur Meeker, general manager of the same company; Thomas J. Conners, superintendent of the same; L. F. Swift, president of Swift & Co.; Edward Swift, vice-president; Charles H. Swift and Francis A. Fowler, directors of Swift & Co.; Edward Morris, president of Morris & Co.; Louis H. Heyman, manager of that company; Edward Tilden, president of the National Packing Company, which is controlled and owned by the Armour, Swift and Morris interests.

Each of the ten men is indicted three times. It is charged, first, that they are engaged in a combination in restraint of interstate trade in fresh meats; second, that they have conspired unlawfully; third, that they have monopolized the trade in fresh meats by unlawful means, and have eliminated competition both in the buying of cattle, sheep and hogs, and in the selling of meat. A part of their work in making a monopoly, it is asserted, was the purchase of a controlling interest in the New York Butchers' and Dressed Meat Association. Swift & Co. have 323 branch houses, Armour & Co. 316, and Morris & Co. 82. The indictments say that the National Packing Company has been used to procure information as to the operations of the branch houses from day to day, and that this information served to suggest the combination prices from week to week. None of the ten men gave testimony,

and therefore they cannot claim immunity, but it is said that immunity was granted to Vice President Fuller and Secretary Snow, of the National Packing Company, because they were witnesses before the grand jury. Mr. Armour asserts that the charges are without foundation; that the three companies do only one-third of the country's packing business; that their average profit does not exceed 2½ per cent., and that prices are high because of the demands of those who raise and sell the animals. The inquiry was made under the direction of Judge Landis, who imposed the fine of $29,000,000 in the Standard Oil case, and he desired that persons, instead of corporations, should be brought to trial, if the evidence was sufficient.——The Department of Justice is about to bring suit in New York against the American Sugar Refining Company, or Sugar Trust, asking (as it did in the Standard Oil case now pending on appeal) for the dissolution of the corporation.——A Federal grand jury in Chicago has indicted the officers of several brick manufacturing companies whose works are in Illinois or Ohio, alleging that they have formed a Brick Trust.——In Arkansas, a State court has decided that the American Book Company is not a Trust. The company was sued by the State for violation of the State's Anti-Trust law, and the State claimed $3,000,000 in penalties.

Nominations and Elections

The complete returns from the Maine election show that Plaisted, Democrat, had a majority of 8,500. Two Democrats are elected to Congress, one with a majority of 2,500 over Congressman Swasey, and the other with 2,200 over Congressman Burleigh. The Democrats have 21 out of 31 in the State Senate and 86 out of the 151 Representatives. ——After a long and sharp division the Connecticut Republican Convention nominated C. A. Goodwin for Governor by a small majority. No question of principle was involved, but simply personal interests. The platform avoids the Payne tariff law, and praises President Taft for his "tactful and resolute insistence" on measures of reform urged by his predecessor.——The Democratic convention of New Jersey met on Thursday of last week and chose President Woodrow Wilson, of Princeton University, as candidate for Governor on the first ballot and by an overwhelming majority. The platform denounced the tariff and favored the popular election of United States Senators and direct nomination of all elective officers. In his address accepting the nomination President Wilson said that there are three dominating questions before us, reorganization and economy in administration, equalization of taxation, and control of corporations. He said there must be a public service commission with the amplest powers. President Wilson will resign from Princeton.—— In Delaware the Democratic convention has nominated Robert C. White for Congress, by a narrow margin, against one of the Saulsbury family. The platform favored "a revision and gradual reduction of the tariff, and strongly supported States' rights as against Federal usurpation.——The accused Democratic bribers in Illinois have been generally "vindicated" by their constituents. The minority leader, Lee O'Neil Brown, accused of leading the bribery squad, got the biggest majority he has ever had, and some twenty others have been similarly endorsed. Speaker Shurtleff, who was prominently mentioned, also received a very large majority in the primary. Also Wilson, the man who diseributed the "jackpot," has been returned by a large majority.——The Independent Democrats of Tennessee who bolted the nomination of Governor Patterson have endorsed the Republican nominee, Capt. B. W. Hooper, which is thought to ensure his election. Governor Patterson's pardon of Senator Carmack's slayers has made it impossible for many Democrats to vote for him.——In the Missouri Republican convention the two wings united in praising both the President's record and that of Mr. Roosevelt. The platform approves local option for counties, and for wards and districts in cities. It endorses equally the administration of President Taft and President Roosevelt. favors reducing the tariff, and a tariff commission. The Democratic platform indorses Joseph W. Folk for President. ——The Wyoming Republican conven-

tion nominated W. E. Mullins for Governor, and endorsed President Taft especially for his attitude on conservation, and praised the Payne-Aldrich tariff law as the best ever enacted.——The Democrats have carried Arizona, and the constitutional convention will have thirty-five Democrats, twelve Republicans and five Laborites. This ensures the adoption into the constitution of the initiative, referendum and recall. The Prohibitionists supported the Democratic ticket, and the Mexicans the Republican, because of the educational test established by the last Legislature.——Among the notable incidents of the nominations of last week may be mentioned the renomination of Parker, of New Jersey, over Howland, Progressive. Also Congressman Fowler, of New Jersey, who was removed from the Committee on Banking by Speaker Cannon, was defeated by Judge William M. Runyon. Congressman Boutell, of Illinois, was defeated at the primary, falling nearly a thousand votes behind F. H. Gunsbergen, a Progressive. He will, nevertheless, be a candidate. Speaker Cannon's plurality in the primary was about 6,000. In Tennessee, Caleb Powers defeated Congressman Edwards by 11,280 votes. Mr. Powers was four times tried for the Goebel murder and was convicted but pardoned, as there was little doubt of his innocence.

President Taft and Governor Hughes

A letter from the President's private secretary, Charles D. Norton, has attracted much attention, and has been interpreted as a change of attitude toward the Progressive Republican wing. In it he says:

"While Republican legislation pending in Congress was opposed by certain Republicans the President felt it to be his duty to the party and to the country to withhold Federal patronage from certain Senators and Congressmen who seemed to be in opposition to the Administration's efforts to carry out the promises of the party platform. That attitude, however, ended with the primary elections and nominating conventions which have now been held and in which the voters have had opportunity to declare themselves. The people have spoken, and as the party faces the fall elections the question must be settled by Republicans of every shade of opinion whether the differences of the last session shall be perpetuated or shall be forgotten. . . .

"The President feels that the value of Federal patronage has been greatly exaggerated, and that the refusal to grant it has probably been more useful to the men affected than the appointments would have been. In the preliminary skirmishes in certain States, like Wisconsin and Iowa and elsewhere, he was willing in the interest of what the leaders believed would lead to party success to make certain discriminations, but the President has concluded that it is his duty now to treat all Republican Congressmen and Senators alike, without any distinction. He will now follow the usual rule in Republican Congressional districts and States and follow the recommendations made by Republican Congressmen and Senators, of whatever shade of political opinion, only requiring that the men recommended shall be good men, the most competent and the best fitted for the particular office."

——It is announced that President Taft will open negotiations this fall for a reciprocity treaty with Canada. The permission of the British Government has been secured for permission to treat directly with Canada. Urgency for reciprocity with Canada has been pressed particularly in New England, and Eugene Foss was elected to Congress from Massachusetts on this issue. It is not expected that the draft of the treaty will be ready for presentation to the Senate at this coming short session.——In his last public political address before entering upon his duties as a member of the United States Supreme Court, Governor Hughes discussed the concentration of administrative power and the short ballot. He said:

"I strongly believe in the concentration of administrative responsibility. I do not believe there is sound reason for its distribution among several elected heads. Great public enterprise will not permanently prosper in this way. And as the burdens of State administration increase it will be found necessary, in my judgment, if the State Government is to maintain proper efficiency, to centralize Executive responsibility and in our State Government to follow the analogy of the Federal Government. I think it would be a decided improvement if the Governor were elected for a term of four years and were ineligible for re-election, and if the other State officers, now elected, were made appointive heads of departments. It would also be to the advantage of administration if the various heads of departments who are appointed by the Governor were removable by him instead of by the Senate. There is no loss of accountability to the people in such concentration of power and of the corresponding responsibility. The people can center their attention upon the election of a governor, but they do not properly fix it upon the election of a large number of co-ordinate State officers."

Census Reports

Chicago's census shows a population of 2,185,283, an increase in ten years of 28 per cent., making it still the second city in the country. The increase of New York was 38 per cent. The population of New Orleans is 339,075, an increase of 18.1 per cent. Lowell, Mass., has overrun the 100,000 mark, now having 106,294 population.——The population of Cleveland is given by the new census as 560,663, a gain of 46 per cent. in ten years. This puts it ahead of Cincinnati and Pittsburg, and only a little behind St. Louis and Boston. The population of Dayton, Ohio, is 116,577, an increase of 36.6 per cent.

Cuba and Central America

A committee appointed by President Gomez to consider propositions for the establishment of an agricultural mortgage bank reports favorably of the proposal of the Banco Español. There were four other bidders. The Banco Español, it is understood, acts as the representative of Speyer & Co., of New York.——Dr. Salvador Castrillo, General Estrada's representative at Washington, has applied to the State Department for aid in raising in the United States a loan of fifteen or eighteen million dollars, for the repayment of which the Nicaraguan Government is said to be willing to pledge its custom house receipts. Dr. Castrillo says that the administration is in need of money to put the present provisional government of Nicaragua on its feet. It is to find out just how much money the Estrada administration needs that the State Department is considering sending a commissioner there to investigate general conditions, in accordance with General Estrada's request. The latter is said to be anxious to pay to the families of Messrs. Cannon and Groce, the Americans who were killed at Zelaya's orders, a money indemnity. The actual Government wishes to postpone for one year the formality of a Presidential election. The United States Government has recognized Estrada, and has appointed Thomas C. Dawson, the new Minister to Panama, a special commissioner to assist in the reorganization of Nicaraguan affairs. Mr. Marsh, the Chargé d'Affaires at Panama, has been recalled in view of published interviews in which he was quoted as threatening the annexation of the country to which he is accredited. That interview, on instructions from the State Department, Mr. Marsh repudiated, but it is conceded that his usefulness in his present post is ended.——On September 14 the election of three Vice-Presidents of Panama by the National Assembly took place. The Liberal party controls the Assembly, and the vote was almost unanimous for Pablo Arosemena for First Vice-President, Federico Boyd for Second and Rodolfo Chiari for Third. Señor Arosemena is at present Minister of Panama to Chile. He will assume charge of the Government as Acting President on October 1 for the balance of the unexpired term of the late President Obaldia. Boyd, the Second Vice-President, is a former member of the triumvirate government which followed the secession of Panama from Colombia, and was one of the envoys to Washington for the purpose of drafting the canal treaty.

The South American Republics

Vice-President Elias Fernandez Albano, who has been Acting President since the beginning of the fatal illness of President Montt, of Chile, died suddenly of heart disease on September 6. Señor Albano held his office thru the constitutional provision that, when the Presidency becomes vacated for any reason, the Minister of the Interior takes office as "Vice-President of the republic." At the moment of the Vice-President's death the campaign to elect a successor to President Montt was in peaceful progress. The leading candidates are Señors Augustin Edwards and Juan Luis Sanfuentes. Until the election, Señor Ameliano Figueroa, Minister of Justice, is the chief executive. Apropos of the funeral of the late President (see the "Survey," August 25), the Paris *Temps* observes:

"The German Government spared no pains to render to the late chief of the Chilean State a funeral worthy of a sovereign. It was on the Government's initiative that the body was transported from Bremen to Berlin, even tho the town of Bremen, with its body of foreign consuls and its numerous garrison, could have furnished the civil and military elements nec-

essary for the celebration of the obsequies with pomp.

"These attentions paid to the mortal remains of President Montt were calculated, and they mark once more Germany's care to assure herself of the sympathy of the South American republics—sympathy which she makes use of, besides, for the development of her commercial and industrial relations.

"The economic expansion of Germany in these lands beyond the sea is effected at the expense of the United States."

——Dr. Roque Saenz Peña, President-elect of Argentina, who recently returned from a tour of Europe, where, especially in France, he was received with great ceremony and cordiality, has in an interview indicated that he will work for friendlier and closer relations between his republic and ours, making an effort to secure better steamship communication between Buenos Aires and New York. He protested also that the bonds now uniting Argentina, Brazil and Chile in no way imply hostility for Peru. "American commerce," he said, "will be given every opportunity in Argentina during my administration." The President-elect was told that the whole diplomatic world was wondering whether his use of the phrase, "America for humanity" did not really mean for "humanity—not for the United States." He replied:

"It is entirely wrong to interpret this phrase in any manner hostile to the United States. I mean that we are friends with the United States and have no hostile feelings toward Europe. We are friends with all and want to co-operate and work with all. That is my idea of 'America for humanity.' . . . There is nothing whatever hostile to the United States about any phase of my policy."

On September 13 an arbitration treaty between Argentina and Chile was signed at Buenos Aires.——The first shipment of corn and flour from Argentina, in the history of Jamaica, has just been landed at Kingston. It is believed that this is the beginning of a serious competition with United States products, and several local business houses are reported to be negotiating for extensive imports from South America.

The British Empire

The Sydney *Mail* reports that the Parliament of New South Wales considered, before adjournment, "the Closer Settlement Promotion Bill," which "practically establishes a land bank." Giving the Government Savings Bank the power to lend money on certain conditions to groups of persons who wish to buy an estate for closer settlement,

"the Government is making it far easier for any one who honestly intends to settle on the land to get over the difficulty which almost always arises—the fact that it costs money, and that he has not the money."

In committee, this bill was altered

"to allow three men seeking land to apply to the bank instead of five, as originally proposed; and also to increase the amount the bank may advance in one year from £500,000 to £1,000,000."

——The Countess of Dudley stands sponsor for a memorial of King Edward VII that is being approved by the people of Australia. Pointing out the need of extending the work of district nursing associations, particularly in bush districts, she has submitted a plan for "the Australian Order for District Nursing," with a view to such extension of a charity whose good results are already recognized.——Australian penny postage will probably be introduced at the New Year. Penny postage for letters exchanged between Australia and Great Britain has obtained since 1905. (In Great Britain it has obtained since 1840; in 1898 it was extended to Canada, and in 1908 to the United States.) In the meantime, it seems odd that while a letter from any portion of Australia may be addressed to London for two cents, penny postage does not universally apply between the States of the Australian Commonwealth. France is, at the present moment, pleading for an extension of the rate which now obtains between London and New York. The present arrangement does not seem fair to the Paris *Temps:*

"Londoners have to pay five cents for a letter addressed to France, a few hours away, while two cents suffice when they write to Melbourne or to San Francisco. The absurdity is yet greater, as all letters bound for India or Australia cross France, the penny stamp permitting a letter to travel across the whole of France, from Calais to Marseilles, but forbidding it to stop there."

The French Chamber of Commerce of London has announced the passing of a resolution reiterating the desire which it exprest in December, 1908, viz.:

"that early negotiations should be entered into by the French and English Governments in

view of fixing the postage of letters sent from and to each country to one penny (10 centimes). It has further decided that this resolution shall at once be forwarded to the French Government."

——Keen satisfaction is felt in Wales that King George will revive the ancient custom of the investitude of the Prince of Wales and that the ceremony is to take place at Carnarvon Castle next July. Chancellor Lloyd-George is the member for Carnarvon in the British House of Commons.——An industrial war on a grand scale is feared to be imminent in England, as a consequence of the boilermakers' lockout. The lockout followed the action of the men in joining in a number of sectional strikes in disregard of agreements entered into between their trade union executive and their employers. The leaders themselves admit that the men were at fault and deplore the situation as detrimental to the principle of collective bargaining, in which lies the foundation of trades unionism. The unrest is not confined to one trade. The employees of the Great Northern Railway threaten to repudiate a conciliation scheme recently agreed upon. The question of a ten-hour day has led to a deadlock in the cotton trade and the employers have recommended a general lockout unless the men involved in a petty strike at Oldham accept arbitration. These troubles, added to the lockout in the shipbuilding trades, will involve over half a million workmen. The northern shipyards trouble involve 50,000 now, and may, in a few weeks, affect 150,000. There are 12,000 Welsh miners now out; on a national strike 200,000 would be involved. One hundred and fifty thousand workmen are affected by the Lancashire cotton factories dispute; the number may ultimately reach 300,000. Thus, if the present disputes are not settled, some 650,000 men will either be locked out or on strike in a short time.

☙

France

On September 1 a monument in commemoration of the heroic charge of the French cavalry on September 1, 1870, at Sedan, was unveiled at Floing. Among the numerous deputations present were those of the regiments of Chasseurs d'Afrique, the Association of Army Veterans and the Frontier Army Corps. Floing, where the monument has been erected, is two kilometers from Sedan. The sculptor is Guillaume, and his work consists of a colossal statue, representing France giving the military salute, while she lowers toward recumbent figures the flag for which they shed their blood. A high relief represents the famous cavalry charge, which inspired the exclamation of King William, "Ah, les braves gens!" The monument is more than 30 feet in hight, and is singularly impressive. Many survivors of the war had crossed the frontier from Alsace and from Lorraine to assist at the ceremony. General Balloud, commander-in-chief of the Nineteenth Army Corps, and a lieutenant of Chasseurs d'Afrique at Sedan, recalled the circumstance that, on the eve of the battle, General de Galliffet, who died only last summer, the most picturesque survival of the France before the republic, sent for his officers of the Third Regiment of African Chasseurs, and said to them:

"We are on the eve of grave events. There is likely to be some hard fighting tomorrow, and we may perhaps have to charge. I count on you to maintain our reputation."

The Third Chasseurs charged, not once, but twice. In comparing the French army of today and forty years ago, the French commander extolled the spirit of abnegation, the sacred love of country, and the virtues of military discipline.——Another anniversary, the millenary of the foundation of the Benedictine monastery of Cluny, was celebrated on the 10th, 11th and 12th of this month. The Mâcon Academy took the initiative in this celebration. M. Léopold Delisle, the scholar who so recently died, with a long record of academic achievement, was to have presided. The Pope has written an autograph letter to the Bishop of Autun, extolling the work of the monks on behalf of religion and humanity. The political inspiration of this letter has been signalized; it is in contrast with the spirit of the appeal of the organizing committee.——The General Confederation of Labor publishes the program of its proposed campaign in Paris and the provinces against those whom it holds

responsible for the increase in the cost of living. Placards and local meetings are to be used in the opening skirmishes; in October a mass meeting will be organized, to follow the Socialist Congress at Toulouse. To give a practical turn to the campaign, the working classes are urged to deal, as far as possible, with co-operative societies, and to blacklist sugar. Meat and wine are likewise to be eschewed while the price of these commodities remains at its present level.——The Naval Aeronautic Commission suggests that the ocean-going liners which are classed as auxiliary cruisers might be specially equipped for tests of the aeroplane at sea. Aeroplanes might be stowed in their holds; the ships have cranes for taking them on board, and it is thought that a sufficiently long stretch of deck could be made available as a "take-off." The commission considers that these fast cruisers, equipped as they already are with wireless telegraphy, would thus become valuable adjuncts to the navy for reconnaissance work. The cost of the innovations would be inconsiderable. Meantime, the usefulness of air scouting in land warfare has been demonstrated in the French maneuvers on the plains of Picardy, which involves 80,000 men. One of the military airmen states that it was easy to distinguish cavalry, infantry and artillery. The difficulty of using either aeroplane or dirigible balloon in all weather remains, however, undemonstrated. In the German army maneuvers, recently terminated, the Gross dirigible airship supplied misleading information to the "Blue" army and was blamed for its defeat. On September 14 Count Zeppelin's airship, the "Zeppelin V," was destroyed by fire at Baden-Baden, as the result of an explosion. Three persons were seriously injured. The airship had been in commission as a passenger vessel only six weeks.

Japan, China and Manchuria

According to the Japanese press, Captain Ide, of the Imperial Japanese Navy, states that, tho there will be no great increase of the navy next year, there will be some additions. Ships will be built entirely in domestic dockyards. Captain Ide speaks also of torpedo boats as having been permanently discredited in the recent war. Nothing is now considered of any use except destroyers, and they too will have to be greatly increased in size. The *Chuo Shimbun*, on the other hand, alleges that it is intended to build three huge armored cruisers of 25,000 tons each, besides destroyers. Two of these cruisers will be laid down when the "Settsu" and the "Kawachi" are off the slips, which will be in October and May next, respectively. Meantime, the battleship "Aki" is approaching completion. She will join the navy early next spring. Her dimensions are 19,800 tons displacement, her speed 20 knots, and her armament four 12-inch and twelve 10-inch guns.——The Japanese Cabinet apparently desires to divert the stream of emigration from the American Continent to the East Asian. This change began to be effected after the war without governmental action. Opposition to this policy has found expression from time to time in the columns of the Tokio press. However, the number of Japanese in Manchuria engaged in business alone, has grown from a negligible quantity to tens of thousands in the last six years. The Governor-General of Kwantung has decided to send Mr. Takahashi Motoji as a commissioner to Europe and America for the purpose of investigating the general question of colonization. On the other hand, the Chinese Government's project for strengthening its hold upon Manchuria by means of colonists does not appear to have met with much success thus far. The immigrants are nearly all from the provinces of Hupeh and Hunan, people reduced to the verge of starvation, and ready to seize any opportunity, lawful or unlawful, of earning a livelihood.——Viscount Arasube Sone, Japanese Privy Councillor and former Resident-General in Korea, died at Tokio September 13. He was born in Choshu Province in 1849, of a Samurai family of distinction. He was Prince Ito's successor as Resident-General when the latter was made President of the Privy Council of Japan, in 1909, and was the incumbent's predecessor. While acting in this capacity, Viscount Sone was an outspoken opponent of annexation.

After Cannonism—What?

BY VICTOR MURDOCK

[Mr. Murdock is serving his fourth term as member of Congress from Kansas. It would probably be fair to call him the leader of the insurgents in the House of Representatives in their fight against Cannonism.—EDITOR.]

TAKE away from the office of Speaker the power to appoint committees—there can be no complete victory over Cannonism without that. In this power is the greatest source of the outrageous control of the House by its presiding officer. The war waged against Cannon must be continued to prevent a return of Cannonism under any future Speaker, whatever his political party.

VICTOR MURDOCK, M.C.

For it is of the utmost importance that the American people, having defined the evil of Cannonism, and having determined upon its punishment, should proceed to plug up the drain which has been poisoning representative government. To this end the people should demand that the House itself, and not the Speaker, appoint the committees.

When the House insurgents arose, two years ago, most of them, uncertain of popular support, insisted that they had no attack upon Mr. Cannon; that their effort for correction was confined to the system of legislative procedure. The people themselves, once the attack opened, did not limit their impeachment to impersonal Cannonism. On the contrary, popular attack concentrated almost wholly on Cannon, the man. It would be a grievous mistake for the nation to believe that the trouble was wholly Cannon or wholly Cannonism. The trouble was both. The thing now to consider is that Cannonism does not necessarily pass with the retirement of Cannon. The one certain way to see that it does pass is to take away from the Speakership the power, concurrent with the office, to appoint committees.

This means a change in system. I do not believe there are many who see how far-reaching that change may be. Consider, in this connection, the mental attitude of the American citizen toward the House during the last ten years. The citizen has come to regard as normal Congressional obstruction and delay of needed legislation, and this has usually been accompanied in him by a disbelief in the adequacy of the desired law when finally enacted after long postponement. For instance, the desired changes in the railroad rate law of 1889, changes made necessary by a court decision in 1897, were reported out of committee in 1903, were enacted into law in 1905, but were made measurably effective finally in 1910. Popular disbelief in the adequacy of major laws, popular doubt of the willingness of Congress to pass effective law, has naturally bred a conviction among many that Congress is naturally not responsive to public opinion, and

that, consequently, any major action by Congress must be forced not merely by means of agitation, but by prolonged and mayhap threatening agitation. Now, as the House and the Senate have lost in popular confidence, the executive branch of government has gained in it, and Presidents, conforming to the situation, veer away from the constitutional function of advising with Congress, and advance, at the opening of a new Congress, with a legislative program which an aroused and sympathetic public opinion demands shall be carried out.

A change in the system, the completion of the task of eliminating Cannonism begun at the last session of Congress, will bring the opportunity for three great developments.

First: A restoration to Congress of the normal faculty of a representative body to respond promptly to the demands of an informed and righteous public opinion.

Second: A return of power and prestige to Congress as one of the three coordinate branches of the Government.

Third: The development of a new type of Congressman, who will insist upon effective legislative action and will fully assume individual responsibility for legislation.

All three of these changes are related directly to the method of appointing committees in the House. None of the changes will have full opportunity of development if Speakers continue to appoint committees. All three changes, in some degree, will come advantageously into the life of the nation, if the House appoints its own committees.

By way of analysis, let us consider the first proposition. Why has it been necessary in the past for the public, in obtaining a needed Federal law, to work itself into a fury before Congress could be persuaded to respond? It has been necessary because, in practice, the House, and not the Senate, takes the initiative in most major legislation, demanded popularly, and the House machine, with Cannon at its head, has maintained a rigid military organization to withstand popular demand. At bottom, the secret of this organization's power was discipline, exercised in part (1) by the Speaker's arbitrary power of recognition (now in part corrected); (2) by the Speaker's presence on the Committee on Rules (now corrected); (3) by the Speaker's appointment of committees. Consider this last named power. By its use the natural, orderly growth of the House has been distorted by the Speaker. There are, for example, some fifty committees of the House, but the Speaker, who has the power of referring bills and who had, until last session, the power of preventing consideration of measures by the House, concentrated all the business of the House virtually in ten or twelve committees. This consolidation of the business into the hands of a few committees made for facility in the Speaker's control. It also diminished the number of really desirable committee places, and increased the value in which each of the places was held. It made the larger gifts in the Speaker's hands more desirable. But, most important, it enabled the Speaker to maintain perfect military discipline. And that discipline was maintained with an iron hand.

Before the day of insurgency, the chairman of an important committee was, in his relation to the Speaker, as a colonel to his general, and, in his relation to a few intimates upon his committee, as a captain to his lieutenants. The rest were privates who were encouraged, not to have opinions of their own, but to vote and act with the committee chairman, who, in turn, was known to be acting and voting as the Speaker directed. The Speaker commanded the House. If he were challenged, as he was, he punished the insurgents by leaving them off committees where they had gained rank, or reducing them in position: action taken against Norris of Nebraska, Cooper of Wisconsin, myself and others. Before the day of insurgency the Speaker had arranged, not processes for the operation of representative government; he had formed a personal machine. After the day of insurgency another Speaker can build another personal machine, unless the House takes over the business of appointing its committees. Another Speaker, after the day of insurgency, can concentrate the business into a few committees, make the personal obligation in committee assignments paramount, and rear again a system of rewards and pen-

alties. And just in the measure the Speaker of the future does that thing, so will necessary laws be denied, essential legislation be delayed and obstruction be practised. For every legislative machine, once it has power, must hold that power, and to hold it the machine must use the tactics of obstruction. The machine's safety lies in negation. Standpatism is not only a belief of all legislative machines, it is also an absolutely essential element to the machine's life. The device on its emblem spells "Inaction." Therein, by the way, is the secret of Cannonism as it is found in Congress, in State legislatures and in city councils. The obstruction, delay and inadequacy in legislative action which many think are the normal, natural things for all legislative bodies are, in fact, largely practices for self-preservation by the machine. If the House will appoint its own committees, obstruction, not as a means of warfare by a minority, but obstruction as a means of control by a machine in charge of the majority, will pass. So much, then, on the opportunity of making the House responsive to popular will.

On the second score—a return of power and prestige to Congress as one of the co-ordinate branches of government. As the House, the popular branch, during the years has lost in popular favor, the executive branch has gained, and a noteworthy diminution in the legislative effectiveness of Congress has been accompanied by an equally noteworthy invasion of the legislative domain by the executive branch. This was a favorite topic with the Cannonites in the days when they railed privately at Roosevelt. They declared he was legislating from the White House. Now, as a matter of fact, nearly all the executive departments legislate. Congress passes a law. Under this law, the department in charge of the administration of that law writes regulations. These regulations often are more voluminous than the law upon which they are based, and sometimes a regulation is written which changes the intention of the statute. I was one of a committee which, after the scandals in the Post-Office Department in 1903, succeeded in creating in that department the place of Purchasing Agent. A year later the Purchasing Agent appeared before our committee and testified that his place should be abolished. The functions we had given the place by law had been taken away by regulations written in the Department. Instances such as this could be multiplied indefinitely. The House is particularly a victim of these invasions by the departments because the House frames initially all the great supply bills which open the vaults of the Treasury to the departments. The Senate usually confines its activities to amendments of these measures, and because of its prestige, the legislation in which the Senate takes the initiative is less subject to distortion by regulation in the executive departments. The House usually finds itself incapable of effective protest under the present system. Means of knowing the full effect of departmental distortion of a law is enjoyed usually by those who have service on the more important committees. The chairman of one of those important committees, under the present system, does not have complete public confidence. He is part of a machine, and if he challenges an executive department, the chairman is likely to find the executive department sharing popularity with the President. The chairman's attack will not be sustained by popular commendation. It is quite likely to be condemned. Knowing this, the ordinary practice is not to challenge the department at all. If a modicum of public confidence come again to the House, there will be frequent and effective challenge of the license of departmental regulation, which every man privy to the affairs of Congress knows is a crying need. But if the House machine, with its personally appointed committees-in-waiting to the Speaker, is to be perpetuated as an institution, the House then will continue to ask popular approval in vain, and the executive departments will go on legislating, often care and fancy free. So much on returning, advantageously to the nation, prestige to the legislative branch of government.

As to the third development which will follow if the power to appoint committees is taken away from the Speakership, that is, the development of a type

of Congressman who will insist upon effective legislation and will assume individual responsibility for it, while this change may come slowly, it will prove of great moment. Before the Cannon machine was assaulted it had reached the point where it did not expect its adherents to think for themselves. The members of a committee which had reported an important bill were, by an unwritten law, obligated ordinarily to follow the committee chairman. Not occasionally, but continually, members of the House were admonished to "vote with the committee." That is, they were told to vote with the chairman of the committee, as he was the one directing figure visible and audible in the contest. What followed this custom of voting blindly with the reporting chairman? Naturally, the greater the degree in which the machine held control, the less studious, the less informed, the less vigilant became members of Congress in regard to measures upon which they were asked to vote. It is no idle fiction; it is an appalling fact that scores of important measures were passed thru the House by the Cannon machine when not 10 per cent. of the men who voted for them had ever read the measures or heard them read. These Congressmen merely "voted with the committee." It is an easy step from a condition where information upon a measure was considered unnecessary by a Congressman to the next stage of mental inactivity where the same Congressman relied implicitly upon the judgment of a chairman. And, in this condition of blind submission to leadership on the part of many Congressmen, the faculty of individual legislative responsibility shriveled away thru disuse. Congressmen who no longer exercised individual responsibility came in time to fear to exercise it. Congressional cowardice became a byword. It was said that there was but one thing more cowardly than a Congressman—that, two Congressmen. There has been nothing quite so fatefully ironical in the whole Cannon contest as the continued complaint of Cannon's chief lieutenants that cowardly Congressmen, to escape blame from angry constituencies, had hidden behind Cannon. It was the Cannon system which had taught them to hide. Now take away from the Speaker his control of the House thru the appointment of committees, and gradually every Congressman, old and new, will be maneuvered into a position where he must act upon his own responsibility. If a Congressman is brought to the place where he must do that, then he will refuse to follow blindly a committee chairman, and if the Congressman refuses to follow blindly, then he must inform himself upon measures which are before the House. What this change of system means, thru added frankness, courage, intellectual activity and legislative effectiveness, I believe it is not possible to overstate. The result will be revolutionary in mental methods in Congress. Debate, which has languished, will take on new life and interest; issues which, for political safety, have been made purposely complex and difficult in the past, will be simplified and clarified; legislation, as the joint product of scores of studious members, not following the direction of a reluctant machine, but working willingly, in the spirit of construction, with information and under a sense of individual responsibility—such legislation will be adequate and effective.

It is imperative that the people see to it, by obtaining pledges from candidates for Congress, that the greater fruits of a victory over Cannonism be not lost. The House is peculiarly the political weapon of the people. It has been said often that the Senate was designed to hold back the House. It may be said also with equal warrant that the House was designed to push the Senate along. However, it was the Senate, by nature conservative, which guarded the covenant of representative government during the dark days of Cannonism. The Senate kept its procedure free. Strike the shackles from the House of Representatives, complete the work begun by the insurgents, free legislative government completely, and America will open the door upon a new era, an era which will hold not only an emancipated House, but a Senate rising, under challenge, above its inherent conservatism, and meeting, with the House, the new demands of a nation which is seeking to write into its law some measure of the nation's spirit of progress.

WICHITA, KAN.

How We Settled the Servant Problem

BY A BUSINESS WOMAN

MY brother, sister, and I decided, after several years out in the world that we would start housekeeping for ourselves, as we were all tired of boarding. We all worked in offices, and, as none of us received a very large salary, we were compelled to practice economy in our household arrangements. As a beginning, we decided to rent a furnished house for the summer months. The owners of the house were personal friends, and they recommended us to keep their maid, as she was faithful and competent. This suited us, and we were well satisfied when she consented to remain at the same wage she had been getting. She had a married sister living on the same street, who wished her to stay with her at night. This arrangement was agreeable to us, for, altho there was plenty of room in the house, her work for the day was finished when she had washed the dishes after the evening meal, and we were rather glad to know she was with friends. It also pleased us, after living so many years in other people's houses, to know we had our little home to ourselves.

In the fall, when our friends returned, and we had to give up the house, we rented a suite of rooms convenient to a good car service and to our work, but there was no bedroom for the maid, who had consented to come with us, as our friends did not require her services. This did not worry us, for we knew we could rent a single room for her at no great distance, and we had become so accustomed to having her leave immediately after she had finished her work, just as other business girls did, that we had come to regard it as her right. It had also occured to us that it was a good thing for her to get away from the surroundings in which she worked, as quite often a change is as good as a rest. This arrangement appeared to suit her well, so we directed her to a house where we knew there were rooms to rent, and instructed her to get a room there if possible. She did so and rented a small but comfortable room at a very reasonable rate.

I would not again make such an arrangement, but you see I had no idea we were solving a problem, and I was still tied down to the idea that if a girl is in domestic service practically her whole time belongs to her mistress, and the mistress is responsible for the girl's room and should make the financial arrangements for it. My ideas on this subject changed when the maid told me that her landlady was moving away. I asked if she knew where she could get a room. She immediately informed me that she had already rented a room in partnership with a girl friend, and the room was much better, while her share of the rent would be a little less than she had been paying. This taking of matters into her own hands rather surprised me for a second or two, but I soon saw that if she were not quite within her rights, she should be. She served us faithfully, and there was no reason why we should dictate where she should live, the kind of a room she should occupy, and the exact price she should pay for it. She was a free, independent woman, working for a living just as we were, and she had a right to resent petty restrictions, just as we would resent such restrictions had our employers been foolish enough to try to impose them. I said nothing to her, but the next pay day I gave her her full wage, plus the amount of her room rent, and told her that, as she was well acquainted in the city, I would in future pay her that amount every month, and she could make whatever arrangements she wished about her room. We have had no further trouble in the matter. We keep her address, as most firms do, that we may know where to inquire for her if she fails to come to work, but so far she has always been prompt, unless when ill, and then she sent us word at once.

Another part of the solution of the

domestic servant problem occurred to us one evening at dinner. One member of the family had received a raise in salary and another had been promised something better soon. We were discussing the matter when the maid came in to change the plates. We had just reached the point where we were strongly commending the business methods of one of the firms for which we worked, in that every employee received a raise in salary each year or was dismissed. This appealed to us as only fair, for those who were not more efficient at the end of the year than at the beginning were evidently not in their right groove, and the sooner they got out of that work and found a place where they fitted in, the better for them and the better for the business world.

This thought we almost unconsciously applied to the work of the maid. She was certainly more efficient than when she came to us, and so logically she should receive a raise in salary. We were business people. The argument appealed to us and we raised her salary at once. She had never asked for a raise, nor had she complained about anything. Since that, at our next raise in salary the following year, we again raised her salary, and I presume we will continue to raise it a little each year that she remains with us, if she increases in efficiency, as she no doubt will.

She has told us that friends of hers in shops, in the telephone exchange, in restaurants, and in laundries, have urged her to take positions with them and have told her of the excellent wages and good hours, but she has so far refused to go. She stays a little later in the evening than the average girl behind the counter stays in the shop, but she is free every evening at the same time, and she often has an afternoon off, and this she considers is more than compensation. On Sunday she comes a little later in the morning than on week days. She does the customary morning work and prepares dinner for 1 o'clock, so that we may not have the heavy meal to prepare in the evening, as she leaves as soon as the work after the midday meal is finished. Occasionally she asks permission to go to her home in the country for over Sunday. It is within reach of the suburban tram line, and we have never refused her, as she is always back at her post at the usual time on Monday morning. It might also be noted that whenever she knows she will be away for a meal, she makes all possible preparation, so that the extra work devolving on us will be as light as possible. This thoughtfulness is rather unusual in such a young girl.

Some may ask us whether we treat her as one of the family. To that I must answer "yes" and "no." We try to treat her as we wish to be treated in our offices. For our relationship is one of business and not a social one, and in the majority of cases I think it is wiser not to mix the two. She has her friends and we never dream of asking her any questions about them, any more than she thinks of questioning us about the people who visit us. Old family friends who come often to the house we introduce to her, but casual visitors we do not. She does not take her meals with us because part of her work is to wait on the table and answer the telephone and doorbell while we are at meals. If she were getting her meal with us she could not attend to her duties without more or less disturbance, and retarding of the meal. The fact that she does not take her meals with us is not a social but a business distinction. Our meal time is an hour earlier than hers, that is all.

But one cannot get away from the fact that conditions at the present time are often very hard for the sensitive girl, who has the courage of her convictions and stays at housework because she feels it is her calling. She must always feel that she is regarded as socially inferior to almost every other class of woman worker. She may argue with herself that she is not inferior, and all the philanthropists and lecturers in the city may tell her that her calling, that of the home maker, is a noble one; but when she goes to that home and finds herself at the beck and call of every member of the family, with scarcely any time, and often not a room that she can call her own; while the shop girls have their evenings, and their own rooms or the use of the parlor to entertain friends, and a few hours at least free from a "boss," she comes back to the regrettable fact that

servant girls are not given the freedom which other girls enjoy, and also that the world largely judges the status of a class of workers by the amount of freedom they are allowed.

Women can bring the girls back to work in the homes, if they wish. It all rests with them. Many, many clever girls prefer housework to the grind of the business world outside of the home; but it will be many years before the woman who knows little or nothing about business realizes that girls will never go back to housework until they are given regular hours, fair wages, a home away from their employer, and extra pay for overtime. Girls do not as a rule wish social intercourse with their employer or h r friends. What they do wish is courteous and businesslike treatment, and when both employer and employee are educated up to the point where the relationship is regarded quite impersonally, and merely as a business transaction, then the domestic servant problem will be settled.

Jack Hagen's Soul

BY W. F. SMYTH

It was Jack Hagen's soul that stood
Without far heaven's gate.
It was Jack Hagen heard a voice:
"You do not knock too late.
This night you died to save a life
Where flames were leaping high.
The gate stands open now for you
Who did not fear to die."

But said the soul of Hagen then:
"I've lived too rough for here"
(Within the gate the glory shone;
The harps of gold rung clear).
But said the soul of Hagen then:
"It's me that's black with sin;
And all the holy saints would mock
Was I to enter in."

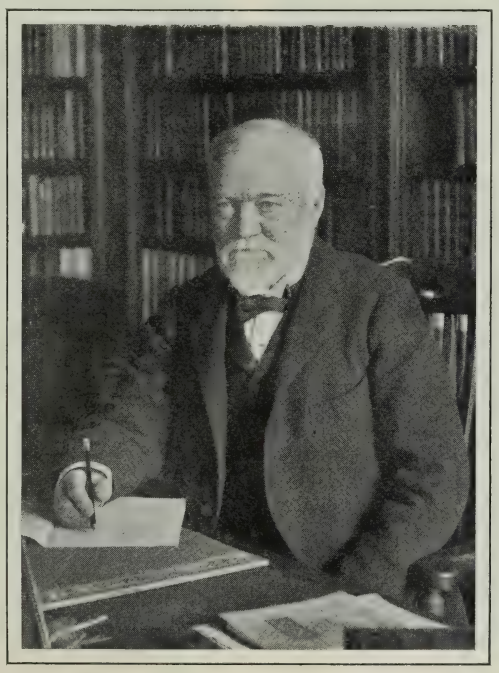
The voice said to Jack Hagen's soul:
"You did not fear to die.
You gave your life to save a child
Where flames were roaring high."
The voice said to Jack Hagen's soul:
"Unmoved, you faced your fate.
You gave your life to save a life—
You do not knock too late."

But said the soul of Hagen then:
"The lads of Number 4,
They'd any done the same as me—
'Twas just my chance, no more."
But said the soul of Hagen then:
"'Twas what I couldn't shirk.
My duty laid before me plain—
I only done my work."

The voice said to Jack Hagen's soul:
"You did not fear to die.
And fear you then the Father's house?
The mansions in the sky?"
And said the voice to Hagen's soul:
"There's one whom you will know—
Your little sister Margaret
You lost so long ago."

Then, wistful-like, Jack Hagen spoke:
"If little Sis is here
I'd slip just in the gate a bit,
So I could see the dear."
Then, wistful-like, Jack Hagen spoke:
"She died, 'twas long ago;
But sure I'm loving her the same—
I'd like to have her know."

The voice said to Jack Hagen's soul
(The gleaming gate swung wide):
"Your little sister waits for you
Amid the glorified.
Your little sister waits for you
Beside the crystal sea."
Within the gate stepped Hagen. "Sis!
O Little Sis!—It's me!"



CLEVELAND, OHIO.

The Leaders of the New Peace Movement in America

BY FREDERICK LYNCH

[Mr. Lynch is pastor of the Pilgrim Congregational Church of New York City and associate editor of *The Christian Work and Evangelist*. As a worker, lecturer and writer, he has already achieved great distinction in the peace movement. He deserves to be ranked with the foremost mentioned in the following article.—EDITOR.]

WE have called it the new peace movement because the endeavor for international peace has taken upon itself a decidedly new and changed form. Up to the beginning of this twentieth century the movement had been largely confined to the prophets and seers, and its method had been mostly that of creating sentiment against war and projecting methods of world federation. But owing to the superb and untiring work of these prophets, men who followed the ideal thru all the doubts and scoffings of the last century, this sentiment that war is outgrown and belongs with medieval things in museums; that it is utterly unchristian and out of harmony with the ethics of our day; that we must find better things, world parliaments, international courts, arbitration treaties substituting law for war, has so taken possession of the world that the peace movement has now passed to that stage where it is beginning to put these dreams and plans of the prophets into shape and form. It is passing from talking to achieving, from preaching to practice. Knox and Scott and Choate and Porter and d'Estournelles are establishing the court of arbitral justice, of which Kant and Grotius and Ladd and Hale prophesied. Hay and Cremer and Root have been signing the arbitration treaties which Smiley and Trueblood and Stead have been urging as the true substitute for war. Bartholdt and Barrows and Apponyi have been establishing those parliaments of man of which Victor Hugo and Tennyson and Rousseau once dreamed. And governments are already appointing commissions to study means for that world federation and the League of Peace which Andrew Carnegie and Campbell-Bannerman have been demanding for many years. The visions have become tasks; the world has turned itself with an enthusiasm which perhaps no other great reform has witnessed, to make realities in this century of the ideals of which the last century was grandly conscious. Even the propaganda is new, too, for the preachers of the peace movement are outlining things that must be done, rather than dwelling on the barbarity of war. The world, for the most part, has become fully conscious that war is unchristian. But it has known of no better way. The prophets of today are pointing out the new way and enlisting men in a constructive program, that they may estab-

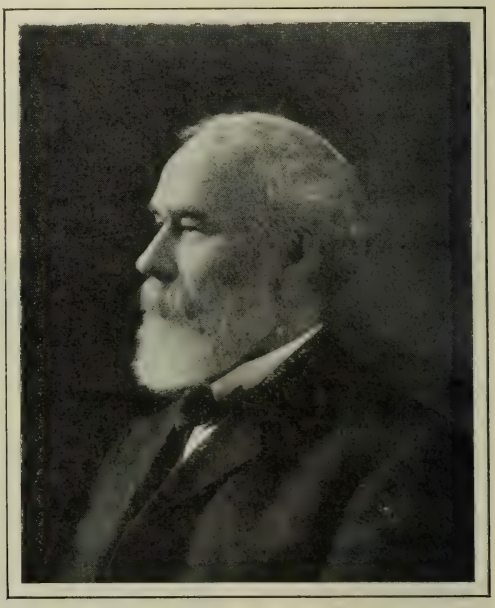
ANDREW CARNEGIE.

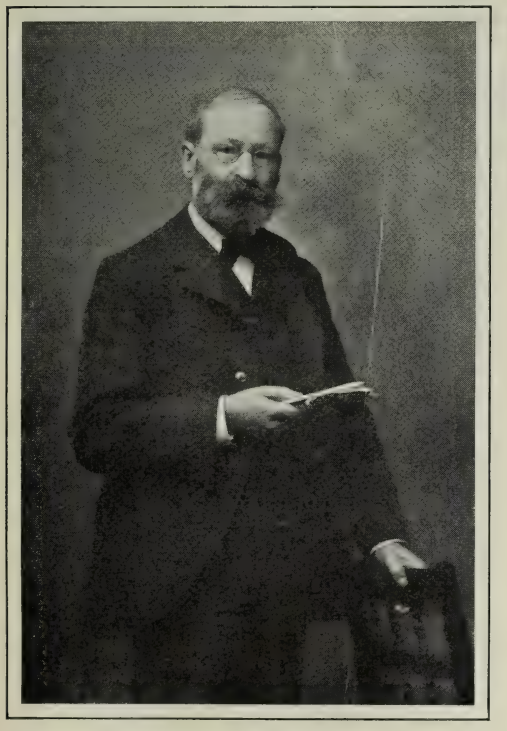


lish those new things that shall, with the expulsive power of a new and larger ideal, banish the old. The movement is new, too, in this regard, that up to quite recent years it was confined largely to a few preachers and writers and poets in each nation, men who belonged to the school of the prophets. Now statesmen and merchants and workingmen and industrial organizations are accomplishing the new task, building the fabric whose plans the idealists perfected. This phenomenon is witnessed in all great movements. It is especially noticeable in the peace movement.

THE INDEPENDENT has asked me to write a few words about the leaders in the peace movement. It will be necessary to confine this paper to Americans and we are to speak of living men. It is a grateful task, for the leaders of this

SENATOR ELIHU ROOT.

movement are really great men, great-hearted as well as prophetic, for the peace movement is simply the realization of the brotherhood of man. These leaders, by a process of natural selection, fall into three groups: First, those who by voice and pen are outlining the course the movement must take and are educating the world to the new order, creating a sentiment that shall demand world unity and good will; secondly, those who are organizing this sentiment, giving it effective direction, creating councils, congresses, bureaus and institutions, demonstrating by actual achievement how the new works better than the old; lastly, those who are actually establishing thru legislative action and governmental sanction the machinery by which the peace of the world is to be assured and the unity of the world find



DR. BENJAMIN FRANKLIN TRUEBLOOD.

harmonious field of operation for the common welfare of the nations. This classification is not strict or absolute, for many of these men have part in all these activities, but it will serve our purpose.

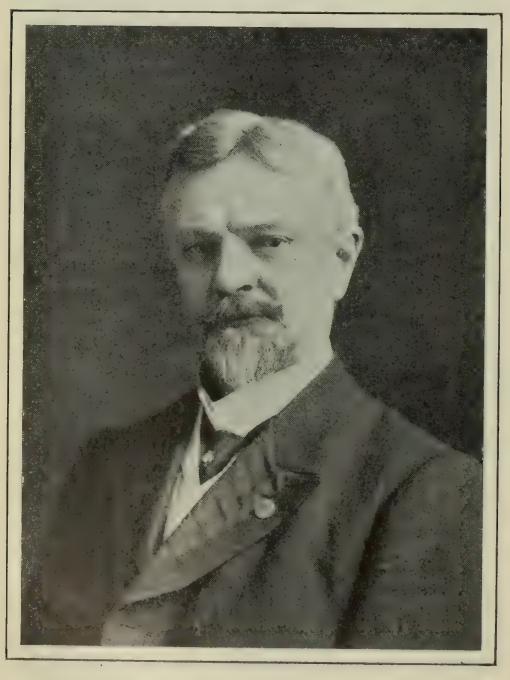
Beginning with the first group, the dean of the prophets is Dr. Benjamin F. Trueblood, secretary of the American Peace Society. For many years by voice and pen, as editor of the *Advocate of Peace*, writer of many pamphlets, author of "The Federation of the World," he has with undiminished zeal boldly proclaimed those things which now we see coming into being: arbitration treaties and world federation. For many years he stood almost alone and yet with a sure faith that

world unity was the only natural and logical outcome of this century's civilization, he pursued his way and is now come into his own. Perhaps no living man knows the history of the peace movement as well as he. His annual papers at the Lake Mohonk Conferences summing up the progress in arbitration for the year are the standard authorities on the history of arbitration.

Simultaneously with Dr. Trueblood's advocacy of arbitration and the federation of the world from Boston, Andrew Carnegie has been sending forth pamphlets and articles from New York. Perhaps no single piece of peace literature has had so wide a circulation as his remarkable Rectorial Address at St. Andrew's University. It is both a history and a prophecy. It has become famous for its advocacy of a League of Peace—three or four of the great nations com-

EDWIN D. MEAD.

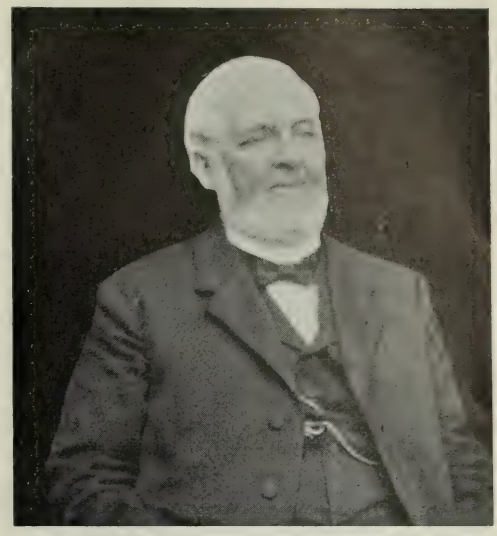
bining their reduced navies into one, arbitrating their own differences and then saying to the rest of the world, "You must keep the peace and arbitrate yours." This pamphlet has been circulated by the hundreds of thousands, and in several languages. Every year Mr. Carnegie sends some memorable utterances thruout the world. He has preached the oneness of humanity by deed as well as word, for three beautiful and costly palaces which he has given are to stand for all the world to see—one for the Court of Arbitral Justice at The Hague, one for the Arbitral Court of the Central American States at Cartago, one for the Bureau of American Republics at Washington. These are all dedicated, to quote Mr. Carnegie's own words at the opening



MRS. EDWIN D. MEAD.

of the Bureau of American Republics, "To the stopping of the killing of man by man in the settlement of international disputes."

Perhaps no life has ever been more absolutely devoted to one thing than has Edwin D. Mead's to the educating of this country in the gospel of internationalism, unless it has been his wife's, Mrs. Lucia Ames Mead. From their Boston home has gone forth a stream of weekly pamphlets and editorials to the ends of the world. Not only has Mr. Mead reached many thousands by his editorials in the Boston *Advertiser* and other Boston dailies, and his innumerable letters



and pamphlets, but he has been the editor of the splendid International Library published by Ginn & Company. Mrs. Mead is as indefatigable a writer, and also a brilliant speaker, addressing many audiences of women all over America. No living woman knows this whole international problem as well as she, and few men. Mr. and Mrs. Mead have recently toured Europe together, speaking in German and French on this great cause. These four, whom we have mentioned, with the exception of Mr. Carnegie, have devoted their lives primarily to this one cause, and Mr. Carnegie has written more on peace than on any other subject But there are a number of others, who, interested in many other subjects and leading in many other movements and speaking on all themes of human welfare, pastors of churches, or professors in universities, or editors of papers, who are leaders in this great cause and lift up their voices unceasingly for the new order. Dr. Charles E. Jefferson, of the Broadway Tabernacle Church, New York, has published several pamphlets on anti-militarism which burn and glow with the fire of Carlyle's latter day pamphlets. He is also chairman of the executive committee of the New York Peace Society. President David Starr Jordan, of Leland Stanford, Jr., University, has developed in his book, "The Human Harvest," one of the most original and effective arguments against war published since Sumner's oration on the "True Grandeur of Nations." In substance it is that war takes off the best blood of the nation and leaves the puny and unheroic to breed the succeeding degenerated stock. Hayne Davis, a lawyer of New York City, and secretary of the American delegations at several inter-parliamentary conferences, has, in many articles in THE INDEPENDENT and in his book, "Among the World's Peacemakers," suggested many of the lines along which the new international movement is progressing. Prof. William I. Hull, of Swarthmore College, has written the history of the two Hague Conferences, and in many pamphlets and speeches has shown the practicability of arbitration as a means of settling international disputes. Jane Addams, of Hull House, Chicago, in her suggestive book "Newer Ideals of Peace," has expounded with remarkable insight the interracial phase of the peace movement and intimated what the movement may learn from the mingling of many races in America into one harmonious unity. Prof. John Bassett Moore, of Columbia University, New York, has made the history of arbitration and the growth of international law familiar to thousands, while Prof. John B. Clark, of the same university, has done more than any other man to show its relations to the industrial and social movements of our day. He has shown in such pamphlets as his last one, "An Economic View of War and Arbitration," that the trades unionists and Socialists are unanimous in their demand for international peace, but that unless the industrial order within the nation is more decidedly based on justice, there is not the same certainty of internal peace. The two reforms must go on together. Dr. Stephen S. Wise, of the Free Synagogue, New York, an impassioned orator and champion of the opprest, has been declaiming with the moral earnestness of the Old Testament prophets against our oppression of the masses of the world by the iniquitous burden of

RICHARD BARTHOLDT, M.C.

war-preparation, and our travesty of the brotherhood of man. Prof. Charles P. Fagnani, of the Union Theological Seminary of New York, has in words of withering sarcasm shown the obsoleteness of the old order of militarism in this new era of universal democracy, and convinced men that Christianity is a farce and failure so long as nations live under the law of force instead of the law of love.

Many young men, new to the movement but full of great zeal, are speaking and writing continually. Such are the Rev. James L. Tryon, the assistant secretary of the American Peace Society, with his illuminating articles on international law; Harry Hunt, of Detroit, with his monthly syndicated letters to the press on the rapid advance of world unity; Rev. F. S. Van Eps, of New York, with his addresses on the peace movement as the logical outcome of the Kingdom of Christ. Mention should also be made here of the impetus given to the peace movement by the most suggestive and illuminating little book by Raymond L. Bridgeman, called "World Organization." No book has more truly foreseen the task of the twentieth century, the federation of the world. This article is already becoming too much the nature of a catalog, but we must refer here to the service the prophetic editors are lending to the cause. The editors of THE INDEPENDENT and Dr. Joseph Newton Hallock, editor of the *Christian Work and Evangelist,* have made their papers practically organs of the movement to substitute arbitration for war, printing weekly articles on this subject, while S. S. McClure, editor of *McClure's Magazine;* John Temple Graves, of the New York *American,* and Rollo Ogden and Oswald Garrison Villard, editors of *The Evening Post,* of New York, are all zealous advocates of the new world unity and use their powerful journals in its behalf. And mention should also be made of the unique use Dr. Robert Freedman, of New York, has made of symbolism in impressing upon the people the unity of the world. He has had made, at great expense, several large "peace flags" of the finest silk. These flags consist of the national flag, with a surrounding white border, and streamers on which are beautifully sewn

ALBERT K. SMILEY.

the flags of all the other nations. At any event of an international character in New York, Dr. Freedman covers the walls of the hall or banquet chamber with these beautiful flags of the United Nations of the World.

Turning now to the second group of leaders we must bear in mind that almost all of these whom we shall mention as organizers of sentiment have also been active as preachers of the gospel of internationalism. But they stand out primarily as those who have crystalized the sentiment of the educators into active and effective organization, gathered it up and brought it to bear upon Governments and Legislatures, given expression to it in definite and commanding resolutions, brought the prophets together into councils and exprest their united voice to the world, set in operation new forces, backed by large groups of men, secured organized and permanent and centered propaganda, as instruction in schools and colleges, printing of circulars, and pamphlets, and regular conferences for the education of the public. This is what we especially referred to as the new phase of the movement. It is now becoming one of the most outstanding features of our time. Even the peace papers cannot chronicle their growing frequence. Foremost among those who have crystalized the vague and general sentiment of the last twenty-five years in favor of in-

ternational arbitration, and given it commanding and really practical effect upon the world, is Albert K. Smiley. Sixteen years ago he began inviting groups of peace workers to the Lake Mohonk House, of which he is the proprietor, for annual conferences on international arbitration. These conferences have perhaps been the most powerful influences in America in popularizing the peace movement. They have brought together every year several hundred leading clergymen, statesmen, editors, college professors and business men from all over the country. They have foreshadowed in their discussions and resolutions almost every great step in internationalism, including even the Hague Court. They are now the recognized clearing house of the peace movement, and under the direction of their able secretary, H. L. Phillips, continue their work thruout the whole year. To hardly any other living man does the new internationalism owe so much as to Mr. Smiley. Many of us think that there is no other man more deserves the Nobel Peace Prize than he.

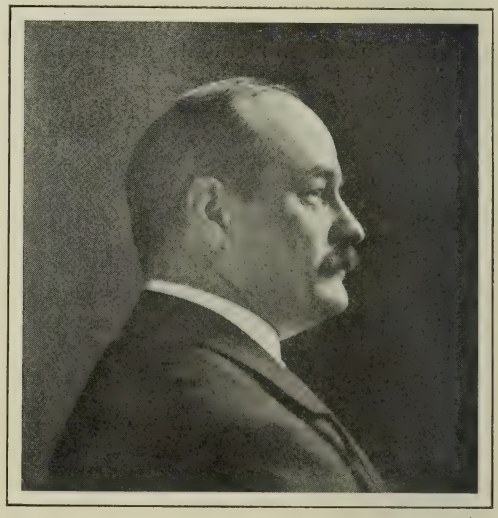
A good example of how this new movement is finding expression is seen in the unique undertaking of Edwin Ginn, the well-known publisher of educational books of Boston. For several years Mr. Ginn has been publishing at cost price the great peace literature of the world in an International Library. He has now founded the International School of Peace at Boston. This school is sending out speakers, printing timely literature, and working in the schools. It has opened large reading and reference rooms in Boston and contemplates the training of workers in the international movement.

Nothing has been more significant for the peace movement in the new century than the leadership of college presidents. Outstanding among those devoted to the movement are Presidents Eliot, Jordan, Warfield, Wooley, MacCracken, Brooks, Finlay, Faunce and Seelye. But President Nicholas Murray Butler, of Columbia University, has become a leader of international reputation, and has made the movement his chief interest next to his university duties. He is president of the American branch of the Society for International Conciliation, founded by Baron d'Estournelles de Constant, winner of the Nobel Prize last year. This society exerts all possible influence to prevent the two nations that may have a quarrel to refrain from war and resort to a court, and is rendering a valuable service to the peace cause by the frequent publication for free distribution of the best current peace articles and addresses. Dr. Butler is also president of the American Scandinavian Society, which arranges exchange of students and professors between Scandinavia and this country, while his annual addresses as president of the Lake Mohonk Conference on international arbitration are among the most striking contributions to the peace movement. It ought also to be remembered that the system of exchange of college professors between Europe and the United States was extended by President Butler. It was he who arranged for the Roosevelt Professorship in Berlin and the Kaiser Wilhelm Professorship in Columbia University.

Columbia University is noted for the large number of the faculty who are leading in the new internationalism and in the attempt to bind the nations of the world together into a unity somewhat resembling that in which the States of the United States find happy and harmonious persistence. Foremost among those who have organized the scattered forces of the movement into powerful and effective expression is Prof. Samuel T. Dutton, of Teachers College, Columbia University. Perhaps the greatest peace congress ever held was that assembled in New York just before the Second Hague Conference. Thousands attended its sessions and the words spoken went round the world. Professor Dutton was the chairman of the executive committee of the congress, and to him, and to Robert Erskine Ely, director of the League for Political Education, another ardent peace worker, the secretary of the congress, its great success was largely due. Professor Dutton was the originator of the idea of a permanent national council made up from among the peace workers of the whole nation, which can give expression to the sentiment of all groups in times of national crisis. (This council was appointed at the Lake Mohonk Conference in 1909.) He has been secretary of the New York Peace Society since its incep-

tion, and has lately been exchange professor to the Scandinavian universities. During his residence abroad as exchange professor he made many addresses on the growing friendliness between nations, even speaking in Constantinople upon this subject.

One feels like the writer of the famous eleventh chapter of Hebrews in the face of all the strong men who are interesting themselves in giving the peace sentiment a body and a form; for time will fail one if he mentions all the heroes. Dr. Ernst Richard, of Columbia University, was the founder of the New York Peace Society, and of the German-American Peace Society, of which he is now president. He has led the German-American societies of the whole nation to commit themselves to the arbitration movement, and is now working out a system of home exchange between Europe and this country—young men of one nation spending a year in some home in another land. Then there is a group of young men in Philadelphia, of whom Stanley Yarnell is representative, who are giving a concrete embodiment to that reservoir of peace sentiment which the Friends and Alfred H. Love have been faithfully storing for many years. The Pennsylvania Peace Congress of 1908 was one of the most progressive and influential congresses in the history of the peace movement. Three young men of great ability have left their chosen callings to devote all their time to the bettering of the relations among the nations of the world: Rev. William H. Short, who is doing much as executive secretary to make the New York Peace Society a great force in the establishing of new international ideals, and who has just been at Stockholm as its representative at the International Peace Congress; Prof. Carl Lorentzen, who has founded the American-Scandinavian Society and is now engaged as secretary of that society in bringing Scandinavian students and professors to America and sending American lecturers to Scandinavia, and who is also using his influence to secure permanent peace among those countries; and Rev. William H. Beals, the field secretary of the American Peace Society, who, from Chicago as a center, is organizing the great West that it may unitedly speak its new idealism. He was the moving spirit of the great Chicago Peace Congress of last year. The founding of such a society as the Japan Society in New York is an instance of the new peace methods. Lindsay Russell, a lawyer of New York City, conceived the idea of bringing the most public-spirited Americans together with the prominent Japanese residing in this country. In this way the influence of the disgraceful talk of enmity between Japan and America would be counteracted. He founded the Japan Society, which has been a powerful factor in creating good will and procuring treaties between Japan and the United States. No list of the organizers would be complete without mentioning Theodore Marburg, of Baltimore, who is president of the newest peace society in this country, the American Society for Judicial Settlement of International Disputes, which is publishing a series of valuable peace pamphlets and giving its prime attention to the creation of the Judicial Arbitration Court at The Hague. An instance of how great business men are being attracted to the new international movement is seen in the fact that Neils Poulson, the proprietor of the Hecla Iron Works, has set aside $100,000 for the use of the American-Scandinavian Society, and Marcus M. Marks, Esq., chairman of the conciliation committee of the Civic Federation and president of the Retail Clothiers' Association of the United States, has been devoting much of his time to interesting the financiers of the country in the peace movement.*



Two other young men should be mentioned who are doing splendid work among the colleges in organizing peace groups and encouraging the study of arbitration: George Fulk and Louis P. Lochnar, of the Cosmopolitan Clubs, clubs made up in different colleges of students from all foreign lands represented. Some women are also doing splendid work among the schools, as are Mrs. Fanny Fern Andrews,

*The day before this article was written Robert Treat Paine, of Boston, passed away. He was a splendid instance of the new devotion of business men to the cause. For many years president of the American Peace Society, he devoted his fortune and talent to hastening international peace.

head of the School Peace League, and Miss Mary J. Pierson, the leader in the work for children in New York. Miss Annie R. Eckstein is preparing a mammoth petition, signed by millions of names, to be sent to the Third Hague Conference. Mrs. May Wright Sewall, of Indianapolis, has done much to interest women in the movement, and Mrs. Donald McLean has made the Daughters of the American Revolution a powerful factor in the new patriotism, which loves America enough to make it the leader of all the other nations into the realm of international brotherhood now so auspiciously opening.

Turning now to the last group, we come to those who have for the past decade been putting into law those sentiments which the prophets have preached and the organizers exprest thru great congresses and societies and resolutions—the legislators and those who, altho not members of Congress or even of the Government, are yet achieving their ends by means of governmental and Congressional action. One of the most encouraging things in the new peace movement is the growing interest of statesmen in the substitution of law for war. Both the cabinets and parliaments of the United States and Great Britain now include many of the most ardent and most radical peace leaders. Even the rulers—and who ever expected rulers to lead in any reform movement until these latter days of the world?—are setting the pace for the prophets. King Edward was a devoted advocate of permanent peace, and the President of the United States has recently declared that all questions, even those of vital honor, should hereafter be included in arbitration treaties. He also said, at the dedication of the Palace of American Republics at Washington, that the time had come when if any two nations of this continent were considering entering upon war, the other nineteen should have the power to tell them to stop. This puts President Taft ahead of any of the rulers of the world.

But among those who are devoting their chief thought and interest to the movement for international arbitration, perhaps Senator Elihu Root stands foremost. While Secretary of State he caused twenty-three arbitration treaties to be signed with other nations, and he has but lately argued the Fisheries case before the Hague Court. His speech at the dinner given to him by the New York Peace Society in 1909, on the cultivation of that spirit that prohibits wars, was a memorable contribution to the peace movement. Secretary of State Knox is making an enviable reputation for himself by going right on where Secretary Root left off, and has sent a circular note to all the chief nations of Europe asking them to unite with the United States in constituting a permanent court of arbitral justice, in addition to the permanent tribunal appointed at the First Hague Conference.

NICHOLAS MURRAY BUTLER.

Hon. Andrew D. White, first delegate from the United States to a Hague Conference, with the devoted labors of the late Frederick W. Holls and the co-operation of Sir Julian Pauncefote, the English delegate, really saved the Hague conferences to the world. It is believed by many that the First Conference would have been a failure except for the insistence of these three men on its taking a certain stand on the question of arbitration and tribunals. The Hon. Joseph H. Choate and Gen. Horace Porter, the American delegates to the Second Hague Conference, introduced those motions that made the Conference take one of the great steps of history,

especially the motion in favor of a permanent court, which was unanimously carried; and the bill which was passed, prohibiting the forceful collection of debts by one nation of another, was introduced by General Porter, and bears his name.

Representative Richard Bartholdt, of Missouri, is the leading peace man in Congress, and has led the fight each year against the inordinate military ambition of the big-navy group with remarkable success. He is the leader of the American Interparliamentary Union group and was instrumental in getting Congress to apportion the fund to entertain the Union in America, and he has lately persuaded Congress to appropriate $5,000 a year for peace purposes and international hospitality. His voice is heard in their councils and he has the ear of Europe as well as America. He is as radical and earnest a peace worker as was ever William Ladd or Elihu Burritt. Furthermore, he is in Congress; and many other peace men are there with him. The chairman of the Foreign Relations Committee himself, Hon. David J. Foster, is doing splendid work for peace, as are also Representatives Tawney and Bennet. But when we get parliaments of whom the majority are peace men, the whole question is settled. It is possible to say that this condition is coming very fast, both here and in Great Britain. In the United States Senate are not only Mr. Root, but Senators Burton and Hale, who are championing every movement to unite the nations in a bond of good will and unity that no war spirit can ever break thru.

The solicitor for the United States, James Brown Scott, is doing noble work for the peace cause. He was the counsel for the American delegation at The Hague, and has recently published a monumental volume on the Two Hague Conferences. He has been assiduous in formulating plans for the Permanent Court, and has done good work in the realm of international law. Closely associated with him in work and friendship is Prof. George W. Kirchwey, dean of the Columbia University Law School, as one of the editors of the *Journal of International Law*. As chairman of the executive committee of the Lake Mohonk Conference, as a director of the New York Peace Society, as an influential force at Washington and as a brilliant speaker, Professor Kirchwey is a recognized leader of the new movement. One of those men closely associated with the Government for a long lifetime as Secretary of State, diplomat and delegate for China at the Hague Conference, is Hon. John W. Foster. For many years he was president of the Lake Mohonk Conference, he has been one of the pioneers in the movement for arbitration and has written a manual of the arbitration movement in "Arbitration and The Hague Court," and has devoted his life to the creating of more and more friendly relationships between the United States and other nations. No one has opposed more strongly than he the present attempt to make the United States a great military nation, ruled by army officers and the executive, as must always be the case with this centralization of power. He has long seen what the Frenchmen are learning, that militarism and democracy cannot exist side by side. And no summary of the peace leaders would be complete which did not include Hon. John S. Barrett, Director of the Bureau of American Republics. Mr. Barrett is giving his life to the unification of the South American States and the establishing of brotherly relations between them and our own country. The Congress of American Republics just finished at Buenos Aires, where all the nations voted to arbitrate financial difficulties after this, is an instance of what this bureau is accomplishing. The beautiful marble home of the bureau in Washington (presented by Mr. Carnegie) is well called "The American Peace Palace."

If this article reads something like a "Who's Who in the Peace Movement," the writer has only this to say: The movement has so suddenly leaped into world wide popularity that it has produced scores of men all over the country who are justly entitled to be called leaders in the movement, some of whom ought to have been mentioned here. Cut as he might, he could not in justice leave any of these out who have been mentioned. They have all made some significant contribution to the peace movement.

The task of the twentieth century is going to be the unification of the nations of the world, as the task of the nineteenth was the unification of the States within the nation. Everything is pointing that way. We have a world parliament already in The Hague Conferences. Some eighty arbitration treaties have been signed since 1900. The permanent court seems already to be descending out of the dreams of the prophets into the actuality of common life. There are a hundred other signs. The last is not the least, namely, the authorization of the President of the United States by Congress to appoint a commission of five men to study the problem of the federation of the world looking toward the delimitation of armaments and ultimate permanent peace. The prime movers of this bill were Messrs. Crosby, Granger, Bartnett and Holt of New York. These are the younger leaders who are carrying the movement, which the older prophets outlined, to actual consummation in the nations.

New York City.

An Outlook on the Pan-American Conference

BY DAVID KINLEY, Ph.D.

[Professor Kinley is Dean of the Graduate School of Illinois University, and one of the American representatives in attendance on the Pan-American Conference at Buenos Aires. He has written much on topics of finance and political economy.—Editor.]

THE first session of the Fourth Pan-American Conference, which, for various reasons, had been postponed beyond the date announced, was held in the magnificent new Palace of Justice in Buenos Aires, on July 12. According to arrangements previously made, Secretary Knox and the Argentine Minister of Foreign Affairs, Señor Victorino de la Plaza, were elected honorary presidents. The Chief Justice of Argentina, Dr. Antonio Bermejo, was made president, and the Argentine minister to the United States, Señor E. Portela, was elected secretary.

The proceedings of the plenary sessions of the conference are confined to the matters agreed on beforehand. No subject not on the program can be discussed, except by a two-thirds vote; for great pains have been taken to arrange the program so as to preclude the likelihood of discussion of controversial topics. The real work of the conference and the ventilation of differences of opinion take place in the committees. There all differences are thrashed out and compromises arranged, so that reports may be submitted in a form that will make discussion unnecessary in the plenary sessions. In this way, the decorum of the august body is maintained, and an appearance, at least, of harmony is presented, whatever may be the effect on the interest in the sessions.

Of course, too much in the way of practical results should not be expected of such congresses as the Pan-American. We must remember that these conferences do not settle matters. Their acts must be confirmed afterward by the various governments. As has been remarked by a wise observer, their true function is to deal with matters of common interest which are not really subjects of controversy, but discussion of which may remove differences of detail. Nevertheless, in view of the public importance attached to this and similar gatherings, one naturally turns to the program to see what topics are of sufficient international consequence to justify the assembling of so many men, some of them of large experience and great eminence in diplomatic life, at so much expense to their countries, for so long a session as a Pan-American Conference usually holds.

The preliminary or tentative program suggested last May by the committee of the Governing Board of the American Republics covered twenty-two subjects, not including the organization of the conference. Unfortunately, some of the most valuable and interesting of these had to be omitted from the final program, so that it includes but fifteen topics. Of these, eight are purely formal, being resolutions of appreciation or similar perfunctory matters. One, relating to the organization of the Pan-American Bureau and the diplomatic standing of its director, has no bearing on the diplomatic or commercial relations of the republics. Another, referring to the interchange of professors and students, is, under existing conditions, impracticable and of academic interest only. The work of the conference on quarantine and sanitary police, also, is not constructive. Its business is simply to recommend or advise against the adoption of the conclusions of the sanitary congresses of Mexico and Costa Rica. In the matter of establishing improved steamship service, another topic on the program, no definite practical conclusions can be reached, because, if for no other reason, our own Government is not ready to commit itself on the subject.

Thus there are left three subjects on which, it may appear, some practical action may be taken. They are uniformity of consular documents and the technical requirements of customs regulations, and also of census and commercial statistics; an arrangement concerning trademarks, patents and copyrights; and the continuance of the treaties on pecuniary claims.

Certain important matters referred by the Third Conference for report to the present one were not investigated by the authorities to whom they were submitted, and for that reason were omitted from the program. Among these, for example, was the collection of information and submission of a report on consular documents. The printed report of the Director of the Bureau of American Republics tells us that, owing to lack of funds and the failure of the Pan-American committees of the various countries to furnish the necessary information, he was unable to prepare the report called for.

Other topics thus referred, but not reported on, were the elaboration of a project for a contract with steamship companies for improved service between the principal ports of the continent; the study of the laws of the various countries regulating public concessions; and the study of the monetary systems and fluctuations of exchange in the American republics. Had the expected reports on these subjects been presented, the program of the Fourth Conference would have assumed greater significance. However, the earnestness and hard work of a number of the delegates will save it from failure and make it possible to present a report that will not be wholly platitudinous. Among these earnest workers should be especially mentioned Colonel Crowder, Prof. J. B. Moore and Mr. Nixon, of our own delegation, whose intelligent work on consular documents, pecuniary claims, and shipping, respectively, have received cordial praise from several of our associates from other countries.

There is every prospect that satisfactory conclusions will be reached on the more important matters mentioned. The Argentine Government, thru the intervention of the former Minister of Finance, Dr. Terry, has given valuable assistance in collecting the information which we needed concerning consular documents and census statistics. Our Consul-General, Mr. R. M. Bartleman, has also been very helpful. Among other things, he put in the hands of our representative on the committee a book published in New York, giving full data concerning consular invoices and regulations, which we should have been able to bring with us from home.

In the discussion of trademarks, patents and copyrights, our delegation has had the valuable advice of our Commissioner of Patents, Mr. E. B. Moore. Of course, an agreement for protecting trademarks is of great importance, and there is every reason for thinking that one satisfactory to our manufacturers will be reached. Finally, in seeking an arrangement for the continuance of the treaties on pecuniary claims, the high regard in which Prof. J. B. Moore is

held by his colleagues from all countries already ensures a happy conclusion.

A comparison of the programs of the four Pan-American Conferences seems to show a decline in the importance of the subjects considered, altho not, perhaps, in that of the permanent results accomplished. The First Conference discussed reciprocity, an international monetary union, weights and measures, port dues and consular fees, extradition treaties, a Pan-American bank, shipping, postal and cable communication, arbitration, and other topics. Of course, conclusions were not reached on all these subjects, and some of the results were not sound or permanent. But there does not appear to have been enough interest to keep alive the discussion of them, to say nothing of gathering information about them.

It may be asked of what value these conferences are if out of them issue so few conclusions of definite practical importance. Are they worth while? On the whole, the answer must be in the affirmative. Their main purpose is the formation of a continental American public opinion. It is to bring together representatives of the various countries to discuss mutual interests, to get one another's point of view, and to formulate general principles of agreement which will serve as a basis of definite action at a later time. Therefore, as has been remarked already, wisdom requires the omission of topics about which violent differences of opinion exist, or about which present conditions make agreement impracticable. These Pan-American conferences may do much good, therefore, even if they yield few definite or practical results. The present conference bears out this opinion. It is pervaded by a spirit of friendship and harmony. While the program has been considered formally, many other matters of importance have been discussed informally. About these, opinion is slowly crystallizing and they will become in time matters for definite action in other conferences. Meantime, possible causes of friction are being removed.

It must not be supposed, then, that the representatives of different countries are in agreement on all matters that we should like to advance. Lurking in the background of their friendliness is a fear of the great republic of the north, which, however unfounded, cannot be ignored. For example, a simple suggestion to introduce a resolution of appreciation of the influence of the Monroe Doctrine in promoting the independence of the states of the southern hemisphere was objected to on two grounds. It was feared, in the first place, that such a resolution would be an acknowledgment of the supremacy of the United States in this hemisphere; and, in the second place, that it would give continental sanction to possible future interpretations of that doctrine, in which the other American states would not care to acquiesce. Nevertheless, the good offices and influence of the United States are freely acknowledged and the feeling of friendliness toward us is general. The newspaper reports that our delegation met with opposition and friction are wholly without foundation.

Of course, social events occupy a large portion of the time of the delegates. But this fact should not be misunderstood. Some of our people are disposed to put undue emphasis upon this feature. It has been rumored that there were many applicants for places on the American delegation, some of them apparently thinking that the conference was pre-eminently a social affair. While it is true that social functions feature prominently in all these conferences, and that in the present one the gracious hospitality of our hosts and fellow guests have made the days very delightful, yet our Latin-American brethren do not regard this as the important phase of the conference. They are alive to the fact that it is the program that is important, and that its conduct requires of the delegates hard work, knowledge and a trained judgment. It is a mistake to regard service on a Pan-American delegation merely as an occasion for a junket or an opportunity for social leadership.

For these reasons the members of the delegation should be selected a good while before the event. The program should be made up at least six months in advance, and the delegates should be furnished beforehand with all the in-

formation necessary for a careful study of the subjects to be discussed. They cannot master these, especially with insufficient data at hand, in a week or two before their departure, nor during their trip. The delegates should be as far as possible men whose sole aim is the success of the program. Nor should the number of delegates be too large, and it is at least doubtful whether any good is accomplished by having their families accompany them.

There are many interesting personalities among the delegates. Of the Argentine delegation, Dr. Larretta has just been appointed Minister of Foreign Affairs, succeeding de la Plaza; Dr. Terry has been Minister of Finance, and Montes de Oca has been Minister of Foreign Relations, as has also Dr. Zeballos. The president of the conference, Dr. Bermejo, is Chief Justice of the Supreme Court. The president of the Brazilian delegation, Dr. Murtinho, has been Minister of Finance, Bilac is a poet and diplomat, da Cunha is Minister to Paraguay, and da Gama is reported to be slated as the next Ambassador to the United States. Of the Chilean delegation, Cruchaga is Minister to Argentina and Cruz to the United States. From Cuba come General Garcia Velez, General Montero and Dr. Quesada, all well known in our country. Minister Herrarte comes from Washington to represent Guatemala. Dr. Arriaga also is here from Washington to represent Honduras; and Minister Mejia, a business-like and energetic man, is present for Salvador. Dr. Larrabure, Vice-President of Peru, and Mr. Lavalle, former Minister to England, represent their country. Taken all together, the assemblage is a distinguished and able one, and worthily represents the great Pan-American union of ideas, feelings and interests, whose existence their presence proves and whose prosperity their work here should do much to promote.

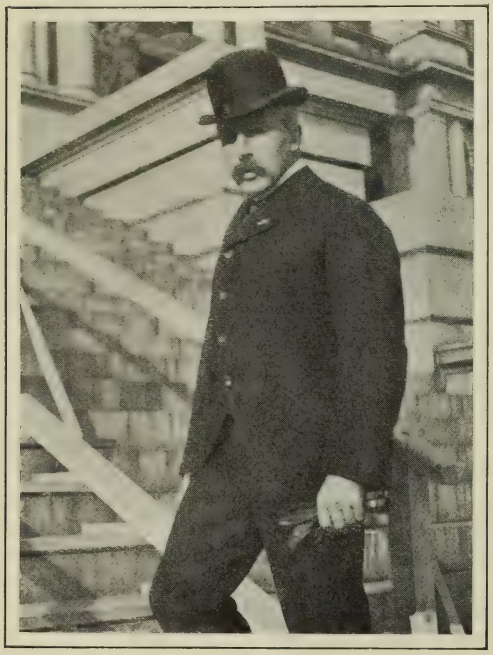
Buenos Aires, Argentina.

The Maliesh of Abdul Yussif

BY JORDAN HERBERT STABLER

Should my caravans be pillaged by the roving desert bands,
Should my shepherds lose their charges, come to me with empty hands,
Should my brood mares die in bearing, purest blood of Arab strain,
Should my grain crops burn and perish for the want of summer rain,
Would I rise and curse my Maker,
Would I clinch my hands and cry,
Allah, Allah, is this justice,
Why not some one else than I?

What has said our Lord Mohammed, what is that he has maintained? —
"All that comes is never failing, all that comes is fore-ordained,"
From the time our mothers bore us, to the time we fade in dust,
Maliesh—Fate—is unrelenting, Maliesh—Fate—and come it must,
So I keep my heart unbroken,
So I say in smiling still,
Maliesh—there is no resisting,
Maliesh—that is Allah's will.



American Lecation, Brussels.

Men We Are Watching

BY A WASHINGTON JOURNALIST

Major-General Leonard A. Wood.

ALL is not so quiet along the Potomac as it was. There's something doing in the War Department, and good reason—Major-General Wood has stepped in as Chief of Staff. Every one knows General Wood. He is the kind of a man who becomes known in spite of himself—few there are who

SNAPSHOT TAKEN OF GENERAL WOOD GOING UP THE WAR DEPARTMENT STEPS, WASHINGTON.

are less eager for notoriety—because he is a man who does things. We have been so well tonicked up to an insatiable appetite for having things doing that we have little taste for desuetude, and a man like Wood quickly captivates.

General Wood was born fifty years ago next month, so that he still has a phenomenally long term of service ahead of him in the important post he has attained as chief in the administration of army affairs, and if he advances as he has progressed thus far, there will be little left to be desired in his department. He is a volunteer, not a military school graduate, and for years has had to contend against the prejudice and "knocking" which run rampant in army circles against "outsiders"; but he has made good so effectively, thru his career of rapid advancement, that criticism has been frequently confounded. His warm friendship for Roosevelt was of less practical benefit to him than many were led to believe. It was McKinley who found him and gave him his first "impetus," and it is history today that Roosevelt did not carry out McKinley's plans for Wood's advancement as rapidly as McKinley intended, all on account of the prejudice which would be created by that friendship. However, Wood is a man bound to find the top.

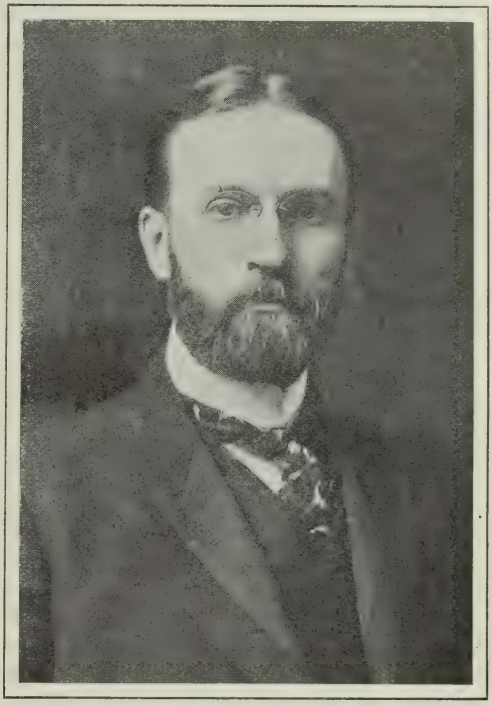
In the gloom of the War Department corridors some little time ago I accidentally ran across a comprehensive

GENERAL LEONARD WOOD, U.S.A.

sketch of Wood, giving a better idea of the man than chapters of biography. A bony, Western fellow, with a saddle gait, evidently an invalid, said to a doorkeeper: "Who was that big bull-bison who dashed past me and bolted thru that door as if it hadn't any business bein' in his way?"

Solemnly the doorkeeper replied, "It was General Wood."

"He covered the ground mighty decided," remarked the saddleman. "Wonder if he's any relative to the Dr. Wood —Dr. Len Wood—who used to be with the Fourth Cavalry in Arizona, and went with the Rough Riders to Cuby, and afterward President McKinley made him Governor?"



"That was the General Wood, himself," said the doorkeeper.

"You're guyin' me," said the saddleman. "Maybe you think I don't know Len Wood. Waal, I do then. I served in the Fourth Cavalry, thru the Geronimo campaign, when Wood got his breakin' in—a lean, stoopy, yellow-white-haired contract doctor; but he made a go of it, by gosh! He wasn't much to look at, but we soon caught on that what little stuffin' there was in him was all right, and before he was with us long there wasn't a man could best him. Doc was always right on hand whenever there was a man to be pulled thru. We come to think a powerful lot of Len Wood, back there in '86. You never could get talk enough out of him to call it answerin' back, but whenever it was *doin'* instead of *talkin'*, he was front, rear and both flanks. He had an eye in his head that you didn't want to have hit you if you wasn't satisfied to have it see clean thru."

The soldier paused and settled back against the wall, for the door flew open and General Wood emerged. Something almost herculean about him; tall, massive, powerful shoulders, deep chest, firm and quick in every motion. His greyish hair bristles over a face that is marked with lines of strength above a square jaw. His mustache fails to hide the precision of his lips, just as his heavy brows only emphasize eyes that are difficult to forget. Passing the old soldier General Wood stopped, extended his hand and said, quietly, "Hello, Bill; what brings you here?" It was characteristic of the man. He is cordial, democratic, and as charming as a man as he is energetic as a soldier.

Senator George Sutherland.

There are other silent ones in public life who have been making deep marks in our history, even during the popularity of words of the past few years. Sutherland is one of these—George Sutherland, of Utah, United States Senator. He has attained a much more effective influence in the administration of public affairs than many suspect. On

SENATOR GEORGE SUTHERLAND.

the floor of the Senate Sutherland is only heard from when there is something vitally to the point to say. Better and better his colleagues are appreciating that what he says is worth heeding. More and more frequently he is summoned to official and private powwows with the Chief Executive, for President Taft has an opinion which he has exprest both publicly and privately, that Senator Sutherland's is one of the keenest, clearest legal minds in the national legislature. He has several times inti-

mated that Sutherland is ideally fitted for the bench—which has given rise to the drifting rumors that the Senator was slated for such an appointment. But Sutherland himself is well satisfied to perform his nearest duty and to his work in the Senate—the quiet, little appreciated but nevertheless most effective work of the important committees of which he is a member—he has devoted an intense, untiring energy which could not fail of signal results. He has distinctly made good and is a man worth watching. Several times during the last session Senator Sutherland suggested, in debate, a new theory of the sovereign rights of the nation above and beyond its delegated powers. At first it caused a gasp of horror and roused no end of resentment among the mighty defenders of the Constitution; but later on the Senator presented the entire matter in a remarkable article, published first in a magazine, then made a state document by the Senate, which has won very general approval and many converts, even as high up as the Supreme Bench. It is destined to play an important part in the national legislation of the future.

Naturally Senator Sutherland loves the law, where he has found both fame and fortune. He was sent as Representative to the Fifty-seventh Congress, but declined re-election, preferring his profession. He was sent back again to Washington, however, this time to the Senate, where he is about finishing his first term, with such valuable work to his credit and such high esteem for his ability and respect for his opinions among his colleagues that if Utah insists upon her best representation she will undoubtedly demand his return.

Senator Sutherland comes naturally by his sterling integrity and indomitable energy. He is a Scotchman, tho born in England, with the added advantage of an early education in America, and the inspiration and experience of having fought his way to the top thru toughening struggles in the West. He is slender, earnest and grave, with dark hair and full beard close cut. He has keen, quick, earnest eyes, of real Scotch gray. He is a thoro gentleman, in its broadest and truest American sense; cordial, dignified, democratic; always friendly with every one, never too friendly with any one. His growing power and influence are being materially felt in high places.

Asher C. Hinds, of Maine.

Seldom if ever has a local fight for nomination for the House of Representatives been watched with the nation-wide interest which followed the successful efforts of Asher C. Hinds in the First Maine district. Few visitors to the House remember Cannon without remembering Hinds, for years the parliamentary helmsman, always standing beside the Speaker's desk. He is the foremost parliamentarian in the United States, if not in the world. Hour in and

Copyright by Clinedinst, Washington, D. C,
ASHER C. HINDS.

out he stands there, keeping watch of everything that goes on. Before the Speaker has grasped the meaning of a motion or a point of order Hinds has it dissected and analyzed and is telling the Speaker what to do. He was appointed to the position by Speaker Reed, whom he is now to follow from the same First District. There are good chances, too, that Hinds may follow his illustrious leader still farther, for he has already been seriously considered for Speaker of the House, even while not a member. During the insurgent outbreak, last spring, it is quite probable that if the Speaker had resigned, Hinds would

have been the compromise choice of the very great majority. Sooner or later he will be there, if nothing happens, for he is distinctly the man for it. He has made parliamentary law and custom his study for years—goodness knows how long. He knows it from the ground up. He knows how the Romans behaved in their Senate, and how the members of the Rump Parliament were controlled—or not controlled. He knows the Continental Congress and all of the world's congresses by heart. And so that the mass of information might not die with him—curiously enough, at the instigation of the Democrats—Hinds has compiled a remarkable work, of cyclopedic proportions, on the precedents of the National House of Representatives.

There are not many men who will be as well known to the general membership of the next House as Asher Hinds—and there are not many men better worth knowing. He is big and strong, with a tremendous forehead, heavy, New England features of the past, clear eyes, a dominant nose and mouth, a face smooth-shaven, full of character, but ready, too, with smiles, which always make one feel, first of all, Hinds's friendliness. He will be a leader in the House from the start, not only from the point of "privilege" and "prestige," but also because of his universal popularity.

Hinds was born in Benton, Me., some forty-seven years ago. His father was a farmer, but his inclinations were not that way. He graduated from Colby College, and like so many other great men, began life on a newspaper—the Portland *Advertiser*. He learned the mechanical part from typesetting to presswork, then jumped into a reporter's job, which brought him in contact with the Maine Legislature and resulted in his coming to Washington as clerk for Mr. Reed. His life has been full of untiring energy and hard work, but in spite of his great accomplishments he remains one of the most charming and unassuming of men. He is a scholarly and effective speaker, and as alive to present issues as to past precedents. Maine could not have done better by her famous First District.

Mammy's Lesson on Manners

BY PAULINE FRANCES CAMP

W'EN yo's gwine upon a journey,
An' yo' een-amos' upset,
'Case yo' trunk is gittin' so full-up
Dat it mighty hard to shet,
Don' yo' leabe no room fo' manners;
Now yo heah, chile, w'at I say;
Jes' yo' pack *dem* in yo' satchel,
Fo' to use along de way.

Treat 'em lak yo' do yo' ha'r-bresh,
An' yo' toof-bresh an' yo' comb.
Ef yo' gwine be skeered to use 'em,
Mout as well be lef' at home.
Shew dem strangers dat yo' 'customed
Fo' to air dem ebery day.
W'at dey *in* yo' satchel fo', chile,
Less'n yo' use 'em on de way?

'Case all trabelin's oneasy.
Fix't de bestes' way yo' kin;
An' if folks fergit dey manners,
T'ings gits rough as piny-skin.
So, w'en yo' goes on a journey,
Dis de word yo' mammy say:
Pack yo' manners in yo' satchel,
Fo' to use along de way.

SPRINGFIELD, MO.

China's Educational Problem

BY PROF. T. C. CHAMBERLIN

[The public will recall that two representatives of the University of Chicago, Professor Shailer and Professor Chamberlin, were sent to China to make a careful investigation of the present conditions, with a view to a possible expenditure of a considerable sum by Mr. Rockefeller on education there. It was the duty of Professor Chamberlin, as one of the leading American geologists, to consider not only the educational problem directly, but also the physical, climatic and hygienic conditions that might govern the conclusion to be reached. We are very glad to be able to present this article, which has basis in an address delivered before the Illinois Academy of Science at Urbana, February 19, and is published by permission.—EDITOR.]

THE education of the Chinese people is essentially a problem of transition from an old adjustment to a new adjustment. What we see today is but the early stages of the transition from an adaptation to a past set of conditions to an adaptation to a coming set of conditions. The past evolution of China has been controlled by conditions of isolation; the coming evolution is to be controlled by contact with the rest of the world. The past evolution illustrates the influence of the factor of isolation in evolution, a factor much discussed recently by Jordan and others. The evolution of a civilization is indeed broader than the evolution of a biologic species, for it is at once a physical, a biological, a mental and a moral evolution, but it carries the same philosophic import.

I can only point out a few of the suggestive features of Chinese evolution under her past conditions of isolation; and first among these, the physical setting of the evolution. Until the sea became a highway, the Chinese were measurably shut off from the rest of the world; on the west by lofty mountain ranges, the Tibetan plateau and the great deserts; on the north measurably by the Mongolian plateau; on the east and southeast by the sea; on the south partially by lofty parallel ridges and deep valleys. The Chinese seem always to have been a stronger people than their neighbors on the south, and the tendency in that quarter has been for the Chinese to flow out rather than suffer incursion. On the north, where the natural barriers were weakest, the great wall of China was added as a supplementary barrier. This implies that isolation was a condition earnestly desired by the Chinese people. They preferred to work out their destiny alone. They, therefore, at great labor, erected the most remarkable of artificial barriers, and yet a barrier whose efficiency was confined rather to protection against marauders, hostile bands and turbulent neighbors than against well-equipped armies. It is significant that the Chinese chose thus to guard themselves by a passive defense rather than to go out aggressively to attack and destroy their enemies or take possession of their lands. They thus demonstrated that they long have been what they still are, conspicuously a peaceful people, non-aggressive and non-belligerent by preference. Under such natural and artificial isolation their remarkable development and their former adjustments took place.

The natural features that constituted these barriers of isolation had not only their general effect on the Chinese people, but their influence on such special factors as the soil and the climate, and these in turn gave shape to the Chinese industries and determined many of the conditions of life. The high interior on the one side and the sea on the other formed and still forms a working climatic couplet. In the winter the coldness of the mountains and high plateaus of the interior give density to the air and cause it to flow down the slopes eastward and southward toward the sea. As it descends it becomes absorbent, and hence the winters are dry and cool. In the summer, the interior air is heated, and pressed by the cooler air from the sea, becomes ascensive. As the moist air flowing inland from the sea rises it becomes precipitant, and hence the summers are warm and moist. In North China notably it is the July and August rains that are the foster parents of the crops.

The moisture borne inland by the as-

censive summer winds and precipitated on the slopes of the interior, on the barrier mountains and on the bordering plateaus, bears back from them to the lowlands a constant burden of new soil material, a means of natural fertilization. By this fresh material the alluvial plains are built up and built out seaward, and their fertility is naturally renewed wherever such accessions take place. In the northern tracts there is added an annual film of dust from the deserts. Thus even the deserts make some compensation for their barrenness.

But the extraordinary preservation of the fertility of China is due mainly to the unusual care and intelligence of the Chinese people in the management of their soils and the handling of their plants. The plants they cultivate may almost be said to be treated individually, as animals are by other peoples. They are rarely sown broadcast. Even cereals are planted in hills or rows. Fertilizers also are often planted with the seed or applied to the hills, tho often also spread broadcast. The fields are carefully prepared and scrupulously tilled. Interestingly enough, plant reciprocities have been discovered, no doubt by pure empiricism and without, even now, knowing the reasons that lie back of the observed effects. One often sees rows or hills of wheat alternating with beans, mustard alternating with peas, and various other alternations of legumes with cereals and other plants, thus securing the simultaneous co-operation of plants well fitted to one another. We seek the mutual good offices of plants by rotation, but the Chinese go a step further and secure this by interplanting. The results obtained astonish one acquainted simply with what is usually seen on Wisconsin or Illinois farms. The cereal crops, even when raised wholly by themselves, reminded me of those grown on the virgin soils of our interior plains in the early days. Fields of grain of great luxuriance are common, and fields of mustard, a crop much raised in Central and Western China, often overtop one with plants 8 or 10 feet high. These results no doubt follow from the long and patient trials of the Chinese under the stimulus of their critical dependence upon the fruitfulness of their crops to feed their vast multitudes. It is their solution of the best relations of plant to man and man to plant.

Better to adjust themselves to the severe demands of a dense population, the Chinese have resorted to a suggestive biological selection; the choice of the fittest, as they see fitness; the selection of man at the expense of the domestic animals. Plants are obvious necessities, but, especially in the central and southern districts, animals other than man are reduced to a minimum rather than multiplied to serve as converters or burden-bearers, as is our practice. Biological evolution in China has thus tended toward a bilateral form, man and plants. The animal intermediaries have fallen in some districts almost to a negligible element. Instead of one man and a horse to help him, it is three men.

But the barriers which had isolated China for thousands of years have been broken down, and the question now arises, What will be the nature of the new adjustment, what form will the new evolution take? we may pertinently ask ourselves. Have these barriers been broken down because Westerners wish to carry to China the benefits of their best civilization, or because Westerners wish to exploit the people and the resources of China? Or, if motives have been mixed, what is their ratio? Must China now adjust herself to a militant world where force dominates, or need she merely become receptive toward the best that civilization offers? Is it the soldier or science that is to creep in thru the gaps in her broken barriers? No doubt the historical answer will be, both the soldier and science. It is clear that two quite diverse phases of Western civilization are struggling for dominance in the readjustment now in progress, that of aggression and appropriation by force, and that of benevolence and broad humanity.

It may be idle to preach the relative virtues of these, but the western world may well sit down and compute the respective costs to itself. China has some four hundred million inhabitants. I was skeptical about these large numbers when I went to China and cannot now say that I am wholly convinced of their accuracy, but taxes are said to be appor-

tioned to the provinces and other districts subject to levy on the basis of the number of inhabitants recorded. The local temptation is, therefore, toward scant registration rather than an exaggeration of the census, so much so that penalties are imposed to correct this. It is hence cogently urged that the census returns minimize rather than exaggerate the real population. At any rate they are a very numerous people, a people of declared character and of persistent traits. It is, therefore, a matter of no small moment to foresee what new traits they will take on as they readjust themselves to the new situation. This is none the less important to the rest of the world because the essence of the new adaptation is *adjustment to the rest of the world.* It is the outside world that has broken down the barriers of isolation and forced the issue. The outside world must, therefore, stand by the consequences of its own forceful intrusions, and it does well to consider what those consequences will be—to weigh well its own part, at least from this time on, in shaping them.

The Chinese of the south, acclimated for some thousands of years to subtropical conditions, have physical and mental characteristics which I cannot better express in a word, tho inadequate, than to call them feminate—I do not say effeminate—men of small bones, small hands, small physique generally, with a touch of the feminine cast; bright, active and enduring, with some predisposition to restiveness and migration, but on the whole non-aggressive as compared with Europeans. In the middle and high latitudes the Chinese are larger, stronger, bigger-boned, more masculine, more individualized, perhaps slower and seemingly duller, but more independent and more aggressive, notably so as they merge into the co-national and kindred peoples who dwell on the Manchurian plains and on the Mongolian plateaus. At Hankau, a metropolis of the south, you may note a policeman—one of the signs of the new order of things—standing on the side of the street and looking apologetic; in Mukden, the policeman stands in the center of the street with the bearing of a soldier, and cart and 'rickshaw and coach alike pass scrupulously on the appointed side. There was no temptation to test it, but the policeman's bearing suggested that you might easily look down the barrel of a revolver if you insisted on taking the street at your own sweet will. Chinese immigrants to America are almost wholly from the south and center of China, where the ancient tendency to outflow is most marked. There are few immigrants from the more sturdy races of the north, practically none from the open fields of Manchuria and Mongolia, or from the adjacent provinces which are overflowing into these uncrowded tracts.

Now we may well ask ourselves whether, having thrown down the barriers and forced these peoples to adjust themselves to contact and intercourse with ourselves and the rest of the world, the adjustment shall be on the lines of peace, equity and the truer forms of co-operation, attended by all the higher qualities of which the western world boasts, not the least of which is its scientific spirit and method, or shall it be on the lines of war and aggression in which the West—notably the European West—is past master? In a word, is the readjustment to be a fitting together for peace or a fitting out for war; a fitting together for mutually profitable intercourse or a fitting out for inequitable trade and the fierce rivalry of grab?

If we continue to elect the latter alternative, what may be the issue of a forced education of four hundred million people in the art of war and the spirit of aggression? In traveling from the metropolis of the southern interior toward the capital, it was our fortune to take a train on which the young son of a high official of the general government also traveled. For the two days we journeyed together, at every important station on the line a company of soldiers paid their military salutations to the representative of the official, and incidentally thus revealed to the foreign student of education what sort of education is in progress in China. I may have misinterpreted, but the military display did not seem so much a matter of obligation, since only the young son of an official was journeying by, as a good chance to drill the soldiers, to create a public impression, and to

foster a military spirit among the people. To a civilian the troops seemed well drilled and well equipped with modern weapons. They were uniformed, not in Chinese costume, but in Western fashion, in boots, caps and khaki. Traveling later from Peking northeastward into Manchuria, in the complete absence of any special occasion, a squad of soldiers was found drawn up at practically every station, soldiers of good appearance and apparently well armed. These squads at the stations seemed to be merely the natural response of the Chinese to the example of "guarding the railroad" set by the Russians and Japanese further to the east and north in Manchuria—the natural Chinese response to the compulsory education forced upon them by their instructors. In hunting a salubrious site for a possible educational institution outside a populous city in the south, we ran into a sham battle of approved European type. In Far West China, when we called to pay our respects to an official, we found a company of soldiers drilling in the court of the yamen. We saw military schools and military drill in the schools. These are merely incidental evidences of one phase of the education that is going on in China.

Now let us compute a bit. If one person in every hundred—an approved European ratio, I believe—is kept in military service in a population of four hundred millions, with rotation to develop the reserves, and if an eye is kept open to working into the permanent service as much of the blood inherited from the soldiers of Gengis Khan and Kublai Khan as practicable, what will be the *reciprocal effects* on Western military requirements and what will be the inevitable financial burden, some touches of which Europe is even now feeling on her own account? We may leave to the Orientals to count their own costs, for if we force them we perhaps do not care, but what will it cost the Western peoples to be ever ready to meet the possible aggressions of four million soldiers inspirited and drilled to fight for their nation's life, backed by proportionate reserves and supported by well developed resources? What will it cost Europe if the four hundred millions of China are forced to acquire the skill and the spirit of the forty millions of Japan?

I think there is no necessary "yellow peril" now, but if a "yellow peril" is foreshadowed, of whose creation is it to be? If China is to enter the lists of aggressive military powers, is it of her own free choice, or is it under compulsion? If under compulsion, whose compulsion? If the result be expensive, who ought to foot the bills? Who will ultimately be likely to foot the bills?

Fortunately, China loves peace; China has given historic demonstration of her love of peace as few peoples have ever done. Is not this love of peace an asset worth cultivation by Western nations? Is it not indeed worth importing and cultivating on Western soil?

China desires scientific education. Just now she is more anxious for the results than the method and the spirit. She would like to put her four hundred millions into the Western type of efficiency which Japan has given to her forty millions. But still China prefers peace. And the radical educational question of the hour is this: May she have the scientific education of peace which she prefers, or must she have first a scientific education for war? May she secure peace by peaceableness or only thru prowess in battle?

In the past the Chinese have placed the scholar at the top of the social scale and the soldier at the bottom. Will the Western world permit this scale to stand and adopt it for themselves, or will they force its reversal? Will the West do what is best for the East and for the West alike? Will the West join in promoting the spirit and method of science, in the spirit and method of peace? In a word, will the West be eminently wise or stupendously foolish?

UNIVERSITY OF CHICAGO.

Literature

The Memoirs of a Great Lady

THE second series of the *Memoirs of the Duchesse de Dino*[1] are marked by much the same qualities as the earlier volume. There is the same richness in ancedote, the same brilliance of side-light upon political and social life under the *roi parvenu*. Thiers, Guizot, Royer-Collard, Lamartine, the liberal Duc de Broglie, Molé, the legitimist Berryer (to whose simple and unaffected character Mme. de Dino pays tribute), the Duc de Noailles, the author of *Democracy in America*, here are only a few members of the procession which defiles thru these three hundred pages, the record of a great lady's four years. That great lady had by this time reached the age when one's mind turns to serious things; she wrote on March 9, 1836:

"I had several times glanced at the *Imitation of Jesus Christ*. Whether it was that my knowledge of others and myself was only superficial or that my mind was ill-prepared and too wandering, I had seen no great difference between this famous work and the *Journée du Chrétien* and the *Petit Paroissien*. . . . Chance led me to open it the other day with Pauline; the first lines caught my attention, and I have since been reading it with ever increasing admiration. What intellectual power beneath the highest simplicity of form! What profound knowledge of the deepest recesses of the human heart! What beauty and enlightenment! And yet it is the work of an unknown monk."

Later in the same month Royer-Collard found the lady reading her new-found favorite, "and brought me yesterday a pretty little copy which he has had from his youth, and has almost invariably carried about with him. I have been deeply touched by this gift, and regard it as a most precious possession." There was no gallantry in this exchange of *bibelots* (for Mme. de Dino gave the statesman in return a much read copy of Bossuet's masterpiece); and the incident is worth reproducing because it shows what a mistake it is to assume all French memoirs to be but a wilderness of *bonnes fortunes* and intrigue.

The lover of literature and of literary anecdote is not forgotten in this generous book, tho Mme. de Dino's tastes were somewhat restricted. Thus, while she read the *Diable boiteux* of Le Sage while journeying from Amiens to Lille, in 1840, she found the stories "monotonous and uninteresting," and deplored "the constant tone of mockery and satire." Chateaubriand, writes Mme. de Dino in 1836,

"has sold his works, unedited or as yet unwritten, for a hundred and fifty thousand francs cash, in addition to a yearly income of twelve thousand francs, payable to his wife at his death. He is said to be completely upset by the payment of his debts."

Chateaubriand was a little apt to be "completely upset." We know how, in his "Memoirs" (themselves a portion of the "works, unedited or as yet unwritten"), he bewails his position of publisher's hack, at the close of an eventful and illustrious career; yet the bargain itself was a good one. His friends were responsible for it, in spite of his half whimsically lamenting that his thoughts had suffered imprisonment for debt in place of himself.

Now Le Sage was of the *grand siècle*, and Chateaubriand, tho he had not yet finished his *Mémoires d'outre-tombe*, that some modernists among literateurs regard as his greatest work, was a survival of the earlier generation. Fortunately, Mme. de Dino now and again read the newer writers—tho she quite justly found Casimir Delavigne, in spite of "some fine lines," cold and wearisome. She preferred, very properly, Thierry's *Stories of the Merovingian Age*, on its appearance. In November, 1836, Balzac was presented to her by a country neighbor; he wished to buy a small estate. "Unfortunately," writes our *grande dame*, "it was dreadful weather, and I was forced to invite him to dinner." Unfortunately, that is, because she was

"greatly afraid of these publicists, men of letters, and writers of articles. I never spoke a word without deep consideration. I was

[1] MEMOIRS OF THE DUCHESSE DE DINO (Afterward Duchesse de Talleyrand et de Sagan): 1836-1840. Edited, with Notes and Biographical Index, by the *Princesse Radziwill, née Castellane*. Second Series. New York: Chas. Scribner's Sons. $2.50 net.

delighted when he went. Moreover, he did not attract me: his face and bearing are vulgar, and I imagine his ideas are equally so. Undoubtedly he is a clever man, but his conversation is neither easy nor light, but, on the contrary, very dull. He watched and examined all of us most minutely, especially M. de Talleyrand."

There is little of literary interest in this second series; tho the names of Lamartine and Villemain are pronounced with less of scorn than Balzac's.

Of much greater value, indeed, is such a page as that inscribed at Liège, May 18, 1840. There she describes a roundabout railway journey taken thru Belgium, referring especially to the "vast amount of time wasted in stoppages at the numerous stations." It is worth our while to quote the passage that follows; it indicates something of the difference between railway travel then and now:

"Moreover, if one takes one's own carriage, time is required to put it on a truck and take it off again, while the expense for the freight of carriages is so heavy that nothing is saved by the railway. It is certainly a marvelous invention, and the machinery is interesting. All is worked with perfect punctuality and order, but at the same time it is an unpleasant way of traveling, to my taste. There is no time to examine anything; for instance, we passed along the outer walls of several towns which I should have liked to examine; we did not even pass through villages, but went straight across country."

And nowadays, as if we saw too much from car-windows, the world wants to fly! At this stage in her journey, Mme. de Dino quotes a page from the *Italy* of the Président de Brosses, who warns us, in our foreign wanderings, to be on guard "against satisfaction of the sight and weariness of the heart. There is as much as you please to amuse your curiosity, but no social resources. You are living only with people who have no interest in you or you in them, and however kind they are, it is impossible for either party to go to the trouble of discovering interest in the other when each knows that they are ready to part and never to meet again." All of which is as true for us, the modern wanderers, as it was for the eighteenth century Cynic who wrote these lines, and the nineteenth century lady who copied them out.

The historian, too, will find here that kind of informal documentation which imparts life to his dull records. Mme. de Dino's eyes were wide open to the phenomena of an era of decadence. "Every day," she wrote, under the reign of Louis-Philippe, "reveals some new social disease, and the age is racked by cruel sickness." She is not above recording her views of the *affaire Lafarge*—the contemporary equivalent of our Steinheil drama. She sums up the impressions that a number of eye-witnesses had of the return of Bonaparte's ashes from St. Helena. This fragment of her *Memoirs* is followed by several appendices, and by a "Biographical Index" that would be admirable if it included page-references. On the physical side, the book is beyond cavil. As a translation, it is generally adequate; tho "grandson" is not the word to describe the ill-fated Duc d'Enghien's relationship to the great Condé.

Maurice Hewlett Again

One reason why one portion of the world finds Maurice Hewlett's stories about an erratic Mr. Senhouse altogether entertaining is that commonplace personages, inimitably done, like Chevenix, for example, prattle about him to such admirable effect. Says Chevenix:

"Didn't I tell you that he was a poet? . . . They don't marry the right person. They never do. Or there are two or three persons. Look at Shelley. Look at Dante. I happen to know all about both of 'em. Senhouse drank 'em up—and gave 'em out like steam. He thought no end of Dante and Shelley. As a matter of fact, he didn't believe in marriage, as a game—as a kind of institution, you know. He thought it devilish wrong—and said so—and that's where the trouble was. Marry Sanchie! I wish to heaven he had. There'd have been no trouble at all."

Ah, but right there the reader draws a different conclusion. For had Senhouse (or another) abidingly mated with the beautiful Sanchia, there could have been no sequel to "Half-way House" and "Open Country."[1] Think of the hungry reader unappeased! And there was, after all, no cruelty in postponing the nuptials. For Senhouse and Sanchia and even Ingram belong to Bookland. The flesh of Bookland people will stand more than yours; so will the spirit. As it is, Sanchia and Senhouse do finally unite. Somehow the romance has leaked out of

[1] Rest Harrow. *By Maurice Hewlett.* New York: Chas. Scribner's Sons. $1.50.

the trilogy before that conclusion, however. Yes, Senhouse is forty-two even at his entrance into *Rest Harrow.* He enters this instalment of the tale with Mary Germain; we leave him filling Sanchia's hands with wild flowers at dawn. Meantime, every one has talked too much, and Mr. Hewlett has talked too much about everybody. The result is called a novel!

Some will think that Mr. Hewlett has drawn his matter out very thin indeed. They will be right. It is an evil habit which he does not even resist: witness his drawing upon "Open Country" for "Letters Upon Affairs at Large" and republishing them in the slim volume, *Letters to Sanchia.*[2] But he is no mean craftsman. When his hero goes steerage, he is compensated by journeying "where depressed foreigners share with bicycles, motor cars and newly boiled pigs the amenities of economical travel." Cleverness passes over into the rococo. and then we have a delineation of one who has been "fed by slaves from the cradle, hag-ridden by his vices, a purple young bully, a product of filthy sloth, scabbed with privilege." In general, Mr. Hewlett makes more pleasant pages. Unfortunate for placing below a commonplace illustration is the mixture of metaphors: "The great music went sobbing and chiding thru her frame, like wounded nightingales." Yet ladies dote upon Mr. Hewlett, in spite of slips like these. A renowned artificer; in these later days, a less athletic Meredith—and a more esthetic. Were he like Meredith in nothing else, he would have suggested him in his sharing—not on equal terms—the greater novelist's success in limning women—the male's rare triumph. To be sure, his gallery is not a wide one. Earlier, he chiefly painted "fools made for loving"—and his attitude toward sex is that of the precocious boy, in its fascination and half-repulsion. Mr. Bronner has written: "Hewlett's women, like Hardy's, are stray angels, but, like Meredith's, they are creatures of the chase, . . . beautiful creatures, who give themselves . . . without thought of sin or of the future."[3] Rather animal, his characters. Sanchia, he avows, is a cat; Ingram, her lover, "waited for her with a face like a rat."

Coleridge speaks of Richardson's hothouse atmosphere, and contrasts it with the wholesome airiness of Fielding's chambers. There is in this Sanchia series the same close and sickly air—in spite of Senhouse's horticultural pursuits and the heroine's and young Glyde's. We know from his own mouth that Mr. Hewlett read "Tom Jones" "too early." He has not read it too late. For Fielding has his lesson for the supercilious present.

[2] LETTERS TO SANCHIA UPON THINGS AS THEY ARE. *Extracted from the Correspondence of Mr. John Maxwell Senhouse by Maurice Hewlett.* New York: Chas. Scribner's Sons. 90 cents net.

[3] MAURICE HEWLETT. *By Milton Bronner.* Boston: John W. Luce & Co. $1.25.

Ruskin and His Circle. By Ada Earland. New York: G. P. Putnam's Sons. $1.75 net.

It seems to be a part of the creed of today that the subject of a biography, especially if he is one of the *genus irritabile,* must first of all be discharged of his load, and his sins distributed among unhappy ancestors or contemporaries. Especially in autobiography is this theory carried to the limit. Very few impecunious geniuses are willing to say frankly: "I was lazy. I ought to have been, gently or otherwise, pushed out of the easy chair and given a turn at the woodpile." Miss Ada Earland starts out with the accepted theory. "Ruskin was the victim of circumstances," she says. It is true that she does not, in all cases, very clearly develop the connection between victim and circumstances; that she loses herself now and then in the details of the story of some distinguished friend of the grown-up and already-formed Ruskin, and forgets to tell us how these details materially affected his character. The friends were congenial company for him. They drifted into the path of his life, and remained of his associates because of similarity of tastes, or, perhaps, because of a dissimilarity of gifts, which made it possible to give and take, to be richer or poorer in possessions, tho not materially affected in character. Indeed, the lack of any real attempt to prove her main theme, leaves room for Miss Earland's real charm. She does collect

from various sources—none of them out of the common reach of the collector—many pleasant details of the life of her subject, details which give him a local habitation among the many groups of English intellectual men. She presses rather hard on a certain lonesomeness in the boy period, as if somehow the mother was at fault, and, on a certain aloofness in the middle years of Ruskin's life, as if not an overworked brain, but a lack of sympathy in ideals was at the bottom of his frequent flights from human intercourse. Aloneness is often mistaken for lonesomeness, and apartness for solitariness, tho both may be necessary conditions of a healthy intellectual growth. The book is entertaining and instructive; and is generously illustrated.

The Old Testament Manuscripts in the Freer Collection. Part I. The Washington Manuscript of Deuteronomy and Joshua. By Henry A. Sanders, University of Michigan. New York: The Macmillan Co. Price, 50 cents.

The Freer manuscripts are the only portions of the Bible in uncial letters in this country, and Mr. Freer very wisely presents them to the nation to be kept in the Smithsonian Institution, and he gives them the name of the Washington Manuscripts. Professor Sanders concludes from very careful study that this first of the four manuscripts, consisting of the Septuagint version of Joshua and Judges, belongs to the first half of the fifth century, thus a century later than Sinaiticus and Vaticanus. It was written in Lower Egypt, by a careful copyist, on parchment, from a papyrus exemplar. A very minute description is given, followed by a discussion of its age and character, showing its relation to Origen's Hexaplaric variants, and to the versions of Lucian and Hesychius. The work concludes with a collation with Swete's text of 1901. The three photographic plates show how clear is the writing, with the contractions and occasional marks of punctuation and rare word divisions. We are indebted to Professor Sanders for a study of a kind which can rarely be made by American scholars without visiting European libraries; but we may hope that our merchant princes will, like Mr. Freer, add to our paleographic treasures as new finds are made. This is Vol. VIII of the University of Michigan's "Humanistic Series."

Guida Degli Stati Uniti per L'Immigrante Italiano. By John Foster Carr. Published under the auspices of the Connecticut Daughters of the American Revolution. New York: Doubleday, Page & Co.

No one is likely to quarrel with the D. A. R.'s whose activity is extended to the issue of a guide-book like the one before us. And, with 500,000 Italians living in Greater New York alone (four times that number in ten States), it is well to have begun with the Italian. This book of less than 100 pages is even more than a guide-book; one might almost call it a manual for intending citizens, while remembering that only one Italian out of thirty among those working in our streets and on our farms is, at the moment, an American citizen. From this green-paper volume can be learned something of our geography, our climate, our means of transportation. There is just enough of American history boiled down there to save the future aspirant from the mistake of that other Italian who, when a candidate for naturalization, assured the examiner that the Constitution was "good fellow—verra." A word of the laws that are likely to affect him, of the school system, and other matters of which the newcomer has need to know; a caution in regard to the private banking system; none of these points is forgotten. There are even illustrations. And there is the right and fitting chapter, *In campagna si trova ricchezza e salute!* We should like to see such a book freely circulated among those for whose benefit it was planned. The method of distribution is not, however, indicated, nor is the volume's price.

Hygiene and Morality. A Manual for Nurses and Others, Giving an Outline of the Medical, Social and Legal Aspects of the Venereal Diseases. By Lavinia L. Dock, R. N., Graduate of Bellevue Hospital Training School, Secretary of the International Council of Nurses, etc. New York: G. P. Putnam's Sons. $1.25 net.

The extent and destructive power of the social evil constitute not only a moral

disgrace, but a physical menace to modern civilization. It is fortunate that men and women with scientific training and high moral purpose are undertaking an educational crusade against this malady. Miss Dock has written an excellent book on the subject, showing that the recent investigations under the direction of men like Schaudinn, Metchnikoff and Neisser have given a sound scientific as well as a moral basis for the proper treatment and final suppression of social diseases. Such subjects as "the white slave traffic" and its relation to systems of "regulation" and "police protection" of vice are discussed with a sound knowledge and freedom. Miss Dock sees no definite prospect of cleansing society of its pollution and rescuing the numberless innocent victims of venereal diseases, both women and children, so long as prostitution is pouring its deadly poison into the stream of human life. She urges the great need of fuller knowledge and instruction without exaggeration among all classes, medical examination for marriage licenses, and, above all, better social conditions for self-dependent young women. The book is reliable and clearly written, a model of excellence in its candor, brevity and comprehensiveness. Its wide circulation would open many blind eyes and add much to the impetus of social reform.

The Old Librarian's Almanack. By *φιλὸ βιβλος*. Woodstock, Vermont: The Elm Tree Press.

The Library and the Librarian. By E. L. Pearson. The same.

The Librarian's Series, of which Volumes I and II have now been published, is edited by John Cotton Dana, of the Newark Library, and Henry W. Kent, at $5 for the series of six volumes. The bibliophile will be chiefly interested, but the editors chose a good way of drawing attention to their wares in issuing as their initial volume one of the cleverest hoaxes of recent years: *The Old Librarian's Almanack*, with this sub-title: "A very rare pamphlet, first published in New Haven, Connecticut, in 1773, and now reprinted for the first time." Mr. Pearson, who is, presumably, the perpetrator, explains with a very long face that *φιλόβιβλος* has been identified as one Jared Bean, "mentioned in Sarah Gilman Bigelow's 'Literary and Genealogical Annals of Connecticut' (New York, 1870)——" a work which we have never had the good fortune to lay hands on.

> "About 1754 he became curator or librarian of the Connecticut Society of Antiquarians, situated in his native town [New Haven]. In this congenial post he spent, so far as we know, the remainder of his life."

This purely mythical personage was in the true sense of the word an "original." If there never was a Jared Bean, that only proves the superiority of fiction—at any rate Mr. Pearson's fiction—to mere fact. The old librarian was a Tory—his one serious failing.

> "He believed, with Sir Thomas Bodley, that a librarian should never marry."

One knows that from his crabbed style. "No person younger than twenty years," he holds, "is on any pretext to enter the Library." And he adds:

> "Be suspicious of women. They are given to the Reading of frivolous Romances, and at all events, their presence in a Library adds little to it (if it does not, indeed, detract from) that aspect of Gravity, Seriousness and Learning which is its greatest Glory. You will make no error in excluding them altogether."

The grave circumstantiality with which Mr. Pearson palms off this Jared Bean upon us is enough to make Defoe himself envious, if Defoe be cognaisant. "Whatever we may think of his ideas of librarianship, his right to his favorite appellation of 'Booklover' is not to be denied," writes his creator. He continues:

> "Mrs. Bigelow saw his gravestone, in 1869 in the old East Hill Burying Ground, near New Haven. She writes that the . . . name 'Jared Bean, Philobiblos' remained, together with the epitath:
>
> "Death, thou hast closed ye Book of Life,
> And set me free from earthly strife,
> Ye page is turn'd and I'm at rest,
> Ye last word said, Finitum est."

The doggerel would have displeased Jared Bean, is Mr. Pearson's view; but today headstone and burying ground have alike disappeared; "an electric car line runs thru the place where the old librarian was buried." O truly humorous *φιβόβιβλος*, with nice admixture of wit and simplicity! Why are you not so much as named in Mr. Pearson's chapter on the Librarian in Fiction—the opening paper in *The Library and the Librarian?* For that, like the other little essays in this second volume of the new series,

some of them reprinted from the Boston *Transcript,* is entertaining and graceful, too, with learning well hid under the cap and bells. Mr. Pearson's excursions in the pleasant field of *belles-lettres* are not for the librarian alone. We only wish the type of his volumes were less murderously perpendicular.

A Brief History of Forestry in Europe, the United States, Canada and Other Countries. By B. E. Fernow, LL. D. Cloth. Toronto, Ont.: University Press. $2.50.

This book, an expansion of a series of lectures delivered to the students of forestry at Yale, is the only history of forestry in English. The chapters on European forestry appeared as a textbook in 1907; there has been added a chapter upon the United States. Dr. Fernow's book is timely, inasmuch as it is undoubtedy true, as Dr. Fernow says, "that, at the present rate of consumption, the bulk of the [American] virgin supplies will be used up in a measurable time, . . . and a more or less severe timber famine is bound to appear, indeed, has begun to make its appearance; and all recuperative measures will not suffice to stave it off, altho they may shorten the time of its duration." The worth of the book lies in the historical study of policies and methods tried elsewhere and "the application of the best knowledge, wherever found, to our own necessities." The style is condensed, sometimes a bit disconnected, abrupt, and not always interesting, but has the strength imparted by a wealth of invaluable material. The number of typographical errors is to be regretted.

The Diary of a Daly Debutante. New York: Duffield & Co. $1.25 net.

Since the author of this theatrical diary is modest as to her personality, we must not draw the curtain. Her anonymity shall be sacred. The more so in view of her writing a book which, albeit gratuitously trivial, is genuine in its "inside" view of such celebrities as Augustin Daly himself, Ada Rehan, Hart Conway, John Drew, et al. John Drew she describes as the inveterate "guyer"—eternally trying to make Miss Rehan laugh thru some trick or other. But she also recognizes the "something particularly pleasing" about his style of acting. As for the diary as a document, it is richer in details and tiny anecdotes than in serious characterization. The first entry is September 4, 1879; the last, August 7, 1880. The debutante was not long an actress; she found another world to conquer.

Studies in Religion and Theology. The Church: In Idea and in History. By A. M. Fairbairn, M. A. New York: The Macmillan Co. $3.50 net.

This large volume from the pen of Dr. Fairbairn is made up of addresses and papers written at various times during the last thirty years. The sub-title suggests the general character of the contents, but the collection is in fact miscellaneous, discussing such widely different subjects as the religious tendencies of the nineteenth century, and the teaching of Jesus, of Paul, and of John. All are included in this volume because they are supposed to have some bearing on the idea of the Church. The method used in treating some of the subjects has lost much of its appeal since the discussions first appeared. A large part of the work deals with the matter of Church polity, Congregationalism being stoutly defended against all comers. As one might expect, Dr. Fairbairn's thought is always clear and well expressed, his scholarship ample, and his logic sound. In spite of these excellencies, however, the book is not easy reading. The bright spots gleaming here and there thru personal reminiscence show how much more attractive is a human life than even a sound theology.

Literary Notes

....I visited a school the other day, writes a correspondent of the Manchester *Guardian,* where a class of boys were engaged on an essay on Milton. One had written the following: "Milton was a splendid poet, and wrote that beautiful poem 'Paradise Lost,' and on the death of his wife 'Paradise Regained.'"

....Franz Xaver Haberl, an authority on musical history, is dead at Regensburg at the age of 70. He was a native of the Bavarian lowlands, and prepared himself simultaneously to become a priest and a practical musician, serving as choirmaster at the Cathedral in

Passau and at Santa Maria dell' Anima, in Rome. He was the author of a practical text book of Catholic choral music and achieved a reputation by his investigations in the field of old church music. He founded in Regensburg a school of ecclesiastical music, from which he issued many important volumes, of which a complete edition of Palestrina's works was the most notable. In 1887 he became a doctor of theology of the University of Würzburg.

....In *My Summer in London* (Dutton) James Milne tells in an entertaining chapter "What London Reads." Novels, he writes, take first place, with memoirs and books of sport sharing the favor of the upper classes. Mr. Milne tells of a London woman who visited a book shop in search of a Browning—for a wedding present:

"Have you a nice copy of Browning?" she asked the bookseller. "No, madam," he said, "I never keep any book I can't understand, and I can't understand Browning." "Oh," she exclaimed, surprised and amused; but wishing to get such a gift volume as she needed, she continued, "then have you Praed?" "Yes, madam," he answered, "I have prayed, too, but still I don't understand."

....The appreciation of William Orpen by Mr. Brinton in the September *Century* introduces to American readers "a new British painter" who is, of course, not an English painter. Orpen might, conceivably, have been born a Scotchman or an American; but he happens to be Irish. That explains the "racy individualism" which distinguishes him as artist and as man. The illustrations to Mr. Brinton's article very justly convey the impression that the painter's work is most interesting in genre work, or when he is dealing with unconventional types—caught out of doors.

....Goldwin Smith's Reminiscences are appearing serially in *McClure's*. "Under Mr. Forbes's roof," he writes in an early chapter (the Mr. Forbes referred to was J. M. Forbes, of Milton, Massachusetts), "I met Emerson. I of course looked with interest on a man whose name and influence were so great. Emerson's character was undoubtedly fine and his influence was very good. But I cannot honestly say that I ever got much from his writings. I can find no system; I find only aphorisms; an avalanche, as it were, of unconnected pebbles of thought, some of them transparent, some translucent, some to me opaque. Carlyle introduced Emerson to the British public as one who brought new fire from the empyrean. But the two men in genius were leagues apart and Carlyle at last found the new fire a bore. George Venables, calling one evening on Carlyle at Chelsea, found himself received with extraordinary warmth, the reason of which Mrs. Carlyle explained by exclaiming, 'Oh, we were afraid it was Emerson.'" Goldwin Smith adds, however, that Emerson "had an elevating influence in his day, which was the critical time when, New England Puritanism having lost its power, there was pressing need of something to maintain spiritual life."

Pebbles

He—I wish I had money enough to travel. I wouldn't be here.

She—Wouldn't that be delightful!—*Boston Telegraph.*

Barring the rhinoceros there is no created creature so armed for the conquest of mere man as a handsome woman. And well she knows it.—*Our Dumb Animals.*

"Is your suburb wholesome?"

"No, old chap, it ain't. My wife lost her voice as soon as we moved out here, and——"

"What's the price of the lot next to yours?"

—*Cleveland Leader.*

"Do you believe that an offense carries its own retribution?"

"I do. I once tried to cheat the Government by buying a box of cigars the man said he had smuggled. Then I tried to smoke them."—*Washington Star.*

"Dolan," said he, "what does them letters 'MDCCCXCVII,' mean?"

"They mean eighteen hundred and ninety-seven."

"Dolan," came the query, after a thoughtful pause, "don't yez think they're overdoin' this spellin' reform a bit?"—*The Green Bag.*

"I've been sending out boxes containing 50 cigars, telling recipients to smoke ten and then send the money or return the rest."

"Are the recipients honest?"

"They seem to be. I've been getting back 40 cigars right along. Some of them even send back 49."—*Louisville Courier-Journal.*

Todgers—Ah, Count, allow me to introduce you to Mr. Saton.

Count—It ees a great pleasure for me to meet a musician like you, monsieur. I hear zat you and your family play ze music.

Saton—Me?—why, I don't know anything about music!

Count—Non? Zey tell me all round zat you play second fiddle to your wife?—*M. A. P.*

He was very bashful and she tried to make it easy for him. They were driving along the seashore and she became silent for a time.

"What's the matter?" he asked.

"O, I feel blue," she replied. "Nobody loves me, and my hands are cold."

"You should not say that," was his word of consolation, "for God loves you, and your mother loves you, and you can sit on your hands."—*Success.*

"John," asked father, "do you practise on the piano while I am away at business?"

"Yes, father, every day," replied the boy.

"How long did you practise today?"

"Three hours."

"Well, I am glad to hear that you are so regular."

"Yes, sir."

"And the next time you practise be sure to unlock the piano. Here is the key. I locked the instrument last week and have been carrying the key in my pocket ever since."—*Success.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

A Warning and a Challenge

THE events of the past few weeks are both a warning and a challenge to the Republican party. The people have given the warning, and the Democratic party has given the challenge.

The warning has come in half a dozen States in which the people have spoken within the party itself in favor of the progressive principles. It is exceptional, and where the control of the old machine is the strongest, that the progressives have been beaten. Over and over again the Republicans themselves have declared their dissatisfaction with the Payne-Aldrich tariff and have demanded its amendment. President Taft has been compelled—for he was quick to hear the warning—that it must be amended, gradually to be sure and with much deliberation, by means of the Tariff Board, but that is a confession. The people also show that they want more popular rule in the House of Representatives, by the overthrow of Cannonism, and in the country by the overthrow of the system of delegated conventions, which necessarily creates bosses, and may and often does stifle the will of the people for the benefit of those that manipulate the nominations. It is a democratic rule, the rule of the people, after the old town-meeting style, by direct nominations that they want, and where they have had the chance to try it they like it and use it; for it gives them the chance to speak their mind and do their will. The bosses don't like it, for they can't control it. See how they fight it here in New York State; for this is the conflict here, Barnes and Woodruff and their crowd against Governor Hughes and his supporters. They will in the end be beaten here, but it is in the West that they have spoken loudest and given the clearest warning. That is the meaning of the enthusiastic reception given to Mr. Roosevelt there. He appeals to the people against bosses, against corporations in politics, against everything by which the few rule the many.

The people have begun to use the system of primary nominations and they like it much. It began in the South where there was but one party, and it was evidently needed; but it has spread like wildfire in the North, from Oregon to the New Jersey coast. It will not be given up; it will be general all over the country and will supplant the caucus system. Where it has been tentatively allowed, the two together, the popular primary nomination and the convention also, the latter will not dare to reject the vote of the people; and finally there will be nothing left for the convention to do but, as in Kansas, to write the platform and appoint, perhaps, a committee or two. Of course, the United States Senators will be chosen by popular vote as well as Governors, and all candidates for office must report to the people their declaration of policy and stand or fall by the direct vote of the people with no intermediaries.

The challenge of the Democratic party is equally notable. They seem to have learned the lesson that for success, where they have been in a minority, as in the North, they must put the very best men at the head of their tickets. They have learned, as in Minnesota, that in no other way can they succeed. There is a multitude of men in the Republican party, a growing multitude, who are less attached to party than to principles, a

multitude, too, who can see very little difference of principles between the two parties, and who will readily vote for the party which is likely to give the best administration because it presents as candidates the best men. So in this city the Democratic party — even Tammany — nominated Judge Gaynor for Mayor, because it had to, and the people elected him and are not sorry. So Ohio Democrats nominated Judge Harmon, and Republicans elected him. So Connecticut Democrats have nominated Judge Baldwin, and the New Jersey Democrats have nominated President Woodrow Wilson, of Princeton University; and it looks very much as if both will be elected. A multitude of Republicans in both States are saying that they will vote the Democratic ticket, because a man they can trust, who is no tricky, ambitious politician, is at its head. Will the Republican party meet the challenge everywhere, and seek, as when it selected Governor Hughes against the will of the leaders, the best, most trustworthy man to appeal to the people?

And now Maine! There the people have spoken. There is the warning. The State which has for a generation been safely Republican has repudiated its Republican leaders, and elected a Democratic Governor and Democratic Congressmen and a Democratic Senator. The Republican party in Maine had admitted no insurgency, for it was well bossed; and so the people rebelled. That Maine election threatens a Democratic House of Representatives. That is to be expected if the Republican party does not take the warning, does not accept the challenge. Is it too late?

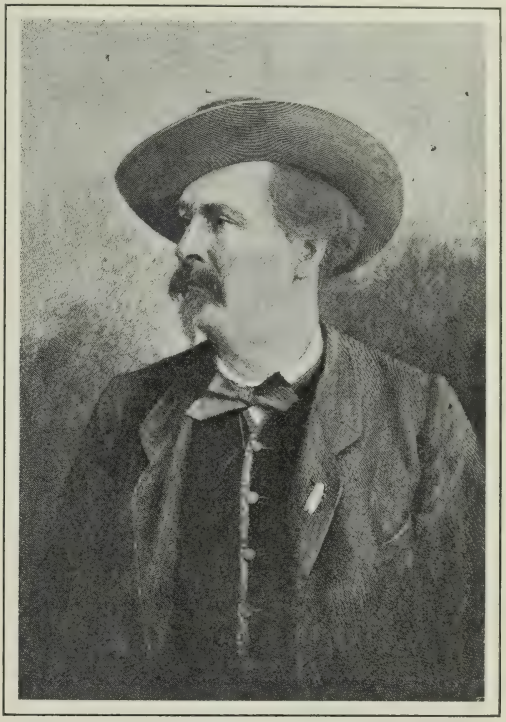
Secretary Norton's Letter

A PARTY convention has just praised President Taft very justly for his "tact," and yet the letter of his private secretary to an unnamed correspondent, which we must suppose to have been written at the President's order, makes the confession of a lack of tact in the previous refusal to recognize insurgents in the distribution of patronage. It says that such refusal may have done more hurt than good. We may also question whether the publication of the letter itself deserves the praise of tact.

The substance of Secretary Norton's letter is this, that during the last session of Congress the President, at the request of the dominant party leaders, withheld Federal patronage from the insurgents —that is, he tried to hold them in line by refusing to give offices to their friends, but gave the offices to those who voted with the old leaders; but now he has heard the voice of the people, recognizes that perhaps it was a tactical error, and now he will distribute the offices fairly, to standpatters and progressives alike, if they will only present good men to him. It is not an agreeable letter. That method did not succeed in Congress or in the country.

We like to hear of principles; we do not like to hear of spoils. We suppose it is necessary and right that in making appointments the President should enquire of Senators and Representatives as to the qualifications of men whom they know about, and he cannot know about. They are a good source of information; but they are not the appointing power. The Constitution does not give it to them, altho they have come to assert it Above all it should not be their spoils of office. President Taft, following now a succession of Presidents, has enlarged the scope of the civil service reform which takes the appointment and tenure of officials out of politics. He does not believe in making office the reward of party fealty. He has taken a multitude of post offices out of the political grab-bag. Yet in this letter he seems to allow that what is wrong in the case of a third or fourth class post office is right in that of a first or second class post office. He would not have Congressmen appoint the census clerks, but they may appoint the collectors of customs and internal revenue. The people will fail to see the difference.

It was noted of Governor Hughes that he was expected to try to force his policy in the New York Legislature by the use of patronage, but that to the surprise of his opponents their opposition to his reforms made no difference to him in his selection of officials. He appealed to a higher principle and to a higher court directly to the people, telling them what



he wanted and why it was right. That is the way he succeeded, and his last failure will yet be a success. We give no special blame to President Taft for doing what every President before him has done, for the ethical sense among the people, and particularly among politicians, has to grow gradually. Northern Eskimos still expose their feeble old men to death, and in our day infants have been thrown to the crocodiles, and both from a sense of duty. Such an ill survival we have had in the spoils system which has lingered to this day, and is quite too frankly confessed in Secretary Norton's letter. It is time that such evils be not flaunted but rather tactfully hidden, just as the witnesses before the investigations of bribery and graft in Pennsylvania and Illinois and New York have convenient lapses of memory and bankers and brokers lose their books of accounts. We are very glad that the present Administration proposes hereafter to have nothing of the sort that needs confession or concealment.

The Birthday of a Poet

On the translation of Mistral's "Memoirs" into English, he who was at the time President of the United States wrote a congratulatory letter, that was prefixed to the American edition. Last year, marking the fiftieth anniversary of the publication of Mistral's "Mirèio," his masterpiece, the young men and maidens of Arles—and all the world knows the reputation of the Arlesienne—acted out his poem in the old amphitheater of their Latin city. We regard that as a higher distinction than receiving à letter from Mr. Roosevelt. But this year it is Frédéric Mistral's birthday which is celebrated, his eightieth. And one reads in the newspapers that "the Pope has telegraphed his best wishes and the apostolic blessing."

Mistral is, we are informed, still vigorous in mind and body, in spite of time's assault. He is no longer the vivid personality described in the autobiography of Daudet—a player of pranks and a lover of jests. His eye may not flash as it does in the portrait which we herewith reproduce. But, on the other hand, he has not been mummified by the climate of his beloved *Midi*. Far from it. Rather has he been preserved in that "alcohol of sunlight"; and he still greets the pilgrims who come to his farm to salute him, greets them whether they are Félibres or mere Frenchmen.

Only last year Jean Aicard, a younger Provençal, poet and novelist, who has used as his medium not the dialect but French, was elected to the Academy. Mistral, for his part, founds academies but does not join them. And with the flight of years his fame passes the boundaries of nationalities and *patois*. He

FREDERIC MISTRAL.
This portrait of the Provençal poet we regard as the most characteristic; it shows him in the full vigor of middle age.

chose to use a language which had fallen into literary disuse, not to say debasement and decay. If he has not succeeded in raising the tongue of the troubadours to an equality with the *langue d'oïl*, he has at least made it known everywhere for the poetic medium it is. He has, besides, and this both directly and indirectly, wonderfully stimulated the study of the Provençal literature in the universities, not of France alone, but of all the world. When he made his *début*, who knew that dialect, that literature—in or

out of France? Today, where is the faculty of letters that ignores it? The last fifty years, that have witnessed a long series of political unifications, have witnessed another phenomenon no less remarkable: the revival for academic and literary purposes of the Gaelic, the Breton, the Provençal, and we know not how many more tongues. France, that is so rich in regional literature today, owes much to Mistral's influence. And France, in celebrating the eightieth birthday of a poet whom Lamartine dared to call another Homer, forgets the "Song of the Cup," and the separatist bluster of a bygone day.

All that is forgotten, and what is, above all, remembered, is the beauty of the blue skies, the music of the *cigales*, the radiant maidenhood, celebrated in his poems. For Mistral stands today the author of the only modern epic: an epic that survives even its translation into French prose by the author himself, and into an English rendering, in verse, by Harriet W. Preston. His work is a reminder, too, of the truth that poets of place are, almost without exception, men of the soil—not bourgeois nor "gentlemen." A Crabbe or a Barnes—clerical men, these—may, indeed, emerge; but Crabbe's song was, as Hazlitt phrased it, "one sad reality"; while Barnes's one may pass over as the necessary exception to the rule. Mistral, at least, has been and remains a poet redolent of the soil which his fathers tilled with their own hands and with primitive tools—tools that have changed very slightly since the days of the Roman occupation. The robustness of his work, as well as its beauty, will survive even the long lived poet—and the precious M. Rostand—and the *réclame* which is the Pegasus of modern poets generally.

The Spanish Congregations

We lately gave an account of the Spanish contention with the Vatican, so far as it was concerned only with Spanish law and uncomplicated with the rights of Rome under the Concordat. That had to do solely with an increased liberty to dissenters from the State Church to make public their places of worship. There remains the contention with Rome as to the asserted conflict of the Royal Order of May 30 with the provisions of the Concordat of 1851 with Rome.

There has been a vast deal of conflict between the Throne and Rome over their respective rights, and three Concordats or agreements have been made—those of 1737, 1753 and 1851. The last (Article 1) makes "the Catholic Apostolic Roman religion the only religion of the Spanish nation to the exclusion of any other," and "in consequence the instruction of the universities, colleges and seminaries and public or private schools will wholly conform to the doctrine of the Catholic religion." The objects of the Concordat are stated in the preamble, and of these the last is:

"5. To fix in a definitive manner what has regard to the religious establishments, by providing that those houses which remain may add to the contemplative life exercises of instruction and charity."

The purpose evidently was to see to it that convents and monasteries made themselves useful and not a drain on the resources of the nation.

We now give the two Articles of the Concordat that relate to monks and nuns:

"29. To the end that in all the Peninsula there may be a sufficient number of evangelizing helpers and workers whom the prelates can employ to occupy missions in the villages of their dioceses, to help the parish priests, to care for the sick, and for other works of public mercy and usefulness, Her Majesty's Government, which proposes to improve as it can the colleges of the missions in the colonies, will bereafter make convenient arrangements (*tomarà desde luego las disposiciones convenientes*) to establish as may be necessary (*donde sea necesaria*) with the previous assent of the diocesan prelates, religious houses and congregations of St. Vincent de Paul, St. Philip Neri, and another order of those approved by the Holy See, the which may serve at the proper times as places of retirement for the ecclesiastics, for their spiritual exercises and for other pious purposes."

"31. In order that there may equally be religious houses for women, in which those can follow their vocation who are called to the contemplative life and the active life of caring for the sick, teaching girls and other services and occupations both pious and useful in the villages, the institution of the Sisters of Charity will be continued under the direction of the clergy of St. Vincent de Paul, the Government providing its support.

"Equally those houses of religious women will remain which add to the contemplative life that of education of girls and other works of charity.

"As to these orders the prelates, according to the needs of their respective dioceses, may propose the houses for religious women and for the admission and profession in them of novices and the exercises of instruction and charity which may be properly established in them.

"No religious woman shall proceed to make profession in them, except as her subsistence has been in due manner assured."

It is perfectly plain from these Articles what the purpose was. It was to prevent the establishment of any orders of monks or nuns that were not engaged in some useful religious work, such as teaching and caring for the sick. Accordingly those orders were specified as permitted which were devoted to such work, and others the Government was not to admit. Two orders of men were named, and the third was left for later agreement. It is supposed that the third had in mind was the Esculapians, who cared for the sick, but no agreement was ever made. Equally only those houses for nuns were to be allowed which made themselves of use to the people. Orders devoted solely to the contemplative life (which always requires some business or trade) were to be excluded.

Now, the contention is that this agreement has been grossly abused; that a multitude of establishments have been admitted far beyond the needs of the people. The number of convents and monasteries has been given as over 3,000, and the number of religious of both sexes as over 100,000, but the Catholic official figures give the latter as about 55,000. We only know that the hostility to them in Spain is intense, at least to those who are cloistered, and that they suffered sadly in the riots of a few months ago. Many have passed over into Spain from France and are not welcomed by the parochial clergy. As an example may be mentioned that famous French order devoted to the contemplative life and the manufacture of Chartreuse liqueur. Complaint is made that they pay no taxes and compete unfairly with Spanish citizens.

Now, it is to meet these conditions that the Royal Order of May 30 was promulgated. It reminds civil governors that, under a previous decree of 1902, which has never been enforced, all religious orders not authorized by the Concordat must be registered and must submit to the "Law of Associations"; that is, the corporation law. This is bitterly attacked, and it is claimed that all these have the right of admission, inasmuch as each diocese may admit its own third order, which gives a multiplicity of orders for the country. But so far as we can see from the text of the Concordat, it was a single third order that was to be agreed upon, and as none has been agreed upon, all other orders of monks but the two specified are wholly subject to Spanish law, and particularly those that are devoted to the "contemplative" and commercial life.

We may add that in a paragraph some weeks ago we stated that the religious orders received support from the state to the amount of $8,000,000. This was an error, as this sum includes the support of the regular religious establishment, bishops and parish clergy.

Bees and Basswoods

We cannot make a complete country home without a few colonies of bees. They are just as much needed as are the hens and the birds. We doubt if even the family cow has a more important place in the right sort of country home. The bee is busy every hour of a pleasant day in spring making sure that your fruit crop does not fail. He is equally important in the vineyard and the berry field and the orchard; and there is a great deal for him to do in the meadow and the cornfield as well. Not one half of our apples and pears even can get along without the help of this busy little worker. Grapes especially are dependent upon his visits; so much so that the Brightons and Lindlys and most of the other best bred sorts would bear no fruit at all if left to themselves.

If you are going to the country, one of the first things to look after is, are you able to supply bee-food? This is too often neglected. There are pastures for the cows, and stalls for the horses, and grain for the hens, but the bees are expected to shift for themselves. This they can possibly do, by skirmishing over a half mile or more of space, taking their provender from your neighbor's gardens; but if you expect them really to do good work in the way of pollenizing, and then

put up a storage of honey enough for themselves and for you, you must look out for their having an abundance of bee food. With ten acres of land you need ten to twenty hives of bees.

At the very beginning of your planting consider this problem, not simply what you wish to eat yourself, but how to feed these co-workers. If you are a fruit grower you will find that raspberry blossoms will give a lot of fine honey, and that an apple orchard in spring is for a short time a grand feasting place. Nearly all the fruits give good foraging for nectar, and so do some of the flowers which delight our eyes along the borders —but by no means all of them. Roses, phloxes, pinks, pansies, nasturtiums, do not furnish much that the bees desire. Oranges in the South and mock oranges in the North are both loved by the bees. The legumes, all of them, furnish honey; especially is an alfalfa field a magnificent storage for them to draw upon.

But the greatest joy of the hives is when the lindens blossom in July. The basswood is a wonderful tree in every way, and when it is in bloom it is one of the most beautiful in the world. Bees will work in them all night, in their passion to extract every particle of the nectar. Our village streets should be bordered with them; and this should be done as a matter of economy, to furnish bee food, as well as to secure superb shade. Think of the millions of pounds of honey that might be gathered along our street sides. Village authorities should see to this; but the home-maker should do more—he should have a little grove of lindens planted, if possible, even before his own house is built, and in the shade of which his hives can find location. The tree is easily obtained along our forest edges, and it takes a grip on the soil very readily. Planting five hundred maples, you will lose fifty, and twice that number of walnuts or hickories, but you will rarely lose a thrifty basswood, even if planted without protection.

There are other trees known as honey makers, and very much loved by the bees; among them are the beautiful mountain ash and the wild cherries, while not a little honey is made from the maples in early spring. Many of these trees have the advantage also of being loaded later in the season with bird-food. They do not take much room, maples excepted, and they serve well as wind breaks. The basswood, however, stands far ahead, not only for shade but for the quality of the honey that it yields. There is none better, not even that taken from the clovers.

Our city folk are coming out into the country unprepared for its problems, and these are many and taxing. It will require five years of schooling, with Nature as an unflinching schoolmaster, before they can have created such a home as they dreamed. It is altogether a blunder that you have little to do but to plant seed in the earth and put the roots of trees under the soil in order to accomplish country home building. Trees will not grow if set ignorantly, and they will starve if unfed—almost as quickly as unfed cattle. There is a little skirmishing that can be done in the way of gardening, by an ignorant person, and it is well to begin with some of these simpler affairs. To get a crop of oats is comparatively easy, but to get a crop of apples is a complex problem; both require knowledge and educated common sense.

Every possible alliance must be secured, and among them all the bee is as good as the best. This is the charm of land life, that it unites the well-meaning to a single end. The robins and the grosbeaks do what they can for us as well as themselves, and it is a great deal that they do. The honey-bees and the bumble-bees are humbler, but they are just as important. They give us food in the orchard and delicious food from the hives. A wonderful place is a well adjusted farm; a modern home made up of nearly everything that grows, and where nearly everything that flies or runs cooperates.

John Burroughs says that the bees show lack of reasoning powers because they go on amassing honey beyond anything that they can use themselves. This logic is narrow, and it leaves out altogether the social unity of the universe. The world is not only one by attraction of gravitation, but it is solidly united in its life interests. There is no such thing as serving ourselves alone. We live in and for each other. The world is a hive and whether we will or not, whatever we

do or refrain from doing affects the whole. Who will take our accumulations after we are gone? All the same we are all gathering, not for ourselves but for other folk. This we say, then, have a few hives of bees; plant a few basswoods; and eat your own honey. Feed your bees liberally, and let them contribute as freely to you in return. This they will do; it is part of the moral arrangement of the world as well as of the physical, that we should help each other.

The rural editor has taken five hundred pounds of honey during 1910, from a dozen swarms of bees, and all this besides the fact that the buzzers have given him a decent apple crop, while there are almost no apples elsewhere. The basswoods have fed the bees, and thru them have gloriously fed us, and now they hang down great clusters of seed-balls to make future basswoods, while the leaves are turning gold; for soon the leaves also will have finished their work overhead, and will drop down to become humus, and then add to the wealth of the soil. It is a glad universe to workers of all sorts; and the bees and the basswoods alike are happy as they are beautiful. The work of life is a poem, and there is no right music but that of the bene-volens.

Political Hysteria in Tennessee

To the outside world Tennessee doubtless seems a State gone mad. She has for the last five years been the victim of nearly every imaginable political hysteria. The results have been far-reaching and deplorable. Business and social life have been disorganized. Families and churches have been disrupted, while government has become a mockery. Every branch of government has been prostituted by one faction or another to the uses of partisan politics. The law has become a jest and municipal governments and judicial officers have actually been elected for the express purpose of nullifying statutes. A candid view of the future inspires little hope for immediate improvement.

But amid all the storms of passion and hate which have raged among the people, they have hitherto been spared one affliction. Tennessee escaped the troubles following the Reconstruction Acts. It is probably due to this that she has as yet escaped the plague of Vardamanism and its kindred forms of "anti-nigger" demagogery.

There has never been a movement to deprive the negro of his franchise. The races have lived together in comparative peace. The election laws have not been tainted with unfair educational qualifications or grandfather clauses. The negro has exercised his voting rights without interference. For some years back, in many parts of the State, especially in West Tennessee, the negroes have done very little voting. There have been no issues affecting them to arouse their interest and the Republican organization has long ceased any effort to retain their old-time loyalty. In other sections the race has been active in the discharge of its political duties.

The wave of political intolerance which has swept over the State now threatens to extend itself to the "race issue." Without doubt the air will shortly be full of frantic appeals for "white supremacy" and Vardamanism will be rampant at every crossroads.

The curious thing about it all is that the negro has brought this calamity on himself by doing the very thing which he has always been advised to do, if he would avoid persecution. He has divided his vote and severed himself from his former blind allegiance to the Republican party. This has made him a real factor in the State's politics, and, of course, drawn down upon his head the wrath of those who formerly used him. The negroes generally have had little motive for their recent political revival beyond a personal liking for Governor Patterson, on account of his humane treatment of negro convicts and his general attitude of fairness toward the black man. Judged by ordinary standards this is not of itself a discreditable motive, but to judge from the abuse that has been heaped on the negroes who supported Patterson, gratitude is a crime in a black man.

Many negroes have also been led to support the Democratic organization on account of their opposition to prohibition. This is a question, of course, on which an honest difference of opinion is

not allowed, and when the anti-prohibitionist happens to be a negro the only possible explanation of his attitude is his fondness for "nigger gin" and his innate criminality. It is a fact, however, that the first efforts to secure the negro vote on the liquor question in Tennessee were made by the Anti-Saloon League, and a large per cent. of the negro votes cast on the local option elections in the State were against the sale of liquor.

It is charged by those who are beginning to clamor for negro disfranchisement that the negro vote in Tennessee is controlled by the corporations. How true this is may be judged from facts like the following: In the recent judicial election in Tennessee the negroes largely supported the regular Democratic ticket. The ticket put out by the Prohibition Democratic-Republican coalition was supported by every corporation attorney in the State, with the exception of about ten or twelve. One of the bitterest struggles ever fought between a public service corporation and a municipality was the election held in Nashville some years ago on the question of issuing bonds to build the Tennessee Central Railway. This proposition was opposed by the Louisville & Nashville Railroad Company and all the allied corporate interests of the city. A majority of three-fourths of the vote cast was necessary to carry the bond issue. The negro vote thus became the deciding factor. Money was spent in an unheard of manner to influence the negroes. Negro employees were told to vote against the measure or quit their jobs. The effort was a miserable failure. The negro vote went solidly against the corporations and with their fellow townsmen. Numbers quit their work rather than stand for intimidation at the hands of their bosses.

The record of the negro as a voter in Tennessee shows that he is a good citizen in the exercise of the franchise and that he is identified with the interests of the people among whom he lives. He has exhibited a degree of independence that is remarkable when his poverty and general state of dependence is considered. But in spite of all this, it looks as if the triumph of the Anti-Patterson element, and the consequent entrance into power of that party which is the negro's historical friend and traditional guardian, and which gratitude should compel to do him justice, is going to be the signal for persecution and probably disfranchisement. It will be the doing of Republicans aided by Anti-Patterson Democrats.

Actual China

A VOLUMINOUS literature on China and the Chinese has come from English and American presses in the last twenty years. Practically all of it, whether in the form of books, magazine articles, or newspaper stories, has magnified the "awakening" of China. It has created an impression that our preconceptions of China were childish and fantastical. It has created a belief that the Chinese people are on the whole more intelligent, practical, efficient, ambitious and far-seeing than we had supposed. It has aroused vague fears of a coming Chinese Empire so well organized and so ably governed that it could make a formidable demand upon Western nations for the recognition of a right of Chinese millions to find new homes and opportunities in America and Europe. We have come to believe without question that the growth of China's population must continue until it contests the control of every continent.

It is to be hoped that before many months the American and European public will have an opportunity to read and think about the curiously different account of actual China which Prof. Edward A. Ross, of the University of Wisconsin, is preparing. Professor Ross has been making an overland journey thru the heart of most unknown China, from Taiyunfu to Chengtu, and the first rough notes of his observations have been published in *The Shanghai Times* of August 5th, 6th and 8th. That they have made a profound impression upon English-speaking people in China is indicated by editorial comments in *The Shanghai Times*. They cannot fail to make an equally deep impression when they become known on this side of the Pacific.

In certain centers of North China, not far from Peking, Professor Ross finds a good deal of the progressiveness of which so much has been written. Streets are paved and lighted with electricity.

Women and girls have ceased to bind their feet and go about freely. Soldiers are armed with modern rifles. Experiments are being made with industrial schools for first offenders. Poppy growing has ceased, and the sale of opium is prohibited. In the houses of the wealthy one may find gramophones, alarm clocks, cameras and Western cosmetics. But thruout this region population is less dense than it was half a century ago. Evidences abound on all sides that prosperity was formerly greater than it is now, and the brick walls of deserted country mansions are used as quarries from which to obtain bricks for newer and less pretentious buildings.

A two or three days' journey into the mountain regions that divide North China from South China takes one into the great wheat growing regions. Here were once natural beauty and wonderful natural resources. The beauty is forever gone, and the natural resources have been wasted beyond belief. The deforested hills have become bare and floods have carried millions of tons of gravel down the slopes and spread them twenty feet deep over the once rich bottom lands of the valleys. In these regions no slightest sign of progress is discovered. Women and girls with crippled feet live out of sight in their mud cabins and most of them have never been a mile from their homes in their lives. The reaping of the wheat is done with the sickle, and five men in binding the grain will not do in a day the work of one good American farm hand.

If the wheat regions of Middle China are desolate, the rice regions of Southern China are filthy and repellant beyond description. Here one sees nothing but an appalling struggle for mere food. In the wretched hovels nothing resembling the home life of Western peoples is anywhere to be discovered. The women and girls are kept secluded. Superstition is the everyday reality. The smearing of idols and joss sticks with the blood of cocks is an hourly rite, and pigs contest the shelter of the mud hut with its human inhabitants. The birth rate is high, but Professor Ross estimates that of five children born four die before the end of the second year.

Two thousand years ago a policy of conservation might have saved China's resources and preserved enough of her natural beauty to keep alive the instincts of idealism and aspiration. Today it is too late for conservation. Only by enormously costly re-creation can China be placed in the same class with Western nations. But, with the awakening of interest in Western progress in North China, there is developing there a new appetite for luxury and idleness. These vices will have the effect, as they have had elsewhere, of diminishing the birth rate.

All in all, it is plain, if Professor Ross is as good an observer as we believe him to be, that it will be many generations before China will be a formidable rival of any Western power; plain, also, that if she ever does become a rival, it will be at such cost of energy and resources that her birth rate in excess of death rate cannot become the menace to Western civilization that has been too easily taken for granted. It is impossible to read Professor Ross's articles without getting from them a new impression of the immense superiority of the English-speaking people and their Teutonic and Celto-Latin kindred over the Oriental, not only in standards of living but also and far more important in the long run—in sheer race vitality and staying power.

"Pure Democracy"

Congressman Boutell, of Illinois, who has been a leader in his party at Washington, refuses to submit to the direct primary vote which has defeated him. He is quoted as saying:

> "I shall run independently and beat my rivals on the simple principles of responsible representative government. I place no reliance in direct primaries. In my district less than one-third of the Republican voters went to the polls. Pure democracy always has been a failure. The initiative and referendum, direct vote for Senators—these are vagaries. The idea of 100,000,000 people trying to legislate direct on subjects that individually they do not understand! The voters were misled by the statements of hired professional liars."

The people can vote as a "pure democracy" for a man, and why not for a principle? Mr. Boutell has been elected time after time to Congress by the direct vote of the people, and we do not see why he might not just as well be nominated in that way.

There are signs of repentance and hopeful conversion among the Southern Democrats, just at the time when the Republicans of the South are turning the cold shoulder to the negroes who have constituted the bulk of their party. It has appeared in Tennessee in Governor Patterson's effort to gain their support, and now, in their platform adopted last week the Democrats of Missouri adopted a plank proclaiming friendship for the black race, and promising never to discriminate against them either by criminal laws nor by attempting to deprive them of their right of suffrage. It will be remembered that in the last Gubernatorial election the Democratic candidate, Congressman Cowherd, advocated the practical disfranchisement of the negro race. He was defeated, and the Democrats of Missouri seem to have learned the lesson.

This is an unusually interesting item which we take from the correspondence of the editor of *The Western Watchman*, Dr. Phelan, who has been in Rome on one of his frequent visits to the Vatican. He says:

"Monsignor Straniero regrets the loss of his friend and protector, Cardinal Satolli, very much. He told me his last days were very sad. He had lost all influence at the Vatican and was shorn of all the positions he had occupied, that of prefect of the Congregation of Studies being the only one left him, a mere shadow of his former tremendous power. But the present Pope made all appointments on his accession, and there were no hold-overs. Those only were named to office who were free and untrammeled to follow out his personal policy of having no policy at all. He wanted to do the will of God, and would have around him only men similarly disposed."

Secretary Ballinger has not made up his mind to resign from the Cabinet. He is conscious of having done his duty, with no lapse of fidelity. Then let him be content with the comfort of it and resign. In an ancient New England girls' boarding school the principal had a series of moral lessons she would teach her girls by way of question and answer, the answer to be given in unison. She would recite the question in a delicate mincing tone, but not so came the answer. One question was: "What is duty performed, young ladies?" The answer was shouted out, "Rainbow in the soul!" Let Ballinger be satisfied with his rainbow.

The new Federated Labor party plans to develop its activity over all the country, and has ambitiously taken as its emblem Atlas supporting the earth, with the words, "Labor Supports the World." That labor supports the world, particularly agricultural labor, there is no question; but Atlas did not support the earth but the heavens. He is seen in classical art with the sphere on his shoulders, but it is the starry sphere, and the constellations, not the continents, are figured on it.

The country has suffered enough in the past from failure to have a generous reciprocity treaty with Canada. In fact, we ought to have no tariff wall between us and Canada as far as any products are concerned on which either country sets up an import duty equal to that imposed by the other country. We have no forts and no navy on the border line to make us enemies, and our coinage is the same. A unification of interests and conditions is of the first importance.

Even more alarming to the managers of the Republican party than the results of the election in Maine is the nomination by the Democrats of such admirable men as Judge Simeon E. Baldwin and President Woodrow Wilson, of Princeton, to be Governors respectively of Connecticut and New Jersey. Such nominations, very nearly unanimous, with the Republican party divided, almost ensure election.

A cable dispatch from Rome says that the Pope will give no cardinalate to the United States this year, because all the archbishops are equally worthy. But a chief Catholic editor says America ought to have as many as six cardinals. There are now eighteen vacancies.

Even strong Republican journals of the highest standard, such as *The Press*, of Philadelphia, for example, severely criticize Secretary Norton's letter on appointments to office.

Insurance

Overinsurance and Its Dangers

If a man has property worth $5,000 upon which he has effected an insurance of say $10,000, there is a tremendous temptation looking toward the incendiary destruction of the overinsured property. The writing of overinsurance is so easy if eternal vigilance is not exercised that it has become a hazard to be reckoned with. The Insurance Commissioner of North Carolina has apparently had this matter before him with good results, since he has just issued a circular calling the attention of fire underwriters doing business in that State to the law prohibiting the overinsurance of property there and the penalty for the violation of this law. The statute provides that "no insurance company or agent shall knowingly issue any fire insurance policy upon property within this State (N. C.) for an amount which, together with any existing insurance thereon, exceeds the fair value of the property, nor for a longer term than seven years. Policies issued in violation of this section shall be binding upon the company if issued, altho such company shall nevertheless be liable for the forfeiture by law prescribed for such violation."

The penalty for each offense in making, issuing and delivering such policies is a fine of from $50 to $200, but the policy, nevertheless, will be binding on the company issuing the same. Commissioner Young says:

> The reports coming to my department, as well as the investigations under my directions, show that but for the insurance on the property being more than its value many fires would not occur. In some cases it has developed that the insurance was procured either thru the ignorance or carelessness of the agent writing the insurance, and was not discovered by the special agent or inspector of the company, and I deem it advisable to call the attention of companies and agents to this law, which will be strictly enforced.

On the ground that overinsurance leads to incendiarism, Insurance Commissioner Hartigan, of Minnesota, has also taken action looking toward a prevention of overinsurance. He has given notice that every flagrant case of overinsurance coming to the notice of his department will mean a revocation of the guilty company's license and also of the license of the agent procuring or writing it.

John F. Dryden, president of the Prudential Insurance Company of America and United States Senator from New Jersey, 1902-1907, is a very busy man. In 1874 he founded the first life insurance company that made a specialty of industrial insurance, and of which he became president. It was a very small enterprise in the beginning, but under the guiding hand of its founder the company grew into a giant. During the existence of the Prudential Mr. Dryden has been called upon many times to make addresses and to write papers on life insurance and other subjects upon which he is an authority. These have now been collected and included in a book that has just come from the Prudential Press, and is published by the Prudential Insurance Company of America. Any one who is even remotely interested in the insurance principle will find a mass of material in the volume under consideration that will amply repay the most careful study. Mr. Dryden naturally considered the inception and early problems of industrial insurance, its history as made during the past twenty-five years, and the part it has come to play in the social economy of the country. He treats of the practice of insurance, which provides a certain method of avoiding the hazards of old age without this or some substitute protection. He has something to tell us of the problem of the uninsured, of life insurance as a career, of the growing burden of taxation, of regulation by Congress, and he has a message regarding the commercial aspects of this regulation. In the volume is included also his able speech on "The American Type of Isthmian Canal," and his address on Abraham Lincoln and Alexander Hamilton. The book contains an excellent portrait of Mr. Dryden as a frontispiece.

Financial

The Rock Island System

It became known last week that the large block of Rock Island Railroad stock taken over on July 27 by Kuhn, Loeb & Co. from the embarrassed Pearson-Farquahar syndicate had been sold to Phelps, Dodge & Co., prominent producers of copper, who own and operate nearly 1,000 miles of road (connecting with the Rock Island) in the vicinity of their extensive mining properties in the Southwest. This block is said to be 185,000 shares, or 37 per cent. of the outstanding preferred stock, which controls the Rock Island system. Heretofore the dominant interests in Rock Island have been those of the Moore brothers and D. G. Reid. The latter is well known in the stock market, and his name has been associated in common gossip with the curious movement of Rock Island stock in December last which caused the suspension of the brokerage firm of S. B. Chapin & Co. It is said that the Moore brothers, who hold about 120,000 shares, and Phelps, Dodge & Co. will act harmoniously in the management of the system. The influence of Phelps, Dodge & Co. will be distinctly conservative. The general belief is that their acquisition of this large block of shares is clearly to the advantage of the Rock Island and must be regarded as beneficial indirectly to general railway interests.

The Crops

The Government's crop report for September indicates a larger yield of corn, spring wheat and oats than was expected at the beginning of August. Gains in condition are shown for each of these cereals. These gains add 45,000,000 bushels of corn, 12,000,000 bushels of wheat, and 75,000,000 bushels of oats to the totals indicated one month earlier. There is promise now of the greatest crops of corn and oats ever harvested—of 2,943,341,000 bushels of corn (a quantity exceeding last year's yield by 171,000,000, and the record crop of 1906 by 15,000,000), and of 1,055,466,000 bushels of oats, or 48,000,000 more than were harvested last year, when a new high record was made. The wheat crop will fall below last year's by 67,500,000 bushels. The figures are given below:

	Indicated.	Crop of 1909.
Corn	2,943,341,000	2,772,376,000
Oats	1,055,466,000	1,007,353,000
Spring wheat	211,239,000	290,823,000
Total wheat	669,533,000	737,189,000

On the 13th, the Canadian Government estimated the entire wheat crop of Canada at 122,785,000 bushels. Last year's final estimate was 166,744,000.

According to the annual report of the New Orleans Cotton Exchange for the cotton year that ended on September 1, the cotton crop in this country was 10,609,000 bales, or 23¼ per cent. less than that of 1909, which made a new high record. But the value of this latest crop ($778,894,000) considerably exceeded that ($683,794,000) of the great yield immediately preceding, owing to the much higher prices obtained. Our crop was nearly 70 per cent. of the world's crop, and about half of it has been exported.

....Lucius Tuttle, for many years president of the Boston & Maine and the Maine Central railroad companies, has resigned, and Charles S. Mellen, president of the New York, New Haven & Hartford Railroad Company, has been elected acting president in his place. This change marks the practical consummation of the merger of the northern companies with the New Haven company. One of the improvements now to be made will be the substitution of electric for steam locomotives in the Hoosac Tunnel, at a cost of $1,000,000.

....There are now thirty-one national banks in the United States with deposits of $25,000,000 or over. Sixteen of these are located in New York City, four are in Philadelphia, three in Chicago, three in St. Louis, two in Boston, and one in Pittsburg, Cleveland and Minneapolis.

VOL. LXIX NEW YORK, THURSDAY, SEPTEMBER 29, 1910 No. 3226

Survey of the World

The Storer Controversy Revived

In a long letter to the Springfield *Republican,* sent from France, Mrs. Bellamy Storer renews the controversy which grew out of the removal of Mr. Storer, as Ambassador to Austria, in March, 1906, because the Ambassador had urged the Vatican authorities at Rome to make Archbishop Ireland, of St. Paul, a cardinal. President Roosevelt said, in his letter of December 2, 1906, that it was not true that Mr. Storer had been authorized to recommend the promotion of the Archbishop:

"As for Mr. Storer's assertion that I authorized him to make such a statement as he says he was authorized to make to the Pope, it is untrue. I gave him no such authorization."

Mrs. Storer now publishes two letters, written in the latter part of 1903 by Archbishop Ireland, to confirm her assertion that authority was given to her husband by the President. At the beginning of her letter she says that ten years ago Mr. Roosevelt was apparently a devoted and grateful friend of her husband and herself. They had "helped him in many ways and were very fond of him." In 1896, Mr. Storer being a member of the House, Mr. Roosevelt (then Police Commissioner of New York) "begged" her husband, she says, to use his influence with President-elect McKinley to have him appointed Assistant Secretary of the Navy. She publishes a letter in which Mr. Roosevelt, on November 17, 1896, addressing Mr. Storer, argues that he himself ought not to accompany the latter in a visit to Mr. McKinley:

"If you care to say anything for me, old fellow, I think you could say it better a good deal if I were away. So, unless you think to the contrary, or unless there is some reason for a change, I believe it would be best for me to come and dine with you; and then you see McKinley by yourself, if you care to do so at all, which I earnestly hope you will. I should rather have you speak in my behalf than any one in the United States."

Mr. McKinley appointed Mr. Roosevelt, Mrs. Storer says, at her husband's request. On November 3, 1901, two months after Mr. Roosevelt became President, Archbishop Ireland wrote to Mr. Storer, saying:

"I have had two most pleasant meetings with the President at the White House. He is decidedly your friend, and resolved to give you the best there is. 'Even,' said he, 'if Berlin comes first and Bellamy wished it for a little while, pending Choate's retention of London, I would give it to him and change him shortly afterward to London. Let him trust me.'"

In September, 1903, she continues, her husband and herself spent a day with the President at Oyster Bay before sailing for Europe:

"Mr. Roosevelt on that day requested Mr. Storer to go to Rome on behalf of the President, and ask the new Pope, Pius IX, to elevate to the cardinalate Mr. Roosevelt's personal friend, Archbishop Ireland of St. Paul."

One month later, October 23, 1903, the Archbishop sent to her the following letter:

"St. Paul, October 23, 1903.

"My Dear Mrs. Storer: I was in Washington last week and, of course, saw the President. I spoke with him of Paris, and removed from his mind all suspicion that a Catholic would be there a 'persona non grata' as Ambassador. He promised me that the next Ambassador to Paris would be Mr. Storer, and furthermore expressed the belief that Gen. Porter would soon retire. The President also told me that he had commissioned Mr. Storer to speak for him viva voce at the Vatican. He seemed rather proud of having done so. Give my love to Bellamy, and believe me, very sincerely,

"John Ireland."

This was followed, a month later, she adds, by a letter in which the Archbishop "quoted the exact words of the President as to Mr. Storer's going to Rome." The Archbishop wrote:

"The President said to me: 'Mr. Storer has told you what I said to him about you, Archbishop?' 'Well,' I replied, 'I do not remember.' 'About his going to Rome?' the President asked. I said, 'No.' 'Well,' he said, 'I told him I would not write a letter to the Pope asking for honors for you, but I said that he could go to Rome and say—viva voce—to the Pope, how much I wish you to be Cardinal, and how grateful I personally would be to him for giving you that honor.' I am most clear in my memory as to every word. . . . I will write about American politics to Bellamy. With most affectionate regards to him and to yourself, I am sincerely, JOHN IRELAND."

The President's message, Mrs. Storer says, was delivered to the Pope on December 2, 1903. When the Scripps-McRae newspaper agency asserted that Mr. Storer had come to Rome on a "diplomatic" mission to the Vatican, "Mr. Roosevelt was alarmed, thinking the anti-Catholics would attack him, and he denied publicly that he had ever sent such a message to Rome." Mr. Storer, in two letters to the Archbishop, gave an account of the delivery of the message. A month later, after a visit to Washington, the Archbishop (February 2, 1904) wrote as follows in reply:

"MY DEAR FRIEND: Your two letters were read and burnt. . . . However, you need have no anxiety whatsoever about the whole affair which was the chief subject matter of those letters . . . The President had no occasion to feel ruffled in the least, but you know his impulsiveness. When I saw him, he of his own accord told me of his writing to you and asked me how publicity was given to the matter. . . . I said the Scripps-McRae agency had merely made a guess (as to Mr. Storer's coming to Rome), and that the few unfavorable comments that followed amounted really to nothing. He calmed down completely; remarked that he had every confidence in you, and hoped that the outcome of your mission would be what all desired. Kindest regards to Mrs. Storer. Yours most sincerely,

"JOHN IRELAND."

At the next consistory, in December, 1905, Archbishop Ireland was not promoted. Mrs. Storer says:

"Mr. Roosevelt was (characteristically!) furious that his wishes had not been considered, and on the very day that he got the news he wrote to me a letter so amazing that I thought he had taken leave of his senses. He accused me of having used his name in an unauthorized way at the Vatican to obtain the elevation of Archbishop Ireland to the Cardinalate and demanded that I write him a letter acknowledging my misdemeanors, or else he would recall my husband. Mr. Storer would not permit me to answer this insulting letter, and two months later the President recalled my husband from Vienna and dismissed him from the diplomatic service in the most brutal manner possible."

In conclusion, after speaking of her husband's letter in her defense, and of the President's answer, she says:

"I write this statement of facts, because it is time that people both in Europe and America should really know what manner of man is Theodore Roosevelt and how much his vociferations for honesty and a 'square deal' really mean. He is a dangerous influence, and the truth alone can overcome his power—as it can overcome all evil. I write this statement also in order to prove that Mr. Roosevelt's request to Pope Pius X was not made at the solicitation of Archbishop Ireland, and that the Archbishop heard of it, first of all, from the President himself, after the commission was given to Mr. Storer. The truth should be known in justice to Archbishop Ireland."

When Mr. Roosevelt's attention was directed to Mrs. Storer's letter, he gave the following statement to the public:

"Four years ago all the letters from me to the Storers and from them to me were published. These make a record against which no recollection of verbal conversations can stand. Therefore the question of veracity cannot be raised. The letters must speak for themselves. I have no desire to enter into further controversy with Mrs. Storer."

Pork Barrel Legislation Denounced

The President attended, on the 21st, the celebration of the completion, by the Government, of a dam on the Ohio River, a few miles below Cincinnati, and made a long address, severely criticising the "piecemeal" method of providing for river and harbor improvements. The cost of improving the Ohio, from Pittsburg to Cairo, according to the approved project, will be $63,000,000, and twelve years will be required. There are to be fifty-four locks and dams, designed to provide for slack-water navigation in the months when the water is low. Describing the method of legislation for improvements in two-thirds of the Congressional districts, with each one pressing for its share, he pointed out that the distribution of the sum available was made with very little regard for the comparative

merits of the several projects, and that the completion of every improvement was delayed for years. There should be a supervising board of engineers to recommend the improvements in the order of their importance. He intended to ask Congress for authority to organize a board empowered to determine whether certain projects should not be laid aside or abandoned:

"As a country, we are all in favor of the most effective and economical expenditure for the development of our waterways, but as members of a district and as representatives of districts we are selfishly insistent upon our share of public appropriations each year, however much that division of the spoil impedes the adoption of the effective and economical improvement of our water transportation."

Because there was no other project that offered so great a probability of success and of benefit to the entire country as the improvement of the Ohio River, the people living on the banks of that river could afford to favor ending the piecemeal system of dividing the spoils, and to call for a concentration of energy and capital in the completion first of one great plan and then of another:

"In signing the last River and Harbor bill, which had many of the characteristics of previous bills and was subject to the criticism that many items were contained therein that were merely piecemeal, I indicated to Congress that the passage of another bill of that character would merit a veto. I ventured to say this in order to bring to the attention of Congress the necessity for a change in the form of the bills, and I am hopeful that with the reason and argument all on the side of the change, the suggestion contained in my memorandum may be given weight. Certainly, until this fundamental reform is put into effect the improvement of our rivers and inland waterways will be chiefly important because of the local advantage of the money expended, and not because of the betterment of our transportation.

"The evil in the corrupt control of a Congress or a Legislature by private interest is manifest and always calls for condemnation. But there is another kind of legislative abuse as dangerous to public weal in certain of its aspects as corruption, and that is the selfish combination of the representatives of the majority of the constituencies to expend the money of the Government for the temporary benefit of a part or with little benefit to the whole. It is the duty of the majority and the minority to legislate always for the benefit of the whole people, and any enactments that look to the selfish exploitation of less than the whole at the expense of the whole, and without benefit to the whole, is a species of legislative abuse that comes very near corruption in its effect, and is perhaps more dangerous than corruption, because those who support such a combination are generally bold in its defense.

"The days of the pork barrel should be numbered. The country is roused against the corporate or corrupt control of legislative agencies, but it is doubtful whether the constituencies as yet are able to perceive the higher obligation on the part of themselves and their representatives, not to use their votes in combination to appropriate to a part that which belongs to the whole."

Trust Cases

Some time ago, the Standard Oil Company of Indiana was indicted on 1528 counts in Tennessee for accepting rebates. It is now announced that the case will come to trial in October, at Memphis. If the company should be found guilty on all the counts, the fine provided by law would range from $1,528,000 to $30,560,000.——The Government is about to begin to take testimony in the suit (under the Sherman Anti-Trust law) against the Southern Wholesale Grocers' Association. It is alleged that the unlawful acts of this association have been committed in fifteen States.—— Charles R. Heike, formerly secretary of the Sugar Trust, who was found guilty in June of conspiring to defraud the Government by false weighing, has been sentenced to be imprisoned for eight months and to pay a fine of $5,000. At the close, last week, of the trial of Charles D. Drew and Charles N. Wardell, assistant weighers in the New York Custom House, and of George E. Bedell, chief clerk of the Deputy Surveyor, who were accused of receiving bribes for the false weighing of imported goods, Bedell was acquitted. Wardell and Drew were found guilty of one unlawful act, the reception of money from an employee of Arbuckle Brothers, sugar refiners.

Countries South of Us

Venezuela has quarreled again with Colombia. On the 23d she recalled her diplomatic representatives from Bogota, directing them to go to Panama and await instructions. Following the overthrow of President Castro, diplomatic relations with Colombia were restored, a settlement of the old controversy concerning boundaries and navigation having been reached by

treaty. The cause of the recent rupture has not been made known, but it is supposed to have been a disagreement as to certain claims which the treaty of June last did not cover.——Several persons arrested in Buenos Ayres last week are accused of being implicated in a plot to assassinate President Alcorta.——Peru's Minister of Finance reported, last week, that the republic's debt had been multiplied by four since 1907. He proposed that a loan of $9,000,000 should be negotiated.——Several prominent men, among them Dr. Rudolfo Spinoza and Sebastian Salinas, have been expelled from Nicaragua by the new Government. There were supporters of Madriz, and it is alleged that they have been conspiring against Estrada.——It is reported that President Davila, of Honduras, has thanked President Cabrera, of Guatemala, for promoting the recent unsuccessful attempt to cause a revolution in Honduras, saying that the failure of the movement has increased his power. Cabrera denies that he assisted Bonilla, the leader of the movement, and says that Bonilla (arrested by his order) is still under restraint at the Guatemalan capital.——It is understood that in his message to Congress, in December, President Taft will recommend that $2,000,000 be appropriated at once for beginning the construction of fortifications at the terminals of the Panama Canal.——Cuba's President is assisting the engineers who were sent from Washington to devise a plan for raising the wreck of the "Maine." He has reserved a tract of land on the shore for the storage of material, has offered the free use of such floating apparatus as may be needed and has given the services of the Cuban engineer who has charge of the harbor.——The concession for the establishment of a bank for agriculturists in Cuba has been granted to the company whose bid was submitted by the Banca Español, and which represents the interests of the Speyers, in New York.

Soaring Over the Alps

The armies of soldiers and later of tourists who used to cross the mountains from Switzerland into Italy found the passage of the Simplon a difficult undertaking. Until recently it was at the best a long and hard day's ride in a diligence. The piercing of the mountain chain by the Simplon Tunnel removed at once the dangers and picturesqueness of the route, but the Simplon Tunnel is by no means a straight tube, but is as twisted as the boring of a bookworm. The shortest way across the range would naturally be "as the bird flies," but that has heretofore been impossible to human beings. Now, however, the airline route has been taken, altho not in such a way as to make it a popular method of travel. The flight of George Chavez on September 23 was a disaster as well as a triumph. He failed to fulfil the conditions of the prize of $15,000 offered by the Italian Aviation Society of Milan to any airman who should go from Brigue to Milan within one day before September 26. Yet he accomplished the most difficult part of his route and it was a mere accident that he was not able to complete it. He rose from Brigue in a series of spirals until he was out of sight of the crowds of spectators, then steered over the pass at an altitude of over 7,000 feet. The weather was good, but passing thru the gorges and around the peaks the gusts of wind and violent upward and downward currents theatened to dash him against the rocks. The aeroplane was violently shaken and tossed but Chavez kept his equilibrium and continued at a high speed. The Augustine friars and tourists at the Hospice on Simplon Kulm heard the whir of the motor before the monoplane came into sight. As the daring aviator neared the Italian frontier, he began to descend from his great elevation to Domo d'Ossola where a plain had been prepared for him. He shut off the motor and tried gliding to the ground without power, but at a hight of only about 25 feet a wire stay broke and he fell, breaking both legs and sustaining other serious injuries. It is believed, however, that he will recover. He had made the passage of the Alps in fifty minutes. George Chavez is a Peruvian altho born in Paris in 1887. He received his pilot's license from the Aero Club only last February and came

first into prominence thru a flight of over 5,000 feet at Blackpool, England, on August 3. At Issy, France, he broke the world's record for high flying by attaining an altitude of 8,792 feet. The total distance from Brigue to Milan is 75 miles, but the rest of the journey across Lake Maggiore and over the plains of Lombardy would not have offered any material difficulty. It is probable that the Aviation Society will award him the prize or a special purse for his daring attempt. Several other airmen came to Brigue for the purpose of contesting, but Henry Weymann, an American aviator, was the only one who actually made the attempt, and he returned after a short flight.

German Labor and Socialism

A general disruption of German industry is threatened by the increase of labor complications. The strike of the employees of the shipbuilding industry has continued without showing any signs of termination because of the support which the men have received from the funds of the Socialist Party and the labor unions, especially from the Metal Trade Workers. In order to enforce a conclusion of the strike the Association of Metal Employers announced that it would lock out 60 per cent. of its men unless the shipbuilders returned to work by October 8. The Metal Trade Workers thereupon voted to declare a strike of their entire membership in case the lockout of 60 per cent. was attempted. Similar efforts at coercion have been attempted in the textile industry. The Brandenburg Employers' Union have declared that unless the spinners, who are now on strike, return by September 27, their mills will be shut down and 25,000 workmen thrown out of employment. The striking shipbuilders now number about 40,000. If the metal workers carry out their threat of a strike there will be altogether some 700,000 men idle.——At the Congress of the Socialist party in Magdeburg, the long existing divergence of opinion between the radical and moderate Socialists came to a crisis. The North German wing of the party, holding to the orthodox Socialist belief that the only way to ultimate success was absolute detachment from connections with other parties, disapproved of the action of the Socialists of Southern Germany, who have been taking an active part in promoting legislation which seemed to them to represent a commendable progress. The representatives of the party in Baden, Bavaria and Würtemberg violated the resolution adopted by the Social Democratic Congress of 1909 by voting with the Government for budget appropriations. The Prussian Socialists demanded their expulsion from the party or at least a pledge of future obedience. Herr Bebel, while expressing his disapproval of their action, advised moderation in dealing with the insurgents, but during his absence at a later session a resolution was passed by a vote of 301 to 71 threatening them with expulsion in case of future disobedience. Dr. Frank, the leader of the South Germans, thereupon withdrew his followers from the hall in indignation. Efforts to heal the breach were made later in the session and it is possible that the party may show a united front in the coming elections, in which they have a chance to largely increase their representation in the Reichstag and possibly to obtain a majority there.——The embarrassments of Chancellor von Bethmann-Hollweg are increased by his fear of increasing the chances of a Socialist victory if he appeals to the country prior to the election for additional taxation. Yet some such action is necessary to relieve the treasury, for it appears likely that the revenue for the present fiscal year will fall some ten million dollars short of the budget estimates while the Government expenditures have largely increased.

The Turkish Loan

Ever since the revolution there has been considerable anxiety as to which of the Powers the constitutional government would choose as its allies. When the Sick Man of the East showed a disposition to recover instead of dying, those who had desired to be his heirs became rivals for his friendship. At first the Young Turks, in their natural desire to repudiate all of the affiliations of their

dethroned tyrant, manifested a dislike for the Germans on whose friendship Abdul Hamid had relied in many internal and external difficulties. This anti-Teutonic feeling was intensified by the open support that Germany gave to Austria in the annexation of Bosnia-Herzegovina. But lately a change has taken place in Turkish policy and the Ottoman Government has shown a tendency to associate itself with the Triple Alliance. Forty Turkish officers have been sent to the Austrian Artillery School at Bruck and two German battleships of the "Brandenburg" type, constructed since 1890, have been purchased. To get the money necessary to pay for these and similar expenditures for armament "made in Germany" it became necessary to raise a special loan of $30,000,000 and Hakki Pasha, the Grand Vizier, has been engaged in this task for many weeks without success. If it had been purely a monetary matter it would have been speedily settled, for Paris, to which he first came, has now more money to loan than the other financial centers, but the French Government insisted upon knowing where the money was going to and when it was coming back. It refused to allow the proposed bonds to be listed on the Bourse unless the Turkish Government should engage to expend a proper proportion of it among French manufacturers and to make it a part of the regular national debt, as well as to give certain guarantees in regard to Tunis and Algeria. This the Grand Vizier would not consent to do, so his emissary crossed the channel. Here he found London capitalists ready to accommodate him and a syndicate was ready to be formed by Sir Ernest Cassel for the purpose. But this roused the indignation of the French, who had not only lost the opportunity of making the loan but saw England playing into the hands of their mutual enemy, Germany. The *entente cordiale* was threatened. The consequences of such an action were incalculable. It could not be permitted. What sort of influence the British Government used to induce the Cassel group of financiers to withdraw their agreement is not known to the public. But at any rate Hakki Pasha had to leave England without the money and presumably will have recourse to Berlin where indeed it was supposed that Sir Ernest Cassel expected to get his funds.

Turkish Entanglements

The failure of Turkey to negotiate the loan in Paris or London gives occasion to the German papers to talk about the advantages that Turkey would derive from joining the Triple Alliance at this time when Russia is *hors de combat* and unable to interfere in Balkan affairs, and when trouble is impending with both Bulgaria and Greece. The announcement is made this week that an agreement has been made between Turkey and Rumania, according to which the whole Rumanian army will be mobilized on the Bulgarian frontier in case war should break out between Bulgaria and Turkey. The Macedonian question has again become acute. According to the official statement of the Bulgarian Government, affairs in that long-suffering section are about as bad under the reform administration as they were during the old régime. The people are being tortured to give up their concealed weapons, and Christians are being banished and their lands given to the Mohammedans. The Bulgarian Cabinet has resigned, partly on account of the impossibility of carrying out its Macedonian policy, partly because of charges of bribery and corruption brought against the Ministry of the Interior. The resentment of the Albanians against the Turkish Government for its establishment of schools which they regard as injurious to their language and religion, has taken so violent a form that the American missionaries in Elbassan have been ordered to retire to Monastir. The danger of a conflict between Greece and Turkey is not yet averted. The Turkish Government has announced that it will be considered a *casus belli* if the three Cretan delegates are admitted to the National Assembly. The Greek Government has promised the representatives of the Powers at Athens to do its utmost to prevent this action, but admitted that it could not control the action of the Assembly. This was apparent on the opening of the Assembly on September 14, when the delegates could not agree upon the form of their oath of office. The Bible was

snatched out of the hands of former Premier Rallis and a free fight ensued in which the spectators took part. The Government holds that the Assembly is only authorized to revise with the non-fundamental provisions of the constitution, while the Independents claim unlimited powers thru the mandate of the sovereign people. Montenegro has been brought into more close relations with the third member of the Triple Alliance, Italy, thru the assumption by Prince Nicholas of the title of King, thus following the example of the Bulgarian ruler. The Italian people took more interest in this than in any other event of the past few months, as is shown by the fact that the ceremonies in the village capital of Cettigue were the most prominent feature in all the Italian moving picture shows. King Umberto and Queen Elena, who was a Montenegrin princess, were the only European sovereigns to take part in the jubilee.

Cholera in Italy

This week is the first time that the Government has admitted the existence of cholera in Naples and even yet only one death is officially announced. This official reticence naturally gives occasion for rumors which range in their estimates of ten to one hundred deaths a day in Naples, the estimates showing a suspicious predilection for round numbers. At any rate it has been generally known for the last three weeks that the disease was not confined to the southeastern provinces but had invaded Naples altho the deaths had been reported as gastroenteritis, a verbal evasion. On this account vessels on the Mediterranean lines have been rigidly scrutinized by the quarantine officers in New York and the discovery of any cases of even the lightest form of intestinal disease caused the vessels to be held at the entrance of the harbor for many hours, much to the exasperation of returning tourists who could see their homes but could not reach them. The tourists have been shy of Italy during the latter part of the summer because of a distrust, which appears to have been well founded, of the official reports of the health department. Many Italian hotels and pensions, even as far north as Milan, were practically deserted, for thousands of tourists cancelled their orders for rooms within a few days after the first reports of the cholera, causing a very serious financial loss to the country. Their alarm was largely due to the impossibility of obtaining reliable information about the extent and progress of the disease. The newspapers published in English and French professedly in the interests of the tourists suppress the news. The German papers were indeed full enough of scare stories but these were taken at a discount, because it was suspected that they might be inspired by a desire to divert the stream of tourists to the northward. Many of the Italian newspapers also pursued the policy of ignoring or minimizing the reports. The Socialist papers, however, played up the news with scareheads and laid the blame for the conditions on the Government, the priests and the capitalists. The authorities seem, however, to have done their best to enforce sanitary measures upon the reluctant populace even tho the opposition rose to riot. The streets of Florence, Rome and Naples have not been so clean within the memory of man and the reassuring odor of chloride of lime overpowered the ordinary smells, which is saying a good deal. In Naples the most popular festival of the year, that of Piedagrotta, was suspended by order of the municipal Government for fear of contagion. The fact that the disease was for a considerable time kept within a narrow area and not allowed to increase even there speaks well for Italian sanitation and gives ground for hoping that the country may be spared a serious epidemic such as it has previously suffered from. The worst of it is that the cholera is of a particularly malignant form, the fatalities ranging from 60 to 80 per cent. from day to day, assuming that all cases of seizure are reported. On account of the number of American tourists who cancelled their return passage from Italy for fear of quarantine, the north Atlantic liners have been overcrowded and berths sold at a high premium. The American consuls in Kobe, Japan, and Trebizond, Turkey, report that cholera has invaded these ports.

WATCHING FLIGHTS FROM THE AUTOMOBILE PARK.

The Harvard-Boston Aviation Meet

BY HENRY WOODHOUSE

[This article, by a most competent authority, gives the most complete and accurate account of an aviation meet yet published in this country.—EDITOR.]

THE big aviation meet held at Atlantic, Mass., September 3-13, under the auspices of the Harvard Aeronautical Society, started as a joke. On November 11, 1909, the Harvard Aeronautical Society was organized for the purpose of advancing the science of aeronautics in general; in the words of the constitution: "to promote the advance of aerial navigation; to contribute both in theory and practice to the conquest of the air; to render easily accessible to Harvard students such information regarding aeronautics as it behooves an educated man to know; and to provide an opportunity to those who desire to experiment in this rapidly developing branch of science." Prof. Abbott Lawrence Rotch of Harvard was elected president, and the officers, directors, members of the advisory board, and lecture staff included some of the most eminent members of the Harvard University faculty. This society was incorporated early this year and soon became active in the aviation division of aeronautics. The result of the activities was the building of an aeroplane which was named "Harvard I." This machine was constructed entirely by the members of the Harvard Society, with the money paid in as membership fees, is operated by a member of the society and has already made a number of flights. About three months ago, Professor Rotch was talking with Mr. James V. Martin, the manager of the Harvard Society and pilot of the "Harvard I." about aviation matters. The Montreal aviation meet was on and these gentlemen talked in a joking manner of the possibilities of holding an aviation meet on the society's aviation field, gathering the brood of international champion aviators under

the society's auspices. In its conception the thing looked big; but they soon thought that it was not too big to be realized and waving all doubts aside they set to work to make the meet a reality. In less than two months the meet was an assured thing, an enterprise requiring the outlay of nearly $200,000 and of such a consequence as to enlist the services of the most prominent aviators of the world.

As soon as the idea had taken definition other people were interested in the matter; permission to hold the meet was secured from the National Council of the Aero Club of America, and a committee was appointed, authorized to make contracts with the aviators, arrange contests and attend to the thousand and one things that go to make a successful meet. Special contracts were made with the very best American and some of the best European aviators, and every possible inducement was given to amateurs to secure large attendance, and twenty-two aviators and seventeen aeroplanes were entered, besides a dirigible and two-man kites.

The course of events and the rules governing same were arranged by the committee as follows, divided between professional and amateur events:

The total prizes under Professional Events were $40,650, including first, second and third prizes for speed, $6,000; three prizes for altitude, $6,000; three for duration of flight, $4,000; three for distance, $4,000; two for the slowest laps, $1,500; two for the shortest getaway, $150; and two for landing nearest a given point. There were two specials, one of $10,000 from the Boston *Globe,* for the best time from the field to Boston Light and back, then circling the field once, and repeating the flight to Boston Light and back; the other for accuracy in dropping dummy bombs at the funnels of a dummy battleship, $5,000. For amateurs there were four events, one for dropping bombs; two for speed, $1,250; two for duration, $1,250; and two for slow lap, $750.

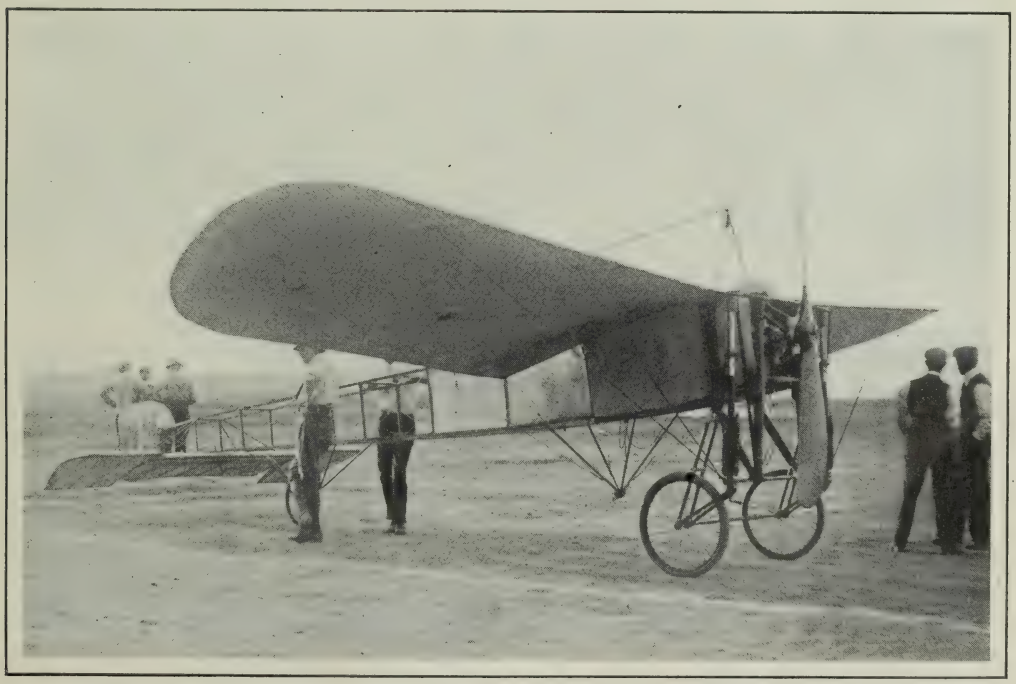
The principal object of the committee was to encourage amateurs. It was rightly reasoned that an early and full development of the science of aviation depends in large part on the degree of interest the amateur and the public in general take in it, so it was proposed to let them witness exhibitions of flights by professionals in the best aerial craft built and give amateurs an opportunity to try their own craft in contrast with the professional craft, to learn the good and bad points of both their own and the professional craft by close contact and contrast. As the meet proceeded the results of flights, what made them possible; accidents and what caused them, and the most minute observations were recorded, so that the amateur aviators, especially the members of the Harvard Aeronautical Society, may in the near future gain by studying them and advance the science of aviation accordingly. There are four hundred members of the Harvard Aeronautical Society. If they continue at the pace they have been going they will bring aviation to a practical stage in a very short time.

The meet opened officially at 2 p. m. September 3. A crowd of 20,000 people had gathered half inside the inclosure and half on the outlying headlands before that hour. The sky was overcast, but the weather man's forecast promised fair weather; and the crowd accepting his prophecy, came dressed in their very best clothes and offered a pretty sight.

At 2.30 one of the Wright machines was run out of the hangar, in the passageway between the hangars opposite to the grand stand. It was the first sight of an aeroplane most of the people had had, so the interest was keen instantly. The aeroplane remained there for half an hour, the mechanicians working on it, the crowd watching. It was evident from the questions they asked of one another and their puzzled, eager looks that very few of them had any definite idea of what was going to take place, and fewer still had any knowledge of aeroplanes. When told that it was a Wright machine the information was passed from mouth to mouth, but it did not bring any enlightenment to their faces.

At 2.57 it was announced that Johnstone would start at 3.10 for distance and duration. At 3.13 there was a chorus of "Ohs!" Johnstone had climbed on the seat and after a start of 40 feet

CLAUDE GRAHAME-WHITE,
English champion aviator, winner of speed, getaway and $10,000 prizes.



the biplane had soared away, headed southeast, beginning its first lap around the course. Coming up toward the grand stand at a hight of about 40 feet the aeroplane rose gradually as it turned east, then northeast, then around, following the marked course, passing one pylon after the other until as it passed over the stand on the completion of the first lap of the course it stood at a hight of 300 feet and had made the round of the 1¾ miles course in three minutes 37 3-5 seconds. From the time of the start until the completion of the first lap the crowd stood as if in a trance, all eyes following the flyer around the course, but when the aeroplane passed before the grand stand on the completion of the lap there was a burst of cheers and honkings of automobile horns which was echoed by the crowds on the outside headlands and intensified by the tootings of the yachts from Dorchester Bay. But the plaudits of the crowd did not reach the aviator. The noise of the aeroplane's machinery prevented his hearing the earthly sounds. One of the head officers realizing that, advised the crowd to wave their hats instead of shouting, which they did and the aviator made his machine nod in appreciation. At Johnstone's ninth lap Brookins, the other Wright pilot, started out on another Wright machine, joining his mate in a contest of distance and duration. The two had made several laps together, the two machines circling around the course in steady flight, when two other machines were wheeled toward the grand stand. These proved to be Harmon's Farman and Willard's Curtiss, both biplanes. Harmon being an amateur could not contest with professionals, but he had been granted a special permission to have a trial at dropping bombs on the battleship outline on the field, in front of the grand stand.

A drizzling rain had been falling; now it fell heavier; but nobody thought of leaving. In the crowd there were hundreds of fine hats and dresses, few umbrellas and fewer raincoats, but nobody seemed to care or even think of what the results would be. They were all keyed up with excitement and stood up on their seats to see what the last two machines would do. At 4.20 Willard started out in the Curtiss machine. With a skip and a jump he shot in the air and soon his fast machine was overtaking the Wright machines. Then the real excitement began. Regardless of the rain people uncovered their heads to wave their hats, and shouted and cheered and pulled their neighbors' coatsleeves in their endeavor to impress them with the importance of the seeming phenomenal feat they were witnessing. The excitement had barely subsided when a noise of tearing canvas was heard from the direction of the hangars and Grahame-White made a sudden appearance in his Farman biplane, made a turn in front of the grand stand and was off for a turn around the course. That made four aeroplanes flying at once in the same course, and one on the ground getting ready to start. At 4.32 Willard alighted in front of the grand stand; Brookins was flying low, Johnstone was 900 feet up in the air and Grahame-White was making his first lap. Two minutes later everybody held their breath as they saw Johnstone's machine descend rapidly and land on the marsh at the north

end of the course. His descent was occasioned by rain having gotten in the magnets and caused the engine to skip. A minute after, Brookins also found it necessary to alight on account of the rain. The crowd had hardly caught their breath when there was a crash, a noise of splintering wood and tearing canvas on the north end of the course. A number of people rushed toward the spot, and found Harmon's Farman ditched, completely wrecked. There was a general expression of relief when Mr. Harmon emerged from the wreck unhurt. The aeroplane had been running heavily, and to avoid a collision with some automobiles on landing from a short flight, Harmon found it necessary to steer it toward the north end of the course, over the marsh. Unfortunately a 14 feet wide creek crossed the marsh on that spot and the machine crashed right into it. Meantime Grahame-White was still in the air, circling the course dropping plaster-of-paris bombs over the outlined battleship. This bit of mimic war was appreciated by the crowd, who followed his every throw with interest and cheered when he hit right inside of one of the circles, representing the funnel of the battleship. As he was about to throw the remaining few balls Glenn H. Curtiss soared out in Willard's machine and just as Willard had overhauled Brookins and Johnstone, Curtiss now overhauled and flew under Grahame-White's biplane. After making two rounds of the course Curtiss landed, and three minutes after, at 5.05, Grahame-White threw his last bomb and landed.

The rain was now pouring down. The crowd released from the spell of the flying machines realized that there was a two miles muddy road between them and the station and hurried away. The means of transportation available on such short notice were very scant and a large majority had to walk. It was a muddy, soaked, dripping crowd which waited for trains at the Atlantic Depot; yet no one decried the loss of outward luster. They had witnessed a wonderful sight; had felt some undefinable thrills and were filled with an inward satisfaction which could not be washed away by mere rain.

Now let the reader take a trip to the hangars. The sky is clear, the winds are low; the day promises to be an ac-

WHITE'S BLERIOT MONOPLANE WITH WHICH HE WON THE $10,000 AND SPEED PRIZES.

tive one on the aviation field. The aeroplanes are being taken out of the hangars and put in readiness for flight. Well trained attendants move the machines about with dexterity and follow the directions of the aviators and the mechanicians. Nearly all the aviators are on the ground; the absent ones are represented by their mechanicians. They make a close inspection of the machines, testing every wire, joint, connection; and according to their finds they either set to work to "fix" or proceed on to test the motors. A faulty connection, a weak wire (a seeming nonentity), and failure, even death may follow. So the inspection is made close, by keen, expert eyes, and extra precautions are taken that no accident happens before the start.

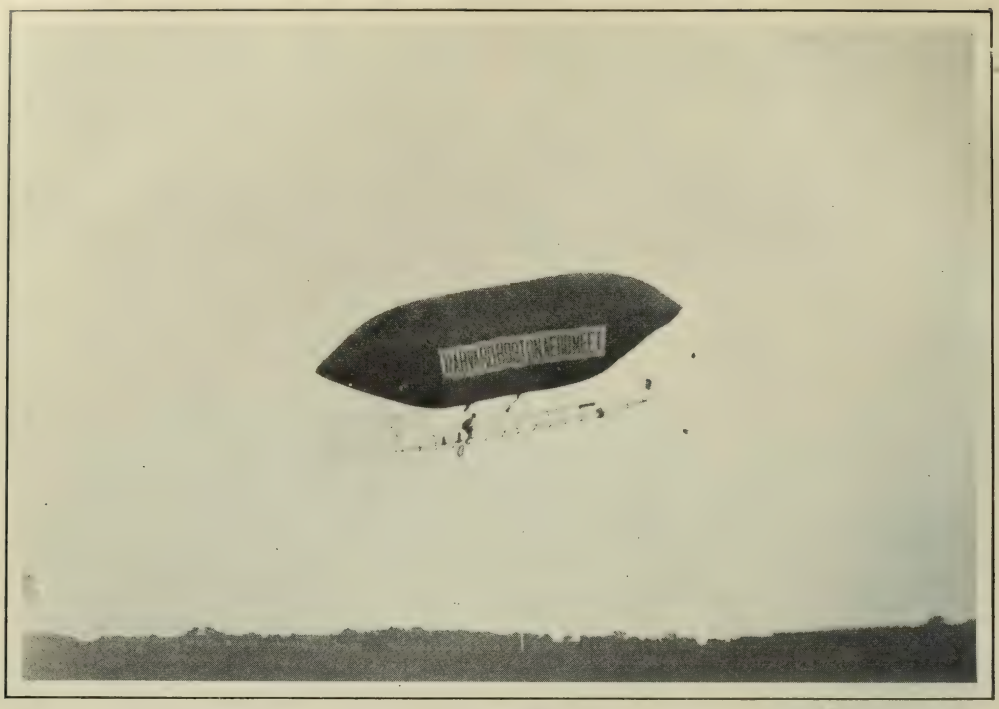
The aviators on the field form a veritable galaxy of human stars. Some of them, like Wilbur Wright and his two famous pilots, Walter Brookins and Ralph Johnstone, Glenn H. Curtiss, Charles Foster Willard, Clifford B. Harmon, Augustus Post, William M. Hilliard, Gardiner J. Hubbard and others, are familiar figures; they are home products and include America's representative air kings. Others, like Claude Grahame-White and A. V. Roe, are not familiar to us. We have heard of their exploits in Europe. A few of the new aeronauts, natives and foreigners, are no longer strangers to us; their efforts in the field have served as an introduction and have convinced us that we will hear of greater exploits from them soon, especially in the case of Cromwell Dixon, the young inventor and operator of the dirigible balloon, and Samuel F. Perkins, the expert kite flyer.

The machines on the ground form an attractive, almost exciting sight. Somehow we cannot look at those winged things and consider them purely mechanical. As we look at those lithe frames, responding to every puff of wind and touch, our imagination gives them life, and we almost feel the sensation of flight. Seven machines are here in front of the hangars, right and left, four biplanes, two monoplanes, one triplane. The biplanes are the Wright, Curtiss, Farman, and Burgess, operated by Messrs. Brookins, Curtiss, Grahame-White and Hilliard, respectively. The two monoplanes are Grahame-White's Bleriot and Kearney's Pfitzner; the triplane is Roe's.

Walter Brookins is one of the two operators of the Wright machines at this meet; the other is Ralph Johnstone. They are here under the special supervision of Wilbur Wright, representing the Wright Company of Dayton, Ohio, with whom a special contract has been made by the committee to insure their attendance. Did they not win any prizes, the remuneration insured by the contract would still make a fair reward for their flying. Brookins held until recently the world's record for altitude, which he made at Atlantic City last July, soaring 6,175 feet. Leon Morane shattered this, a few days ago reaching an altitude first of 7,054 feet, then of 8,471 feet. Brookins may go higher still; who knows? Johnstone became known only recently through his many daring ascents at Asbury Park. He is considered to be one of the best operators. These two pilots—for Wilbur Wright will not fly—expect to prove the superiority of the Wright machines. They will compete in all the contests except the $10,000 speed trip to the Boston Light. The Wright machine is not as fast as the Curtiss or White machines, so they do not propose to try this contest. Mr. Wright, who is on the ground, says: "We have been devoting our attention entirely to the development of the elements of safety, reliability and endurance. It isn't necessary to have all-speed craft for aerial navigation. If a man is thinking of safety he will not want an airship which will only carry a guarantee of speed."

Glenn H. Curtiss's racer is a beautiful bright looking machine. This machine differs considerably from his earlier machines with which Curtiss won the Gordon Bennett trophy at Rheims and later made the Albany-New York flight. The wing tips have been replaced by *ailerons;* the lower plane has been trimmed of thirty feet of its surface; the double planes elevating rudder has been replaced by a single plane rudder; the motor is an eight cylinder and the propeller is new and more powerful than any used heretofore. Everything possi-

ble has been done to make for speed. He is working for the $10,000 *Globe* prize. Grahame-White's Bleriot monoplane is a fast bird, so the champion American speeder is not going to take any chances. Willard also flies a Curtiss machine. He is one of the very best aviators and shares with Curtiss the hopes of proving the superiority of the Curtiss machine.



Grahame-White's Farman is the largest machine on the field. It is also the most steady and reliable. Other machines may need constant fixing and their motors throbbing unevenly may keep them to earth, but not the Farman. It has already made more flights than all the others together and is ever ready to take to the air. The spectators and the officers of the meet idolize its operator. Even when the sky is a mass of gray mist and the fog is thick, and no aviator dares to make a flight, even then the clean-cut, pleasant Englishman with his Farman can be relied on to make flights to entertain the crowd and break the monotony. Then the machine fleets through the fog, appearing and disappearing in the gray with a weird effect; but starting, circling and alighting with the ease of a big bird. Clifford B. Harmon, the American champion amateur, also has a Farman machine with which he has won considerable success in the last six months. He had planned to do many things at this meet; unfortunately it was completely wrecked in an accident on the very first day of the meet.

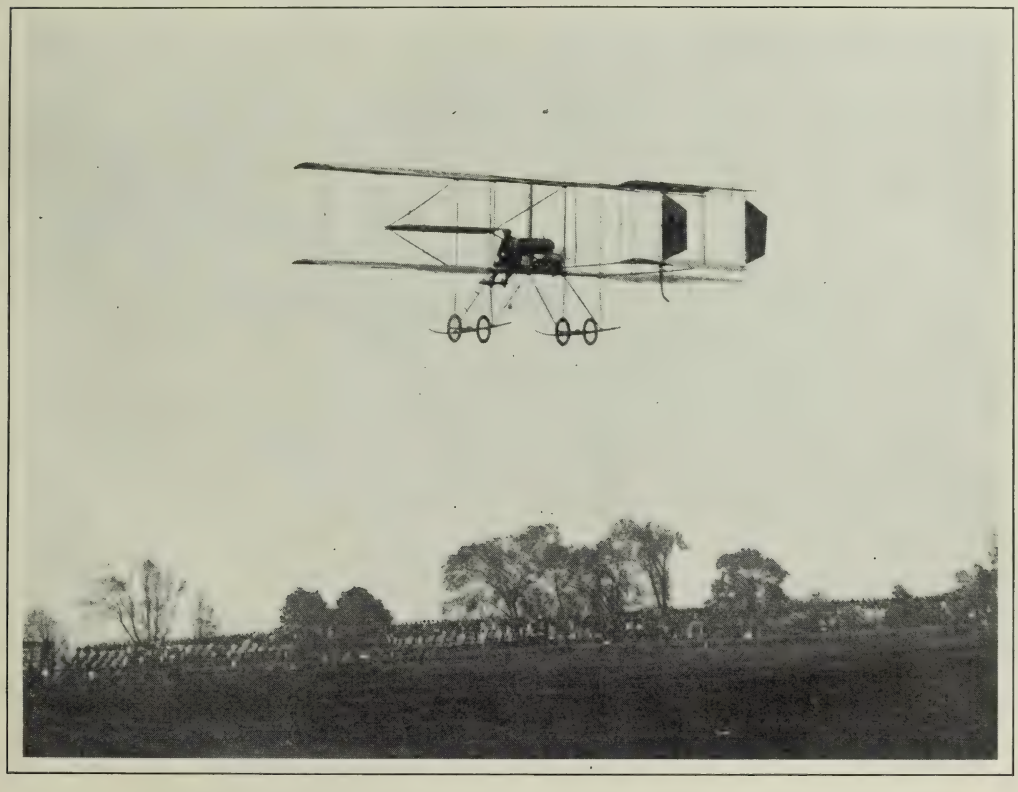
The Burgess biplane was the first aeroplane built and flown in New England, and its pilot, William M. Hilliard, was the first man to fly in New England. This special one, which is to contest the amateur prizes, is a model B, the very latest and is considered a good one by the professionals.

CHARLES F. WILLARD'S CURTISS BIPLANE.

Grahame-White's Bleriot monoplane is the one machine all contestants fear. Its symmetrical bird-like body tells of speed capacity, and there is no telling what it may do when piloted by such an experienced operator as Claude Grahame-White. With such a machine

CROMWELL DIXON ON HIS WAY TO BOSTON.

Louis Bleriot crossed the English Channel; Leon Moraine made the standing record for speed, 66.2 miles per hour, and for altitude 8,471 feet; Olieslagers made the duration and distance world records of five hours and 244 miles, respectively. This machine caused Glenn H. Curtiss to develop the racing biplane he is going to use to compete for the big prize. If he beats the Bleriot he will have achieved the impossible, as the general opinion among professionals is that biplanes will never equal a monoplane in speed.



The Pfitzner monoplane, which was built and is owned by Burgess & Curtiss Co., is the only monoplane ever built with elevators and vertical rudder in front. It is called the "ill-fated" by the aviators and officials because it met with three accidents since the opening of the meet and is supposed to have caused the death of its builder, Lieutenant Pfitzner, who committed suicide last July. But its plucky operator, Horace F. Kearney, believes in it and with wonderful patience has repaired it after each wreck and is going to try it once more today. All hopes to him, especially as the amateur prizes are still uncontested.

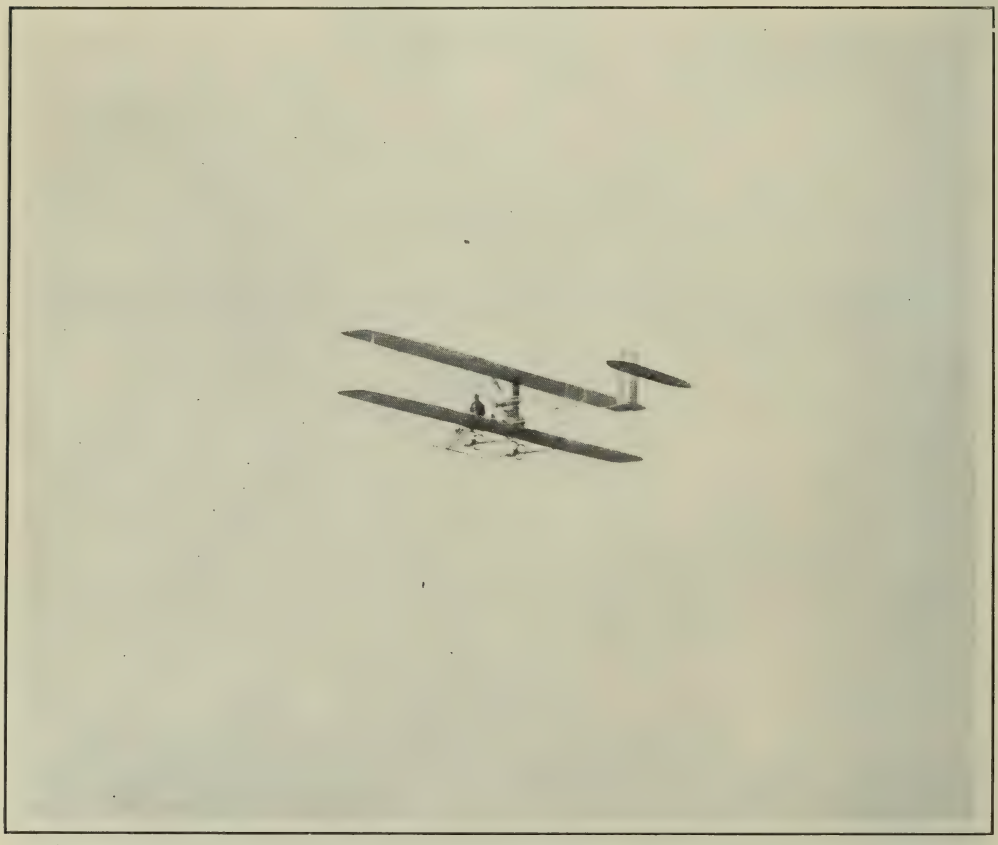
A. V. Roe's triplane is another unlucky machine. It has already figured in three mishaps, the last of which cost its owner nearly $2,000. A strange thing, this machine was one of the first aeroplanes to fly in England, the only one of its kind that ever flew, and was always fairly successful, even carrying a passenger beside the operator. Here at Atlantic it seems to be unable to break the shackles of gravity and is continually coming to grief. But Roe is hopeful and the triplane is ready for another trial.

Samuel Perkins is trying some kite flying. These kites have a great lifting power and he expects to go up 500 feet in the air and communicate by wireless with the transatlantic liners which are speeding to and from Boston Harbor. It is doubtful if he will be able to do that, especially as the aviators object that the strings of the kites make aeroplaning dangerous. But we all admire this young specialist and look forward to great things from him. Cromwell

Dixon, the seventeen-year-old inventor and operator of the dirigible balloon, is passing by on his way to the hangar with his mother and sister. His youth and wonderful capacity command more than a passing notice. As one of the air kings says: "He'll do things worth mentioning before long."

All eyes are now turned toward Grahame-White's hangar. The young Englishman has climbed to the seat in his biplane and is going to start. Other aviators have their machines carried to the field for their starts, but White starts right out from the passageway between the hangars, with as much assurance and

CLIFFORD B. HARMON, THE CHAMPION AMATEUR AVIATOR, IN FLIGHT.



dexterity as an experienced chauffeur drives an automobile out of a yard. The head mechanician gives a last pull to the cables which control the ailerons, then the propeller is set in motion and the assistants hold the machine. The aviator feels the different controlling devices to make sure that all is right, then lifts his hand. When the hand drops the assistants let go their hold and hastily move out of the tail rudder's way. After a short glide of from 40 to 50 feet the aeroplane leaves the ground and soars up in the air, with a noise not unsimilar to the tearing of a hundred thicknesses of strong canvas. Most people hurry to see the machine alight in the field near the official starting point. The aviator alights, goes to the official stand to declare his intentions, then climbs again to his seat and is ready to start. The spectators look hastily at the announcer's board and comparing the letters and numbers in evidence there with the letters and numbers marked in the program find out the aviator's intentions. The aviators and their machines are lettered, the events to be contested are numbered. When the announcer's board reads:

Aviator.	Aeroplane.	Event.	Time.
H	C	1	2 p. m.

the spectators see by a glance at their programs that Grahame-White, flying a

Farman biplane, is starting for the speed event at 2 p. m.

The progress of the meet affords many points of interest to both professional and lay people. There were entered originally twenty-two aviators and seventeen types of machine. The results of the nine days of the meeting—no flying having been allowed on Sunday—show that only six aviators, using four different types of machines, actually made flights. two days of the meet. Hilliard with his "Model B" Burgess biplane, and Kearney with his Pfitzer monoplane, tried hard; but the first, mistrusting the balancing capacities of his machine, never dared to make flights of more than a few feet length. The second was so unfortunate as to wreck his monoplane at each trial. Mr. Starling W. Burgess, the inventor and builder of the Burgess aeroplanes, also tried the "Model B" Burgess

RALPH JOHNSTONE, WINNER OF THE FIRST PRIZES FOR DURATION, DISTANCE, ACCURACY, FLYING THE LATEST MODEL OF WRIGHT BIPLANES.

The weather was largely to blame for preventing a number of less experienced aviators from trying to fly; a number of others could not get their aeroplanes ready in time for the contest. According to the rules, amateur contests were to take place mornings, before 2 p. m. Following Harmon's accident, which wrecked his machine, thus forcing him out of the contest, the amateurs' prizes remained uncontested until the very last biplane, but never succeeded in making a flight around the course.

Clifford B. Harmon was the holder of the American record for duration, having flown for two hours and three minutes at one time at Mineola, L. I., also the author of many other aerial feats, which classed him, in experience, with the best professionals. Great things were expected of him; the accident deprived him of his machine and put him *hors de*

concours. To get his machine rebuilt in time for the meet he kept a dozen men at constant work, and a factory worked nights to build new wings; but it was not possible to get it ready in time for the contest. Luckily he was able to borrow White's Farman on the 12th, and by making a single flight on that date he won all the amateur prizes. The second place duration cup was awarded to Burgess for a short flight.

Five aviators took part in the professoinal contests: Grahame-White, English; Brookins, Johnstone, Curtiss and Willard, American. The Englishman operated a Farman biplane and a Bleriot monoplane; the Americans operated Wright and Curtiss biplanes. White led from the very beginning. His two machines were in perfect condition and that with his personal ability made it possible for him to fly in any kind of weather even when the fog was thickest and other aviators did not deem it safe to try. On the seventh day, after making his first flight to the Boston Light, he led with best records in six of the nine contests. The best records of the meet on that date were as follows:

Speed—(3 laps of the course) Grahame-White, 6m. 1s.
Distance—Grahame-White, 45 ml. 617 ft.
Getaway—Grahame-White, 66 ft. 10 in.
Bomb dropping—Grahame-White, 20 trials, score 58.
Globe Prize Course—Grahame-White, 40m. 13⅘s.
Duration—Johnstone, 107m. 24 2-5s.
Accuracy—Glenn Curtiss, 63 ft. 10 in.
Three Slow Laps Continuous—Brookins, 13m. 48s.
Altitude—Grahame-White, 3,440 ft.

Soon after that, however, the able Wright operators became active and gave a hot contest for altitude, duration and distance, succeeding finally in securing first place in all of these and in accuracy. This was the first time in which the Wright machines flew at a meet in competition with the Curtiss, Farman and Bleriot machines, so the comparison of the feats of different machines is of special interest.

Curtiss and White were considered the speed kings. Curtiss was the world champion speeder for a time and was regarded as the only aviator who could compete with White in the speed and Boston Light contests. In the first days, when White kept making points and Curtiss was not flying, it was thought that Curtiss was waiting for his opportunity, feeling his rival's capacity before starting. That was true in part. The fact was that Curtiss's expert judgment told him that his machines, as they were, could not compete with the Bleriot in speed, the monoplane being somewhat faster than the biplanes; so he set working to devise means to add speed to his best machine. His efforts did not bring the success he hoped to attain. His own motors, which he had used in all of his record-making flights, were not quite powerful enough to afford the desired speed. As a last resort he even sacrificed his pride to the extent of putting a motor of a different make in his "Boston Racer," but it was in vain. The borrowed motor did not work. On the very day of Curtiss's last effort, September 12, White made another flight to the Boston Light beating the time made in the first trip. That left Curtiss with nothing more than a second place speed prize. Likewise, Willard, an early favorite Curtiss flyer, won only a second place prize for getaway. He did some fair flying and once held the second place in speed, but while he could beat the Farman biplane, his machine was not equal to the Bleriot monoplane.

A. V. Roe did not fly. He worked hard, but every trial at flight ended in a wreck. This was especially unfortunate as it was the first appearance of that type of machine in this country.

The summary of points made by the different aviators in the nine days of the meet is as follows:

	Speed.	Altitude.	Duration.	Distance	Bomb throwing.	Total.
Grahame-White	15	12	11	8.5	180	226.5
Brookins	..	15	..	..	93	111
Johnstone	..	2	13	13	24	52
Curtiss	11	..	..	.5	27	38.5
Willard	8	..	..	..	13	21

The amounts won by the contestants run as follows:

CLAUDE GRAHAME-WHITE.

Globe prize, first	$10,000
Bomb dropping, first	5,000
Speed, first	3,000
Altitude, second	2,000
Duration, second	1,000
Distance, second	1,000
Getaway, first	100
Total	$22,100

RALPH JOHNSTONE.

Duration, first	$2,000
Distance, first	2,000
Accuracy, first	500
Slow lap, second	500
Total	$5,000

WALTER BROOKINS.

Altitude, first	$3,000
Slow lap, first	1,000
Accuracy, second	250
Total	$4,250

GLENN H. CURTISS.

Speed, second	$2,000

CHARLES F. WLLARD.

Getaway, second	$50

AMATEUR PRIZES.

CLIFFORD B. HARMON.

Bomb dropping, first, Harvard cup, valued at	$5,000
Speed, first, cup valued at	1,000
Duration, first, cup valued at	1,000
Slow lap, first, cup valued at	500
Total value	$7,500

W. STARLING BURGESS.

Duration, second, cup valued at	$250

The guarantee paid to the aviators by the Harvard Society to insure their attendance was: Brookins and Johnstone, two, $30,000; Curtiss, $10,000; Grahame-White, $7,500; Roe, $7,500; Willard, $4,000.

The best records made in the meet were:

Speed—3 laps in 6 min. 1 sec. over 1¾ mile course by Grahame-White.

Altitude—4,732 ft. in one flight by Brookins.

Duration—3 hrs. 5 min. 40 sec. in air during one flight by Johnstone (American record).

Distance—101 miles 389 ft. in one flight by Johnstone (American record).

Getaway—26 ft. 11 in. from start by Grahame-White.

Accuracy—Stopped 5 ft. 4 in. from center after landing within 100 ft. circle by Johnstone (world's record).

Slow Lap—3 laps in 13 min. 48 sec. over 1¾ mile course by Brookins.

Bomb Dropping—180 points on 81 hits by Grahame-White.

Boston Light Course—34 min. 1⅕ sec. over 33 and a fraction miles over water by Grahame-White.

The absence of half of the entrants did not mar the success of the meet. Every day, even when the fog was thick, flights took place and large crowds attended, and as many as 75,000 people attended in one day.

While the services of the ambulance for aeroplanes were required on many occasions, the services of the ambulance for human beings were not required, not a single accident being reported during the meet.

And so, when the meet closed officially at 6.30 p. m. September 13, a million people were much wiser and happier because of the Harvard-Boston Aviation Meet.

BOSTON, MASS.

Timely Doing

BY MRS. FRANK A. BRECK

HAST thou some heaven-sent task? with promptness choose it:
Some little talent given? fail not to use it.
Hast found some stream of truth? be quick to span it;
Or spark of latent good? be swift to fan it.
If Wisdom's pearl is yet unfound, then seek it;
Is there some comfort-word unsaid? oh, speak it.
Is there a cry of woe uneased? then heed it;
Some worthy cause unhelped by thee? go speed it!
Behold life's rushing tide of ill, and stem it;
Where wrong is blatant—undisturbed—condemn it.
Tho crime be skulking—well-concealed—yet find it;
Go chase it from its secret lair and bind it.
Are life-lines short? then thou the cords must lengthen;
Where faith, hope, love, are weak—haste thou to strengthen.
When tempted souls despairing falter, nerve them;
Wherever human lives have need, there serve them.

HADDONFIELD, N. J.

The Second Season at the New Theater

BY WILLIAM LYON PHELPS, Ph.D.

LAMPSON PROFESSOR OF ENGLISH LITERATURE AT YALE UNIVERSITY.

The New Theater will reopen its doors on Monday evening, September 26, with one of the most ambitious undertakings ever attempted under American management. This will be an elaborate and spectacular production of "The Blue Bird," a poetically beautiful, symbolistic play by Maurice Maeterlinck. This drama was first presented at Moscow, because the conditions there were all favorable to a successful interpretation. The absolutely necessary conditions are three: Intelligent and sympathetic acting, sensible and adequate stage management, and by no means the least important, a thoroly intellectual audience, whose enthusiasm can be aroused only by what is really first class. The Moscow performance was a prodigious success, and "The Blue Bird" is now being acted in Russia by fifty-nine different companies. Last December the play was put on at the Haymarket Theater, in London, and scored an instant and decisive victory. Note that the title of the play is not "The Blue-bird," but "The Blue Bird."

M. Maeterlinck was asked why he did not arrange to have the first performance in Paris instead of in far-away Moscow. He replied that the Parisians were too much taken up with their monotonous triangle comedies to appreciate so spiritual a play as his, and that their attitude of cynical mockery would create an atmosphere where so fragile and ideal a work could not live. It is indeed something entirely apart from the conventional modern drama; it reminds one somewhat of Barrie, and somewhat of Rostand. It has Barrie's wistful tenderness and whimsicality, and it has more than a touch of Rostand's bold and soaring imagination. But it naturally has most of all Maeterlinck's own spirituality of conception and his love of brooding on the idea of death. The great difference between "The Blue Bird" and "Chantecler" is the difference between defeat and triumph, between pessimism and optimism. For surpassingly lovely and filled with sympathy as Maeterlinck's play is, it is profoundly depressing. Mr. Chesterton has well said that Death in Rostand is more cheerful than Life in Maeterlinck.

The immense success achieved by the New Theater last season with Maeterlinck's "Sister Beatrice" makes it a practical certainty that "The Blue Bird" will be well mounted and intelligently acted. No pains and no expense have been spared to attain this consummation. Much that is new in stagecraft has been promised by the management. There will be a musical accompaniment running quite thru the performance, some half dozen dances will be given, and the cast will include about fifty children, making the largest company ever seen on the boards of the New Theater. As is well known, the characters not only represent various animals, but also dews, perfumes, stars of the night, will-o'-the-wisps, hours of the day, glow-worms, and similar stage curiosities. Fire has a speaking part, and will be seen coming out of a chimney. Water will naturally flow from a spout. Milk leaps from the pitcher and Light springs from a lamp.

This production of "The Blue Bird" does not belong to the regular subscription season, which will begin in November. These opening performances start what is known as the preliminary season, and it is expected that they will continue for about four weeks. After this is over the regular stock company intend to produce during the year twelve plays. The first one will be a classic, in all probability by Shakespeare. The director states that the outlook for contemporary dramas is better than last season. The company has forty players instead of thirty-five; nearly all of those who were

members last year have been re-engaged, and the only prominent ones who will be missed are Annie Russell, Oswald Yorke, Henry Stanford, Guy Bates Post and Miss Beverly Sitgreaves.

Even more important than the announcements regarding dramas and actors is the good news of the complete change made in the interior of the house. It may not be well always to gild gold, or to paint the lily; but it was decidedly necessary to renovate the New Theater. The fear that I exprest in my article in THE INDEPENDENT a year ago that the auditorium would be altogether too spacious for the completely successful presentation of intimate domestic plays was speedily justified by the facts. During the summer the top balcony has been closed and boarded in. The seats have been removed from the foyer stall and replaced by sixteen founders' boxes. The twenty-three boxes which stood at the rear of the orchestra floor have been taken away, and that space is now occupied by four rows of parquet chairs, to be known as the orchestra circle. The ceiling has been lowered about 15 feet. The entire interior has been redecorated; it will now be dark oak and gold instead of driftwood gray and gold. The seating capacity is reduced by several hundred. There is every reason to believe that these radical and exceedingly expensive alterations will accomplish two things: They ought to make the theater more intimate, and the acoustics—a bitter disappointment last year—should be much improved.

When one considers the enormous difficulties and complicated problems that confronted the founders and the management of the New Theater a year ago, it is difficult to praise too highly Director Ames and his corps of assistants for the splendid results actually achieved. They did in one year what many of us thought could not be accomplished in five, and they did it in face of a determined and able army of enemies, and they did it after making two false starts that terrified the faint-hearted and filled their opponents with malicious joy. It is impossible to forget that the New Theater opened with a performance of "Antony and Cleopatra"; how I wish I could forget it! I have heard many inadequate and tiresome representations of the work of the world's greatest dramatist, but it is seldom that I have ever witnessed one that was during all its interminable length such a colossal bore. Then followed the next *première,* a "modern" play, by way of contrast, called "The Cottage in the Air." I did not see this, but so far as I can judge, the cottage remained on earth, while the New Theater went up in the air.

But the motto of the Director, who by this time might naturally have been in a sanatorium, seemed to be, "By success be encouraged, by failure be inspired." Two painful and glaring failures had been made; but every single thing that followed was a conspicuous success. The four productions that stand out most prominently among the successes of the season are "Sister Beatrice," a play so beautiful that many believed it could not be given in America at all; it was the favorite drama of that most gifted Russian actress, the late Madame Komisarzhevskaya. The company had no single actress equal to her, but Miss Mathison appeared at her best, and the whole troupe seemed inspired. Then Mr. Sheldon's play, "The Nigger," while frankly melodramatic, was presented in a manner that made failure an impossibility. John Galsworthy's social analytical study, called "Strife," simply clutched the audience like a vise; every word, every shade of meaning, and every character received full valuation. Greatest of all the year's achievements was the presentation of "A Winter's Tale." I attended this with some misgiving, as I had not yet been able to shake off the thick gloom of the performance of "Antony and Cleopatra"; and I knew from other painful experiences that nothing is so dull as Shakespeare when inadequately interpreted. But it has been my good fortune to see Shakespeare acted by Booth, Salvini, Irving, Possart and Mansfield; and I can truthfully say that "A Winter's Tale," as presented by the New Theater Company, was the best performance of Shakespeare I ever saw. There was not a single dull moment, and one clearly understood why Shakespeare fascinated his contemporaries. The elocution of the actors—which in America is usually distressing—was a joy and delight to the ear. The lines were given by Miss

Mathison and the others with such impeccable art that the real meaning of every passage was driven home, while not a note of the music was lost. I came away from that matinée with the conviction that at last we had in America a stock company equal to the best in Europe.

The founding of the New Theater is the best thing that has ever happened in American dramatic history.

The Religion of the Passion Play

BY WALTER RAUSCHENBUSCH

Professor of Church History in Rochester Theological Seminary.

IN common with thousands of Americans I witnessed the Passion Play at Oberammergau for the first time this summer.

As an artistic performance it is certainly worthy of all praise. Even for those who do not undersand the German, there is at least a series of pictures of wonderful beauty of color and grouping. The costumes, though rich and varied, were absolutely harmonious. None clamored for personal attention. I noticed in the audience the red head-cloth of an Italian woman which was more exclamatory than any robe on the stage. This harmony was due to team-work in costuming. All the six hundred costumes were planned and made by the central management, none by the wearers.

The character of the performance is deeply affected by the fact that the play is given by daylight and in the open air. The theater is roofed and enclosed on three sides, but an open proscenium separates it from the closed part of the stage. Repeatedly the rain fell on the players as we watched them. It is said that fifty or sixty years ago the chorus occasionally hoisted red umbrellas while they sang. This open-air performance reproduces the conditions of the Athenian theater when entire days were spent in witnessing the great trilogies. Without the inflow of fresh air the endurance of the actors and the audience for four solid hours in the forenoon and four in the afternoon would be impossible. The daylight does away with the temptation to use artificial light-effects and the paints necessary to offset them, and so helps to keep the play natural and truthful.

The performance is wholly chaste. The bare limbs and hairy breast exposed in some of the Old Testament tableaus seemed natural. One tableau, showing the bride in the Song of Solomon longing for the bridegroom, came near to being a mere aggregation of pretty girls. But perhaps that was due to the fact that the mystical significance of the bride and her love is so remote from our modern religious thought. But otherwise the religious meaning spoke from all and dignified all. All action was restrained, slow and noble. But it would require but an almost imperceptible change in spirit and action to degrade it all, and in America, under professional management, that fatal change would be inevitable.

Doubtless any one looking behind the scenes would find the desire for money profits a powerful influence in the village. The Bavarian peasant is almost as thrifty as the Connecticut Yankee. The year of the Passion Play is the great economic epoch for the parish. The houses have been enlarged to provide sleeping accommodations for over 4,000 outsiders, and except thru summer boarders this investment can give a return only once in ten years. Naturally, prices for board are high. The inflow of well-to-do strangers is also the great chance to market the wood-carvings which are the staple product of the village. But the desire to make money was not sordid and riotous, as it tends to become in America whenever there is a

great and brief chance. There were no ramshackle buildings to house the guests. No room was allowed to hold more than three beds. Any desire of individual actors to exploit their notoriety is rigidly checked by the pledge which they must sign on accepting their parts.

The efficiency and moral power of the whole is explained by two factors: the community spirit, and religion.

The Passion Play is no scheme of individuals, uniting to make money. It is the great undertaking of a stable community, bound together by neighborhood, kinship and great traditions. The play originated in a vow made by the whole parish. It is managed by the Town Council of twelve, increased for this purpose by six citizens chosen by the village. They know every candidate for a rôle from childhood. Any pouting, any selfish display, or negligence would be punished by the resentment of the entire community. This offers means of discipline vastly higher than fines and salary contracts. The ancient Teutons fought by clans, knowing that no man would care to be a coward in sight of his own people. The greatest relative excellence of the acting at Oberammergau is in the great popular scenes of the triumphal entry and the mob before Pilate's palace, and the simple naturalness of the women and little children would be impossible if they were not moving about among their own townsfolk.

The other potent factor is religion. The decennial repetition of the play is in fulfilment of a religious vow taken in 1633, and tho commercial and artistic motives may be gaining strength, the religious feeling has not disappeared. The mass is celebrated before every performance. During the year of the play no festivity, not even a public wedding, is permitted from January to September, and the community is dedicated as to a ministry. The long hair of the boys and men is a physical expression of their separateness. Thru all the decade the hope of being found worthy for the John or the Magdalene is in the hearts of the young people, and must exercise a persistent molding pressure on their conduct and character. Because their work is religious, these people can put their best powers into it. There is nothing like religion to tap the subliminal reservoirs of the soul and develop the latent forces in a community.

Oberammergau was to me an inspiring demonstration of what a community of plain people can do under proper conditions and with a great spiritual task and impulse. Decade by decade this little village develops the artistic talent to act and stage so great a play, and the practical ability to house and manage the huge crowds that come flooding into the place. It has profited by the literary gifts in the neighboring monastery of Ettal, and by artistic advice. But the present text of the play was written by the village priest, and the music by the village schoolmaster, and outside professionalism is barred with jealous care. It is true, the village has long been above the ordinary. For centuries before the coming of the railways it was an important stage on the road between Augsburg and Italy, and thus in contact with the larger world. The wood-carving industry demands intelligent craftsmanship. But these are the conditions which modern life ought by rights to furnish to all workers. Oberammergau is a prophecy of what industrial communities may be and do in the good times coming.

If any one is under the impression that he has seen a medieval play at Oberammergau, he is mistaken. The play has been modernized again and again, and a history of the successive revisions would be an interesting study.

Its beginnings go far back into the Middle Ages. The vow of 1633 probably meant that the play was henceforth to be re-enacted regularly. The earliest extant text, of 1662, was drawn from two Augsburg plays, which again had used earlier sources.

Down to about 1680 the text was in short rhymed verse, plain, concrete, comic, and often coarse. During the eighteenth century the Benedictine monks of Ettal re-wrote it completely to conform it to the artificial taste of Jesuit art. The lively devils of the old drama were replaced by personified vices. Arias were introduced on the model of Italian opera. The fact that so large a part of the text is now sung,—a feature of questionable value,—goes back to the

influences of that period. The far-fetched types and allegories of the tableaus are also an inheritance from that time.

A new era of revision ran from 1745 to 1860. The "Age of Enlightenment" had changed the standards of religious taste and feeling. The coarse and comical religious plays became offensive. They were often acted before beer-garden audiences, and after the play the actors, in the dress of the sacred characters, joined in the drinking, love-making, and fighting. The Bavarian Government undertook the suppression of all of them. Oberammergau was able to preserve its ancient privileges only by tenacity and stratagem, and by willingness to conform to modern feeling.

Between 1810 and 1815 the play was entirely re-written by Father Ottmar Weiss of the Ettal monastery. He belonged to the rationalistic school, and cut out everything legendary and diabolical, basing the text simply on the Gospels. The modern feeling for naturalness also pruned it of the artificial decorations of the Jesuit era. Finally, Father Daisenberger, the parish priest, revised it once more at the request of King Maximilian II, and brought it to its present form by a revision of the text of Weiss. He, too, was a rationalist and confest that he was little fitted for his task by sympathy with the ancient form of piety.

Thus the text, as the official handbook concedes, has "suffered many changes to adapt it to the changing feelings, fashions, and tastes, as the religious and even the political tendencies of the times demanded." If any one finds it hard to understand the J, E, P, D, and R of Pentateuchal criticism, he can find a modern analogy in the text of the Passion Play.

At any rate the present text is not medieval. No modern audience would bear it, if it were. All the legendary material with which the Gospel narrative had been embroidered has been cut out. Only St. Veronica and her napkin are left; Weiss had abolished her, but Daisenberger restored her. The plottings and rejoicings of the hosts of hell, who goaded Judas into despair and gloated over the roasting they would give him in hell, were exceedingly impressive for the religious imagination, but they are utterly gone. So is the devil that played pranks behind the chorus to distract the attention of the audience and spoil the religious effect. It is interesting to fancy what an orthodox Catholic of the fifteenth century would have thought of a religious play without a devil in it. The horror which was so religious has also been lessened. Judas used to die in plain sight. Christ was nailed to the cross in sight of the audience, and the brutal jests of the soldiers accompanied the blows of the hammer. Today the rising of the curtain shows the cross ready to be raised with its terrible burden. I noticed that many women averted their eyes even from that, and a shudder ran through the audience when the lance was used on Christ, and the malefactors were clubbed to death. Thus modern feeling revolts against the horror which medieval art and preaching studied to arouse.

I would go farther and say that the play is scarcely Roman Catholic any more. There was scarcely anything to remind one of Catholic ritual. At the triumphal entry Jesus raises his hand in blessing after the fashion of a Roman bishop, except that he does not make the sign of the cross. It would have been easy to introduce allusions to the mass in the acting of the Lord's Supper, but I failed to see any. It is true, Christ places the bread in the mouth of each apostle and holds the cup to his lips, but that is Lutheran and Episcopalian usage, too. Peter's denial and Christ's rebuke of his attempt to hold him back from the way of suffering are given unsparingly. On the other hand the fundamental passages assigning to Peter his primacy in the Church are either not given or not emphasized.

The evangelical purity of the play amazed me. We have to thank the "rationalism" of Weiss and Daisenberger for it. But in the main it is due to the Gospels. Whenever any one honestly turns to them he becomes less ecclesiastical and more Christian.

The only real reminders of the Church and its priesthood came by the striking portrayal of the Jewish hierarchy. Here was the priestly garb, the tone of re-

ligious authority and the unlovely spirit of churchly intolerance. In the deliberations of the Sanhedrim and in the appeals used to fanaticize the people we have exactly the arguments and motives always used by the Church to stifle new movements. We are the holy Sanhedrim, they say, the appointed teachers of religion, the guardians of pure doctrine; this man has no proper authority; he turns the people from the sacred customs and the obedience to the priests. When I remember the strong anti-ultramontane feeling in the Bavarian Church which culminated in the organized protests against the Vatican decrees in 1870, I wonder if the "rationalistic" authors of the play were not conscious of these resemblances and used it to press home a covert protest against the ecclesiastical tyranny and machinations which broad-minded Catholics know so much better than we on the outside.

The literary value of the present play is not at all high. The language is wordy, declamatory and utterly lacking in poetical vigor. The text of Weiss was superior. It left something to passion and intuition. Daisenberger has flattened everything out like a prosaical pedagog. In the most touching situations, as in the parting of Jesus from his friends at Bethany and from his mother, the author does not rise above sentimental interjections: "O dearest teacher! O beloved benefactor!" If the story, nevertheless, speaks with thrilling power and chokes the great audience with stifled sobs, it is once more the perpetual triumph of the Gospel story over the faultiness of its exponents. Jesus is insuppressible. Men wishing to honor him do their best to make him feeble and repellant, but he still rises from their words majestic, the eternal miracle of manhood.

Probably every thoughtful man who sees the Passion Play is haunted by the question: "Is this, then, my Lord?"

In many ways the impersonation of the Christus is as satisfying as human character can make it. He appears as the strong, beautiful, loving Saviour, meek in all suffering. His face and bearing reminded me most of the Christ of Guido Reni and Hoffmann. But there was the same comment that is so often made about the Christ face in art: "He lacked virility." He was so restrained, so well bred and gentlemanly. His strength was the passive strength of patient submission. He lacked action. The cleansing of the temple is the only blow he is allowed to strike, and that is done so gently that it is hard to see why the merchants should be panicstricken and the Sanhedrim excited and afraid.

The fault is not with Anton Lang nor with the writers of the play. It lies with the conception of Christ held by the entire Church. The Christ of theology and of the sacraments was a Christ who came to die an atoning death which would make pardon and eternal life possible for men. His task was to suffer; His chief characteristic was love to men and submission to the Father's will. But in the Gospels we see a Christ whose task was to set up the reign of God on earth, and whose dominant characteristic was a passionate love for men and for righteousness, and a hatred for covetousness and hypocricy. He was a Samson who shook the twin pillars of Church and State till those who sat on the roof were pale with fear.

Now, in this attempt to realize and visualize the dramatic climax of Christ's life and work in a Passion Play, the Christ of Galilee re-emerges and forces home on us that the traditional passive Christ is inadequate to fill the part. How could he ever sweep the people with him, attract a man like Judas, and arouse the men in power to venomous self-protection? That Christ was no shaker of thrones and class privileges.

The Christ of Oberammergau lacks dramatic power, because he lacks human development. He knows all things from the beginning, and is always mildly rebuking the disciples because they grope in perplexity. There is no clearness of soul for him to work out amid the stress of that great conflict. The struggle in Gethsemane becomes only a shrinking from something that is sure and fixed. It is the Logos Christ of the Fourth Gospel passing thru all with supernal tranquility.

Pilate and Judas are lifelike and tragic. The secular rulers, Pilate and Herod, are far fairer and more faithful to their task of justice than the ecclesiastical

rulers; which comes near to being a general truth of history. Judas used to be a comic villain, who bit every piece of silver to test its metal value before he gave receipt for it. Like Shylock, he has gradually become a pathetic figure. He is drawn into sin by prudent self-preservation, by covetous resentment against Mary's waste of the precious ointment, and by some expectation that his master will take care of himself. He never expected his death, tries to undo his work, finds himself a mere tool of abler plotters and dies in despair.

The history of the Oberammergau play is a cross section of the history of religion and civilization during the last three hundred years. It has passed from the coarse humor and brutal emotions that appealed to medieval audiences to the sensitiveness and naturalness demanded by modern taste. It has passed from legendary decorations and superstitious supernaturalism to the simplicity of the Gospel story. But the effort to reach the real Christ is not yet over.

Nevertheless, precisely in its deficiencies the play is a wonderful demonstration of the incomparable interest and power of Jesus Christ. Thru all history He has been seen thru a haze, darkly. Yet he has always laid hold of the souls of men and shaken them with a sense of the tragic solemnity of our sinful life and of his divine life. The sin of the world is no trifle. It killed Jesus.

ROCHESTER, N. Y.

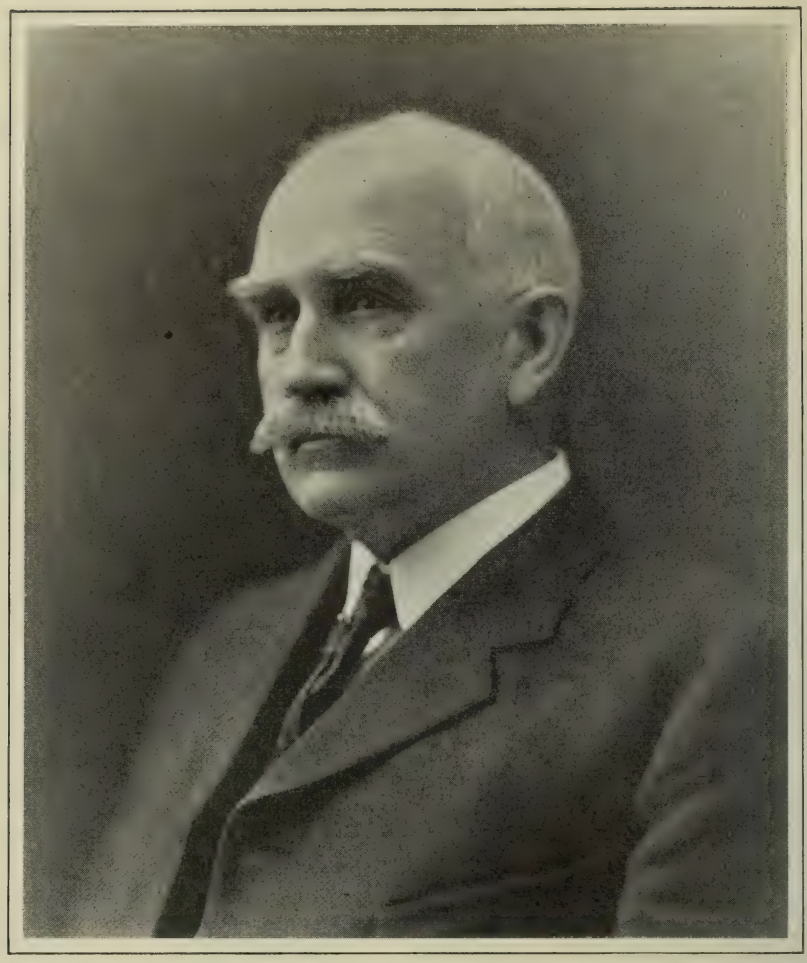
The Dancing of Morgiana

From the Tale of "The Forty Thieves"

BY WILLIAM R. BENÉT

"Aha! A guest!
Within my master's house, a guest—
To eat
With his meat
No salt?
Say you so!
His vest—his vest—
What glitters thru his merchant's vest?
Fast and fleet, tabor, beat!
Round again we go!

Scarves about my head—so!
Silver girdle, flash—ho!
Round again—again we go.
Round again—again we go.
Chalk upon the panel there;
Oil upon the pave—beware!
A guest, ho! A guest, ho!
A sweet guest, ho!



Laden mules, laden mules
Came within our court there.
Who boil
In their oil?
The thieves?
Say you so!
Fair fools—fair fools!
The moon saw the sport there!
Spin, spin! Tabor, din!
Round again we go!

Thieves' beards be red—so!
Poniard, forth and flash—ho!
Round again—again we go.
Round again—again we go.
Master Ali, drunk with wine.
Houssain, only I divine!
A guest, ho! A guest, ho!
A sly guest, ho!

For treasure, for pleasure
Stabbed and plotted many men.
The Fox
Picked the locks.
The springe
Seized him—so!
Full measure—full measure!
Purses for my dancing, then?
Purple are the shadows;
The lamps red and low.

Poniard at my breast—so!
Poniard at thy breast—ho!
Round again—again we go.
Round again—again we go.
Here's a dagger's smart should be
Salt for such villainy! . . . .
A guest, ho! A guest, ho!
A dead guest, ho!

BENICIA, CAL.

Judson Harmon

BY HARRY BRENT MACKOY

[The author of the present article has had such close relations with Governor Harmon that what he says comes from intimate knowledge. The Governor of Ohio is a prominent candidate for the Democratic nomination for the Presidency.—EDITOR.]

WHETHER it is because the Middle West is more nearly the heart of the nation or because its blood combines virile youth with prudent age, the pulse of political life seems to be beating there most healthfully at present. Not content with being the vivifying force for the insurgent movement within the Republican administration, the same great territory now produces an increasingly formidable candidate to oppose the choice of that party in 1912.

Governor Harmon, or "Jud" Harmon, as he is familiarly called, has been talked of as a possibility on several occasions before. Then, however, the mass of the voters in his party had their eyes on a rainbow due to a sun in the West, which sun has apparently set. With a fairer day dawning, the light on the horizon begins to look decidedly Harmonesque, and not at all adapted to chasing after visionary pots of gold or silver. Should the election in Ohio this fall go the way which shrewd politicians

on both sides predict, that State would furnish the most likely Democratic applicant for the White House.

In order to understand the secret of Judson Harmon's success one should run back through a long line of plain-living ancestors to certain strict old Puritan fathers, who first conquered the New England wilderness. He should trace their descendants thence westward, thru York State and Pennsylvania, carving new homes for themselves and fighting Indians or achieving and maintaining independence in the Revolutionary War and the War of '12 until they finally settled in the fertile Miami Valley. It is the story of many other sturdy pioneer folk, who have given Ohio's sons the place which they hold in history, and it is essentially the reason why Harmon himself possesses that mental and physical make-up which fits him to be a man of the people. He is big, clean-cut and athletic. He is fond of all out-

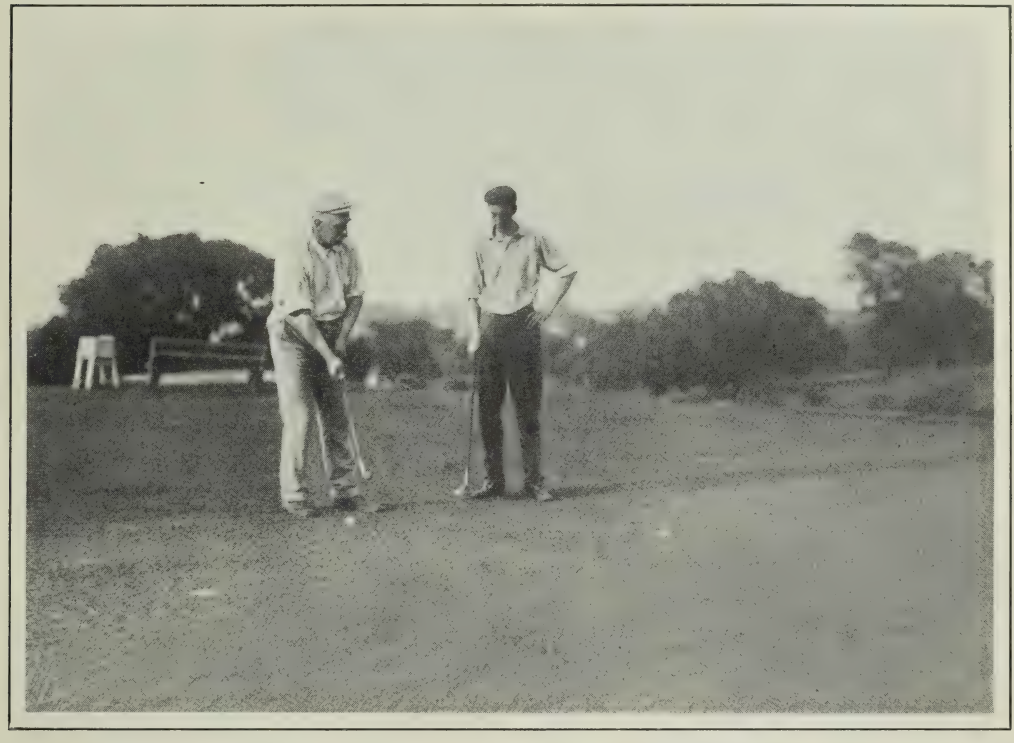
RESIDENCE OF JUDSON HARMON IN CINCINNATI, OHIO.

of-door sports and amusements—particularly riding, shooting, fishing, baseball and golf. He has a hearty, genial face and manner and clear, gray eyes that require no further introduction. His mind never travels in circles or parabolas. He knows and remembers his friends. He loves children, the trees, the grass and all things that are simple and natural.

As in the cases of Grover Cleveland and Charles E. Hughes, the father of Harmon was a preacher. There is standing in the village of Norwood today, just outside of Cincinnati, a Baptist church named in his memory. A man of excellent parts he was, who held the respect and love of his community for more than forty years. He also followed the vocation of a school teacher, exercising his talents and impressing his religion upon four sons, of whom the eldest was Judson, christened Adoniram Judson after the famous Baptist missionary.

When he had passed beyond his father's training, young Harmon went first to Dennison University and later taught school himself, studying law at odd hours. At twenty-one he entered the office of Judge (afterward Governor) Hoadly, and at the same time began a course at the law school of the old Cincinnati College, from which he was graduated.

Those who came into contact with him say that, at the outset, he appeared handicapped by an inadequate preliminary education. The bar of Cincinnati in the '60's was composed of very superior men, particularly among the younger generation. Association with these keen, legal minds, hard study and careful attention to business speedily developed his skill, and his later service upon the Superior Court, to which he was elected when only thirty-two, did much to enlarge his field of work. No court of limited jurisdiction ever boasted a greater number of able jurists than did that. When, at the request of ex-Governor Hoadly and Edgar M. Johnson, he resigned from the bench to become head of the firm with which they had been actively identified, he was fully prepared to assume his share of an extensive general practice. Since then he has been recognized as one of the leaders of the Ohio bar, and occupies the chair of constitutional law in the University of Cincinnati.



By family training and tradition Harmon was a Democrat. His environment during the war, serving as a young militiaman in the defense of his State in the Kirby Smith and John Morgan raids, tended to make him a Republican and such he was for a few years afterward. Becoming dissatisfied with that party's tariff policies and carried away, as many young fellows were, by Horace Greeley's ideas, he changed into a Democrat and has remained one ever since. He was nominated by the latter party for judge of the Common Pleas Court in 1876 and received the majority of votes, but was counted out by the Ohio Republican Senate sitting as a contest board. From that time until his appointment by Cleveland to the Attorney-Generalship, the only political office which he filled was that of the Superior Court judgeship above referred to.

In 1904 when Judge Parker was nominated for the presidency, Harmon was frequently spoken of for the place, and he had many followers in the convention. Four years later he was more prominently mentioned, but the campaign managers, realizing the necessity for a strong gubernatorial candidate, forced him rather reluctantly to permit his name to be used at the head of the State ticket. The issues in Ohio were, it will be remembered, purely local, but that alone hardly accounted for the magnificent plurality which he received. The fact that it was the time of a national election in a State the home of Taft and normally Republican, made his victory an impressive one.

In the short space of two years it is not always possible for an executive officer to furnish evidence of his qualifications. Events have moved rapidly in his jurisdiction, however, and there has been no disposition upon the Governor's part to delay them. Soon after his inauguration he began to look into the management of public institutions and the condition of those departments having charge of printing and finances. His examination revealed loose and corrupt practices in various branches of the

State government, which he has been and still is rectifying in the best possible manner, prosecuting the offenders vigorously. This he has been doing with only perfunctory support from a Legislature of opposite political persuasion. There have likewise arisen a number of emergencies that have demanded a high order of administrative ability to handle, such as the Newark riot and the Columbus street railroad strike. The latter situation was used in an apparently unsuccessful attempt to embarrass his administration. He took the stand that it was his duty impartially to preserve order, which he did by calling out troops when the local officials were powerless to act. He also refused to enforce arbitration on the ground that he was not authorized to do so by law. When asked to convene the Legislature in special session to enact a law that might give him such authority, he realized the futility of so costly a performance on the eve of an election, with a Republican law-making body, and declined to become a party to such an obvious political trick designed to enact an unconstitutional law. In the former case he immediately assumed full charge, saw that proceedings were instituted to punish the guilty and tried to blot out the disgrace in all legal ways.

Judging from his career thus far, it is safe to assume that, if the next National Democratic Convention sees fit to place Harmon's name before the people of the United States, it will do so at an opportune time for the party and for him. He represents a conservative element which should and in time, no doubt, will come back into control of his party's councils. But more than that he stands preeminently for three fundamental principles of Democracy, tariff reform, opposition to centralization of power in the Federal government and due adherence to the Constitution. He is also a believer in the enforcement of the law. If any further evidence were required of the latter fact, his report in the Santa Fé rebate case, when he and

GOVERNOR HARMON AT CINCINNATI GOLF CLUB.
His son-in-law, Alfred C. Cassatt, is playing with him.

Frederick N. Judson of St. Louis recommended the prosecution of Paul Morton, would be conclusive.

It has been said that he is not a constructive statesman, and in the strict sense of the words this may be true. He has, however, qualities which many constructive statesmen do not possess. He is a man of sound common sense and business-like methods. He is an excellent judge of people, and able to handle them tactfully. His administrative power has been demonstrated not only in the discharge of the duties of his present office, but by his successful and economical management of railroad receiverships and by his conduct of the Attorney-Generalship, when the country was passing thru one of its worst crises. His record in the important cases involving the construction of the Sherman Anti-Trust law, which paved the way for the Northern Securities decision, bears testimony to his genius for legal organization and direction.

Those theorists and reformers who try to work out the salvation of the whole human race by legislation would not receive any sympathy from him. His creed destroys no monuments of wood unless stone ones can be erected in their places. Nor would the doubting Thomases and show-me-Reubens find in him a congenial companion, altho a little test-tube analysis before investing in gold bricks meets with his hearty approval. On the whole, while he may not astound the world by the novelty of his ideas, he will do whatever job is cut out for him and do it well.

Should you put the question to him as I did recently as to what the local issues are in Ohio this year, he would tell you simply: "Whether or not I have discharged my duty." This he will say in no spirit of braggadocio, but because he feels that is the true measure of his accomplishments. He will also add that, as part of his task, he has endeavored to maintain a higher standard of character in the service and a greater degree of efficiency than have heretofore been secured in public office. And the truth of his assertions can best be estimated by the attitude of the press and of the management of the Republican party in Ohio. Neither at the State convention nor in any printed utterance has any statement appeared which may be construed as an attack by them upon his administration.

As to what he thinks of national issues, should you ask him that as I also did, he would doubtless reply: "The fundamental ideas of good government ought to be the same in one community as in another. It is only a question of a broader field. I have been too occupied with my own responsibilities to assume the care of the country at large, and it is impossible to foresee what may happen between now and 1912."

Such expressions as these may not indicate a knowledge of universal economics. They may not, as one writer puts it, "fire any waiting train of the imagination." But they do inspire you with a feeling of confidence, a sense of conscientious devotion to honest ideals and safe principles on his part, and a conviction in your mind that he is not demagogically asserting to himself any false superiority. You cannot avoid the consciousness after conversing with him that your affairs would be wisely administered in his hands.

If Harmon should be the candidate of the Democratic party in 1912 and Taft of the Republican, it would be a novel spectacle. Apart from the fact that they are fellow-townsmen, both brainy lawyers and have filled some of the same positions, they have many traits in common even to their fondness for a brassie. Their orbits have touched one another so frequently as to almost justify belief in a recurrence of the phenomenon. Striking as have been their political and professional points of contact, however, their friendship has been quite as remarkable and out of it has arisen more than one interesting story.

In 1893, when Theodore Roosevelt was Civil Service Commissioner, he spoke in Cincinnati before the local civil service club, of which Taft, then United States Circuit Judge, was the head. The latter, desiring another orator to grace the occasion, called upon Harmon, who accepted. The result was that on the platform that evening three men delivered addresses, two of whom

were to be Presidents of the United States, and one to be mentioned for the office.

Prior to that, when Taft was chosen Solicitor-General by Harrison, he had shown his confidence in Harmon's judgment by going to him for advice, and Harmon in return, upon being notified of his selection to fill Olney's place, sought Taft's counsel in the same familiar manner. Afterward at a banquet tendered to Harmon by the Hamilton County Bar Association in honor of this appointment Judge Taft presided as toast-master and paid a beautiful tribute to the distinguished guest. Subsequently when the same association gave a dinner to Taft prior to his departure for the Philippines, Harmon was the principal speaker and was equally generous in praise of the new commissioner.

Apart from that which they represent, their parties and their records, it would be difficult for the people to choose between the personalities of two such men. The difference, in the event of a campaign between them, might become more apparent, but if one were to attempt to define it now, it would perhaps be held to consist in the element which occasionally makes one man "hole out" first on the putting green—some persons call it "opportunity;" others, "luck."

CINCINNATI, OHIO.

The Fisheries Award

BY W. T. STEAD

[The reader can hardly ask for a more intelligent and sympathetic authority on international questions than the distinguished English publicist, Mr. Stead.—EDITOR.]

THE award pronounced at The Hague on September 7 differs from every other award that I remember in having been received with equal enthusiasm by both the disputants. How far the jubilation of the respective counsel was sincere and how much was assumed is not for me to decide. The fact remains that the champions on each side, spoke and acted as if they honestly believed that they had carried off the honors of the fray and they tendered to their opponents their profound commiseration and professed no small surprise when they found them bearing up so well under so crushing a defeat. Possibly the universal satisfaction expressed at The Hague that Wednesday night may not survive a close examination of the terms of the award. But for the moment the arbitrators were cheered by an unanimity of approval as remarkable as their own unanimity in signing the award.

The fact that Dr. Drago, one of the ablest and most conscientious of jurists, found himself constrained to record a reasoned dissent from the finding of the tribunal upon one of the seven questions submitted to it for decision, emphasizes rather than impairs the remarkable unanimity of the five arbitrators. Five men had to answer seven questions, some of which raised all manner of juristic difficulties and were involved in historical controversies which had accumulated for a hundred years. The ablest counsel on both sides of the Atlantic had poured out for forty days a flood of forensic eloquence, the volume of which might well have bewildered and confused the minds of those to whom it was addressed. Nevertheless these five men—an Austrian, a Dutchman, an Argentiner, a Canadian and an American—found no difficulty in arriving at a unanimous decision upon every one of the seven questions—for Dr. Drago's dissent is more of a confirmation of than of a dissent from the finding of the tribunal on Question 5. He would have had the tribunal decide the question outright, instead of recommending the governments to agree upon the lines which the award lays down. To all intents and purposes, therefore, we are confronted by a unanimous verdict by the supreme court of the world and this a court upon which each litigant had its own special representative. If such an award is not accepted as decisive of the controversy we might indeed despair of ever being

able to settle anything by law, by reason or by authority.

That of course, is the great gain that the North Atlantic fisheries award has achieved for the cause of civilization. It affords mankind a most impressive object lesson by demonstrating in this most crucial instance that it is not very difficult to arrive at a substantial agreement concerning the most tangled international dispute provided that the parties approach the discussion in good faith, that the counsel address themselves honestly to the consideration of the questions of fact and that jurists of worldwide reputation are willing to stake their reputation upon the justice of their decision. All these elements of success were present at the recent arbitration. Nothing could have been better than the temper in which the proceedings were conducted. It was a friendly suit between brothers, each of whom would rather lose the case on its merits than win it by a trick. Honesty, patience, industry and common sense were allowed a fair field and they have achieved a brilliant and memorable success. That is a result so important as completely to obscure the minor question as to which of the two litigants has most reason to congratulate himself on the award.

It may be well in view of the somewhat complex and obscure nature of the questions submitted to the court briefly to explain what has been decided, and what still remains to be done if the recommendations of the award are carried out.

Question One, which is far and away the most important, was decided with unusual, nay almost unprecedented emphasis, in favor of Great Britain. That question resolves itself into two main contentions.

First—Whether the right of regulating reasonably the liberties conferred by the Treaty of 1818 resides in Great Britain.

Second—And if such right does so exist, whether such reasonable exercise of the right is permitted to Great Britain without the accord or concurrence of the United States.

The tribunal decided both these questions in the affirmative. The award sums up under eleven separate heads the contentions put forward by the United States in opposition to the British claim of right and in every single case dismisses the American contention as untenable. "The tribunal is unable to agree with this contention" is the terse formula which reappears no fewer than eight times and in the other seven instances the rejection of the American plea is exprest in terms as decisive, altho in a slightly varied phraseology. Nor was the tribunal content with this wholesale and retail repudiation of the whole American argument. It must needs give its reasons. The net result is that the award contains no fewer than forty-three reasons, in due order set out, to explain and justify the rejection of the eleven American contentions. "The right of Great Britain to make regulations for the fisheries without the consent of the United States * * * in the form of municipal laws, ordinances or rules of Great Britain, Canada and Newfoundland is inherent to the sovereignty of Great Britain."

If the award had stopped there the tribunal would have missed a great opportunity which it courageously utilized. After affirming in the most unqualified terms the sovereign right of Great Britain to regulate the fisheries without the consent of the United States, the arbitrators took advantage of the explicit statement of the British counsel that the reasonableness of the British regulations could always be impugned before the Hague tribunal. They therefore called upon both parties to nominate within one month expert commissioners for the examination of the reasonableness of the regulations now in force. To these experts the tribunal adds Dr. Hook, the scientific fishery adviser of the Netherlands. This expert committee of three, after examination, shall report to The Hague tribunal and if they are unanimous their report shall be incorporated in the award. If they disagree the tribunal will decide after hearing counsel. It may be objected that this is to put the cart before the horse. To the lay mind of the outsider it would have seemed a more natural mode of procedure if the tribunal had begun by investigating the charge that the British regulations are

unreasonable limitations of the rights of American fishermen. But that is now neither here nor there. The tribunal has settled the question of abstract right first. It may still have to settle the question of the reasonableness of the practical enforcement of that right. That was obviously an indispensable part of its duty under the terms of the agreement. But the tribunal went a step farther. It declared that Article IV of the agreement does not expire in 1913 with the expiring of the General Arbitration Treaty of 1908, but was permanent in its effect. As counsel for both parties assented to the declaration we have secured, as it were, by a side award a permanent Anglo-American treaty of arbitration limited to the fisheries. The tribunal, "pursuant to the provisions of Article IV," the present title of the new permanent treaty, recommend for the consideration of the parties "the following rules and method of procedure under which all questions which may arise in the future regarding the exercise of the liberties above referred to (the fisheries) may be determined in accordance with the principles laid down in this award." This procedure may be briefly summarized as follows:

All future regulations are to be published in London *Gazette* two months before they go into operation.

If the American Government considers any of the proposed regulations to be inconsistent with the treaty rights, they must notify this to the British Government and the enforcement of such regulations shall be postponed until the reasonableness of the regulation is admitted by the fishery commission.

This fishery commission shall be a permanent body of two experts, one British and one American, who shall be appointed for terms of five years. If they fail to agree they can either appoint an umpire of another nationality or allow him to be nominated by the Dutch government.

In cases where the British and American experts fail to agree within a month, the British Government will convoke the full commission of three which by a majority must deliver in three months a decision which shall be final and binding on both parties.

By this admirable arrangement all that Mr. Elihu Root asked for would be secured. No regulations would go into operation until after the American Government had an opportunity of considering them and of securing the verdict of an impartial umpire upon the reasonableness of any regulation to which it objected. Yet while thus giving the American Government all it asked for, the award does not in any way impair or impugn the sole sovereign rights of Great Britain. Even the summoning of the Permanent Expert Fishery Commission, which is to sit in judgment upon the reasonableness of the regulations, is vested in the British Government. It is sincerely to be hoped that Mr. Philander Knox and Dr. Edward Grey will lose no time in giving practical effect to a recommendation which seems to be a triumph of diplomatic ingenuity to sound, common sense.

Question Two was decided with the same regard to sovereign rights which dominated the tribunal in deciding Question One. The award affirms the right of the Americans to employ any one of any nationality on board American fishing boats, and so at first sight hasty reporters and editors concluded that the tribunal had decided against the British on Question Two.

But the tribunal asserts just as strongly the British sovereign rights to forbid British subjects to take service on American ships fishing in British waters, and to exclude aliens from entering these waters even if they are engaged by and working in company with those "inhabitants of America" who alone have a treaty right to share on the fisheries. The apparent concession of the American claim to employ alien Newfoundlanders, is rendered absolutely nugatory by the simultaneous recognition of the right of the British to forbid aliens and Newfoundlanders to take part in the fisheries. However annoying such a result may be, no other conclusion was possible after the high doctrine of absolute British sovereignty laid down under Question One. The one decision is the logical corollary of the other.

Question Three was answered in the

only possible way. American fishers must only be subject to the same regulations and obligations as to the payment of light and harbor dues as are exacted from Newfoundland fishers. The duty of reporting to the Custom House is declared to be not unreasonable nor inappropriate if there be reasonably convenient opportunity therefor. More than that Britain does not ask for. And less than that no reasonable tribunal could concede.

Question Four forbids the imposing of any restrictions or payments upon American fisher boats entering non-treaty waters for shelter, repairs, wood or water, unless the boat remains more than forty-eight hours, in which case it should report to the customs "if reasonably convenient opportunity therefor is afforded."

Question Five deals with the vexed question of bays. The tribunal rejects seriatum one after the other all the contentions of the United States and decides and awards:

In case of bays the three marine miles are to be measured from a straight line drawn across the body of water at the place where it ceases to have the configuration and characteristics of a bay.

There is much of the ambiguity of a Delphic oracle about this decision. At what point does a body of water cease to have the configuration and characteristics of a bay?

Dr. Drago revolted against this evasion of the question. He wanted the tribunal to declare that what he termed "historic bays"—a notable term which, like the Drago doctrine, may become a permanent addition made by Argentine genius to the nomenclature of international law—the other bays less than ten miles across—should be considered as those on which the fishing is reserved for nationals.

The tribunal refused to be convinced by Dr. Drago's argument, but it was unable to deny the justice of his contention. The award therefore expressly admits that their Delphic answer "is not entirely satisfactory as to its practical applicability and that it leaves room for doubts and differences in practice." Therefore they "recommend for the consideration and acceptance of the high contracting parties" the adoption of the ten mile wide principle plus the express definition of the "historic bays" whose headlands were formally laid down in the Bayard-Chamberlain treaty. If the high contracting parties do this it will be well that they should do it swiftly, otherwise the ambiguity of the award and the impossibility of deciding the precise point where a body of water loses "the configuration and characteristics of a bay" may lead to trouble.

Question Six was an ingenious piece of special pleading inserted at the instance of Sir Robert Bond in order to secure the consent of Newfoundland to the arbitration. The Treaty of 1818 gave liberty to fish on the coast of Newfoundland and on the bays, harbors and creeks of Salvador. Therefore, argued the ingenious Sir Robert—naturally anxious to find some way of hitting back at the protectionists who had defeated his convention in the American Senate—American fishermen may be excluded from the bays, harbors and creeks of Newfoundland and confined strictly to the coast. If not, why this specific mention of bays, harbors and creeks in the case of Labrador and the significant omission of bays, harbors and creeks in the case of Newfoundland?

The tribunal made short work of this contention, which, indeed, had hardly been seriously argued by any of the British counsel.

Question Seven alone remains. Here again, as in Question Two, the award gives in the one hand what it takes away with the other. Are inhabitants of America who are entitled to fish in British waters also entitled to use their ships for commerce on British coasts? Certainly, replies the tribunal, they are so entitled. But "liberty of fishing and commercial privileges are not to be exercised concurrently." It would have been impossible to have decided otherwise. An American vessel which once went a-fishing in British waters would if this ruling had not prevailed, have forever after been forbidden to enter a British port as a trading ship, which is absurd. On the other hand the decision against allowing fishing vessels to trade while on a fishing cruise—when they are enjoying special privileges and immunities—is not less obviously just.

So much for the award. It imposes upon the two governments two duties. The first is the appointment of fishery experts to examine into and report upon the justice or the injustice of the existing fishery regulations. The second is the drawing up of a formal agreement or treaty in order to carry out two recommendations of the tribunal: (1) The appointment of the permanent fishery commission and (2) The specification of the historic bays which are to be regarded as British from specified headland to headland and the acceptance of the principle of the ten-mile width for non-historic bays.

Whether the American government will be permitted by the Senate to give effect to the recommendations of the tribunal is a matter on which Mr. Henry Cabot Lodge or his son-in-law will in due time pronounce. But the fact that a small group of specially interested persons can dictate the policy of a nation of 80,000,000 souls illustrates the necessity of transferring as much as possible the settlement of international questions from national to international authorities. There is no reason to doubt the truth of the assertion frequently made in the course of this arbitration that Mr. Elihu Root and Sir W. Robson would have found not the least difficulty, if they had been allowed a free hand, to settle the question on broad principles of justice and common sense in drawing up by mutual agreement an award which would have been substantially identical with that which has been made by the tribunal. But the trouble is that in international disputes, the statesman hardly ever has a free hand. The great advantage of arbitration by such an international tribunal as that which has just sat at The Hague is that it supplies mankind with a supreme court whose authority the Senator Lodges and Sir Robert Bonds of the world are powerless to dispute.

Dr. Lammasch, the president of the tribunal, is framing to be a second Professor Martens. He is a little too much of a professor, and his temper is not always proof against the strain of what he regards as insubordination in his class. But he is a learned man, expert in English and in many other languages, quick and keen and intelligent. As he is also engaged in the next arbitration between the United States and Venezuela, he is on his way to be regarded as chief justice of Christendom. Judge Gray, after the president, is the most conspicuous figure who emerges for the arbitration. His independence, his courage, his good temper won him universal respect and affection. Sir Charles Fitzpatrick was one of the adroitest and perhaps one of the most impetuous men on the bench. His health sometimes tried his temper, but the momentary squall soon blew over. No one was any the worse. Dr. Drago has been an independent and fearless arbitrator. His solitary dissent brought a hornet's nest about his ears. But he stood firm and was allowed after no small loss to table his reasons for his dissent to the finding of the tribunal on Question V.

As at the Hague Conference so in this arbitration, every one loved Dr. Drago. Judge Gray said once that it was worth crossing the Atlantic merely to have had the pleasure of making Dr. Drago's acquaintance. Sir Charles Fitzpatrick was no whit behind his American colleague in his tribute to Dr. Drago. A genuine thorobred gentleman, with a keen sense of humor and a resolute determination to insist upon the essentials of things, Dr. Drago has once more vindicated in Europe the reputation of Spanish America. Of. Dr. Lohman it must be said that no man had a more open mind or one that was more accessible to reason. Nor was he without a certain sly humor. When Mr. Elder was perorating concerning the millions of Americans who were following from day to day in their papers the proceedings of that illustrious court, Dr. Lohman dryly asked Sir Charles Fitzpatrick if it was possible to secure a return of the comparative amount of space devoted in the American press to the proceedings of that court and that devoted to chronicling the Jeffries-Johnson prize fight? Of the counsel heard in court, Mr. Elihu Root alone imprest the British. On the other side honors were divided between Sir Robert Finlay and Sir W. Robson. From first to last counsel on both sides were like Nelson's captains, more like a band of brothers than the foremost fighters on opposite sides.

LONDON, ENGLAND.

Literature

The Russian Novel

Just before taking up this brand new course in Russian literature of the nineteenth century entitled *Landmarks,*[1] the reviewer happened to have reread the Vicomte Melchior de Vogüé's historic study of *le Roman russe.* Here is a book first published perhaps thirty years ago—certainly before women's clubs and societies for university extension "discovered" the humor of Gogol, the strongly national artistry of Tourgeniev, Tolstoy's Nihilism, and Dostoievsky's gloom. Mérimée had, to be sure, made known something of Russian fiction;[2] which, as M. de Vogüé points out, was with poetry, the only kind of literature "compatible with the exigencies of a press censure," and which had, therefore, monopolized for some time "the whole nation's attention." This point is of more than historical moment. Elsewhere, a romance is, properly, expected to afford a refined amusement—our Galsworthys to the contrary notwithstanding; a diversion from the practical interests of life; sometimes no more than a fleeting impression. Russian writers, however, are "the guides of the race; their poets are such according to the ancient and full sense of the word—*vates.*" Mr. Baring fails to bring this contrast out; tho in minor matters he does not hesitate to paraphrase M. de Vogüé and other authorities. Yet his book, like the one we have quoted, has its usefulness. Only the late M. de Vogüé's is literary criticism; Mr. Maurice Baring's, more or less literary journalism.

We are not of those who use the noun *journalism* in token of disparagement. Good journalism is too rare for that. Nor is journalism to be distinguished from literature by a want of accuracy; altho it is true that Mr. Baring, who ostentatiously states that he "learnt French at the same age as he learnt English, and became familiar with French verse long before he was introduced to the works of English poets," refers more than once to M. de Vogüé's "la" *Roman russe.* To praise as a creator of literature the Frenchman who was the first "outsider" profitably to treat of Russian fiction, and to praise the newcomer as an accomplished journalist (formerly, if not even now, a Petersburg correspondent of the London press) is, primarily, to pay tribute to that sureness of taste and sense of form which make for permanence. M. de Vogüé commanded these qualities, and was eloquent into the bargain.

We thank Mr. Baring, on the other hand, more particularly for renewing interest in the theme for which he is so enthusiastic. And yet, tho the passing of time has given the later writer the chance to command a broader view, to use a truer perspective, he has struck no note of difference unless it be in his half-hearted disparagement of Tourgeniev, whom we had agreed to regard as "the" Russian of them all. Him he represents as inferior to Tolstoy, and, above all, to Dostoievsky. This is, he says, the Russian standpoint. Now, as a critic, Mr. Baring is undistinguished; as an interpreter of the Russian temperament and of the contemporary attitude, in Russia, toward native novelists, he is a welcome arrival. Unfortunately, even as an interpretation, his book has its severe limitations. Perhaps Mr. Baring has striven to avoid, for the sake of contrast with the Russians themselves, anything like searching analysis. Be this as it may, there is too much of casual impressionism in his view. There is no paragraph in his book which throws upon the authors who have so perfectly

[1] Landmarks in Russian Literature. *By Maurice Baring.* New York: The Macmillan Co. $1.75 net.

[2] Prosper Mérimée knew Spanish excellently well, spoke English fluently, and knew something of German and Italian literature. He had studied Russian also, and had translated Gogol's *Revisor.* M. Louis Léger, of the French Institute, has latterly pointed out some amazing blunders of the translator; some of which are reproduced in a recent issue of *La Revue.*

combined the genius for analysis with the genius for evocation, such light as the Frenchman conveys in one sentence:

"The hereditary malady of the Slavonic mind is a tendency toward that negative doctrine which we call, today, Nihilism, and which the Hindu fathers called *Nirvana*."

As if to give point to this somewhat summary view of the Russian field, several volumes translated from that language, and thus made available for use by the English reader as a test for Mr. Baring's opinions, have been lately issued. It requires courage, to be sure, to translate from "the richest of all the European languages." One of the freshly rendered novels is Andreiyeff's *A Thought,* given here under the title, *A Dilemma: A Novel of Mental Perplexity.*[3] A little more than a year ago THE INDEPENDENT published an account of this novelist, written by Ivan Lavetsky; nor can his work be altogether unmiliar, since the present translator has previously given us his rendering of *Silence.* The little novel of today, whose principal figure is one Dr. Kerzhenseff, is no *Hamlet,* but this character is, like the Shakespearean Dane, *sicklied o'er with the pale cast of thought.* His morbidity is joined to inordinate pride; for, as Mr. Baring has written:

"The Russian character can, roughly speaking, be divided into two types, and these two types dominate the whole of Russian literature. The first is Lucifer, the fallen angel. The second type is that of the hero of all Russian folk-tales, Ivan Durak, Ivan the Fool."

Andreiyeff's hero is, of course, the former type. And his wonderfully ingenious confession of a murder, fascinating alike in its motives and its perpetration, is distinctly melodramatic. We can understand its author being called "the Edgar Allan Poe of Russian letters," but *A Dilemma* is Poe the pathologist, not Poe the artist. Yet it would be idle to deny its morbid power. A gulf gapes between the tales that come to us out of Russia and those mock Russian tales we ourselves write. Gilbert Watson's *Forbidden Ground*[4] is one of these last; tho here we have an Albanian scene. Its lurid cover alone—orange sky, black and green rocks, barbaric palace in middle distance—tells us the whole story. John Ironside's *Red Symbol* is another such tale.[5] This is a mystery story of love and adventure, Anglo-Saxons and Slav conspirators, sure to be found "a rattling good yarn" by its quota of readers, but hardly a subject for serious review. Concerned as it is with crime, and types that are abnormal in so far as they are not purely artificial, such a romance might well serve as a foil for the critic of Russian fiction. Above all, the cursory examination of such a detective tale or story of perils well escaped, that is created only for the momentary thrill, would throw into relief the sentiment of overwrought, too tense, too concentrated feeling, that powerful introspection coupled with a sense of logic become the tyrant, which is one frequent impression of really-and-truly Russian fiction. In the true Russian novels, logic, reason are of such exaggerated importance in the action and development of characters as to become monstrous, unbelievable. This is not to deny that the Russian novel moves—where it moves at all! —with the brutal power of the Indian Juggernaut. It is only to assert that much science has made its characters, if not mad, then at bottom unscientific; wanting, at least, universality; while the novels themselves are deficient in art, as we understand the matter. After all, "Russia is a freak of nature," as Dostoievsky never wearied of confessing.

Mr. Baring is an eager reader of Russian verse; and here, too, the American publisher has been busy. Our critic praises, above all, "the poetry arising from the incidents of everyday life," the homeliness, the temperance, of Russian poets. Remembering Heine's *mot* about translators, we have little to say of the newly issued volume, *Russian Lyrics,*[6] containing specimens of Pushkin, Lermontoff, Tolstoy, Maikow, Nikitin, Nekrassow, Nadson and others. "I once

read a very admirable and exact Russian translation of Alfred de Musset's *Nights*, M. de Vogüé has written; "it produced the same sensation as gazing upon a beautiful corpse, for the soul had fled." The life of a lyric, its beauty, "cannot be transferred into a foreign tongue," he continues. No less impossible than the rendering of Musset in Russian is the Englishing of these earthy Slavic songs—written, in the first place, in so exotic a tongue, used by folk so different from our own, and used more intimately than we often dare to use ours, in poetry. The lyrics seem to be translated faithfully at least, and a keen effort has been made to reproduce the rhythm of the original. Like Mr. Baring's book, this collection of songs is excellent literary journalism. And one cannot fail to be interested in this journalism, for it regards a literature which has not only exerted a great influence upon the intellectual development of the younger generations, but has, in Prince Kropotkin's words, furnished "the stepping stones in the development of Russian youth within the last fifty years," and in the evolution of the modern Russia.

Books for the Young

SQUARE, like the children's books of our own generation, are the new volumes for youthful readers issued by T. Y. Crowell & Co.—square, but smaller and better suited to the young fist. Such a book is Norman Hinsdale Pitman's *Chinese Fairy Stories*.[1] It is a pleasant volume—both in its narratives and in the simplicity of its colored illustrations. Children may probably be counted on to overlook the commonplaceness of these last. And, from *Yow-To's First Lesson* to *The Bride of the Dragon King* we like these moral but not too moralistic tales; tho we should like also to have had the writer indicate whether we owe them more to Chinese legend, or (as we suspect) to his own ingenuity. The author is an American teacher in the Provincial College, near Peking.

The Story of Jesus[2], which comes to us in the same edition, is adapted for readers of from eight to twelve years. The chapters here are not above two or three pages in length; in all, there are sixty-three of them. No doubt there is a place for this book, altho the task is not accomplished this time with exceptional grace. Neither are the pictures distinguished. However, the task of the adapter has been executed with perfect reverence. Almost as much may be said for the newly told *Stories from Shakespeare*,[3] but can it be that, "notwithstanding the immense popularity of the 'Tales' by Charles and Mary Lamb there is room for a new rendering," as the publishers tell us? We doubt it, in spite of Mr. Carter's good intentions, and the prettiness of Miss Hammond's work in colors.

More ambitious is the volume entitled, *The Boys Cuchulain*,[4] that all our future Presidents will mispronounce and enjoy. The illustrations in color are the work of Stephen Reid, and Miss Eleanor Hull, who, twelve years ago, brought out a grown-ups' *Cuchullin Saga*, is the author here. The subtitle of her new book is *Heroic Legends of Ireland*, and one is glad to have a cycle of hero tales not nearly so well known as the Arthurian legends, yet distinguished by some of the same qualities (and others of its own), brought within the reach of the youngsters. Even the unflagging Mr. and Mrs. Andrew Lang have slighted Irish folk-lore; and Miss Hull has done boyhood a real favor in offering it this gift. Miss Hull does not believe in "writing down" to the supposed level of child readers; like Hawthorne, she believes childhood to possess "an unestimated sensibility to whatever is deep or high, in imagination or feeling," and lets her theme soar "whenever such is its tendency." Partly for that reason, only such boys as have enjoyed other and easier myths are likely to appreciate these. But such, at least, are assured of a manly hero; tho some will, per-

[2] THE STORY OF JESUS, TOLD FOR CHILDREN. *By E. F. Jones.* New York: Thos. Y. Crowell & Co. $1.

[3] STORIES FROM SHAKESPEARE. *By Thos. Carter.* New York: Thos. Y. Crowell & Co. $1.50.

[4] THE BOYS' CUCHULAIN. *By Eleanor Hull.* New York: Thos. Y. Crowell & Co. $1.50.

haps, prefer a hero of more modern experiences; the author of *In the Forbidden Land* having very recently condensed his adventures in an illustrated volume that should kindle the spirit of even the unimaginative bantling.[5] Do you, however, consider Tibet too contemporaneous a matter for the youngster? Are you afraid that it might even tempt him into peeping into newspapers? Well, then, there is the story of Siegfried,[6] whose illustrator is Cuchulain, albeit the storyteller is another. The book is most invitingly divided into adventures, not chapters. Both text and pictures here are praiseworthy. The same, one may add, is true of Susan Cunnington's *Stories from Dante,*[7] a most handsome work, "intended primarily for younger readers," but one which "many older persons will find of interest and value as an easy method of becoming acquainted with the great Italian poet." This last statement is authoritative. It is quoted from the cover "blurb." No "blurb" is necessary in the case of the late Joel Chandler Harris's work—a specimen of which has just reached us.[8] Uncle Remus "goes without saying."

The number of great men, ere Rousseau's day and since, whose youthful minds have been stimulated through a reading of Plutarch, is inestimable. A contemporary publisher has thought, however, that the children of today are not "up" to the reading of their fathers and forefathers; so we have *The Children's Plutarch,* the Greek and Latin Lives being separately offered.[9] This constitutes a really excellent specimen of inexpensive book-making; and there are a few vigorous illustrations in black and white by Walter Crane. The retelling of Plutarch is still further distinguished by the collaboration of Mr. Howells, who tells us in one of his four-page introductions that the adapter's work

"is very well done, indeed, with a feeling for the original and a faith in it which no criticism or research can ever quite dissipate."

Mr. Gould himself adds a preface, and a biographical note in which the infant public is informed that *Πλούταρχος* was born at Chaeronea, about A. D. 46. Mr. Wheeler, on the other hand, offers the modern boy information about a much more decent hero: Napoleon Bonaparte.[10] His biography is from the British angle, and is handsomely illustrated. When we say that the book is "from the British angle" we mean, of course, that it is far more considerate of Bonaparte than a French biography ordinarily is. From Abbott to Rosebery the English-speaking historians have been hypnotized by the usurper. Mr. Wheeler treats him with exceeding gentleness in a volume that is overwhelmingly military.

The Incidence of Taxation. By E. R. A. Seligman. New York: The Macmillan Company. $3.

"Who pays the taxes?" This is the question which Professor Seligman sets out to answer. With a wealth of scholarship attested by abundant reference to books, reports and investigations in all languages, and with unbiased analysis of numerous, bewildering theories, he shows where the burden of all the imposts which hard-driven statesmen devise finally rests. As to who pays the tariff there has been ample discussion, tho little agreement hitherto; but the incidence of the most important of all taxes, the real estate tax, has been little considered by the mass of citizens. By instinct the rent payer feels that fluctuations in city taxation don't affect him, for, in any event, the landlord charges "all that the traffic will bear." This comfortable confidence, Professor Seligman shows, is largely justified, because, undoubtedly, the landlord pays the tax on the lot value, which in New York City is eight-thirteenths of the whole; and as to who pays the tax on buildings authorities are so divided that laymen cannot pretend to say. The writer

[7] Stories from Dante. *By Susan Cunnington.* With illustrations in color by Evelyn Paul. New York: Thos. Y. Crowell & Co. $1.50.

[8] Uncle Remus and the Little Boy. *By Joel Chandler Harris.* Illustrated by J. M. Conde. Boston: Small, Maynard & Co.

[9] The Children's Plutarch. *Arranged by F. J. Gould.* Two Volumes: Tales of the Greeks, Tales of the Romans. New York: Harper & Bros. 75 cents each.

[10] The Boys' Napoleon. *By Harold F. B. Wheeler, F. R. Hist. S.* New York: Thos. Y. Crowell & Co. $1.50.

agrees with the majority that the tenant ultimately pays this tax in the shape of higher rent; but the reasoning which supports this contention is not so conclusive as the reasoning in other parts of this able work. Complaining real estate dealers, who vainly strive at election times to persuade their tenants to join forces in fighting for reduced city budgets, would profit notably by studying some chapters of this book.

The American Flower Garden. By Neltje Blanchan. Planting Lists by Leonard Barron. Illustrated with ninety-two full-page photographs. New York: Doubleday, Page & Co. $5.

In a new issue from last year we receive as beautiful a book of gardens as has ever been published in this country, and which will receive a fresh demand. There are sixteen chapters which will give the choicest suggestions to those who will create a new garden or reform an old rugged one. Instructions are given for designs, whether of a formal garden or what is called an old-fashioned one, the wild garden, the rock garden, the water garden, the rose garden, and abundant instructions about trees, shrubs, perennials, annuals, bulbs and vines, and all with a wealth of attractive illustrations. Our only fear is that the fascination of the book may tempt the ambitious reader to try more than he can accomplish for himself. Yet the failure to equal the pattern will still allow great pleasure and no little measure of success. The publishers, who also issue the magazines, *Country Life in America* and *The Garden Magazine,* move their establishment this October to Garden City, L. I., where they will devote fifty acres to making such gardens as they so well describe. We should add that the lists of plants and trees for cultivation given at the end of each chapter are excellently selected.

A History of Hatfield, Massachusetts. By Daniel White Wells and Reuben Field Wells. Springfield, Mass.: F. C. H. Gibbons.

We have in this volume an account of the development of the social and industrial life of the old town of Hatfield from its first settlement, an account of the residences with personal reminiscences of the people who have lived in them, and brief historical accounts of religious and educational institutions, and genealogies of the families of the first settlers. Hatfield was settled in the first half of the seventeenth century by a colony mainly from Hartford, and it suffered in the Indian wars and had its part in subsequent struggles. Very properly the volume gives special attention to the early history. We have the story of those who were carried captive to Canada by the Indians, and of the man who kicked his minister when he prayed for the King and Parliament. Hatfield has reason to be proud that Williams College and Smith College were founded by its citizens and that the first president of Princeton and the third of Yale were its townsmen. It is a beautiful old Connecticut valley town which is now famous for its tobacco fields, as earlier for broom corn. A book like this is not for easy reading, but for biographical and genealogical reference, and to cultivate the local pride of the descendants of the first settlers, some of whom yet occupy the old farms, not crowded out by the Irish and Germans who have swarmed in these fertile meadows, and who now share the local patriotic spirit.

The Epic of Moses. Two volumes.
The Epic of Saul. One volume.
The Epic of Paul. One volume.
Poems. One volume.
Five volumes 8vo in set. New York: Funk & Wagnalls Co. $15.

Professor Wilkinson's *Epic of Paul* is well known, and his *Epic of Saul* and *Epic of Moses* have now been before the public for four years, and he has done well to gather these and his fugitive poems in uniform volumes. They are very handsomely issued, in legible type, and by varying the thickness of the paper the volumes are made of uniform thickness. We have previously given attention to the three epics, in which the biblical stories are developed in blank verse, with much ingenuity of invention and with theological digression to justify the ways of God to man. That he always succeeds in this is not clear, especially in such a climax as that which the author makes of the destruction of Korah. Dathan and Abiram. The stories of the three biblical characters are made interesting and readable, altho

there is lacking the majesty of Milton's measure. Of the short poems, which we are glad to see here collected, a number first appeared in THE INDEPENDENT. The most considerable is "Webster, an Ode," which expresses the author's fervent admiration for a statesman who has suffered much for his subserviency to the South, but who is one of the greatest characters in our history. We first recognized Professor Wilkinson's critical powers and literary skill long before he was made professor of poetry in the University of Chicago, when he published a series of trenchant criticisms on Lowell's writings and on other authors; and, later, in his vigorous discussion of religious questions.

The Fight for Conservation. By Gifford Pinchot. New York: Doubleday, Page & Co. 60 cents.

The title of this little volume gives us a hint before we open it that we are to find a tense and vigorous presentation of a timely subject, and we are not disappointed. Tho not a systematic treatise or an exhaustive analysis of the problem involved, Mr. Pinchot briefly sets forth the essential features of this most important national issue which, he points out, is fundamental to all other questions. Conservation, as a term for expressing a new movement in politics and reform, has become in three years a household word. In 1907 few citizens knew its meaning. Since the convention of May, 1908, its application has broadened until it represents a definite policy originally outlined by Mr. Pinchot, Mr. Newell and ex-President Roosevelt, and now, since the St. Paul convention, more than ever a prime factor in our national politics and problems. The great things sought by conservation are few and simple but too often obscured by false issues and unreal and conventional thinking. "A square deal for every man," "equality of opportunity" must be secured if the future of our country is to be safe. Essentially, therefore, Mr. Pinchot points out, the conservation policy involves "Morality breaking into politics"—and too long has this union been delayed. Conservation as defined by Mr. Pinchot is based upon three underlying principles; first, natural resources now existing on this continent must be developed for the benefit of the people who are here now; second, waste must be prevented; third, the natural resources must be developed and preserved for the benefit of the many and not merely for the profit of a few, in a word, the greatest good for the greatest number for the longest time. Tho there is not a great deal new in the book, much of the material having previously appeared in the form of magazine articles, the clear, fearless treatment of a vital theme, giving in small compass an unequivocal review of the problem reduced to its simplest terms, is a distinct contribution to the literature of the subject.

Fungous Diseases of Plants. By Benjamin Minge Duggar. New York: Ginn & Co. $2.

This book is the most comprehensive work on plant pathology yet published in America. The subject is comparatively new; indeed, the first work to which this title could be applied was Kühn's "Krankheiten del Kultergewächse," published in 1858. In no country, however, have the fungi attacking plants been more systematically studied than in the United States in the past twenty-five years. Excepting the publications of the agricultural experiment stations, and the smaller works of Burrill, Farlow, Underwood, Weed and Scribner, this is the first general text covering the whole of this field. A knowledge of fungous diseases and their prevention is a matter of considerable economic importance, inasmuch as they destroy annually large crops, and fields of cultivated plants. Dr. Duggar's book brings together in convenient and available form much exact information on this subject. Beginning with a description of "culture methods" and technique, he takes up the physiological relations: parasitism, germination studies, general relations to environment factors, artificial infection and the principles of disease control. Next, he treats the fungous diseases of plants, taking up the fungi in their taxonomic order. In the discussion three points are emphasized: first, the pathological effects and other relations of host and parasite; second, the life history of the casual fungus; finally, the remedial treatment. Dr. Dug-

gar's book bears very favorable comparison with the Continental literature on this subject, with Marshall Ward's work in England, with Frank's, Hartig's, Sorauer's and Winter's in Germany, Cornu's and Prillieux's in France, and Comes's in Italy. The book is written in a clear, direct way and contains a wealth of material valuable for the scientist and the agriculturalist alike. It is well printed, with a large number of excellent illustrations.

Literary Notes

....The *Amerika Esperantisto*, of Chicago, offers a grammar pamphlet of Esperanto free to any one who will write for it.

....The London publishers, Smith & Elder, are preparing a new Biographical Edition of Thackeray, which will be issued in honor of his centenary—1911. For this, Lady Ritchie has rearranged the Biographical Prefaces, making changes and additions. The edition will consist of twenty-six volumes. The earlier Biographical Edition was issued in America by the Messrs. Harper.

....Max Nordau contributes to the New York *Bookman* an account of Björnson's *Paris Days*. Björnson turned to Paris chiefly as a refuge from the storms of his native country's politics—teapot tempests. He met few Frenchmen there; his society was exclusively Norwegian. Mr. Nordau narrates the petty circumstances leading to the ultimate coldness between him and the great novelist. One fall evening, in 1884, the latter sipped Spanish wine with Nordau, and discussed American customs duties. Some of his statistics were unbelievable, which his companion did not fail to point out; "upon which . . . he flew into a passion, and replied almost in a shriek, 'How dare you contradict me? You forget who I am. I will not tolerate being so treated.'" Nordau rejoined: "Herr Björnson, it is not generous to adopt this tone to me under my own roof, where consideration for a guest prevents my answering in a similar way," and he adds: "We never saw each other again."

....Don C. Seitz, of the New York *World*, is once more an author. This time his book is entitled *Elba and Elsewhere*, and the illustrations thereof in caricature are by Maurice Ketten. The text, as may be supposed, deals with travel and describes many visited places. Mr. Seitz says what he has to say very characteristically and very entertainingly. Here and there a novel idea stands forth as only Mr. Seitz can make it stand, and the reader laughs merrily with, but not at, the author in his kindly jests. His comparison of the Casino at Monte Carlo with the New York Stock Exchange is a fair example of the epigrammatic way in which Mr. Seitz "covers" his subject. He uses the word "purveyed" twice in the book, once on page 40 and again on page 70. On page 24 Mr. Seitz in a reference to the armorial bearings of Monaco remarks that they should be the plucked goose and the sheared lamb, rampant, whereas the artist thru lack of understanding or by failing to read the text carefully has portrayed the lamb *en passant*. The book is nevertheless very pleasant reading. (Harpers. $1.25.)

Pebbles

"Mrs. Davis has a new little baby."

Breathless interest.

"It looks just like its mother."

Chorus: "Poor little thing!"—Buffalo *Express*.

"Gardening has restored young Spriggles to health. Great thing, gardening."

"It was gardening that knocked him out in the first place."

"How strange. What kind?"

"Roof."—Newark *News*.

Two lawyers before a probate judge recently got into a wrangle. At last one of the disputants, losing control over his emotions, exclaimed to his opponent:

"Sir, you are, I think, the biggest ass I ever had the misfortune to set eyes on."

"Order! Order!" said the judge, gravely. "You seem to forget that I am in the room."—*The Green Bag*.

Old Lawyer—Young man, it strikes me that you are very much attached to Miss Plainwell.

Young Attorney—She owns three hundred acres of land in Kansas.

Old Lawyer—What has that got to do with the case?

Young Attorney—Why, isn't that sufficient grounds for an attachment?—Chicago *News*.

J. Adam Bede, of Minnesota, the humorist of the House while he was in it, and whose humor still bubbles, despite the fact that he was elected to stay at home, tells the following on a friend of his who travels for a carpet firm:

"My friend," said Bede, "is of a saving disposition, and he recently had to make a longish jaunt with two trunks. Arriving at the station he approached a stranger standing on the platform and said: 'Are you going to Chicago on this train?'

"'I am.'

"'Have you any baggage?'

"'No.'

"'Well, friend, you can do me a favor, and it won't cost you a cent. I've got two good sized trunks here and they always make me pay excess for one. You can get one checked on your ticket and save me some money.'

"'Yes, but I haven't any ticket.'

"'But you said just now that you were going on this train.'

"'So I am. I'm the conductor.'"—San Francisco *Examiner*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Condition of the Republican Party

MR. PAYNE, chairman of the House Committee on Ways and Means, defended the new tariff, last week, in the convention which had nominated him for another term. It was, he asserted, "a general revision downward," and "no amount of special pleading, no misstatement of facts, nor any suppression of material facts" could "ever make it appear otherwise." There is no special pleading in the recent report of the Government's Bureau of Statistics, showing that the average rate on dutiable imports for the first year of the new law was 41.3 per cent., against 42.2, 42.8 and 42.4 per cent. for the last three years of the Dingley tariff. These figures prove that the "general downward" movement has not been a headlong and precipitous one. Mr. Payne's friend, Vice-President Sherman, recently asked a Western audience to consider whether it would not soon be "necessary to check a sentiment for downward revision and resort to revision upward." The chairman of the Ways and Means Committee does not go so far as that, but he appears to believe that the new tariff is a most commendable and successful example of wise legislation.

In his address to the convention he said nothing about the present condition of the Republican party, which is suffering by reason of the Payne-Aldrich tariff and on account of menacing factional quarrels which originated in what he calls the "general revision downward." And yet the condition of the party is such that it deserves the very careful consideration of leaders like Mr. Payne and of conventions like the one that nominated him again for a place in the House.

He must have had in mind certain warnings and expressions of opinion which should appeal with much force to a confirmed standpatter and a prominent officer of the Cannon organization in the House. First, there was the election, in the Fourteenth Massachusetts District, of Eugene N. Foss, a Democrat. In only sixteen months a Republican plurality of 14,200 was followed there by a Democratic plurality of 5,640. In a district which had never before been represented by a Democrat, the Republican vote fell from 20,909 to 9,340, and there was a Democratic gain of 6,700. The issues of a national character were the new tariff, reciprocity with Canada, and the high cost of living. Not long afterward, the Rochester district in New York, which had been represented by Republicans continuously for twenty years, elected James S. Havens, a Democrat. Here a Democratic plurality of 5,440 followed a Republican plurality of 10,160, and the Republican loss was 14,000. In both these districts the dominant party had been led by confidence in its majorities at previous elections to nominate men that were weak or unworthy. It suffered by reason of its lack of political common sense as well as on account of its tariff legislation.

Maine has elected a Democratic Governor for the first time in thirty years, and will send a Democrat to the Senate in place of Mr. Hale. In Kansas, four standpat members of the House have been rejected. In Iowa at least 60 per cent. of the Republicans support the Senators who voted against Mr. Payne's tariff bill. In a convention they cheered one of these Senators who said: "I refused to follow Aldrich, Hale, Lodge,

Cannon, Payne and Dalzell into a sneering, open, contemptuous repudiation of my party platform." Six of Speaker Cannon's committee chairmen have been defeated in primaries. One of these is Mr. Tawney, chairman of the important Committee on Appropriations. It was in his district, at Winona, Minn., that the President made a memorable address in defense of the new tariff. Mr. Cannon himself has become so unpopular and so heavy a load on the party's back that his old supporters in the House shiver at the thought of his making speeches in their districts. In several States, factional bitterness due to a division upon national questions is intensified by local quarrels. An "old guard" of petty Republican bosses in New York, affiliated with the Vice-President, is striving to retain its hold upon legislation and the offices. while an investigating committee, driven to its work by the foul disclosures of the Allds inquiry, is daily taking testimony which excites the anger of the people against these bosses and the corporations which they and their legislative allies have served.

To the blindness of regulars who long ago ceased to learn anything in politics has been added the unwise treatment of insurgents by higher authority. Months ago there were rumors that the Republican legislators who earnestly criticised and vigorously opposed the Payne-Aldrich tariff had been punished by a withdrawal of the patronage to which by custom they were entitled. But proof that these rumors were well-founded was not shown. In the remarkable Norton letter, the President now permits it to be known that he did so withhold patronage, but has decided to restore it. Does not the average man say that it was withdrawn in resentment before the political strength of the insurgents had been developed—possibly with an expectation that in this way they would be crippled —and that it was given back only after their political power had been clearly shown? The President was unfortunate in those advisers who induced him thus to use Federal patronage for punishment or restraint. Official admission that it was so used merely intensifies the bitterness of factional revolt.

Democrats are rising to their opportunity. This has been shown by the nominations of Dr. Wilson in New Jersey, and Judge Baldwin in Connecticut, and by the popular demand that Mayor Gaynor shall become the party's candidate for Governor in New York. All signs point now to a large measure of Democratic success in the States and to the election of a Democratic majority in the House. Those who are familiar with the history of Congresses containing a Republican majority in the upper branch and a Democratic majority in the lower one, with a Republican in the White House, can foresee the effect upon legislation in a general way. It can be said, without questioning the wisdom or sincerity of either party, that the work of such a Congress will leave much to be desired.

The loss of ability to carry forward steadily a legislative program in the planning of which the progressive element of the Republican party has exerted much influence will be a heavy price to pay for the blunders which caused the insurgent division and opened the door for the contests which that division has promoted. Tariff revision offered to the party and to the new President a great opportunity. It is deplorable that they did not take advantage of it for their own good and that of the public. It is unfortunate for them and for the public that thus far they have shown no evidence of a purpose to correct promptly the errors that were made. We do not overlook the Tariff Board, by means of which it was possible to do something, but the people do not know that this board has made any progress. Political conditions required that some official proof of its activity should be given to the public. A recent promise that its first report would be presented "within two years" could have no good effect in this year's national campaign.

The prospects of the Republican party, so far as the approaching elections are concerned, could even now be improved if there should be a conference of leaders, if concessions should be made, and if an agreement could be reached with respect to a policy and a program to be supported in an appeal to voters. But the factions are so sharply at variance that no movement toward union is expected. The "progressives" are not inclined to make any advances, and many

of the "regular" leaders will not realize until after the polls have been closed and the votes have been counted that they have lost anything.

Mayor Gaynor's Letter

MAYOR GAYNOR'S letter to his sister in which he gives her an intimate account of his experience and feelings after he was shot is one to excite sympathy. We see a brave, manly man fighting almost inevitable death, and supported by the affection of his family. But there are in it two topics that arouse thought as well as sympathy.

In one of them we get a glimpse of his outlook on that which may be after death. He puts it thus:

> "I was not a bit afraid to die if that was God's will of me. I said to myself just as well now as a few years from now. No one who contemplates the immensity of Almighty God and of his universe and his works and realizes what an atom he is in it all can fear to die in this flesh, yea, even tho it were true that he is to be dissolved forever into the infinity of matter and mind from which he came."

Far be it from us to belittle the courage and the incoherent faith which looks undismayed into the future, uncertain whether that future means the conscious existence of the soul in an eternal state, or its dissolution with the body. And God forbid that we should disparage that measure of faith in Almighty God which cannot decide whether his is a conscious will like ours, or whether he is to be imagined as "the infinity of matter and mind" out of which all things are evolved. God could not condemn one who by honest searching could not find out God. It is a great comfort and support to be able so to find him; but if one questions reverently as Mayor Gaynor questions, then let one live as God would have him live, if there be a God, and let him live in precisely the same way, equally under the imperative law of justice and love, because it is the law of "the infinity of matter and mind" which we call Nature; and that will be good for the soul in this world, and in the next, if there be a next. Zeno also argued well.

The other matter of general interest in the Mayor's letter is his denunciation of the yellow journals, and particularly of the Hearst journals, which have so severely attacked him, particularly for his refusal to interdict the pictures of the prize-fight which were excluded from so many other cities. Particularly he is offended at a "terrible cartoon," and at falsehoods invented about him. The cartoon was coarse and bitter, but it could not have been taken as literal fact, and one with a tough hide would not have minded it; but to invent an interview with a Y. M. C. A. committee on the pictures was an outrage and was meant to do him an injury. Being Mayor, and being venomously attacked, this was likely to excite cranks and fools to assassinate him. As it was, the man who shot Mayor Gaynor was not incited to the act by this published abuse, but by a fancied personal wrong; yet the Mayor is clearly right in his severe criticism of such crude and malicious abuse. Unfortunately it serves its purpose, and it pleases the class of readers for whom it is purveyed. It is crass and coarse and vulgar, and yet we are not sure that it is any more malicious than the abuse which we see every day, repeated with a persistent malignity, and in journals that are called high toned and high priced, not cheap yellow trash, but well written, spiced with wormwood, addressed to men of culture in the clubs, and thus attacking and misrepresenting men of commanding position whose progressive measures offend the "interests."

We have not been wholly an admirer of Mayor Gaynor; and yet he has, with some shortcomings of temper, made a good Mayor. We presume he will be nominated by the Democrats for Governor and may very likely be elected. It is about time for a Democratic Governor, for it is a good while since David B. Hill and Grover Cleveland. Because the people believe that it is his purpose to act as if there were a God, to act in obedience to the moral laws imprest on "the infinity of matter and mind," doubtless many Republicans will be glad to vote for him. To be thought honest is a great political asset.

The Drama of the People

THE cinematograph is doing for the drama what the printing press did for literature, bringing another form of art into the daily life of the people. Plays are now within the reach, literally, of the

poorest, as are good books and good pictures. The secret of cheapness in art as in other things is mechanical multiplication. So long as a play required for each presentation the active co-operation of a considerable number of more or less talented persons it could never be cheap, and in its better forms it was necessarily accessible to a comparatively small part of the population. But once on a celluloid film a spectacle can be reproduced indefinitely, the good as cheaply as the poor, and superiority is no longer handicapped. The same effect is shown in the field of literature. Among the dollar and a half books published every year there is a large proportion of trash or worse, but the volumes sold for fifty cents or less comprise the world's best literature.

The moving picture shows are in general superior, both artistically and morally, to the vaudeville and melodrama that they have driven out of business. It is a mistake to suppose that their amazing popularity is due altogether to their low price of admission. On the contrary the cinematograph has some advantages, not only over the cheap shows which it at first rivaled, but over any previous form of dramatic art. The most conspicuous of these advantages is spaciousness, distance. The stage is at the best but a narrow platform. The characters must dodge out of the wings or pop out of a door at the back. They have their exits and their entrances, but all both necessarily sudden, more "dramatic" than lifelike.

But the moving picture show has a third dimension. The characters have a gradual approach and recession. The railroad train rushes out toward the spectator; the horseman rides off thru the woods or across the plain until he disappears in the distance. The scene of action is all outdoors. Rejoicing in this release from the limitations of the old drama, the moving picture plays at first were mostly routs. They gave the spectator a run for his money, a chase of comic or tragic character.

The abolition of the painted scenery of the backdrop gives to the drama a sense of reality, a solidity, that it never had before. The mountains and clouds do not now show spots of threadbare canvas. The tumbling waves do not throw up a dust. The rocks and trees do not shiver at the touch of the actors. The sunshine is such as never came from calcium or carbon, and the wind that blows about loose hair and garments is not that of the electric fan.

In the *al fresco* performance of troupes of summer players one corner of a lawn must serve as scene, helped out by a few potted shrubs and by trees with artificial limbs. The modern manager limits his playwrights to three or four changes of scenery on account of expense and the time it takes to set them. But for the cinematograph there are no such restrictions. There may be as many scenes as in an Elizabethan drama, for the setting may be changed in the twinkling of an eye, or it may be gradually shifted to follow the actors without jar or rumble. The moving scenery of Wagner's "Parsifal" and the treadmill of the racecourse plays, which aroused the admiration of our fathers, seem to us absurdly crude and clumsy.

The divided stage, with its broken partition end on to the spectator, may also be sent to the lumber room. The moving picture has it in its power by alternating scenes to show us what is going on simultaneously in two different places, inside and outside a house, for example, or in adjoining rooms. He can vary at will the distance of the stage, giving us a closer view at critical moments. When we would see more clearly what emotions the features of the heroine express or what is in the locket she takes from her bosom we have no need to pick up opera glasses. The artist has foreseen our desire and suddenly the detail is enlarged for us until it fills the canvas.

On the ordinary stage there is no good way of showing what is being written or read, however essential this may be to the plot. The actor has to read aloud his letter as he writes it as tho he was not sure of its grammar. This device is no longer necessary. The incriminating note, the long lost will, the visiting card, the portrait, and the newspaper paragraph are shown to us directly and we do not have to hear of them at second hand. We see instantly what the hero sees when he puts the spyglass to his eye, and what the housemaid is looking at thru the key-

hole. Ghosts, visions and transformation scenes are accomplished in a manner truly magical, without the aid of the old stage contrivances, the steam curtain, the trap and the *deus ex machina.* Flying is as easy as walking. Acrobatic feats are unlimited. All miracles are possible, even that most marvelous of miracles, the reversal of the course of life.

The cinematograph theater is international. We do not have as formerly, translations, adaptations and misinterpretations. We have the real play, exactly as presented in Paris, London or Berlin. Villages in the Rocky and Carpathian Mountains look at the same scenes on the same day. Still, in spite of manifolding and syndicate management, some differences of national taste may be observed by one who visits the popular theaters of various European countries. Americans seem to prefer comic incidents corresponding to the usual short story; Germans, the sentimental novelette; English, melodrama; French, passional intrigue, and Italians, classical tales. But in any place one may often have the opportunity of comparing the acting of several different nationalities.

First night performances are no longer the privilege of the favored few. Every moving picture show is an original and unique presentation. The actors have had no time to become jaded and mechanical.

The replica of a painting, tho by the same artist, is not esteemed so highly as the original. The three hundredth replica would be thought ridiculous. Yet of such repetitions our drama has hitherto consisted. The cinematograph actors, once their drama is satisfactorily played, are released from it and may go about their business of preparing another.

Their achievement has now the permanence of a painting or a statue. Dramatic art may have a true history and make real progress now that direct comparisons can be made with the past. The great actor will still have fame but his head will not be turned by constant personal adulation. It is not the least of the advantages of the cinematograph that dead men cannot rise to receive the applause that follows their death-scene.

The disadvantages of the cinematograph in comparison with the ordinary drama cannot well be discussed at present because we do not know which of them are inherent and which remediable. The flickering and jerky action, now often so disagreeable, can be obviated by more rapid exposures and better adjustment of apparatus. The cinematograph drama is still pantomime as was all drama everywhere in its primitive form. But the phonograph is losing its metallic twang and may soon be satisfactorily synchronized with the running film. The problem of photography in natural colors may be regarded as solved altho it cannot in its present stage stand the quick exposure and great enlargement necessary for moving pictures. If once the cinematograph drama can be made vocal and given lifelike color, the only thing further required for a perfect illusion of reality is a real perspective. It can be done by giving our two eyes different pictures and this is not impossible. It has been accomplished for small stationary pictures by means of red and blue spectacles and other contrivances. How it can be managed we do not know. If we did we would not be engaged in writing editorials for a living. But we expect to see some time a stereoscopic colored speaking moving picture drama and it will be well worth seeing. It will be a new form of fine art not unworthy to rank with the elder arts.

Need It in Their Business

Mr. C. W. Morse, sometime financier, purveyor of ice and steamboat accommodations, late of New York, but now dwelling in the Federal prison at Atlanta, Georgia, has made a discovery that should interest a few American millionaires and some other persons. Mr. Morse is operating a typewriter in cataloging the books of the prison library. When Mrs. Morse visited him the other day he confided the discovery to her, and so the reporters got it. "I never knew before," he remarked, "how little I knew; how little I could do any one thing well."

Mr. Morse is a good representative of others, whose intellectual poverty is not concealed by their material affluence. His self analysis is applicable to, let us say, five millions, more or less, prosper-

ous American citizens that have thus far led an out-of-jail life. Possibly for this reason they have not yet made for themselves Morse's discovery in psychology. Only a few of them will get an opportunity to make it in prison. The others, we must hope, will at least reflect upon the vast possibilities which Mr. Morse's experience reveals.

Merely by way of suggesting some of the possibilities, one might ask what would happen if the "brilliant" and "rapid" sort of American business man, to which our remarks apply, knew more than a "little," or could do any one thing well. For one thing, it would be possible for the United States to have a monetary and banking system approximately like those that have been devised by the civilized nations of Europe. For another thing, the American people might make a beginning upon the formidable task of adjusting their tariff schedules to elementary principles of morality and economics. For yet another thing, American business might, in course of time, become the art of supplying the wants of the community on reasonable terms, instead of the art of marketing fake values.

American business men as a whole are neither better nor worse, neither "brainier" nor stupider, than business men in other parts of the world, but American "business" itself has been infected with a spirit of conceit and humbug, and American business methods have been pretty thoroly bedeviled by men of the "rapid" kind and caliber. Upstarts, fakers, braggarts, from their childhood up, they have swelled and blustered, and manipulated "transactions" for all the world as if they had exceptional intelligence and "grasp," when, as a matter of fact, their entire intellectual and moral capital has consisted in assurance and nerve, and their entire success, so far as they have attained success, has been made possible by the boundless and bottomless ignorance of the sort of people that have admired them and aped them.

With few exceptions the "business men" of this particular stripe may be identified with the "business men" who love to air their pet theory that "college spoils a man for business." They have always "begun at the bottom of the ladder"; they have always "worked their way up." They have no patience with "theorists" or with the "academic" view.

Now it is quite true that the study of Latin and Greek, or the study of political economy and constitutional history may not fit a young man for "business," but there is one thing that these self-made and self-sufficient business men overlook. A college education includes not only the pursuit of studies prescribed in the curriculum, but also the experiences and disciplines providentially vouchsafed to college youth in their freshman year. To those who have enjoyed these experiences and profited by them it is unnecessary to explain their subtle and permeating efficacy. It is enough to say that there is something about them which ordinarily insures a young man against ever again being certain particular kinds of a fool.

It would occupy the entire staff of the Census Bureau for a decade to compute how much American character, American culture, American citizenship, and even American material prosperity, in any legitimate sense of the term, have suffered by reason of the spirit of bluster and brag and pretense in American business life. Horace Greeley once said that the American people needed, above all else, "a good licking," but that unhappily there was no people that could "lick" them. We will be less severe and less confident than Mr. Greeley was, and summarize our reflections in the single observation that there is nothing which American "business" so much needs as the chastening disciplines of an old-fashioned, unreformed college freshman year.

A New Immigration

A NEWSPAPER item which has probably attracted small attention—there are so many newspaper items nowadays—gives the report from New Orleans that arrangements have been made to bring one thousand peasant families from France to settle and cultivate 50,000 acres of land in Southwest Louisiana. It seems that one Gustave Camoin, a French citizen, came to Louisiana about a year ago and signed a preliminary contract for the purchase of the land; then returned to his own

country, organized two million dollar corporations, and undertook a lecture tour of the provinces with the salubrity and fruitfulness of Louisiana for his text. He is now back again in New Orleans, has consummated his purchase, and has made arrangements for the beginning of development work.

The first hundred families of the new emigration are expected to land at New Orleans from Marseilles in February of the coming year. Others will follow as fast as the land can be opened up for settlement. But it is not the details of this undertaking which attract attention at the present moment; besides, we have few details, when all is said; it is the fact that such an undertaking is made at all, in an age when superficial observers are proclaiming the decadence of France, and statisticians affirming her sterility. It reminds us that, tho England is the colonizing power to which this country owes its first debt, there was a day when France developed plans for colonizing, not two parishes or three, but a whole continent. In the "grand century," France thought in terms of empire. And tho there is a great contrast between the project of the century and the experiment of today, it is a fact that France has given to the development of her African empire, of which the Anglo-Saxon world has heard so little, the same largeness of vision, the same courage, and a wider wisdom.

If the Anglo-Saxon world has, indeed, heard so little of this African empire of the French, that is partly because the colonies over which the tri-color floats remain largely administrative; for the number of French immigrants has been small enough. It is difficult to make the Frenchman see the expedience of colonizing Africa, or America, or Asia. He is happy at home; he is not forced out of his country by the pressure of population, as is the Englishman or the German. It is only the ambitious Basque who seeks out South American pastures; and the Basque is hardly a Frenchman at all. Whence, it would be interesting to inquire, does the Louisianan immigration draw its constituent members?

The news item does not tell us; that they will set sail from Marseilles is the most it vouchsafes. One may rest assured, at any rate, that the worthy Gustave Camoin, in preaching this new agricultural crusade, has dwelt upon the fact that in entering Louisiana the immigrants will not really be leaving France at all. They will not be obliged to learn a new language, unless they wish to do so; they will find parish priests to marry them or bury them in tolerable French-Latin. And we venture to say that these newcomers will prove, in thriftiness and energy, desirable additions to the population of the State that still bears the great Louis's name.

Woodrow Wilson

The president of Princeton University properly resigns his office when he accepts the Democratic nomination as Governor of New Jersey, with the fair expectation of being elected by Republican votes. It would be impossible for him to fill both positions simultaneously and do justice to either. At the same time the position at the head of so great a university as Princeton, a position to be held for life, is one that offers to a man ambitious of the most useful service larger opportunities than that of Governor for two years. His idea of the limitation of the duties of the executive he thus defines, after recognizing the right to recommend and to veto legislation:

> "The power incident to the Governor's office will never be used to coerce the Legislature into subordinating its judgment to my own. The law-making power will remain where it has been placed by the organic law of the State, in the hands of the elected representatives of the people."

That is a safe position, laid down by all our constitutions, but everything depends on the meaning of the word "coerce." A President or a Governor can have great influence, and he has great power. It is a rare executive who in the exercise of his appointing power will not use it to recommend and persuade; and it is the exercise of this power which is called coercion.

Mr. Bryan an Insurgent

It is greatly to the credit of William J. Bryan that he declares that he will not support Mayor Dahlman, the Democratic candidate for Governor of Ne-

braska. The conditions are these. The attempt is being made in the State to enact a county option law, and also a law requiring the closing of all saloons at 8 o'clock. In the Democratic State Convention a resolution opposing a county option law was defeated by the vote of 638 to 202; but yet Mr. Dahlman declares that if the legislature shall enact such a bill, or an early closing bill, he will veto it. Under these circumstances Mr. Bryan will enter the campaign for other Democratic candidates, but not for Mr. Dahlman. That is, Mr. Bryan prefers principle to party fealty, and he does it at some risk. Mr. Dahlman reminds Mr. Bryan of twenty years of support given him, and taunts him with the prophecy that he has got hold of the "wrong end of a red-hot poker," and that in the election he "will get the biggest trimming which has been given in this or any other State in several decades." We had not thought so ill of Nebraska, and are glad to think so well of Mr. Bryan.

The Belligerent Storer

Mr. Roosevelt has found that

"Heaven has no rage like love to hatred turned,
Nor hell a fury like a woman scorned."

He had done better not to start a Sapphira club. It is not necessary for us to go into the merits of the controversy which Mrs. Storer has revived, finding a medium in the Springfield *Republican,* further than to say that it seems incredible that Mr. Roosevelt while President should ever have seriously thought of promoting her husband to be Ambassador at Paris or London, for he is not a man of the caliber that would warrant it, however able his busy wife may be. We can imagine that President Roosevelt was quite flattering in those days to his old friend, and that they gathered hopes that could not be met. As to the break over the Archbishop Ireland matter, it was very unwise in Mr. Roosevelt to allow the Storers to tell the Pope that he hoped the Archbishop would be made a Cardinal. Mr. Roosevelt never meant it to be known, and it must have been thru some indiscretion on the part of a Storer tongue that the subject of their interview with the Pope became public. The present revival of a story better forgotten must be even more disagreeable to Archbishop Ireland than to Mr. Roosevelt, for we can hardly conceive that the Archbishop gave permission to publish his letter.

Lynchings of Italians

It is one thing to lynch a negro, or even a white citizen, but quite another to lynch Italians not naturalized. At Tampa, Fla., last week two Italians were seized from two deputy sheriffs and were hanged by a mob. The Italians were charged with killing a man in a strike conflict and were being taken by the officers to jail. We do not know whether they were citizens of Italy or had been naturalized, but we remember one very serious case in New Orleans where Italian citizens were taken from jail and lynched, and it caused great humiliation and trouble to our State Department. Italy wanted to know why we could not protect her citizens, and we had to say that under our Constitution the National Government is powerless to protect. It is subordinate to the State authority, and we had to pay an indemnity to the families of the murdered men. But it is not quite clear that the National Government is powerless. Perhaps Congress could enact a law that in case of a capital charge the accused, if an alien, should be tried by a Federal court and be under the protection of Federal officers. At any rate some way ought to be found by which Federal authority should investigate and punish in case of the lynching of the subject of a friendly nation.

Good Reading

It is a real revelation that comes to us thru the *New York Sun,* as to what is read on the East Side in New York. It seems that there is no more popular book, either in the libraries or as a good seller, than the Bible. One branch owns fifty copies, and these are all the time in circulation. It is a wonderful volume of great poems and essays, and its fiction alone appeals to all sorts of minds. After the Bible it seems that our common novels get no welcome compared with the good old

sound novels of Jane Austen, Walter Scott, Dickens, and Bulwer-Lytton; whose works are worn threadbare in tenement homes. "Two copies of the latest thriller will suffice on a Rivington street circulation shelf, where from twenty-five to thirty copies of David Copperfield are not enough to meet the demand." Actually Shakespeare's works are in constant demand. The last monthly list of additions to one library included the Bible in several languages, ten of Shakespeare's plays, essays of Ruskin, beside novels of Dickens, Thackeray and Scott. What will come of this we know very well. It will be another of those revolutions or evolutions in society that will bring to the top what is now the bottom; while the degenerate readers of rotten rubbish, altho living in style, will go to the bottom.

Modernism Defined

We are glad to get a careful definition of modernism from *America,* in an intelligent article giving an account of the Sillon and its condemnation by Pius X. It is as follows:

"Modernism consists in transporting the spirit and tendencies of democracy into religious thought and the institutions of the Church, and reduces doctrinal belief to the religious experiences of collective Christianity, thus restricting the rule of the hierarchy to that of merely registering, expressing and formulating these collective aspirations."

This definition assumes much. It assumes that a hierarchy is essential to the Christian Church, which is much denied, and which is not to be gathered beyond serious question from the Gospels or the Epistles; and which is contrary to the fact of common knowledge, that there are indubitable Christian bodies which are not hierarchical. It next assumes that to this assumed hierarchy belongs the right of expressing and formulating the Christian faith, which is again not indubitable. It further errs in definition in that it declares that Modernism depends on "religious experiences" and "aspirations," when, in fact, it depends chiefly on the evidence secured by historical criticism. It searches not so much inwardly as outwardly, seeking not feeling but objective truth. *America* objects to Modernism because it "transports the spirit and tendencies of democracy into religious thought and the institutions of the church." What does this mean? The spirit of democracy consists in allowing the people in general to search for what is wise and right and accept and act it; to let every one do this, and not merely kings or an aristocracy. Why is not that spirit right in the Church? Why may not Lord Acton or a university professor be as capable of finding religious truth as a high ecclesiastic? The spirit of democracy, of free search for truth by everybody will not hurt any Church.

The Prince of Wales

An interesting piece of news is presented to the public in the statement that the investiture of the new Prince of Wales will take place next year in Wales, in accordance with the wishes of the Welsh people. The time will be July; the place, Carnarvon Castle. The London *Times* considers that English opinion will generally agree with that of the Welsh committee which fixt upon Carnarvon, not because Edward I there solemnly presented his infant son to the Welsh people as "a Prince of Wales who spoke no English"—for history, upsetting tradition, teaches that, tho Edward II was born at Carnarvon in 1284, he was not created Prince of Wales till 1301, at the Parliament of Lincoln—but for much better reasons:

"Its fine position, in the midst of magnificent scenery, gives it a natural primacy among the towns of Wales. Its great feudal castle, begun by Hugh Lupus at the end of the thirteenth century, vainly attacked by Glendwr, and twice captured and recaptured during the great civil war, is by far the first of the old feudal strongholds of Wales, and . . . the least ruinous. Moreover, it is Crown property, whereas Cardiff Castle is a private dwelling. It is right that such a ceremony as the investiture should take place in such a building, splendid in itself and teeming with historical associations. For we may take it that this will be a real investiture."

The Thunderer expresses the hope that this rite, which follows the still greater "Solempnity" of the coronation by only a month, "will bring all Welshmen to feel the greatness and the Imperial significance of what some of their leaders disparagingly call 'the English connection.'"

A priest writing to *The Catholic Register*, of Toronto, is far less charitable to the Oberammergau people than is the Protestant Professor Rauschenbusch in our present issue. He criticizes the Passion Play as a money-making scheme of the thrifty villagers:

"Two-thirds of the total receipts go to the individual players. These receipts were in the neighborhood of a quarter of a million dollars ten years ago, and they will be much greater this year. One-third of the receipts go to the community. What proportion of this is spent for religious purposes? In the published reports of how the money was spent, in 1900, there is not a trace of a cent having been devoted to purely religious purposes, tho a small proportion was, 'tis true, given to the hospital. The greater part was devoted to deepening and straightening the bed of the Ammer—a purely commercial enterprise.

"The villagers have not the slightest intention, tho they are taking in enormous sums of money, this year, to build a little chapel, well supplied with altars, for the convenience of visiting priests."

The automobilists resent the published charge that a multitude of people are foolishly mortgaging their homes that they may buy automobiles. The editor of *The Horseless Age* reports letters sent out to 24,000 bankers in the United States with blank forms, asking them to report to them as to people they knew who had mortgaged homes or borrowed money to buy an automobile. Answers had been received from 4,830 men, who reported 198,216 motors in their towns of which not more than 1,254 have been purchased by placing a mortgage, and not more than 7,475 have borrowed without a mortgage, that is in all, 4.4 per cent. We doubt not that of these last many have bought them for their business and found them profitable.

Like his predecessor President Taft wants the Panama Canal fortified; and until the canal is finished he wants two new battleships a year, understanding that after that the efficiency of our fleet will be doubled and one a year will be enough. If the canal is to be completed in five years, and it takes about three years to build a battleship, only those put on the stocks for two years will be in readiness to take advantage of the canal at its opening, and we might drop to one in three years. But what is the likelihood of our going to war in these next two years? Battleships are getting to be an expensive luxury and not a necessity.

There was an attempt the other day by a mob to take a negro prisoner out of the jail in Frankfort, Ky., but the bravery of the county officials saved him. Judge R. L. Stout, in requiring the grand jury to investigate the matter thoroly, said well:

"If citizens are to be allowed to take the administration of justice into their own hands and decide who shall be punished and who shall not, it will not be long until all private affairs and business matters will be controlled by such methods and anarchy will reign. That means there will be no law and no redress for any citizen. There is no bravery or courage in any man who joins with a lot of other men to kill a poor, cowering, trembling prisoner who is already in the custody of the law."

We are reminded by a correspondent that Chief Justice Taney, in his celebrated decision affirming the constitutionality of the Fugitive Slave Law, did not give it as the opinion of the court that negroes had no rights that white men were bound to respect, but that such was what the "fathers" believed at the time when the courts were established under the Constitution. We see no great difference, inasmuch as the decision was rendered in part on the basis of that belief.

Many readers of the articles in THE INDEPENDENT by Mrs. L. H. Harris will sympathize with her on the sudden death of her husband, who was for fifteen years professor of Greek in Emory College, Oxford, Ga., and who has now for seven years been connected with the educational work of the Southern Methodist Church, in its publishing house in Nashville. He was a man of unusual talents and attainments, and his service for his Church will be much missed.

The shooting season is on, which is also the season for shooting one's father or brother or best friend by mistaking him for a deer. Nearly every day brings a report of this sort. If insurance companies are inclined to cancel risks on aviators they might well consider the question whether it is safe to insure the hunters in the northern woods.

Insurance

The Bretton Woods Convention

The twenty-third annual convention of the International Association of Accident Underwriters was held at Bretton Woods, N. H., on September 20, 21, 22 and 23. Walter C. Faxon, vice-president of the Aetna Life Insurance Company, of Hartford, Conn., presided and made an address of welcome. In his address President Faxon made a strong plea for the reform of policy contracts. Hon. Arthur I. Vorys, of Columbus, Ohio, dwelt upon the advisability of private ownership and government supervision of insurance. His address was entitled The Tendency to Socialism. In his remarks he recognized and paid deserved tribute to the wide influence exerted by insurance men. Prof. Irving Fisher of Yale University spoke before the convention on "Insurance Companies and the Public Health." There were also other addresses.

Enthusiasm

Railroad managers figure that it costs more to slow down the engine, stop one minute at the station and start again, than it does to run the twenty or thirty miles to the next station on a clear track; this is of course based on fuel consumption and on the wear and tear of machinery. In the insurance business, as in other lines, enthusiasm is the fuel. It generates the power to run the human engine, and if a man loses his enthusiasm entirely he soon becomes a dead engine. The analogy as here suggested is capable of much amplification, but it is perhaps enough to say that with enthusiasm things are easy of accomplishment that are very hard without it. The moral is, do not lose your enthusiasm. If you do it will presently appear that when the engine has been slowed down and the stop made it will cost you more to start up again and strike the same gait to run between stations than as if no stop had been made. Enthusiasm is indeed a mighty force and with it you can easily feel that you are going some. It makes for energy and achievement and no man can afford to part company with his enthusiasm. "Drive your business; do not let your business drive you" is an excellent maxim. The enthusiastic man gets the glad hand that is denied to his brother who lacks enthusiasm. He it is that wears the smile that has permanency. The members of the $100,000 clubs are all of them enthusiasts. It seems to be an entrance requirement. It is indeed well said that there is no need to waste energy by slowing or stopping. The correct thing to do is to keep everlastingly at it. Keep going! The railroad statistics show that it's costly to stop. Consequently, why stop?

In our issue of August 11 we printed an article by Judge George C. Holt on "Unpunished Crime in the United States." In this article Judge Holt pointed out the danger to be apprehended from the present unrestrained sale of firearms and of the increasing hazard to life thus caused. Commenting on the easy purchase of such firearms by all applicants for them the Montreal *Chronicle* says:

> The moral is that mayors and aldermen who allow half-crazy dock laborers and everybody else (all lunatics and criminals included) to own revolvers, are challenging fate. In this respect Chicago is a long way ahead of New York—or Montreal. You cannot, in Chicago, sell, buy, own, lend, give away or have in your possession a revolver or other deadly weapon without a license from the mayor. And you cannot get a license without giving exceedingly good reasons why you should be trusted with a weapon which is useful to very few except fools and criminals. Practically in a big city nobody but bank messengers and policemen on special duty have any legitimate use for revolvers. The average citizen can use it to shoot his wife, his mother-in-law, or his little sister, or to commit suicide. Or he can leave it around for the children to play with. That is about all the use he gets out of it. In sparsely settled country districts the case is different. The record of deaths, accidental and otherwise, in Montreal during the last thirty years from revolver shots would make a long and ghastly list, and it would be difficult to find two cases in which the weapon did any good.

Financial

Influences Affecting the Stock Market

TRANSACTIONS on the New York Stock Exchange last week amounted to only 1,937,000 shares. In the preceding week the number was 2,129,000. These figures may be compared with the record for corresponding weeks one year and two years ago, when the sales were in the neighborhood of 5,000,000 shares. The fundamental cause of the prevailing dullness is the political situation. Some who expect a loss of the Republican majority in the House at the approaching elections do not yet see whether such a change of control will be injurious or beneficial to corporate financial interests. They reason that while it is true that the majority will probably be in favor of further regulation and restraint, the division of Congress may prevent legislation. The general effect of political conditions is that those who make the market are inclined to wait and do nothing.

Quotations were slightly affected last week by rumors concerning the steel industry and by an interesting decision relating to railroad rates. It was reported at the beginning of the week that the recent shading of prices by certain independent manufacturers of steel was speedily to be followed by such a price war as was started in February, 1909. On the 20th, Judge Gary, speaking for the Steel Corporation, denied that a "wide open market" was impending. On the 21st there was a conference at which the Corporation and the leading independents were represented. At the conclusion of it, Judge Gary reported that the situation was better than he had expected to find it. No war of prices seems to be at hand, but the depressed condition of the industry casts a shadow upon the securities market.

While the steel reports tended to discourage buyers of stocks, the Minnesota decision, being quite satisfactory to railroad interests, was effective on the other side. Judge Otis, special master, filed with the Circuit Court at St. Paul his finding with respect to the freight and passenger rates imposed in Minnesota by legislation and by the State's Railroad Commission. He declares that these rates are unconstitutional, because they are confiscatory. He holds also that the rates cannot be enforced in the State without compelling discrimination against interstate traffic, in violation of the Federal statute and at variance with the Federal power exercised under the Constitution's commerce clause. If this decision shall be confirmed by the court and sustained on appeal, it will tend to prevent drastic regulation of rates by State authority and to give the Federal Commission almost exclusive power over them. But the report of a special master in such a case is not a final decision.

*

....The directors of the Boston & Maine Railroad Company have asked Lucius Tuttle, who recently retired from the presidency, to remain with the company in an advisory capacity at a salary of $10,000, and have voted to him a year's salary of $50,000 in appreciation of his past services.

....Ten years ago the guayule shrub, in Mexico, was regarded as worthless. In the last six or seven years $65,000,000 has been invested in the production of rubber from this shrub, and the value of guayule crude rubber and of shrub (to be converted into rubber) in the year which ended with June last was $26,228,000. It is expected that the exports for the current year will exceed $50,000,000.

....The Madison Trust Company, Fifth avenue and Sixtieth street, is the new name of the institution known heretofore as the Van Norden Trust Company. The stock control is entirely new, and the policy of the new management will be to maintain a representative, conservative and independent uptown trust company. The capital of the Madison Trust Company is $1,000,000, and the total resources exceed $8,000,000. The officers are: Watkins Crockett, president; Bradley Martin, Jr., vice-president and treasurer; William W. Robinson, secretary; Charles A. Fisher, assistant secretary and assistant treasurer; George H. Bartholomew, trust officer.

The Independent

VOL. LXIX NEW YORK, THURSDAY, OCTOBER 6, 1910 No. 3227

Survey of the World

Mr. Roosevelt's Victory in New York

Owing mainly to the contest between Mr. Roosevelt and the "Old Guard" politicians of his party in the State, the convention of the New York Republicans, at Saratoga, last week, excited much interest thruout the country. Before the delegates assembled it was known that a majority of them would vote to make Mr. Roosevelt temporary chairman, and that Vice-President Sherman, whom the State Committee had selected for this office, would be defeated. William Barnes, Jr., Louis F. Payn and other members of the "Old Guard," predicted that the party would be beaten at the polls, and asserted that Mr. Roosevelt had obtained a majority only by the aid of Federal officeholders. Mr. Barnes published a statement in which he declared that the elevation of Mr. Roosevelt was sought by means of the humiliation of the President and that Mr. Roosevelt was the champion of doctrines which were a menace to public order. There was a stormy meeting of the State Committee. Mr. Sherman had written a letter asking for an investigation of the charge that the committee's vote in his favor had been obtained by deceit and misrepresentation. Hard words were used in the discussion, the friends of Mr. Roosevelt saying that votes for Mr. Sherman had been obtained by the assertion that President Taft desired him to be chosen. At last the committee voted, 22 to 15, that there had been no deceit. Following this meeting, Mr. Roosevelt said the discussion had proved that "trickery was used in the effort to win a majority and keep the management of the party under the control of men who have been discredited by their actions. Our fight," he continued, "is squarely against corruption and the unclean bossism which has bred corruption. The men who by trickery kept control of the State Committee, and who now come here in the effort to dominate the convention, are the very men who are responsible for the corruption which produced Allds and for all that has been discreditable in the party management." On the first day of the convention the chairman of the State Committee announced the selection of Mr. Sherman. Whereupon a delegate nominated Mr. Roosevelt. Speeches followed. Abraham Gruber denounced the ex-President, recalling nearly all of the incidents in his career which have been the subject of hostile criticism. He urged the convention to try to "prevent a third term or something worse." In reply Mr. Prendergast, Comptroller of New York City, said Mr. Roosevelt had been raised up providentially for the present exigency. He spoke of "the angry frothings of Barnes," denying that officeholders had been subjected to pressure, or that the present movement had for its purpose "the nomination of any one for President in 1912." For Mr. Roosevelt, 567 votes were cast; for Vice-President Sherman, 445. Mr. Roosevelt's address, upon taking the chair, was regarded as a temperate and conservative one. Reviewing with satisfaction the record of recent legislation at Washington, and the record at Albany while Mr. Hughes has been Governor, he declared that the first duty of the party was to "war against dishonesty, against corruption in politics, against corruption in business, and

above all, against the degrading alliance of crooked business and crooked politics; the alliance which adds strength to the already powerful corrupt boss." Concerning direct nominations at primaries he said:

"Democracy means nothing unless the people rule. The rule of the boss is the negation of democracy. It is absolutely essential that the people should exercise self-control and self-mastery, and he is a foe to popular government who in any way causes them to lose such self-control and self-mastery, whether from without or within. But it must be literally self-control and not control by outsiders. We should at once introduce in this State the system of direct nominations in the primaries, so that the people shall be able themselves to decide who the candidates shall be instead of being limited merely to choosing between candidates with whose nomination they have had nothing to do."

It was plain that the convention was controlled by Mr. Roosevelt and his supporters. On the second day Senator Root was made permanent chairman, and the platform was reported. Concerning this there was no contest, except with respect to direct primaries. For the "Old Guard," Speaker Wadsworth offered and defended a minority report on this subject, favoring primaries only for the election of delegates to conventions and of members of party committees. Mr. Barnes also deplored "radicalism" and "nostrums," predicting that the plan proposed in the platform would lead to the adoption of the initiative and referendum and the recall. Mr. Roosevelt vigorously defended the majority report. "We trust the people," said he; "you do not." He urged the party to be progressive, to take the lead. Sooner or later it would be compelled to accept direct nominations. The minority report was rejected by a vote of 610 to 403. In the evening the ticket was made. Mr. Roosevelt nominated Henry L. Stimson for Governor. For him 684 votes were cast, and for Congressman W. S. Bennet 242. In nominating Mr. Stimson, the ex-President said he had appointed him District-Attorney in New York City at a time when a first-class man was needed in the place, because there was hard work to be done in the prosecution of powerful corporations. He spoke of Mr. Stimson's successful prosecution of the Sugar Trust and of great railroad companies guilty of paying rebates. "We put him in," said he, "and he made good." Mr. Stimson, forty-three years old, is a graduate of Yale, and for a time was a partner of Senator Root. It was due to his action that the Government recovered nearly $3,500,000 from the Sugar Trust and other companies in the sugar trade, and that several employees or officers of the Trust were convicted. He also procured the conviction of Charles W. Morse, the banker, who was sentenced to be imprisoned fifteen years. Since his retirement from office, a year and a half ago, he has been employed by the Government in connection with the Sugar Trust cases. President Taft and Governor Hughes have sent him messages of hearty congratulation. After the convention Mr. Barnes said he was for the ticket. He hoped that Mr. Stimson would not be "so sycophantic" as the majority of the convention had been, and that he would not be "deceived by Mr. Roosevelt's political vagaries." Vice-President Sherman said he accepted the result complacently, altho the convention had been "absolutely dominated by one man, and its every action had been taken at his bidding." He exprest his disapproval of that part of the platform which relates to direct nominations.

The Saratoga Platform

The New York Republican platform begins with a declaration of "relentless warfare upon official and legislative wrongdoing in this State." It promises that the inquiry now in progress (suggested by the Allds investigation) shall be a thoro one. "The crimes which have been committeed have involved members of both parties, and the fact that some of the wrongdoers have masqueraded under the name of Republican neither has gained nor shall gain for them immunity from punishment by Republicans. The crook and grafter and the unfaithful man in public service shall be put out and kept out." The platform then says:

"We enthusiastically indorse the progressive and statesmanlike leadership of William Howard Taft, and declare our pride in the achievements of his first eighteen months as President of the United States. Each succeeding month since his inauguration has confirmed the nation in its high esteem of his greatness of character, intellectual ability, sturdy com-

mon sense, extraordinary patience and perseverance, broad and statesmanlike comprehension of public questions, and unfaltering and unswerving adherence to duty."

After a long enumeration of his achievements, the new tariff law is warmly commended. It has "reduced the average rate of all duties 11 per cent.," and has turned a national deficit into a surplus. Its average rate is less than that of the Wilson law, and, "unlike the Democratic law, its great reductions of duty have not stopped industry nor deprived labor of any part of its hire." In providing for a Tariff Board it "affords the means of still more accurately determining the difference in cost of production at home and abroad." A Republican Congress "is necessary to provide appropriations for this board and to assure business and labor that changes in rates will be made only to equalize this difference in cost." It is urged that Congress should by a joint rule permit the consideration and revision of separate schedules. "Advances in the cost of living are only the local reflection of a tendency that is world wide, and cannot truthfully be said to be due to the present tariff." The record of the recent session of Congress is then reviewed and the appointment of Governor Hughes to the Supreme Court is commended. In his four years' administration, the platform says, he "appealed to the conscience and intelligence of the people, and championed legislation demanded by the moral sense of the community." Among the new laws enacted upon his recommendation those relating to race-track gambling, public service commissions, insurance and banking are mentioned. The platform points with satisfaction also to several new laws in the interest of workingmen, promises that agriculture shall continue to be encouraged, and favors the conservation, development and utilization of New York's natural resources, "under conditions, however, which will protect and safeguard the rights of the State." It demands "the most rigid economy" in every department. The paragraph concerning direct nominations is as follows:

"To Governor Hughes is due the credit for arousing the interest of the people and convincing them of the need of directly electing their party officers and directly nominating their party candidates. We promise legislation which will enact these principles into law."

On account of this platform and passages in Mr. Roosevelt's opening address, the Des Moines (Iowa) *News*, which is said to be the organ of Senator Cummins, published the following remarks:

"Roosevelt selects as his permanent chairman Elihu Root, who is the incarnation of the doctrine of dollars in politics. Roosevelt, bringing with him Taft, Ballinger, Wickersham, Root, J. P. Morgan, Tawney, Lurton, Hitchcock and all the motley crew of plutocrats, the Hessians of privilege, cannot enlist in the army of insurgency. He cannot swallow the insurgent movement, and insurgency will not swallow him, with his indorsement of the tariff bill and of the President, with his Roots and Griscoms. Taft isn't welcome as a recruit, and Roosevelt's room is far preferable to his company."

New York Democratic Convention

At the convention of the New York Democrats, in Rochester, there was some delay, owing to the refusal of Mayor William J. Gaynor to be a candidate or accept a nomination. His first letter, sent to Mr. Dix, chairman of the State Committee, was not regarded as conclusive. He said in it that he was not a candidate. "May I add," he continued, "that as a matter of fact the office of Mayor of New York, considering the power and the constant occasion for the exercise of the highest functions of free government lodged in it, is second to no office in this country save one." In his second letter he said: "Make it plain that if nominated I would decline to accept. I could not abandon to their fate the splendid men whom I have appointed to office, and who are working so hard for good government, nor could I abandon the people of the city of New York after so short a service." It was plain that control of the situation was held by Charles F. Murphy, the Tammany leader. Nearly all reports are in agreement, however, to the effect that he did not exercise his power, but urged the delegates outside of the greater city to unite in supporting some one in their territory. At the opening session, ex-Judge Alton B. Parker, formerly Democratic candidate for the Presidency, was temporary chairman. In a very long address he attacked Mr. Roosevelt, denounced the latter's "new nationalism," and reviewed the history of tariff legislation, asserting that there had been a corrupt alliance of

the Republican political machines with the Trusts and corporations for the benefit of the campaign fund. Mr. Roosevelt's career and opinions were the subject of a large part of the address of the permanent chairman, Herbert P. Bissell. Not until midnight on the 30th was a nomination for Governor made, and then it was given to John A. Dix, of Albany, chairman of the State Committee, who at first had said he would not take it, and whose name had not appeared in any of the current lists of possible candidates. His final condition was that the other aspirants should unite for his support. All withdrew except Congressman Sulzer, who received 16 votes, while 434 were cast for Dix. The nominee is a banker and an owner of lumber and paper mills. He was born in 1860, and is a nephew of the John A. Dix who sent, in 1861, the message: "If any man attempts to haul down the American flag, shoot him on the spot." In a message of congratulation Mayor Gaynor said:

"Every man, without regard to partisan politics, honors the convention for refusing to enter into alliance or a truce with corrupt influences, or with common libellers or scamps, whether living here or chiefly in Europe in show and splendor, or elsewhere out of the State except now and then, about election time."

Mr. Hearst, whose attitude toward the nomination has excited some interest, is in Europe.

The Rochester Platform

The platform of the New York Democrats begins and ends with denunciation of the "new nationalism" of Mr. Roosevelt. At the outset, the party "pledges itself anew to the old nationalism embodied in the Constitution," declares that all powers not specifically granted to the Federal Government belong to and of right must be exercised by the States in their sovereign capacity, opposes any usurpation of the rights of the States by the Federal Government, and condemns "all attacks upon the Supreme Court." At the end, the platform says:

"Lastly, we solemnly declare our inflexible opposition to the so-called 'new Nationalism.' Its inventors put this forward as if it were progressive, while in reality it is sheer reaction to tyrannical methods long ago shaken off by the free peoples of the world, oftentimes at cruel cost in treasure and blood. The settlers of our country fled from Europe to escape it. Whatever advance its adoption would bring is advance toward Socialism. They would have to abandon freedom. They would reduce the States to prefectures governed from Washington. They would clothe the President with power to declare what is lawful—a power usurped by one President in the case of a giant corporation absorbing a competitor. Such a 'new Nationalism' would lay the meddling hand of a bureaucracy upon every industry, increasing the burdens of taxation, making the struggle for life still harder, and compelling every American workman to carry on his back a Federal inspector. Against all this exaltation of Federal centralization power to the destruction of home rule, against this despair of representative government against this contemptuous impatience of the restraints of the law and of the decisions of the courts—we contend, in supreme confidence, that the people of this State and of this nation will not forget the noble heritage of their past, but upon that foundation will build the still nobler progress of their future."

In the course of an attack upon the new tariff law, it is asserted that it has "even increased the exactions of former Republican tariffs, and placed great additional burdens upon the shoulders of the average man, thereby largely contributing to the present high cost of living." Only by an honest revision downward "can this excessive cost of living be lessened." Fourteen years of Republican rule "have brought us to a point where the prices of the necessaries of life are almost without precedent." Much is said about Republican extravagance and legislative corruption. Concerning direct nominations the platform has the following paragraph:

"We declare in favor of State-wide direct primaries to insure to the people the right to choose members of political committees and to nominate candidates for public office."

The popular election of United States Senators, extension and development of the parcels post, a Constitutional amendment to permit the imposition of an income tax, and extension of the merit system, are favored. The paragraphs concerning agriculture and workingmen are similar to those of the Republican platform.

Countries South of Us

It is now denied at Caracas that diplomatic relations with Colombia have been severed by Venezuela. The Venezuelan Minister to Colombia has been directed

to remain at Bogota. It is understood that Colombia objects to certain parts of the treaty negotiated in June, 1909, which provide for a cession of territory to Venezuela, and refuses to give up the land in question.——Many who were exiled from Nicaragua by Zelaya or Madriz are now returning. A train load of them came up to Managua from the port of Corinto last week. At Leon a mob attacked the train with stones and pistol shots, crying "Death to Estrada!" Several of the exiles were injured. Estrada sent 400 soldiers to Leon.——The bodies of Groce and Cannon, the two Americans who were shot by order of Zelaya, in the early days of the revolution, were buried at Fort San Carlos. They are now to be taken up and placed in graves at Granada, where a monument will be erected to their memory.——In a civil suit against Charles F. W. Neely, who had charge of the finance bureau of the Post Office Department at Havana during the American occupation of Cuba, our Government obtained a judgment of $112,000. The criminal suit against him, for embezzlement, was dropped because of the Cuban general amnesty act. It has now been decided by the courts that our Government is entitled to the $20,000 which he deposited as cash bail.——A large section of the Panama Canal cut at Culebra was filled up two weeks ago by a great landslide from the adjacent mountain.

The Lancashire Lockout

The British cotton trade was threatened on the first of this month with a disastrous stoppage on account of a labor dispute originated in a very slight difference of opinion between employers and operators as to the duties of their men. The Oldham Cardroom Association objected to the requirement of cleaning the machinery at the end of the day with cotton waste, and in accordance with this decision George Howe, a grinder at the Fern Mill, refused the task. He was discharged, whereupon the Cardroom Association declared a strike of all members of the union. The operatives refused to submit to arbitration the question as to who had broken the agreement between the Federation of Employers and labor unions. The Fern Mill remained closed for three months, but on September 19 the Employers' Federation determined to force the matter to a settlement and announced for October 1 a general lockout in all the mills unless the Fern Mill was reopened. An effort was then made for arbitration, and employees and employers were brought to agree to it, except on one matter; both sides stuck on the point which had started the trouble, that is, the employment of Howe. The Cardroom Workers' Amalgamation demanded his reinstatement in the Fern Mill, while the employers insisted that the mill should be opened without Howe, altho they offered to pay him wages if the case was decided against them by the arbitrators. George Askwith, K. C., Comptroller-General of the Commercial Labor and Statistical Department of the Board of Trade, visited Manchester for the purpose of arranging a settlement, but found both parties obdurate. The lockout went into effect on October 1, and threw 150,000 men out of employment. As the interests involved are so tremendous, it is probable that some compromise on the disputed matter will be arranged, perhaps by a place being found for Howe in some other mill.

Riots in Berlin

The streets of the Moabit section of the German capital were the scene of furious conflicts between police and people from September 26 to 30. The disorder originated in the strike of the workmen of Kupfer & Co., coal dealers, and in the efforts of the police to prevent street meetings and parades by the strikers and their sympathizers. Men and women took part in the fighting, shooting from the windows, and throwing stones, flower pots, coal and bricks at the police, as they passed below in the streets. The most dangerous of these household missiles was a lighted lamp, which was thrown by a woman at a squad of police invading her flat, and burned several of them. Windows were broken and stores were looted. The rioters tore down the lamp-posts of several streets in the precinct, so the fighting was carried on in the dark every night, except for the bonfires

of furniture and mattresses on the pavement and the searchlights and magnesium torches of the police. The authorities have not called for troops or declared martial law, but 4,000 police have been employed in patrolling the disturbed district and in preventing strike sympathizers and hoodlums from entering it. Orders were given them to scatter all groups and arrest all rioters, using sabers and revolvers wherever necessary, and these orders have been carried out in the most brutal manner. They rode at full speed thru the streets packed with people, leaving a trail of wounded persons behind them. In one charge at a procession carrying a red flag thru the Kleiner Tiergarten about a hundred persons were injured. The hospitals are full, altho most of the wounded took refuge in their homes in order to avoid arrest. Many innocent spectators, including women and children, are among the victims of the police. One was a boy of sixteen returning to his home from confirmation, when he got into a crowd and had one of his arms almost cut off by a policeman's sword. The police at first struck with the flat of their swords, but in the later conflicts slashed and shot freely. Four newspaper men, correspondents of the New York *Times*, *Sun* and *World* and Reuter's Agency, were watching the affair from a taxicab on a well-lighted and tolerably quiet street when they were attacked by half a dozen policemen and badly cut and beaten before the chauffeur could get them out of the way. No attention was paid to their protestations or display of permits from the police. Police Commissioner von Jagow, in reply to their letter of protest, justified the action of the police, so the matter will be taken up diplomatically. Joseph C. Grew, the second secretary of the American Embassy, has presented a formal note to the Ministry of Foreign Affairs, asking for an investigation of the assault. The British Government has taken the same action.

The Pope and the Mayor

The Vatican continues to be agitated over any expression of the antagonism existing in Italy against the Papacy. A thorn in the flesh quite as annoying as the Methodist Mission is the Mayor or Syndic of Rome, Signor Nathan, who as a Free Mason, a Hebrew, and a Socialist, is trebly obnoxious as a ruler of a city which the Pope still claims as his own. On September 20, the occasion of the fortieth anniversary of the overthrow of the temporal power of the Pope by the entrance of King Victor Emmanuel II into Rome, Mayor Nathan had delivered an address which attacked the doctrine as well as the policy of the Catholic Church. Official protests were sent out by the Vatican to the Catholic Powers and a letter of Pope Pius X to the Cardinal Vicar-General was made public in which the Pope expresses his deep sorrow that a public official in the performance of his duty should make such a blasphemous and offensive attack on the Church and religion. He asks the Roman Catholics of the entire world to unite in prayers that the Church be not subjected to such outrage in the future. Mayor Nathan has published a reply in which he asserts his right of freedom of speech:

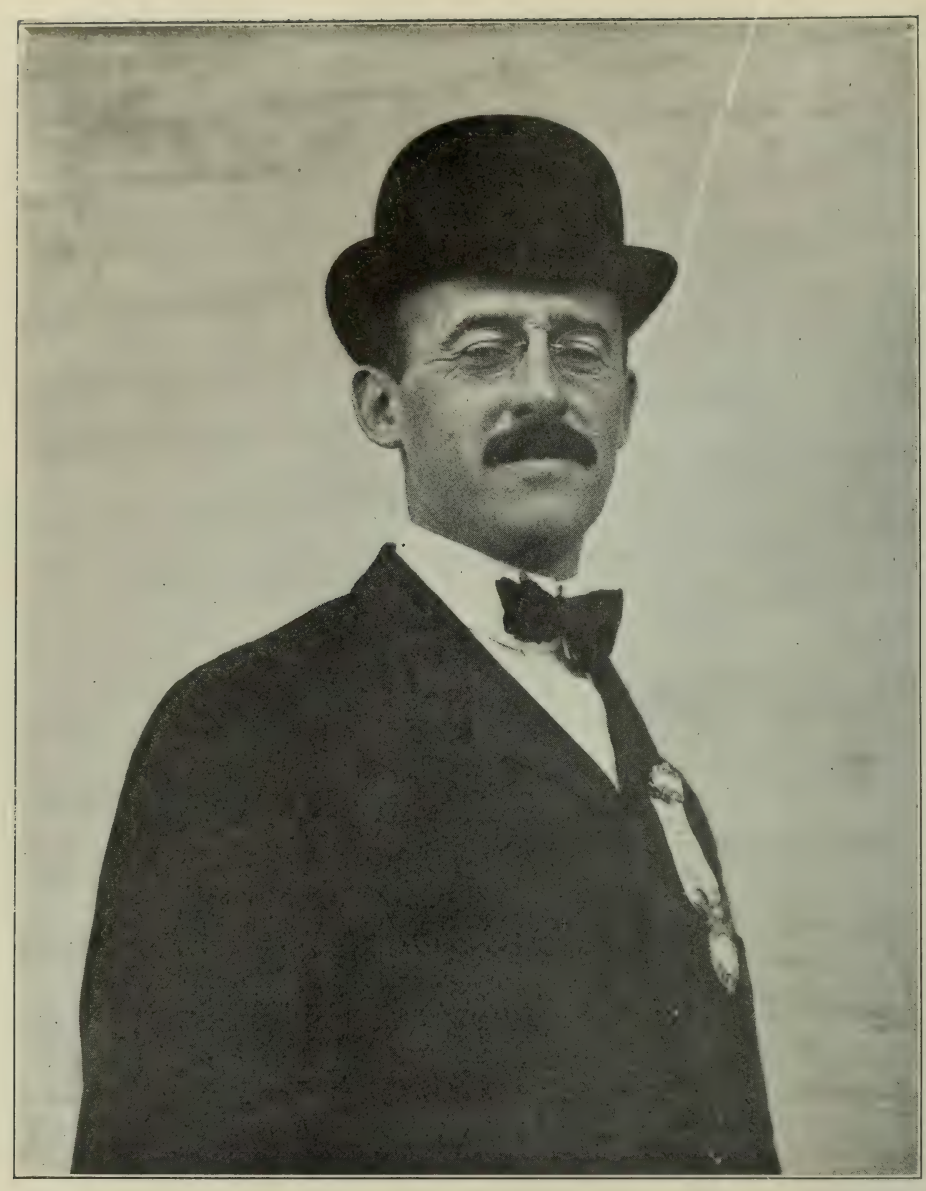
"If I have offended the law I will answer before the courts. If I have offended the duty of my office, the citizens must judge me. If I have offended religion, my conscience, without any intermediary, will answer before God."

Signor Nathan also seizes the opportunity to repeat his charges against the Papacy in the following language:

"I am not the author or inventor of the plan to banish from the schools and seminaries the whole daily press, nor have I imagined the solemn condemnations of Christian democracy, the Modernists, the Sillonists, and all those anxiously seeking a faith which reconciles the intellect and the heart, tradition and evolution, science and religion.

"I have not molded together the dogma of the ritual and religion, thus denying the consolation of the faith to those who could not blindly submit to the changeable instructions and will of men; nor have I failed to respect other people's beliefs or been lacking in my regard for the Pontiff as a man called to the highest office, who within the limits of his heart and intellect sacrifices his whole being for love and goodness according to the dictates of his conscience."

Numerous messages of sympathy and indignation have been received at the Vatican from Catholics in all parts of the world. The clerical papers demand the removal of Mayor Nathan by the Government for having violated the law of



guarantees and the Italian Constitution, which declares the Catholic religion a religion of the State. It is not at all probable that the Italian Government will take such action, for Mayor Nathan has a strong popular following in the capital.

The Egyptian Nationalists

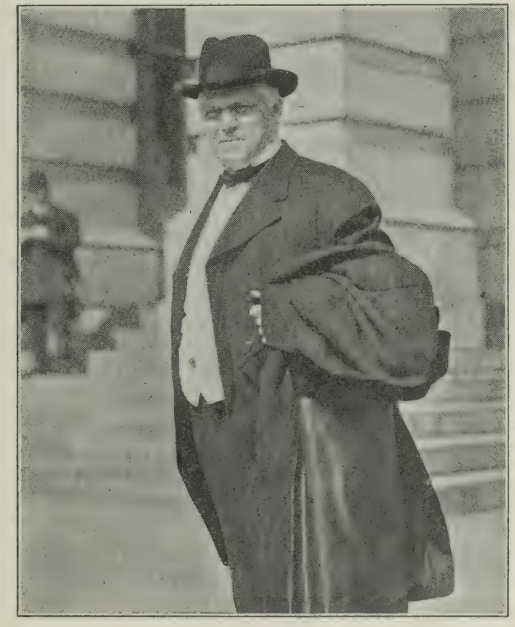
The Egyptian Nationalist Congress which was to meet in Paris the last of September, was held in Brussels instead, the French Government having refused to permit their meeting in Paris. This action is naturally pleasing to Great Britain and contributes to the *entente cordiale,* but doubtless the French Government had also reasons of its own for not desiring the presence of the Nationalists. France has tacitly agreed to the continuance of the British occupation of Egypt in consideration of getting a free hand in Morocco, and the Pan-Islamic propaganda of the Egyptian Nationalists threatens equally to disturb her African colonies of Tunis and Algeria. One of the more moderate of the Nationalist organs, the *Noayad,* uses such language as the following phrase: "France has seized the heart of Morocco with its poisoned talons and sucked the blood from its veins until it is ready to die. The Mohammedan countries in the possession of France have suffered from injustice and barbarity to such a point that the boats following the African coast can hear the groans beneath the roof of every house in these regions." The Nationalist Congress was presided over by Mohammed Bey Farid. He held England responsible for the prohibition of the meeting in Paris and alluded in complimentary terms to France as well as Belgium in his opening address. Mohammed Farid stated that the program of his party could be exprest in two words, "Evacuation" and "Constitution." The freedom of Egypt had been lost thru the machinations of British imperialists and cosmopolitan financiers. The Suez Canal being an international channel of trade should be under the control of Egypt and the independence of this country guaranteed by all the Powers. This question would be brought up before the next peace conference. He declared that Egypt had not prospered under English control and he denounced Roosevelt for acting "as the mouthpiece for Sir Edward Grey." He declared that the Egyptian people were quite capable of self-government and should be allowed to demonstrate their capacity. Eighty persons were in attendance upon the Congress, including some of the Socialist members of the Belgian and French Parliaments and Mr. Keir Hardie, member of that of Great Britain.

The Spread of Cholera

Now that the Asiatic cholera is admitted to exist in Naples the Mediterranean steamship lines refuse to call at that port for either passengers or merchandise, consequently Neapolitan commerce is at a standstill. This aspect of the affair, however, is not worrying other countries, for there is a general feeling that Naples deserves punishment for its failure to report the presence of the disease in the city. The French Government has made an official protest against the action of the authorities in giving a clean bill of health to vessels bound for French ports. They might have succeeded in concealing the truth for a longer period if it had not happened that four Neapolitans who had gone to Rome came down with the cholera and one of them died. The Mayor of Naples was thereupon called to Rome for a consultation with Signor Luzzatti, President of the Council, with the result that the municipality of Naples changed its tactics from denial and inactivity to avowal and sanitation. It is still suspected that the official reports are not frank enough, for they have given as the highest for any one day twenty-four new cases and fourteen deaths, while it is generally supposed that the hundred or more deaths laid to gastroenteritis are really victims of the cholera. The authorities are, however, making a strong effort to force the population to take the necessary precautions against the spread of the disease. The oyster beds along the city front have been closed and the sale of fruit and fish prohibited. The tourists and a large proportion of the better classes of the population have fled from Naples. Cases of cholera are reported from Turin, Leghorn and Palermo as well as Apulia and Foggia, where it first broke out. Turkey and Hungary are also widely infected.

HENRY L. STIMSON,
Republican candidate for Governor of New York.

Mr. Stimson is 43 years old. He was born in New York City, graduated from Yale University and from the Harvard Law School. He became a junior member of Elihu Root's law firm, and in 1902 two of its members formed the firm of Winthrop & Stimson. In 1906 President Roosevelt appointed him as Federal District Attorney for the Southern District of New York. This gave him immediate important work in prosecuting corporations guilty of violations of law. First came the prosecution of the New York Central Railroad for rebating. This case was fought by the ablest lawyers, but the Central Railroad was proved guilty after appeals to the Supreme Court and had to pay $108,000, and other railroads accepted the decision without fighting. Then, after a number of smuggling cases, Mr. Charles W. Morse was convicted for juggling with the funds of the National Bank of North America, and is now serving a sentence of fifteen years in the penitentiary at Atlanta. Most sensational of all was his prosecution of the sugar frauds which followed, ending with the imprisonment of a number of the guilty officials and the recovery of $3,435,365 for past duties. He is an indefatigable worker, has a remarkable grasp of all facts related to a case, and has won the confidence of the people who know that it is only an incorruptible man who would relentlessly pursue wealthy guilt to its exposure and punishment. He has won his nomination much as Governor Hughes won his, not by suing for office, but by doing his fearless duty till office sought him. His first appointment to public office he owes to Mr. Roosevelt, and it was Mr. Roosevelt's urgency which carried the convention which nominated him. Like Mr. Roosevelt, he is fond of outdoor sports and hunting of big game.



Patriotism and Political Peace

BY FRANK M. NYE

Member of Congress from Minnesota.

THE evolutionist attempts to tell us where we came from and the theologian where we are going. Most of us have misgivings as to the conclusion of either of these leaders of thought, but one thing it is possible we may agree upon, and that is where we are—that we are here. We are here, today, in the best country since the dawn of creation, in the best year of the century, thus far; and today is the best day of the year, and *now* is the best hour of the day to men who can see it.

The metaphysician says that there is some question about whether we are all here or not, and he tells us, with some color of truth, that here and now are not the same to any two creatures or beings upon the earth. But that is all a matter of individual consciousness. No two men, on a rare summer morning, can look at the trees and flowers and the sky above them with the same realization of the beauty and vastness of the universe in which we live. The black and somber crow and the joyous lark fly thru the same atmosphere, under the same sky, and alight on the same tree. The music of the nightingale and the hoot of the owl mingle in the common night.

FRANK M. NYE.

The optimist and the pessimist speak from the same platform, but the auditor catches the words of one which brings to him a revelation of beauty and life and faith and hope. All things seem to open to him serenely and he is in touch with infinity, while under the withering words of the other the world seems to shrink and groan and everything seems to portray death.

We walk together, the optimist and pessimist, the man of hope and joy and the man of sorrows; one singing a hosanna, the other a dirge, both amid the same outward surroundings.

Applying these facts to the philosophy of life I have come to the conclusion that gratitude is the one great element of true, pure patriotism. Only a grateful man can be a real patriot. Only a grateful people can be truly and sincerely patriotic. Optimism is the word. As a man thinketh in his heart, says the Wise Man, so is he. It is that which is within which projects the vision and men walk side by side in this world of ours, the one in heaven, the other in hell. It is all a question of our realization of the blessings which we have.

There is a great deal in politics which is sham and evanescent, but when we strip off the mask and get down to the real subject, our country, we shall find that one general sentiment of love pervades the common heart. Ours is a land blessed as no other since the dawn of creation, as prosperous from sea to sea, as it has ever been, at least, with inequalities and injustice and wrongs to right, it may be, as there have always been; but from our starry banner today there shines every reason for hope, every reason for faith in our country, and even in our public servants, who are so frequent-

ly of late a target for criticism and denunciation.

It is a wonderful age and a wonderful day. We are heirs not only of the blessings which have come to us since the days of our fathers on this continent, but of all the rich and wondrous past; and every hero, every martyr, every scholar, every philosopher, every poet, every musician lays the wealth of genius and self-sacrifice at our feet. We are not perfect. The Republican party is not perfect. The Democratic party is not perfect. But we are all pretty good fellows. We are all trying to do our duty from our standpoint of right and patriotism. You will notice all thru history how things shift and change—how prone we are to watch the weather vane and tack to every breeze that comes to us laden with a promise of votes, and it is possibly true that the average Congressman, for instance, thinks too much of his job. But in the realm of politics the same principle of optimism and pessimism pervades and is largely accountable.

We have found it impossible to translate our ideas of government into real life except thru the instrumentalities of parties. This is at least a government *for* the people. Our fathers gave us a country designed to be a government *by* the people. They could not accomplish a government by the people, however, except as the people exercise the functions of government. But thru the instrumentality of political organizations, slowly and by degrees, we are carrying into effect, imperfectly as yet, the great ideals of true government.

We often hear it said that no government should do for the individual that which the individual can do for himself; but the best government is unquestionably that which does the most for its people as a whole, which uplifts man toward liberty, toward a wider range of intelligence, toward a truer patriotism, toward grander and nobler ideals. Government for the people, in its last analysis, should open the avenues of infinite possibility to the individual. In the home and by the fireside we all have our ideas of what such a government should be, of what its laws should be, but we do not agree. We must put an active and practical force out into the world to fight for those ideas, and accomplish, as far as possible, our ideals in actual government; and the more efficient the force the grander the results will be. We are all imperfect, and the individual must constantly yield his views upon specific questions of legislation, but with cohesive power the party must move together to accomplish the best results attainable. We cannot accomplish the good individually that we can as a party.

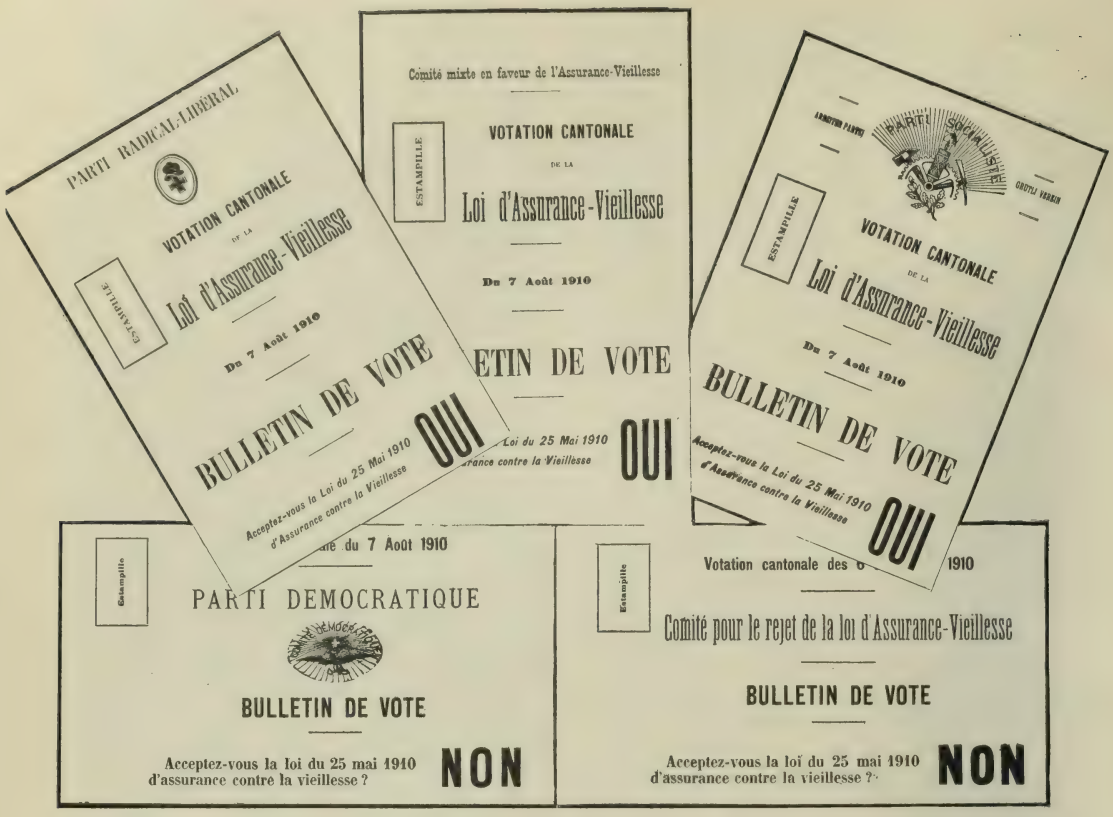
I believe in my political party. I glory in its history. I glory in the thought that it was born in the night of human bondage and that its first cry was a cry for human liberty and human rights. I am proud of the way it has moved along the line of progress, with a fair degree of success, for fifty years. The experience which we have obtained in these fifty years is worth more to us than our national wealth. The genius of our national life has quickened the pulse of the whole world and sent new blood to the brain of the age in which we live. And I believe that the good achieved in the past warrants faith in the future and justifies loyalty, even to the extent of sacrificing some personal antagonism to individual measures which the party as a whole approves. I believe that the grave lesson of today is that we must stop quarreling by the way; that there is nothing to be gained in true and enduring progress by bickering over trifles and distrusting our fellow men, our party, our nation.

Faith is the root and foundation of this republic—faith in that which is good, faith in the good which is in man. We all know the history of that marvelous character to whom we look as the father of the Republican party. We all know that the great, simple, democratic Lincoln had, preëminently, faith in man—faith in the good that is in man. When he came to Washington, despised by the cultured East, bitterly denounced by the South, and almost unknown everywhere, he came with unfaltering faith in the good which was in his fellow men. He conquered because there is something invincible and irresistible in the man of faith. Humanity follows the man of faith—faith in the good that is in mankind.

The antithesis is suspicion, and suspicion is one of the greatest enemies of the race and of all progress. It is in the world about us. It is in local and national politics; it is more or less in Congress as well as in the Congressman's constituency. But I believe, with Tennyson, that a man had better fail, better be betrayed than to distrust everybody;

> "'Tis better to have loved and lost
> Than never to have loved at all."

We would better trust our fellow men than build up a fabric upon the principle that men are enemies to good legislation, enemies to the best good of their country; that public officials do not intend to do their duty. I do not believe it. Most men in this world are trying to do the best they can under the circumstances. We have the individual right to think they are mistaken, but the cause of progress cannot be helped by ventilating every personal antagonism in bickering and quarreling. It is being untrue to ourselves and unjust to our fellow men. It is to oppose real progress.



It has recently become a kind of fad, not only in the National House of Representatives, but thruout the country, to lay no end of blame upon and say no end of unkind things about the Speaker of the House, intended to rouse suspicion and distrust; yet where is the man, if he is a student of history, who will honestly say that in his conscience and in his life Uncle Joe Cannon is not a loyal, patriotic American? Who is there who can read the history of the past fifty years and say that he should be denounced as an enemy to progress, to good legislation and to good citizenship? I have not been among the intense Cannon men. I did not vote for him in the caucus, believing that, from considerations of age, and other considerations, a change of leadership was desirable and that young men should come to the front; but why should we despise the wisdom of the past and denounce the men who have been in public life for years, fighting the battles which have resulted in America's marvelous progress?

Fifty years ago this summer Joe Cannon went as delegate to the Illinois convention sending delegates to nominate Abraham Lincoln. He has been a stanch Republican ever since. He has been honored by all parties. He has made mistakes, and so have we all of us; but when he leaves public life it should be with the respect and love which is due to him for what he has accomplished for good government and for the nation Happy may we be at the sunset of life if we have performed our part for our country as well. Political parties are but the human agencies of government and the servants of progress. Between them errors are avoided and over-ambitious enthusiasm is checked. Honest strife between opposing parties is stimulating and beneficial. In the end the best wins out; but bickering, distrust, suspicion, denunciations within the party are fatally dangerous. The kingdom divided against itself cannot stand. United we stand. Divided we fall. Patriotism, not pessimism, is what we need; peace within the party and honest, earnest and united efforts, on both sides, in the coming campaign, to attain the ideals which we have established as making for the best government. That means prosperity. Prosperity means happiness and happiness means peace. An inefficient party is no better than an inefficient army on the battlefield.

Without peace in the party there cannot be efficiency. Without efficiency there cannot be progress. Without progress there will not be prosperity. Without prosperity where is happiness and gratitude? Then what becomes of patriotism? What becomes of the party? What becomes of the nation?

The watchword of every loyal American should be Patriotism and Peace.

MINNEAPOLIS, MINN.

The Referendum in Action

BY EDWIN E. SLOSSON, Ph.D.

[Our editorial associate now in Europe sends us this description of a Swiss election, which shows how the referendum actually works in the land where it has been most extensively employed. Both the machinery and the result of the voting are of interest to American readers.—EDITOR.]

THE average tourist looks upon Switzerland as a gigantic spectacle, and the inhabitants as mere stage managers, scene shifters, attendants and supernumeraries. But even the average tourist, arriving in Geneva early in August, must have had forced upon his attention the fact that the inhabitants really had interests of their own, quite apart from the tourist industry, and that his guardian angels, Baedeker and Cook, fail to point out to him all that is worth seeing in the country. On the billboards and pillars along the street, beside the usual advertisements of Swiss chocolates and concerts, and American drinks and rinks, there appeared numerous colored posters in exclamatory type, appealing to the electors of the Canton of Geneva to vote *Oui* or *Ja, Non* or *Nein,* on the old age pension law recently passed by the Grand Council, and the daily papers were filled with lively controversy over the various provisions of the law. This *ex-post facto* journalistic discussion was in no way surprising, for have we not in our own country the custom of devoting more careful consideration to a measure after it is passed than before? But in this case there was a manifest call to action, action more effective than the appeal to "turn the rascals out," familiar to us in America. There was, indeed, some criticism of the members of the Grand Council, but the voters were less concerned with their

replacement by their political opponents, who very likely would do no better, than with annulment of the law itself, which, by means of the referendum, they had the power to accomplish.

The situation was this. The Grand Council of the Canton of Geneva had passed, on May 25 last, a law establishing a system of annuities for the old men and women of the canton who were were circulated, and in a few weeks over 6,000 voters, more than a fifth of the registry, had signed the demand that the law be submitted to the referendum, a protest of unprecedented promptitude and magnitude. The Government was therefore compelled to call for a general ballot on the subject.

The law was necessarily complicated in its financial details, but its essential

ELECTION POSTERS ON THE BILLBOARDS AT GENEVA.

not able to support themselves. It was a compromise measure, prepared by a mixed committee, after careful consideration, and passed in the Council by a vote of 65 to 11; the radical, democratic and socialist deputies voting for it, and the conservatives against it. But in this instance it became immediately obvious that the representatives of the people did not represent the people. Petitions provision was the payment of a pension of $60 (300 francs) a year to men and women over sixty-five years of age who had an annual income of less than that amount. Swiss from other cantons and naturalized foreigners could become eligible to the pension after twenty-five years residence in the Canton of Geneva. The pensions were to begin January 1, 1921. The money was to be provided by

a separate and inalienable cantonal fund, derived from such charitable gifts and bequests as had been or might be given to the Canton for such a purpose, from an annual appropriation of $20,000, and from an income tax ranging from 50 cents for those having a salary of $240 a year, to $4 for those receiving $800 or more.

For the education of the electorate on the question, the Government sent to every registered voter a copy of the law as passed, together with a detailed criticism of it by the committee of voters opposed to the law, and a defense by the committee favoring it. Besides the discussions in the press and the appeals on the billboards, public meetings were held, but these were meagerly attended. At the principal mass meeting in the city of Geneva in opposition to the law, held a few nights before the vote, there were only 71 persons present, and at the rival meeting in support of the law there were only 144. It was evident that there was a strong sentiment against the law, but it was not easy to ascertain the real grounds of it, for the various political groups used the same catchwords and professed the same principles of philanthropy and patriotism. None of the opponents of the law would admit that they disapproved of old age insurance. They only argued that the measure was badly drafted; that it threw intolerable burdens upon the taxpayers, while failing to provide adequately for the needy; that it discouraged thrift and providence and opened the way to innumerable frauds; that it would cut the nerve of filial affection and so tend to destroy the family. A great deal of stress was laid upon the point that the man who had 300 francs income would get a pension of the same amount from the cantonal insurance fund, while the man who had 301 francs would get nothing. But this eleatic quibble can be urged against any law having limitations. A man is not appreciably better qualified to vote at twenty-one than he was the day before.

The main strength of the opposition seemed to come from the fraternal societies and mutual insurance companies, which feared that an old age pension system would deprive them of their reason for existence. The advocates of the law, on the other hand, argued that it would not discourage the saving habit. They calculated that an old married couple could have investments amounting to $3,200, producing at 3¾ per cent. an income of $120; that both could draw an annuity from a mutual insurance company of $120 each; that the husband could be earning $120 a year; and both still would be entitled to the cantonal old age pension, making the budget for the couple $600 a year.

The voters were urged not to let monarchies like Germany and England get ahead of the Swiss democracy, which was looked upon by the whole world as a leader in progressive legislation. A newspaper item telling of an old man who had thrown himself into the Arve because he was out of work and starving was placarded on the billboards in large type, with the heading "A Tragedy in the Night," and the conclusion, "Vote yes!" A fair sample of the campaign literature is the following:

PARTI JEUNE-RADICAL GENEVOIS

Dear Fellow-Citizens and Confederates! You are called upon to pronounce upon the acceptance or rejection of the law of insurance for old age recently voted by the Grand Council.

Doubtless this law is not perfect. Certain of its provisions can be criticized and especially those which impose insufficient taxes upon those having large incomes.

But to give a fair judgment upon the work accomplished it is necessary to take into consideration the difficulties encountered; on the one hand, in solving the financial problem, and also on the other hand in getting men of opposing opinions to unite upon a single project.

Those well-meaning citizens who, insufficiently enlightened upon the exact significance of the law, are now fighting it with such zeal, are allying themselves with the incorrigible enemies of all progress.

It is the conservative party which has organized the crusade against this useful reform.

This fact alone is significant and ought to give grounds for reflection to those progressive citizens who have grievances against certain provisions of the law. It throws a glaring light upon the motives of the organizers of the campaign against the law.

This motive is the most egotistical and the least commendable. It is inspired only by the desire to continue to maintain our old people in dependence on certain chapels which profit by misery in enslaving those who are obliged to have recourse to them.

This law, altho susceptible of modification and improvement in the future, constitutes a real and important progress since it secures to

all our old people above 65 years an annual income of 300 francs, while now they have no other alternative than to accept a charity which offends their dignity or to die of starvation.

The fruit of mutual concessions of men of different opinions but equally animated by noble and generous sentiments, this law constitutes a benefit that ought to be accepted by all progressivists.

Those who oppose it are committing an antisocial act and doing a great wrong.

Chers Concitoyens, chers Confédérés!

Jeunes Radicaux!

A la question qui vous est posée, répondez par un *oui* énergique.

Venez nombreux aux urnes pour voter *oui* en faveur de l'Assurance-Vieillesse.

Votez *oui* au nom des principes d'égalité et de solidarité.

Vive Genève, Vive la Confédération suisse.

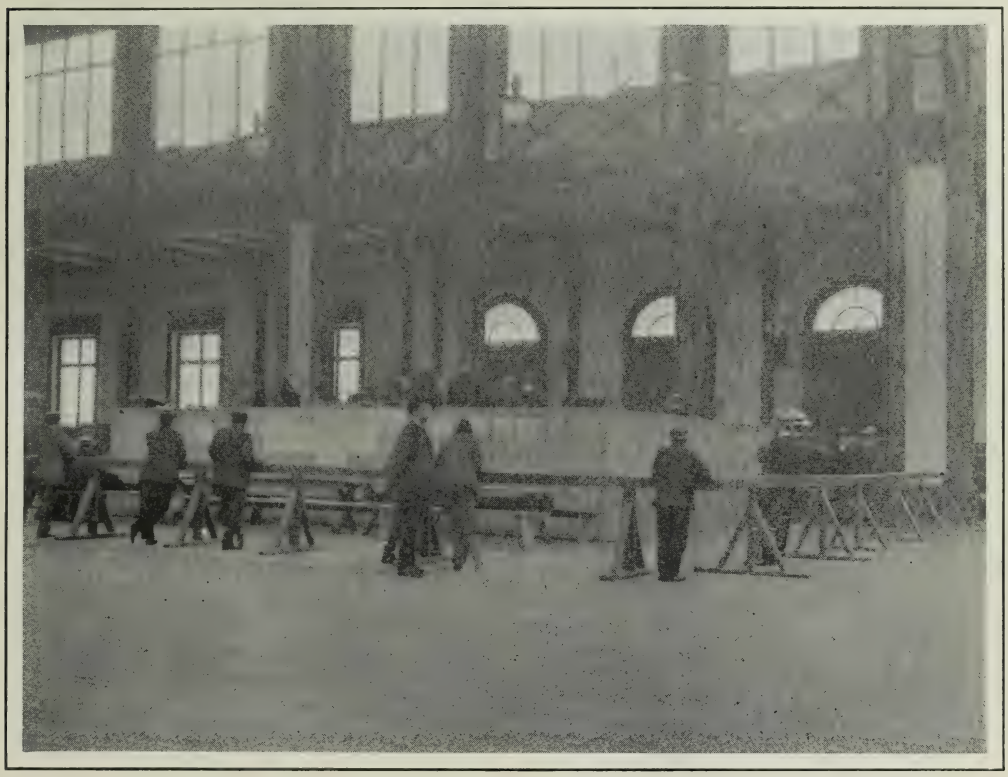
La Commission exécutive
du Parti Jeune-Radical.

The voting was interesting because it was so different from an American election, not so much in its methods as in its spirit. Altho the question was one that involved the financial interests of every person in the canton, and many of them very deeply, there was nothing of the nervous strain, the intense party rivalry, and the attitude of mutual suspicion, characteristic of our political contests. The whole affair was conducted with less formality and vigilance than an election of officers of a college debating society. There was no scurrying about of automobiles; no personally conducted parties of voters being brought to the polls; no gangs of bullies about the doors; no anxious watchers nervously chewing their mustaches or unlit cigars; no outposts of policemen on the sidewalk. The idea that fraud or force might be used seemed never to have entered the heads of these simple-minded Swiss. They do not care who the election officials are, since nothing more is required than the ability to check off names and to count correctly as far as ten. The position is honorable and easy, but not lucrative. The president and vice-president of each polling place are appointed for the occasion by the Government, and the other election officials are taken from the list of citizens in alphabetical order, so it is a matter of chance, as with our juries,

THE ELECTORAL BUILDING AT GENEVA,
The chief polling place for the referendum on the old-age pension law. Altho taken during the closing hour, the photograph shows no crowd or disorder.

who serves on any particular election board. None of them receives pay, but as it does not take much time there is no general disposition to evade it. The polls are open Saturday evening, from seven to half past nine, and Sunday from 9 a. m. to 3 p. m., so no voter is put to inconvenience on account of his occupations or Sabbatarian scruples.

VOTING BOOTHS AT GENEVA.



The voter selects a ballot from the rack in front, gives his name to the judges and, procuring from them a stamp, passes into the booth next to the wall. On coming out at the other end he drops the ballot into the large striped box.

There was no crowd or excitement at the Batiment Electoral, the chief polling place in Geneva, when I visited it an hour or so before the close on Sunday afternoon. A solitary policeman was posted at the entrance, but he had no other concern than to find a shady standing place. The large hall inside the building was empty except for the polling booths along the side and the central stand for the presiding officers. There was no need to wait or stand in line, altho the votes were being cast at the rate of two or three hundred an hour. The process of voting was as simple and expeditious as calling for one's mail at the post office. There were ten voting booths or bureaus, constructed of unpainted pine lumber, dividing the alphabetical list of voters' names into as many equal sections. At a table in front of each booth sat two judges or election officials, provided with their section of the registered list, say "Bo-Ch," or "Pf-R." This list had been for some weeks posted on the wall of the city hall, alongside of the notices of persons intending to marry. A voter entering the hall went to the proper booth, greeted the officials there, gave them his name, if he was not recognized, received from them a gummed stamp, looking like a postage stamp, picked up one or more ballots, went into the booth, or, rather, passageway next to the wall, where he affixed the stamp to the proper ballot; then coming out of the other door, dropped it into the ballot box himself, and, with a *"Bon jour"* to the officials, went on about his business. The two officials had nothing to do but to scratch off the names on their lists and keep tally of the number of stamps given out. The ballots, as may be observed from those here reproduced, were of various kinds, some with party names and emblems, others issued sim-

ply in the name of the committees, for the acceptance or rejection of the law. They were placed in piles on a rack in front of each booth and also in the booth. Since only a ballot bearing the stamp was valid, it was impossible to vote more than one.

The accompanying photographs show how empty, quiet and orderly the electoral hall was during the busiest time of the day. The officials offered no objection to the presence of an inquisitive tourist. They even allowed me to go thru the voting booths, and were cordial in answering all my questions, tho they found some of them puzzling, particularly when I inquired as to the political proclivities of the election judges. They did not see what difference it made which party they belonged to, and I was ashamed to tell them.

The officials on the platform in the center of the hall, who were distinguished from the ordinary citizens by wearing in their buttonholes red and yellow ribbons, the Genevan colors, had nothing to do during the voting except to arbitrate an occasional case of irregularity, but promptly at three the president rose, rang a bell and announced, "*Le scrutin est fermé.*" The officials at each booth then locked the "urns," which were big, square boxes, striped diagonally red and yellow, looking like doll houses, the ballots being dropped down the chimney. As the president called "Bureau No. 1," the two men in charge seized the ballot box by its handles and lugged it up to the central platform, where their lists were verified to see if the number of stamps they had left over corresponded with the uncanceled names on the registry list. The ballots were dumped onto tables and rapidly sorted into bunches of ten and bundles of a hundred, to be again count-

COUNTING THE BALLOTS.
The ballots are brought to this central booth to be sorted and counted by the judges and clerks. The spectators are few.

ed by groups of three officials, who filled out and signed a blank for each bundle. Many hands make light work, and as the thirty or more men busied themselves where most needed in counting or sorting or adding, it was only a few minutes before the president was able to announce the result, which here as everywhere was overwhelmingly against the law.

The official figures for the entire canton were: Registered voters, 27,255; stamps delivered, 11,881; stamps recovered, 11,793; valid ballots, 11,734; void ballots, 12; blank ballots, 47; absolute majority, 5,814. There were 9,276 votes against the law and 2,458 in favor of it.

The old age pension law was therefore annulled by the people of Geneva within three months after its passage by the Grand Council. Whatever we may think of the wisdom of the action, we must admit that under these circumstances the referendum does what it is intended to do; it places the power directly in the hands of the people and provides a simple, prompt and effective method of ascertaining their will. Altho fewer than half of the registered voters took part, there is no room for doubt that the result is a fair expression of the opinion of the whole electorate. The percentage voting was greater than at any other referendum in the last ten years. Rich wards and poor, Catholic and Protestant, German and French speaking, rural and urban populations, agreed in rejecting the law. Only one precinct out of the fifty-two in the canton voted "yes," and that was a small precinct of 48 votes.

Altho the old age pension law has been thus repealed by popular vote, it is not as if the question has never been raised. For one thing, the whole project has been carefully considered and thoroly discussed. For another, all parties have exprest themselves in favor of old age pensions in principle. The opponents of the law always insisted that their only object was to clear the way for a better measure. But whether the Grand Council will be disposed or will be able to draft a more satisfactory measure is doubtful. The voice of the people has spoken an emphatic "No!" but the meaning of the monosyllable is susceptible of diverse interpretations. It will be harder than before to bring together those who fear that an old age pension, however small, would be destructive to initiative and frugality, and those who hold that everybody should have a pension large enough to live on comfortably. The Socialists are sore because, when they abandoned their attitude of proud isolation in favor of a compromise measure that was far from meeting their ideal, it was overwhelmingly defeated by the classes in which they have most confidence. The progressivists, on the other hand, claim that the ardent advocacy of the measure by the Socialist party was what defeated it, for, they say, "the Swiss people are unalterably opposed to anything bearing the name of socialism."

Whether this very striking example of the actual working of the referendum is to be regarded as an argument in favor of its adoption elsewhere is left to the reader. Altho the adoption of the referendum is generally advocated by radicals, it seems from this, as from many other instances, that when the referendum really works as it is intended to work, that is, when it elicits an expression of opinion from a considerable proportion of the electorate, it is more likely to err in conservative than radical directions. This, indeed, is what we should expect when we realize how difficult it is to effect any decided change in the opinions of large masses of people. The case is the same as with woman suffrage. If any one advocates woman suffrage because he thinks it will bring about some particular project he desires, say the abolition of the liquor traffic or of vivisection, he is likely to be disappointed in the result. So if any one advocates the referendum because he believes it will secure old age pensions or socialism, he is likely to be disappointed in the result. The only safe ground one can have for favoring either woman suffrage or the referendum is because he believes in a completer democracy, whatever may be its effect upon his pet measures.

Then, too, the question arises whether the referendum under American conditions would be a democratic institution.

It has not always proved to be so when we have tried it. When one finds, on reaching the bottom of a blanket sheet ballot that he is expected to vote "Yes" or "No" on Propositions I, II, III, IV, V and VI, without any indication of what they are about, it is a very different thing from a case such as we have been considering. Geneva is one of the smaller cantons of Switzerland, having an area of 108 square miles and a population of about 135,000, corresponding, therefore, to one of our counties containing a city of moderate size. More important, however, than the matter of area and population is the spirit of the people and that, as I have endeavored to indicate, is very different in Switzerland from America. The only safe conclusion is that the referendum, when it is carried out in the democratic spirit by a democratic people, is a very democratic institution.

GENEVA, SWITZERLAND.

Letter from a Father to His Son Entering College

BY CHARLES F. THWING, LL.D.

PRESIDENT OF THE WESTERN RESERVE UNIVERSITY AND ADELBERT COLLEGE, CLEVELAND.

MY Dear Boy:—I am glad you want to go to college. Possibly I might send you even if you did not want to go, yet I doubt it. One may send a boy thru college and the boy is sent thru. None of the college is sent thru him. But if you go, I am sure a good deal of the college will somehow get lodged in you.

You will find a thousand and one things in college which are worth while. I wish you could have each of them, but you can't. You've got to use the elective system, even in the Freshman year. The trouble is not that so few boys do not seem to know how to distinguish the good from the bad, but the trouble is they do not know the better from the good and the best from the better. I have known thousands of college boys, and they do not seem to distinguish, or, if they do, they do not seem to be able to apply the gospel of difference.

You won't think me imposing on you, —will you?—if before entering college I tell you of some things which seem to me to be most worthy of your having or being on the day you get your A. B.

The first thing I want to say to you is that I want you to come out of the college a thinker. But how to make yourself a thinker is both hard to do and hard to tell. Yet, the one great way of making yourself a thinker is to think. Thinking is a practical art. It cannot be taught. It is learned by doing. Yet there are some subjects in the course which seem to me to be better fitted than others to teach you this art. I've been trying to find out what are some of the marks or characteristics of these subjects. They are, I think, subjects which require concentration of thought; subjects which have clearness in their elements, yet which are comprehensive, which are complex, which are consecutive in their arrangements of parts, each part being closely, rigorously related to every other, which represent continuity, of which the different elements or parts may be prolonged unto far reaching consequences. Concentration in the thinker, clearness, comprehensiveness, complexedness, consecutiveness, continuity—there are the six big C's, which are marks of the subjects which tend to create the thinker.

To attempt to apply each of these marks to many different subjects of the curriculum represents a long and unduly stupefying labor. Apply them for yourself. Different subjects have different worths for the students, but there are certain recognized values attached to each coin of the intellectual realm. Mathematics and pure physics eminently

represent the larger part of these six elements which I have named. Mathematics demands concentration. Mathematics is, in a sense, the mind giving itself to certain abstract truths. What is X^2 but a form of the mind? Mathematics demands clearness of thinking and of statement. Without clearness mathematics is naught. It also represents comprehensiveness. The whole field of its truth is pressed into its larger relationships. Mathematical truth is complex. Part is involved with part. It is consecutive. Part follows part in necessary order. It is also continuous. It represents a graded progress.

It is, however, to be remembered that the reasoning of mathematics is unlike most reasoning which we usually employ. Mathematical reasoning is necessary. Most reasoning is not necessary. That two *plus* two equal four is a truth about which people do not differ usually. But reasoning in economics, such as the protective tariff; reasoning in philosophy, such as the presence or absence of innate ideas; reasoning in history; is not absolute. I have even wondered how far Cambridge, standing for mathematics and the physical sciences, has helped to make men great. Oxford is said to be the mother of great movements, and it is. Here the Wesleyan movement, and the Tractarian movement and the Social movement, as seen in Toynbee Hall, had their origins. Cambridge is called the mother of great men. Is there any relation of cause and effect, at Cambridge, between its emphasis upon mathematics and the sciences and the great men whom she has helped to make?

Logic is the subject of a course which embodies the six marks I have laid down. It demands these great elements in almost the same ways in which mathematics demands them. Logic, in a sense, might be called applied or incarnate mathematics. The man who wishes to be a thinker should be and is the master of logic. Language, too, represents almost one half of the course of the modern college, and it represented more than one half of the course of the older college. What merits has the study of language for making the thinker? The study of languages makes no special demand on the quality of concentration, but the study does demand and creates comprehensiveness and clearness. The study represents a complex process and demands analysis. The time-spirit has worked and still works in languages unto diverse and manifold forms. Languages are developed with a singular union of orderliness and disorderliness. The parts of a language are in some cases closely related. The Greek verb is the most highly developed linguistic product. It is built up with the delicacy and poise of a child's house of blocks, yet with the orderliness of a Greek temple. Each letter represents a different meaning. Augment, prefix, ending has its own significance. I asked a former Chinese minister to this country what taught him to think. His succinct answer was "Greek."

In creating the thinker, the historical and social sciences have chief value in their complex relationships. Select any period of history pregnant with great results. For instance, select the efflorescence of the Greek people after the Persian wars. What were the causes of this vast advance? Take, for instance, the political and social condition prevalent for thirty years in America before the Civil War. What were the causes of this war? Or, take economic affairs; —what are the reasons for and against a protective tariff? What are the limitations of such a tariff? Such conditions require comprehensive knowledge of complex matters. From such mastery the thinker results,—the thinker of consideration and considerateness. He can perceive a series of facts and the relation of each to each.

The laws of values of these different subjects in making the thinker, is that the subjects which demand hard thinking are most creative. Easy subjects, or hard subjects easily worked out, have little place in the making of a thinker. One must think hard to become a hard thinker. Subjects and methods which are hard create the inevitable result.

Subjects which demand thinking only, however, sometimes I feel are rather barren in result. One likes certain content or concreteness in the thinking process. Abstract thinking sometimes seems like a balloon which has no con-

nection with the earth. If a balloon is to be guided, it must be held down to *terra firma.* The ricksha men in Japan can run better if the carriage has a load. The bullet must have weight to go. A subject, therefore, which has content may quicken thinking and stimulate thoughtfulness.

The thinker is not made, however, only by the subjects he studies. In this condition the teacher has his place, and especially the methods of teaching and the inspiring qualities of teaching which he represents, have value. The dead lift of the discipline of the mind is liable to be a deadening process. Every subject needs a man to vitalize it for the ordinary student. Every graduate recalls teachers of such strength. He holds them in unfading gratitude and often in deathless affection.

The second thing I want to say to you is that I want you to be a gentleman. How absurd it is for me to write that to you. Of course, you are, and, of course, you will be one. In the creation of the gentleman as well as of the thinker, the personal equation counts. In fact, it counts for more in the making of the gentleman. For in this making truth is less important than the personality. In the gentleman intellectual altruism and moral appreciativeness are large elements. One has to see and to understand the personal condition with which he deals. If he is dull, his conduct is as apt to give unhappiness as pleasure. In order to open the eyes of the heart, in order to create an intellectual conscientiousness the study of great literatures must be assigned a high place. Constant and complex needs to be such study. Literature represents humanity. The humanities are humanity. Literature is style and style is the man. The gentleman as a product represents the homeopathic principle. The gentleman makes the gentleman. Certain colleges are distinguished by the type of gentleman which they create. It will usually be found on observation or analysis that colleges which are distinguished for the gracious conduct of their teachers toward their students are distinguished by the gracious bearing of their graduates.

As a gentleman you will be a friend and will have friends. In this relation of friendship in its earlier stages there is no part of life in which it is more important for you to exercise the virtue and grace of reserve. Be in no haste to make friends. Friendships are growths not manufactures. These growths, too, are like the elm and the oak, not like the willow. At this point lies all I want to say to you about joining a fraternity. If the men you want to be your intimate friends are members and ask you to join, join. If the men you do not wish to be your intimate friends wish you to go with them, decline. Do not join for the sake of a blind pool membership. Such a membership is really a sort of social insincerity, a lie.

In the assessment of academic values, give a high place to sound health. The worth is so great that very slight may be the paragraph I write you. In the "Egoist," George Meredith says, "Health, wealth and beauty are three considerations to be sought for in a woman, who was to become the wife of Sir Willoughby." Wealth and beauty are quite as much out of ordinary results of the education of the American college as health should be among those results. The method for securing and holding this result of health covers the trinity of proper food, proper exercise and proper sleep.

One of my old teachers once said to me after I was engaged in my work, "I am sorry to see you looking so well." "Why?" "Because every man has to break down three times in life. I broke down three times; Professor Hitchcock broke down three times; every man must break down three times and the earlier the breaks come, the better." There is no need of any man's breaking down, if he will observe with fair respect the laws of food, exercise and sleep.

I also desire that you should be a man of scholarly sympathy and appreciation. I can hardly hope you shall be a scholar. Yet you may. The scholar seldom emerges. If one out of each thousand students, entering the American college this year, should prove to be a scholar, the proportion is as large as one can hope for. For up to one in a thousand is as big a proportion as the world is prepared to ac-

cept. Yet it is to be hoped that you and that most men should have appreciation and sympathy with scholarship. You should know what scholarship means: in work as toilsomeness, in method as wisdom, in atmosphere as thoroness and patience, in result as an addition to the stock of human knowledge. If you be a laborer in one field, you should not seek, and I know you will not seek, to discount the existence of other fields or despise the laborers in those fields. If you become an engineer, you will not condemn the classicist as useless. If you are a Grecian, you will not despise the mechanical engineer as crass and coarse. One finds that the best men of any one field or calling are more inclined to recognize the eminence of the claims of other fields or callings. Smallness spells provincialism, and provincialism spells smallness. I have heard one of the greatest teachers of chemistry say that if he were to make a boy a professor of chemistry, he would, among other things, first teach him Greek.

In the appreciation of scholarship is found the strain of intellectual humility. The scholar is more inclined to inquire than to affirm. He is more ready to ask "What do you think?" than to say "I know." He is remote from intellectual arrogance. Humility means greatness. Cockiness is a token of narrowness. The Socratic spirit of modesty is as true a manner of wisdom as it is an effective method of increasing wisdom. The man who has an opinion on all things, has no right to an opinion on any one.

This intellectual sympathy and appreciation should take on esthetic relations. You should be a lover of beauty as well as of wisdom. Good books, good pictures, good music, good architecture, should be among your avocations. Read a piece of good literature every day. See a good picture or a good copy of one every day. Hear some good music every day. The chapel service may give it to you. And see a piece of good architecture every day. Some of the college buildings can give it. Alas! many do not. Such visions and hearings will soak into your manhood. All this is only saying lead the life intellectual. You should not only be a thinker, you should be thoughtful. You should be a man of large thoughtfulness. You should be prepared to interpret life and all phenomena in terms of the intellect. Many of our countrymen are intelligent. They know a great deal. They have gathered up information about many things. This information is desultory, unrelated. Their minds are a Brummagem drawer. Here, by the way, lies the worthlessness of President Eliot's list of books to the untrained mind. To the educated mind such books mean much, to the uneducated, little. Yet, as a college man, you may know less than not a few uneducated people may know. I don't care. The life intellectual is more and most important.

I also want you to go from the college a good combination of a good worker and a good loafer. To be able to loaf well is not a bad purpose of an education. The loafing that carries along with itself the freedom from selfishness, appreciation of others' conditions, and gentlemanliness, is worth commending. Loafing that follows hard work and prepares for hard work is one of the best equipments of a man. Loafing that has no object, loafing as a vocation, is to be despised. The late Professor Jebb wrote to his father once from Cambridge, saying,

> "I *will* read but not very hard; because I know better than you or any one can tell me, how much reading is good for the development of my own powers at the present time, and will conduce to my success next year and afterwards; and I will *not* identify myself with what are called in Cambridge 'the reading set,' *i. e.* men who read twelve hours a day and never do anything else; (1) because I should lose ten per cent. of reputation (which at the university is no bubble but real living useful capital); (2) because the reading set, with a few exceptions, are utterly uncongenial to me. My set is a set that *reads*, but does not only read; that accomplishes one great end of University life by mixing in cheerful and intellectual society, and learning the ways of the world which its members are so soon to enter; and which, without the pedantry and cant of the 'reading man,' turns out as good Christians, better scholars, better men of the world, and better gentlemen, than those mere plodders with whom a man is inevitably associated if he identifies himself with the reading set."

I rather like the loafing which young Jebb indulged in, but I fear it is a type of the life which some college men do not follow. They are inclined to look upon the four college years as a respite

between the labor of the preparatory school and the labor of business, or rather they may look upon the four college years as a life of professional leisure. I am glad you cannot, even if you wished to, and I know you do not wish to, think of college as either respite or leisure. Whether the college is wise in allowing such loafing, it is not for me now to say, but I can trust you to be the proper kind of loafer as well as of worker.

Indeed, I want you to have good habits of working. In such habits the valuation of time is of special significance. Take time in large pieces. Do not cut time up into bits. Adopt the principle of continuous work. The mind is like a locomotive. It requires time for getting under headway. Under headway it makes its own steam. Progress gives force as force makes progress. Do not slow down as long as you run well and without undue waste. Take advantage of momentum. Prolonged thinking leads to profound thinking. Steamers which have the longest routes seek deepest waters. Let me also counsel you to do what must be done sometime as soon as possible. Thus you avoid worry. You save yourself needless trouble and waste. You also have the satisfaction of having the thing done which is a very blessed satisfaction. I would have you spring to your work in the mood and the way in which J. C. Shairp, in his poem on the "Balliol Scholars," spoke of Temple:

"With strength for labor, 'as the strength of ten'
To ceaseless toil he girt him night and day:
A native King and ruler among men,
Ploughman or Premier, born to bear true sway:
Small or great duty never known to shirk,
He bounded joyously to sternest work—
Lest buoyant others turn to sport and play."

Therefore, do not be a slave. Go at your job with enthusiasm. To get enthusiasm in work, work. Work creates enthusiasm for work in a healthy mind. The dyer's hand is not subdued to its materials. It is strengthened thru materials for service.

All this leads me to say that I want you to come out from the college with a determination to do something worth while. It is rather singular how political ambitions have ceased among graduates. Some say all ambition has ceased among college men. I do not believe it. The softer times may not nurse the sturdier virtues; but men are still men. The words which Stevenson wanted put on his tombstone: "He clung to his paddle," and the words of George Eliot: "Don't take opium," and the words of Carlyle: "Burn your own smoke," are still characteristic of college men. Men are still moved by the great things, and by such inspiration they are inspired great things to do.

One thing more I want to say to you, my boy. It is so personal that one hesitates to say it, even to a son. It is also needless for me to say it to you, more needless than anything I have ever said. You believe it, you know it, you are acting upon it; but it is this: Be religious. It sounds almost goodish, but I know you do not think it such. Be religious. Relate yourself to something. Relate yourself to some what. Or relate yourself to some who: beyond whatever your eye sees or your hand touches. I do not care how you put it. If I were a Buddhist, I would say, Worship Buddha. Be what the great image at Kamakura represents. If I were a Mohammedan, I would say, Follow the teachings of the Koran, and pray. I am, and you are, a Christian. Therefore I say: Love your God. Follow the example of the Christ. Be one of that company who accept his guidance and are seeking to do his will in the bettering of the world.

Good-bye, dear boy, I have written too long but it has done me good to write it. If it does you a quarter of the good to read it, I shall be grateful.

CLEVELAND, OHIO.

A Classic Municipal Skyscraper

BY SYDNEY REID

WHEN homecoming New Yorkers stand on the decks of ships thirty miles out at sea, peering in the direction of Manhattan, the first landmark rising to their vision will be a sheer white building of classic design towering away and away above the highest steeples—making Trinity and St. Paul's look like churches of Lilliput strayed into Brobdingnag.

New York's new municipal building, it will be, standing in Park Row, Duane and Centre streets, straddling Chambers street by means of a 30 foot arcade, rising 582 feet (without the figure that will ultimately surmount the tower) and div-

VIEW OF NEW MUNICIP AL BUILDING AS IT WILL APPEAR FROM BROADWAY AND CITY HALL PARK.

ing down for firm foundation lower than pneumatic foundation work ever went before. The Eads Bridge, at St. Louis, reached a depth of 110 feet below the line of high water mark, and that was looked on as the limit—for the caisson laborers or "sand hogs" had to work in an air pressure of three atmospheres. But here, on May 19, the "sand hogs" reached a depth of 112 feet 1 inch below the line of high water mark, and continued their task until August 1. There are a hundred of these "sand hogs" who work in forty minute shifts, for the limit of endurance under a pressure of three atmospheres is very brief. Six at a time go down and delve like gnomes in the depths, then come up and spend, in a special chamber, a long time fitting themselves for the change from three atmospheres to one. In the early days of this caisson work "the bends" attacked many "sand hogs" with extremely painful and sometimes even fatal results. The trouble was caused by bubbles of high pressure air remaining in the system after the caisson worker came out into the normal atmosphere. If these bubbles lodge near any vital organ they are very apt to cause death. Generally they are caught in the joints—elbow or knee—producing excruciating pain. "The bends" are foreseen and provided for now and cases are easily cured by means of an airtight cylinder where the atmospheric pressure is made to suit the patient's condition and he is gradually prepared for the everyday world. The "sand hogs" work two forty minute shifts each day and receive $4.50 for a little more than an hour's work. Theirs therefore, is highest paid manual labor. The hazard of life increases in proportion of air pressure, yet on this greatest and deepest of all pneumatic foundation jobs there has not been one unfortunate accident to the laborers. In some mines men work in comfort at a depth of 600 feet, but those mines are in the mountains and their lowest depths far above sea level; this caisson digging is very different. It is proceeding far below sea level and the pressure of three atmospheres is necessary in order to keep out the water.

The white effect of the great building will be produced by the 700,000 cubic feet of Mount Waldo (Maine) granite, of which it will be composed. Concrete, rock, steel and glass are the principal substances to be used, and, so far as human ingenuity can provide, it will be fireproof. There will be nothing to burn except floor boards and some wooden furniture and papers.

The engineer in charge is Kingsley L. Martin, of the Bridge Department. The Thompson-Starrett Construction Company, which is to erect the building, has promised to finish its work by January 1, 1912, and McKim, Mead & White, the architects, believe that in spite of elaborate interior decoration and fittings all will be ready for city officials to move in on January 1, 1913.

The new municipal building is the latest and largest of its kind in the world It will give 2,000,000 feet of floor space for the city's business—each floor having an area of about an acre. There will be twenty-six floors in the main building and eight more for use in the three towers which, diminishing in diameter as they ascend, are set one upon another. The topmost tower cannot be used for office purposes and will hold pressure tanks.

The total cost will be $12,000,000, but even at that it will save the city money, for $600,000 per annum is now being paid out in rent for premises occupied by city departments.

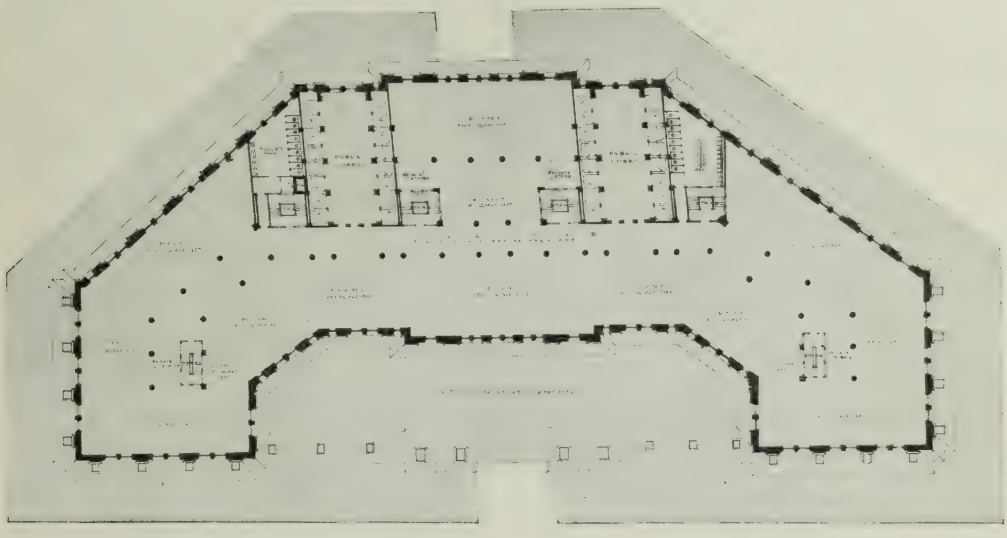
More than that, it may be made to bring in a very large revenue, for the city departments, tho taking plenty of space, will yet leave one whole side vacant and this may be rented to private firms.

The city pays its landlords about an average of $2 per square foot of the office space that it rents, and is using 300,000 square feet. In the new building the engineers calculate that it will use a million square feet and rent the other million. In case it does this the revenue ought not to fall far short of $2,000,000 The present city administration will still be in charge, and it has shown a disposition to turn an honest dollar for the public pocket. The Dock Commissioner expects the Jamaica Bay Development scheme to yield large revenue, and everywhere in the city government today there

VIEW OF THE MUNICIPAL BUILDING LOOKING EAST THRU CHAMBERS STREET.

is a disposition to make city properties yield revenue as well as they would if held in private ownership.

The shape of the new building will be peculiar, a sort of semi-octagon, more than 300 feet long and 100 feet deep.



Not all of the city departments will move into the new building. The dear little old City Hall, so long admired for its architectural beauty, will sit still right where it is at the feet of the skyscraping giant, and will lose none of its present high honor. It will contain the Mayor's office, office of the Borough President of Manhattan, office of the President of the Board of Alderman, board room of the Board of Estimate and Apportionment, and board room of the Aldermen.

Offices of the Dock, Police, Park and Fire Departments will remain as they are.

The architects are now figuring out the interior arrangements of the new building, as the wants of each department to be accommodated will be a little different from those of any other department. It must be convenient within, as well as beautiful without, in order to approach the designer's ideal. The elevators will be the best and swiftest known.

No engineer, nor architect, nor prophet knows what the period of the life of this new building will be. Rock, concrete, steel and glass—they ought to last. As to floor boards and furniture, they can easily be renewed.

Engineer C. C. Martin, father of Kingsley L. Martin, who, for many years, was in charge of the Brooklyn Bridge, once told the writer that the Brooklyn Bridge would stand forever if it was painted regularly and the steel thereby protected from water. That sounded like exaggeration, but Mr. Martin knew exactly whereof he spoke and he insisted that "forever" with him in this case meant not one hundred years or one thousand years, but forever. For, as he asked, "What is there to decay or grow old?"

VIEW OF A TYPICAL FLOOR PLAN OF THE NEW MUNICIPAL BUILDING.

And if the Brooklyn Bridge will stand forever, barring cataclysms, why not the new municipal building? It is planned with the future very plainly in sight—large enough to accommodate the departments of the ten millions of people who will be gathered within the bounds of Greater New York by the year 1940.

There's another interesting question that the architects and engineers can't answer at present—What figure will surmount the topmost tower? Mayor, Aldermen, Board of Estimate, heads of departments, Corporation Council, architects, engineers and maybe even "sand hogs" are puzzling, worrying and losing sleep over the problem. Some are reading Epictetus, Plato, Marcus Aurelius,

Emerson, Spencer and Carlyle in hope of gaining light from the philosophers, but so far without good results.

"It's a classic building," say some, "and therefore a classic figure would be most appropriate." They suggest Mercury. But it is objected that Mercury was a light sort of person and not famed for honesty. Moreover, doctors have used him until he is redolent of pills. And how does he represent New York?

Father Knickerbocker is another candidate, but objectors declare that he looks too much like William Penn and, moreover, is, like Penn, local, whereas in order adequately to represent the great eastern gate of the American Continent he should be cosmopolitan.

Peter Stuyvesant has some friends, but not many; there is not much of New Amsterdam left in New York of today.

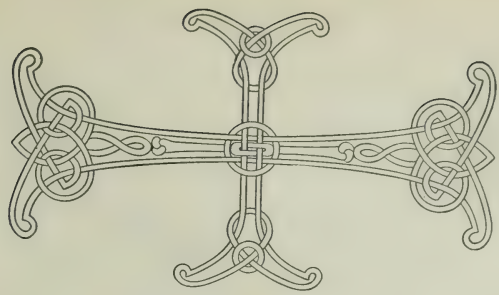
A figure of idealized American labor might do, but that would almost certainly stimulate local working men to strike for a new raise of wages on the strength of the tribute.

The American Indian might do best of all, tho his would be a sad and lonely post overlooking the mighty works of his white conquerors.

The matter is one to which letter writing citizens might well turn their attention. Newspapers and city officials alike welcome bright suggestions.

NEW YORK CITY.

When?



BY MARIE CONWAY OEMLER

SOME day—in future, fairer, days to be—
I'll do the kindly work my heart has planned;
Then every one that asks shall have from me
The quick, sure sympathy of heart and hand.
I shall obey the Father's old command:
To lift the fallen, comfort the opprest,
To pluck the thorns from out my brother's breast;
To open wide my soul and cast out sin,
And call good deeds, God's tenderest angels, in.

I have no time today; but some time I
Shall follow where the Master's feet have trod;
Shall face the frowning world with courage high;
Shall learn to kiss, with chastened lips, the rod,
And find in Sorrow's face the eyes of God.
So shall I curb the quick, rebellious will,
Hear in my heart a low-voiced "Peace, be still!"
Thru grief most nobly borne my soul shall win
A space to call the choiring angels in.

But oh, what if, on some fair eventide,
When I might watch, as Abram watched of old,
The long-closed tent doors of my heart flung wide
To welcome angel guests into my fold,
That they should find my dwelling place too cold!
A moldered floor, unknown of wind and sun;
A lamp unlit of kindness never done;
A shrine dust-strewn with selfishness and sin,
And, all too late, I called the angels in!

SAVANNAH, GA.

An American Churchman on the Anglican Church

BY REV. G. MONROE ROYCE

Author of "Americans in Europe," "The Decline of the American Pulpit," etc.

I LIVED six years in England as an American clergyman, acting under special license from the Archbishop of Canterbury. I was also licensed by the Bishop of London, and received the written permission of more than a dozen other bishops to officiate as a *locum tenens* in their respective dioceses. Besides this I have taken occasional duty in many other dioceses where episcopal sanction was not required, so that my observations cover almost the whole of England. And let me say at once that I have experienced nothing but the kindest consideration from both the clergy and the laity of the Church of England. This paper, therefore, is inspired by no spirit of hostility, but by a true, if mistaken, feeling of love and loyalty to the Mother Church of the Anglican communion.

My point of view must necessarily be American. Yet I believe I am also able to appreciate, to some degree, at least, the English position, otherwise this discussion would be bootless.

In order to assure the reader that my study of the English Church and my observations of English life and character have been both careful and sympathetic, I venture to refer to papers on "English Oral Tradition" and "Henry VIII and the Religious Houses," published in *The Nineteenth Century Review*.

My duty for the most part was that of *locum tenens* in country parishes. I resided, as a rule, in the parsonage (vicarage or rectory house, as the case might be), hence I was able to take my observations from the very center and heart of the parish. My tenencies were for periods of one, three, six and twelve months.

Perhaps it is well for me to say that I did not go direct from America to England, but by way of Germany, where I acted for several years as chaplain to the American Church in Munich. I had also held the post of chaplain in France and Italy. In all of these countries I was in the way of meeting British clergymen and of learning something about the administration of the Church of England. Besides I had often visited England as boy and man, so that I did not find myself in a wholly strange situation. Still the atmosphere of the Church of England was very different from that of the Continental chaplaincies, and I was impressed from the first by the stability and dignity of the position of an English Church incumbent and the tone of authority which his security of tenure imparted to his office, and—viewed from the purely personal standpoint of the parson—I considered the British cleric a most fortunate man.

The next thing that arrested my attention was the austere aloofness of the English bishop and the air of legality which enveloped him. It took me some time to realize that a lawyer—and his fee—always stood between me and my father in God, and that in very fact I was dealing almost exclusively with a lawyer. I at first supposed that the

bishop's secretary was a clergyman—as he invariably is in America—and I made the mistake, more than once, of addressing him as the Reverend. Such a thing as seeing a bishop face to face, or of getting one friendly word of greeting from him by tongue or pen, I soon learnt was not to be thought of, and the utter coldness of the thing nearly froze me to death during my first winter. But I was in England for study, experience and adventure, and determined to stick it out to the bitter end—if bitter it should prove. On second thoughts I find it is not literally correct to say that I did not during my first winter meet a bishop face to face. As the *locum tenens* of a parish I was asked by the rural dean to take part in the re-opening ceremony of an old and disused church. The bishop of the diocese was present, and I ventured to introduce myself to him as an American clergyman, acting under his permission. He turned upon me with a look of astonishment. "American? With American orders? I know nothing of an American priest officiating in my diocese." And this was the only greeting I received from his lordship; and it set me to wondering whether a man could become a bishop in England without having the manners of a gentleman. I confided this unhappy experience to a brother clergyman, who was both a scholar and a gentleman. "Yes," said he, "such things do happen in the Church of England, and you must understand that your case is not an exceptional one; let that console you." And it has. I knew, of course, that there could be nothing personal in the cold comfort I got from the English episcopate, as I was unknown to nearly all of the bishops, and I learnt, as time went on, that the unbeneficed clergyman, and especially the non-parochial clergyman, is a wholly minus quantity in the eye of the diocesan—for the Church of England is made up of parishes, and a minister without a parish connection of some sort—except he be some high official—does not come within the purview —to use a legal phrase—of the diocesan's functions. But, strange to say, in spite of all this, the Church of England is governed—not by bishops, as I had supposed—but by act of Parliament; and the bishops, realizing this fact, surround themselves with lawyers, who define the scope of their episcopal authority, and the bishops naturally confine their activities, for the most part, within these legal limitations. That they possess human sympathy beyond the bounds of their episcopal dignity I have no doubt, but they are so hedged about with lordships and palaces that the man and the Christian minister are often lost in the grand official. It is a dangerous thing to take a successful schoolmaster out of his schoolroom, or a learned professor out of his chair, put him in a palace and dub him "My lord." In nine cases out of ten it turns his head and spoils his character. The social pretensions of bishops not too well born were brought to my attention at Lucerne, Switzerland, early in my ministry, by the chaplain of an English lord bishop. "You know," said the chaplain, who himself had some well-grounded family pretensions, "that his lordship is not quite a gentleman by birth, and hence he makes the most of the dignity of his high office."

On the other hand, I have generally found that when a bishop is a man of good birth he is also a man of good manners and simple habits—always amiable and usually friendly disposed to the stranger within his gates. I may, perhaps, without meaning to be invidious, give two examples of what I am trying to suggest. One of these examples I take from the Midlands, the other from the south of England. A clergyman of the very highest scholarship and of hardly less high birth was offered the bishopric of a diocese with a country palace attached. He accepted the diocese, but declined the palace, and took up his residence in a very modest dwelling, where I had the honor of visiting him. His diocese was divided not long after he became bishop, and he voluntarily removed from the old see city—the site of one of the great cathedrals of England—to make his home in a huge, dirty, smoky manufacturing town. An almost exactly parallel thing happened, about the same time, not a thousand miles from London, where another bishop, of similar birth and scholarship, left a palace and a cathedral, to live in the

midst of squalor and poverty. How much easier it is, apart from every other consideration, to have relations with a bishop who is not fenced about and shielded from the vulgar view by the high walls of a sequestered palace. This is not mere theorizing, and I point to the two bishops just mentioned as object lessons of the good results of what I am suggesting, for there are certainly not two bishops in the entire Anglican Communion who exert more, or, in my opinion, as much, influence for good among all sorts and conditions of men as these two veritable fathers in God.

De Quincy somewhere tells how episcopal pride descends even to servants, all of which shows that if the bishop resigned his palace and his worldly title it would probably promote family modesty if no other virtue. But this family pride points to much graver matters, for it can hardly exist where the bishop is a godly man, intent on doing the work of a Christian minister. The point which I am endeavoring to make is that these things—the palace and the lordly title—are corrupting influences which a bishop can seldom withstand, and his family never; and that often, very often, they—the palace and the lordship—are fatal to what might have been under more favorable conditions a good, earnest, effective chief shepherd. Moreover, palaces and lordships—together with knee-breeches, aprons, etc.—belong to a period in English history when bishops were often temporal princes and always temporal powers, and are therefore archaic and should long since have become obsolete. Does any sane person suppose that John Wesley or General Booth could have accomplished his vast work if he had lived in a palace, remote from the heartbeat of the mass of the people? Nowhere, perhaps, is the temperature of England registered with so much accuracy as in the city of London. But when, in recent days, was a lord bishop, or an archbishop even, given the freedom of the city as General Booth was given not long since? Is it possible that the Church of England is wholly blind to such signs of the times?

Now I believe there is no finer class of men in the world than the English clergy. I go further, and say that the English are the best educated and best mannered clerics to be found in any nation; and as the bishops can only be chosen from this splendid body of men, it seems strange that their elevation to the highest office in the Church should so often prove a fatal mistake. Well, my explanation of this sad circumstance is that the lordship and the palace into which the bishop is suddenly thrust paralyze him and render him a mere legal official, with a strong tendency to social pretensions and worldly mindedness.

An episcopate, I believe, is essential to the stability and continuity of a Christian Church. Church history teaches us this, I think, if nothing else; and this fact is coming more and more to the front, as dogma recedes more and more into the background. There can be no such thing as cohesion or union of any sort on mere dogma, for it is the primal nature of dogma to divide by exclusion and condemnation. The *"Quicunque Vult"* is perhaps the typical dogmatic formula, and it begins by exclusion and condemnation. The episcopate, as such is free from all prejudgment, and is at liberty to assume such an attitude toward all questions of doctrine and discipline as the times and the circumstances may suggest. As these simple truths are more and more apprehended there will be a wider and a freer acceptance of the episcopate, as the only universal point of Christian contact, as well as the only means of tracing the historic continuity of the Christian Church. But his Lordship, or his Grace, in a palace can never become this center of Christian convergence. That, I think, is self-evident. The bishop is the connecting, the uniting vertebra in the body of the Church, and he cannot be separated from it without causing universal paralysis of the whole body. He has survived all reformations and all revolutions. It were as well to found a state without a head as a Church without a bishop. Where the bishop is there is stability, cohesion, union, order; where he is not there is a want of stability, cohesion, order; and sooner or later anarchy creeps in and chaos is the final state.

The Church of England possesses a valid historic episcopate, but it can no

longer grow and flourish in the hot-house atmosphere of a palace, surrounded by lordships and other civil dignitaries. It must be taken out and away from all this, and planted in the midst of the work-a-day life of the common people before it can hope to draw democratic England to its banner.

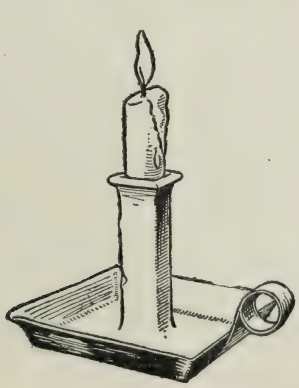
With the passing of the bishop from the palace and the House of Lords, the social exclusiveness of the country clergy would soon prove untenable, and one reform would follow fast upon the steps of the other.

I wonder if the British people fully understand what I mean by the social exclusiveness of the clergy? I doubt if they do, for they have become so accustomed to it as to be hardly able to see it—or at least to appreciate its full meaning. The first *locum*-tenency I held was for six months in the diocese of Norfolk. I had not been in residence at the fine old rectory house many weeks before most of the gentry in the neighborhood had called upon me, but the resident dissenting minister took no notice of my arrival. I thought this strange and asked the principal lady of the parish to explain it. She was literally amazed at my question, and answered, with some heat, that he would not dare to do such a presumptuous thing. "Why presumptuous?" I inquired. "Has there been any trouble between him and the rector?" "Not that I know of," this lady made answer, "but, of course, they have nothing to do with each other." On pressing my inquiry I found that it was not on account of their Church differences, but solely on social grounds, that these two Christian ministers, living in the same little parish, were as far apart as the poles. And I ascertained further that no one not included in the very small body of "gentry" would presume to visit the rector or his family on social grounds. And that is the state of things that exists all over the countryside thruout England, with hardly an exception, so far as I know, and I have been at some pains to make a very extensive inquiry about this matter. Such a condition of things is simply appalling to an American, and it must be more or less so to many thoughtful English people, who love their Church and would like to see it the happy home of all the people, and the minister the hearty friend and pastor of all, without regard to birth or condition.

Water will find its level, and a clergyman and his family will naturally form their intimacies with the most congenial people in matters of birth, education and tastes. But for the parsonage to adopt the social standards of the hall is to destroy the office of pastor, degrade the calling of minister, and make impotent the Church's ministrations; for neither those who are excluded nor those who are included have any respect for such utter worldly mindedness. If the people of the parish cannot meet on a common basis in the home of the Church minister, they will not willingly meet on any basis in the Church itself. And the truth is they do not.

In the light of this clerical social exclusiveness is it surprising that all the Nonconformists have combined and act as a solid body against the Established Church and the social order and exclusiveness it represents? Virtually no one in the country parish worships in the Church except the gentry and their dependents, who fear to offend by going to the chapel. During my six years in the English Church I did not find a dozen common laborers who were bona fide worshipers in the Church of England. In one parish where I was *locum tenens* for three months I found the vicarage in an unsanitary condition and took lodgings in the house of a dissenter. After a month or so I observed one of the daughters in church for two Sundays in succession, and laid the flattering unction to my soul that I did it, and I said to the mother that I was glad to see Katie in church. "Yes, sir," said she, "Katie is now in service at the Hall," and this she knew was a perfectly sufficient explanation.

The worst cases of all—and I have seen several—is where a poor clergyman marries a woman with money and social ambitions. There is perhaps not a hundred—I should say not half a hundred—country livings in England today that can be taken by men without private means, and this fact is changing the character of the country clergy very rapidly. When the Archbishop of Can-



terbury visited the United States a few years ago he was greatly pleased, and not a little surprised, to receive a very cordial greeting from the non-Episcopal ministers, who would be classed as dissenters in England, and who, of course, never approach his Grace in any way whatsoever. This expression of good will for the Archbishop on the part of the American non-Episcopal ministers is explained by the fact that there is no social exclusiveness nor other superior pretensions by the Episcopal clergy in America. Abolish these things in England, and put the Archbishop in a more modest and accessible place of residence, and I prophesy that in a very few decades he will be accepted as the head of that great body of earnest Christian men and women now known as Nonconformists. And it is perfectly plain that unless some such thing does happen the Church of England will be left high and dry, to whiten on the narrow beach of class distinction, while the warm red blood of the nation will flow away from her into the wider and deeper channels of a common humanity.

It has been shown, time after time, that something in the neighborhood of $500,000 is annually thrown away on empty city churches, while one-quarter of that sum cannot be raised for the millions of people swarming all round these stranded Church barks. I held a curacy just outside of the city limits, in a parish of more than eight thousand souls, which did not contain one person of independent means or position, so far as I knew, and where 90 per cent. of the people were in abject and indecent poverty, and yet the Church of England appropriates, all told, less than $3,000 for the support of a staff of three clergymen, while within a walk of fifteen minutes there is a city church, which has practically no resident parishioners, that gives an income of $6,000 to one cleric. This church has besides an endowment for a lectureship, which yields, I think, $1,000 a year. I cite this case because it happens to lie within my own personal experience, but I have heard of much worse contrasts. The Bishop of London is, I hear, moving in this matter.

There is, I believe, no national Church whose history has embraced so much of the "glory that was Greece and the grandeur that was Rome"—and I think I may add of the righteousness that was Jerusalem—as the Church of England; and there is nothing which attracts and holds the reverent attention of the American and the colonial visitor to England so much as the beautiful cathedrals which cover the soft green bosom of their motherland; and as loyal children of a common race and a common religion they protest against the narrow and exclusive spirit in which this great national and racial Church inheritance is being administered.

They know, of course, that rank and social distinctions in the mother country are marked by very hard and fast lines, which it would be ignorant and futile presumption on their part to attempt to alter or modify. But the Church—their Mother Church of England—they hold should be free from all such alliances and should breathe an atmosphere of fraternity, equality and Christian fellowship for all—untainted by rank or title or any other class distinction.

MELVIN VILLAGE, N. H.

Irrigation in Australia

BY ELWOOD MEAD

[Dr. Mead is well known in this country as a leader in the irrigation movement which has already added thousands of acres to the arable area of the United States. While in the service of the States of Colorado and Wyoming and later of the Department of Agriculture at Washington he did much to solve the problems which confronted the farmers in the arid region and also to free them from the embarrassments of antiquated and inadequate laws which caused them more trouble than the alkali. A few years ago he was called to Australia to do a similar work there and he is now in this country on a brief visit as the representative of the State of Victoria for the purpose of calling the attention of Americans to the advantages offered by the unsettled lands of Australia.—EDITOR.]

TO most Americans Australia is an unknown country. It is not likely to remain so much longer. If the conservation of resources becomes a national issue in America, no country has more valuable lessons than Australia and New Zealand, because these two democracies have from the first taken an advanced position in industrial legislation of this character. Those who are struggling for better water laws in the Western States will find in Victoria legislation a convincing demonstration that industrial development may be secured without any surrender of public rights. The lessons of Victoria's experience can safely be applied to the United States, because the climatic and industrial conditions of the two countries are remarkably alike.

These facts will, it is hoped, give interest to the impressions of an American who left irrigation work in the United States to assume the chairmanship of the Water Supply Commission of Victoria. The letter of the Minister of Water Supply offering me this position said that the State was entering upon an extensive scheme of irrigation development. Great storage works were to be built and large areas of fertile land reclaimed. Some one with practical experience in the management of irrigation schemes was desired to direct this work.

Two circumstances combined to make this offer attractive. From boyhood the islands of the South Seas had possessed for me an unusual fascination. Under the "Gentler moons and softer skies" of those far-off lands were products and peoples unlike anything I had ever seen. I longed to know more of countries where fruits were gathered without planting, and where work and clothes were alike superfluous.

Australia is the nearest continent to these alluring tropic lands. It is also near to the wealth, poverty and mystery of the Ancient East, so that vacation visits to either are easily made.

This young commonwealth, with an area almost equal to the whole of Europe, and with soil and climate infinitely superior, did not seem a bad place in which to live. The more so as its Government is one of the most advanced and enlightened democracies of our time, and its increasing population and expanding industries are destined in a few years to profoundly influence the world's movements of trade and enterprise.

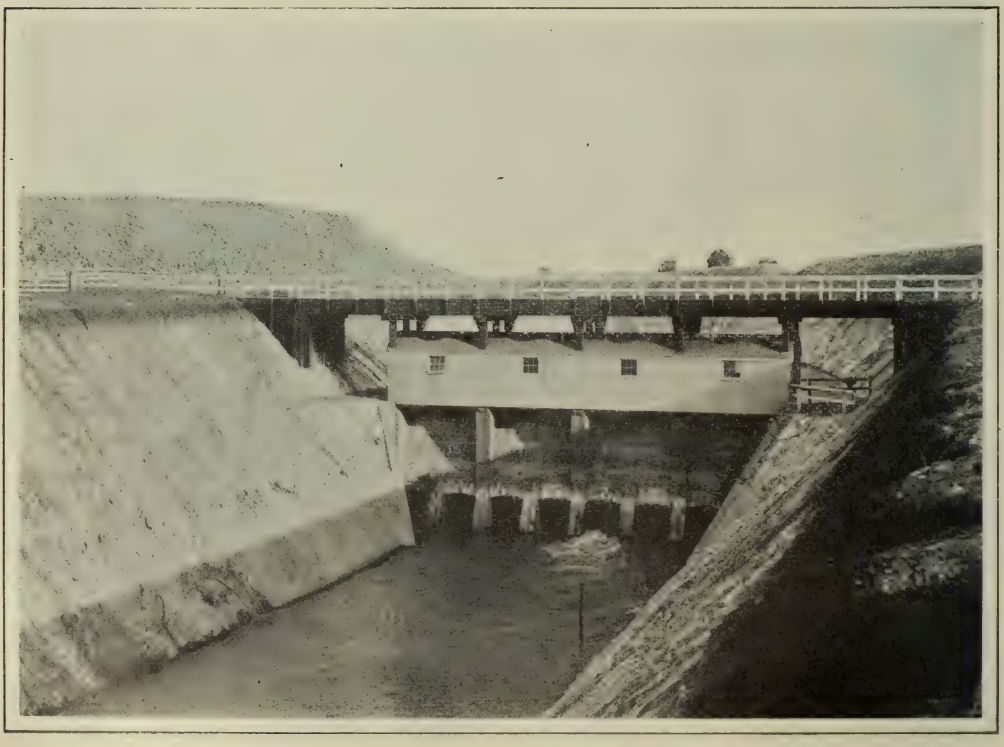
The position was made additionally attractive by the fact that Victorian laws governing the ownership and use of streams carried into effect the principles for which I had been contending in America for twenty years. Under these laws the State has not only reserved to itself the perpetual ownership of the water of all streams, but has retained title to the bed and banks as well. The State is, therefore, the sole riparian proprietor. It is not possible here, as it is in America, to secure speculative perpetual rights to public water supplies by acquiring a few acres of riparian lands or by posting a notice on a cottonwood stump in some obscure bend of the stream.

The profligate surrender to private ownership of water powers worth untold millions of money has never been a feature of Victorian development, nor is there any possibility of it becoming so in the future. Whatever value these natural resources possess has been retained

for the benefit of the community. Believing fully in the doctrine that public waters should remain perpetually a public property, and that to grant private perpetual rights is to sacrifice the welfare of future generations, I was curious to observe at close range the operations of such laws. The position offered me not only permitted this, but gave the privilege of helping shape development under them.

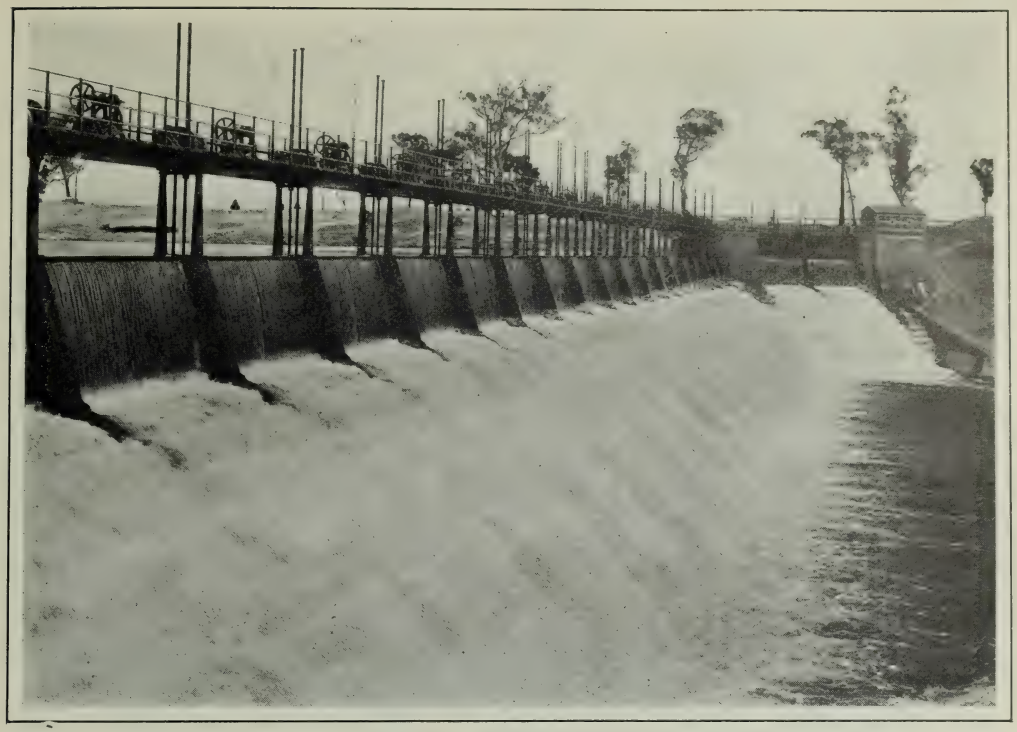
Melbourne, the capital of Victoria, is a friendly and cultured city of over 500,000 people, and is more like San Francisco than any other city in America; the State is also marvelously like California in climate and productions. There is the same prevailing sunshine, the same absence of winter, and the same charm and healthfulness in rural life. Both States owe their early development to the discovery of gold, their later prosperity to wheat growing and live stock raising, and both will owe their ultimate greatness to the extension of irrigation.

Every country which owes its early development to gold mining has the gambling spirit largely developed. Growing wheat with a rainfall of 15 inches gives abundant opportunity for the exercise of the gambling impulse. Wheat growing in both Victoria and California has been popular, and the great wheat ranches in both States have operated to retard the development of irrigation. The Goulburn Valley in Victoria is the counterpart of the Sacramento Valley in California; in both, for many years, population declined as the size of the wheat ranches extended.



MACORNA BUTTER FACTORY
On the Macorna Channel.

Irrigation development in Victoria began over twenty-three years ago. Practically all the irrigation works have been built with money furnished by the State. The first State schemes sought to combine public money and public oversight with private management. Districts with local trustees, not unlike those first formed under the Wright Act in California, were created. Some of these districts were given large grants of



money outright. The donation to the Goulburn scheme was the magnificent sum of $3,500,000. In all about $16,500,000 has been expended by the State on works for irrigation and water supply.

The early results from the schemes first inaugurated were not satisfactory. The rich landowners became as a rule trustees of the irrigation districts and shaped the management to suit their own agricultural methods. They had no objection to the State expending money on canals so long as they were not called upon to repay the money, but they did object to using the water made available, because they preferred wheat growing on large areas to the expenditure and careful attention to detail which successful irrigation requires.

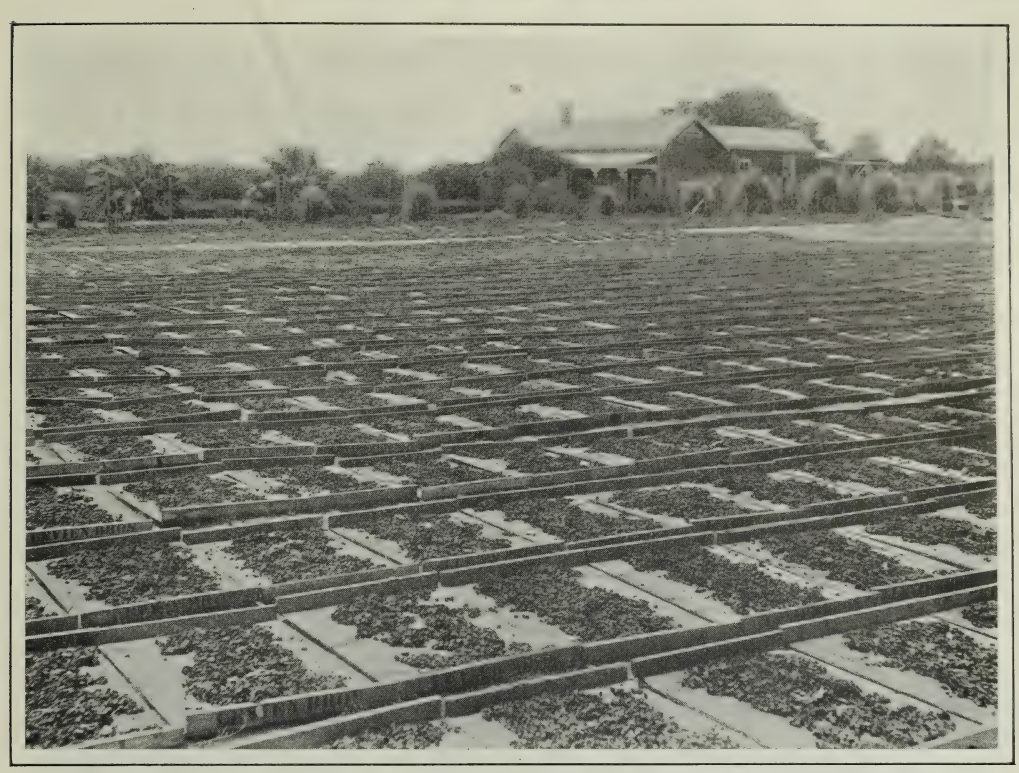
The outcome of this was disappointing from an agricultural standpoint. Instead of an increasing population there was an absolute decline in some districts, and instead of farms being subdivided they grew steadily larger. This was contrary to public policy, and in 1906 the control of all these districts was taken over by the State and placed under the administration of a commission of three; I became chairman of this commission in 1907. In all, the commission provides water for over 10,000,000 acres of land, the different areas being widely distributed. The conditions in the different irrigation districts are, however, so nearly alike that an explanation of the problems of one will serve to illustrate the policy which the State is pursuing thruout the irrigable areas. The one chosen is the Goulburn Scheme, intended to utilize the entire flow of the Goulburn River, which last year had a discharge of over 3,000,000 acre feet. The two main canals of the scheme cover over 1,000,000 acres of irrigable land and have cost about $6,000,000. The lands under the two main canals have been divided into five districts for administrative purposes. One district partially irrigated has over 600 miles of distributary canals, and there are distributary canals traversing in all about 500,000 acres. Nevertheless, but little of the land has been graded and prepared for irrigation and only a small

MAIN OUTLET FROM THE WARANGA BASIN.

THE GOULBURN WEIR.

fraction of the water has been used. This year practically all of the water of a reservoir which holds 200,000 acre feet is being wasted back into the river because there was no demand for it during the irrigation season. The cause of this disappointing development has been the large size of farms. There are two with over 30,000 acres and in one district there are forty farms of 1,000 acres or more. So long as there was no fixed charge for water these large estates could be held intact.

In order to bring all the land into use a law was enacted which provided that all land which could be supplied with water must pay its proportionate share of the annual cost of the scheme. The commission allots a definite volume of water to each acre of land in a district, and if it is able to supply the water the owner of the land must pay his allotment whether he uses the water or not. The commission has temporarily fixt the yearly amount of water required as two acre feet for an acre; of this one-half is allotted as a right and must be paid for. The price of the water furnished between the 1st of April and the 1st of November will be 50 cents an acre foot, between the 1st of November and the end of the irrigation season in April the price will be 25 cents an acre foot. The higher price being due to the fact that much of it comes from reservoirs.



This legislation has made it possible to put the works on a sound financial basis. This, however, was the least important of the State's purposes, the main object being to secure the highest use of land and water. In carrying out the latter purpose the effective industrial legislation of the State came into play. There is not here the reluctance to the State's engaging in industrial enterprises that there is in America. On the contrary, it is the general policy that all natural monopolies should be controlled and operated by the State. As an outcome of this policy the State owns and operates all railroads and all telephones and telegraph lines. When the strike interfered with the supply of coal for the State railways the State promptly opened a mine of its own and now provides the fuel used at greatly reduced cost. There

are no private refrigerator car lines in Victoria; the State not only owns and operates the refrigerator cars but has built a large number of cold storage warehouses to which the country producer can send his fruit and vegetables to be handled and sold by State officials. The State has made special contracts with the steamship companies for the carrying of farm products to different ports of Europe, and so complete is this industrial organization that butter is sent from the Victorian markets to the markets of London at the total expense of 1 cent a pound, and without a change of one degree in temperature. In this way the distance of Australia from the markets of the world has been practically obliterated. The freight charges between Melbourne and London are less than those between Ireland and London.

The experience of Victoria having shown that successful irrigation required the subdivision and closer settlement of the land, the State immediately took steps to see that the land was subdivided and that small farms should become the leading feature of its irrigation development. An act was passed giving wide powers to a Lands Purchase and Closer

AUSTRALIAN CORN,
Weighing fifty-five tons to the acre.

RAISIN DRYING.

Settlement Board, which in the irrigation districts was to act in co-operation with the Water Commission.

Authority was given for the purchase of 100,000 acres of land under the Goulburn scheme, to be paid for at its unirrigated value, and which could be taken by condemnation if necessary. Nearly all of this land has now been purchased, and is being subdivided into two acre blocks for farm laborers; into 5 to 10 acre blocks for orchards and market gardens, and into 20 to 200 acre blocks for farmers, stockmen and dairymen; the aim being to create conditions suited to the means of all classes of men, and to enable the families of laborers to live as independent lives as the families of men of ample means.

The State has a surplus water supply under this scheme for about 200,000 acres of land, and it is hoped to bring this into use within the next two years. As there are not enough surplus farmers in Victoria, the State has organized a special delegation which left for Europe in May with a dual purpose; one to study the conditions and methods of the best irrigation districts of other countries in order that those suited to this State might be introduced here, and to bring to the attention of farmers and farm laborers in Europe and America the opportunities which the irrigation districts offer to settlers. No doubt the greater number of the settlers will come from Great Britain, but great admiration is felt in Victoria for the achievements of the American irrigator. It is recognized that he is the best equipped in training and experience to promptly utilize the opportunities which this State offers, and it is hoped to secure a considerable number of American irrigators for these areas.

The State's organization has not stopped with buying land and subdividing it. The Closer Settlement Board has prepared plans and estimates for houses ranging in price from $150 up to $1,200. The settler can select the plan of the house and this will be erected for him in advance; the Closer Settlement Board will fence the land and, if desired, grade

and seed a portion so that the settler can begin farming as soon as he arrives, and if he begins with dairying he can receive his first payment for cream a fortnight after he begins work.

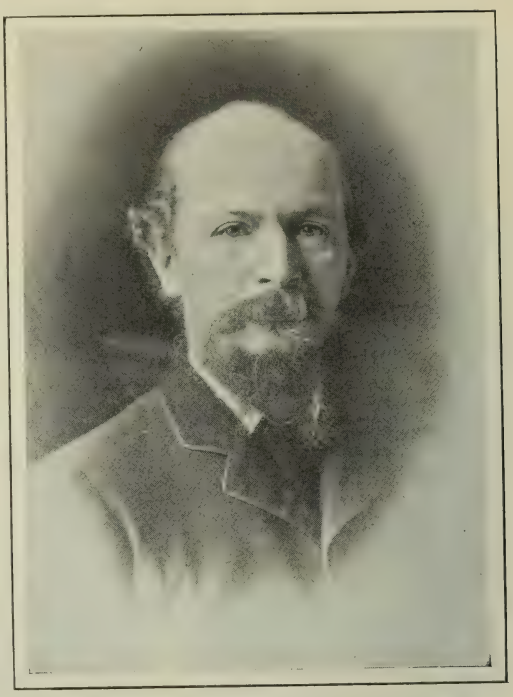
Dairying has great advantages for the beginning. A herd of twenty cows will ensure a comfortable living for a family, and it can easily be maintained on thirty acres of land. Fruit growing and market gardening are, however, the two industries bringing the largest returns. The steamship lines running a refrigerated service to Europe enable the Victorian fruit grower to land his products in the Northern Hemisphere when it is ice-bound and snow-covered, hence they realize very high prices. The last shipment of grapes to Europe realized from $6 to $7.50 a case. Pears are a profitable crop owing to the fact that the Continent of Australia is free from blight, and to ensure that it will remain so the importation of pear trees has been prohibited.

The Government will also aid settlers in getting started by arranging for them to buy farm implements at wholesale prices, and will give them expert advice in the selection of nursery stock, dairy cows and work horses. The Government superintentends the grading of land on an area less than fifty acres free, and on areas above that at the actual cost of the service. The Government will loan to settlers up to $2,500, at 5 per cent. interest, for the purpose of making improvements; 21½ years time is given in which to complete payments for land and 15 years in which to complete payments for houses. Two colonies have been established since this scheme of development was put in operation. In both cases the districts have made as much progress

THE HARVESTER.

in twelve months as similar districts would have made without State aid in two years.

Such an organization in the United States would doubtless be called Socialism gone mad, and the same sentiment has occasionally been heard here, but fears regarding the outcome have been largely allayed by the successful results of past experience in other lines of development. Undoubtedly leaving settlers to contend unaided with every obstacle, as was formerly done in the United States, has created men of great enterprise, initiative and hardy mental fiber, and there is some danger that the State by doing so much may weaken the individual strength of its citizens. Nevertheless, after two years' study of the results obtained here, I cannot but regret that more was not done in America for the pioneer in the arid American States. I feel sure that the hardship which many families underwent might have been entirely averted with no loss to the public but with a very material gain to the nation in the rapidity and character of the development.



MELBOURNE, AUSTRALIA.

How Wags the World at Westminster

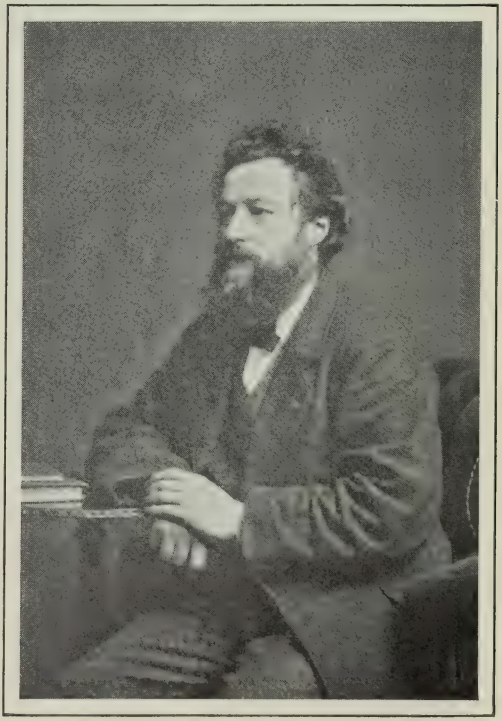
BY JUSTIN McCARTHY

A PAST era of many great moments and memories has been suddenly recalled to the present by the death of William Holman Hunt, who must ever live in history as one of the principal founders of the Pre-Raphaelite school of modern painting. I need not enter into any critical dissertation or disquisition on the artistic genius of Holman Hunt or on the characteristic peculiarities of his paintings. The place of the painter in the world's art is already one of the world's monuments. At the moment my inclination is to cast back my memory to the rise and growth of that school of Pre-Raphaelitism as it chose to call itself in art, which was already making such a sensation first in England, then thruout European countries and then almost at once all over the United States. During the earliest days of my settling down to the endeavor at making literary occupation in London I came to have the opportunity of becoming personally acquainted with some of the early Pre-Raphaelite leaders. One of these was the late Ford Madox Brown, whose close friendship I was fortunate enough to obtain and to enjoy during many years. Dante Gabriel Rossetti I unfortunately never had the pleasure of meeting, but his brother, William Michael Rossetti, became an intimate friend of me and my household, a friendship which happily lasts to the present time. I may mention the fact that the home of Madox Brown in one of the artistic centers of London was a most genial place of meeting for all who were devoted to the pencil in art or the pen in literature. The poets, too, were welcomed to these centers of genuine culture. William Morris was the most loved among the poets of his time, and altho he did not sound a challenge for fame with the thrilling and even piercing notes of a Swinburne yet they who, like me, can thoroly recall the sensations of that day will well recollect what a tender, sympathetic affection was blended with the admiration compelled by his genius and his art. Swinburne is not in any strict sense to be reckoned as one of the Pre-Raphaelites. He was among them because of personal association and acquaintanceship, but he was not of them and there was much about his ways and I might say his peculiar eccentricities which would not have suited the leading members of what I might call the Pre-Raphaelite order. Of course it might naturally be said that as Swinburne was not a painter no question as to his being a Pre-Raphaelite could possibly have arisen but it is quite certain that some

literary men of those days were always associated in the public mind with the Pre-Raphaelite school altho they were not artists with the pencil any more than was the author of "Atalanta and Calydon." The fact is that the influence of the Pre-Raphaelites spread all thru social life in these islands during those distant days to an extent of which the rising generation could hardly form an adequate conception. Men and women, elders as well as youngsters, who had any interest whatever in books or in pictures, regarded it as a positive compliment to be suspected of devoting themselves to the propagation of the new school's doctrines. In any case, it cannot be questioned that the most distinguished painters of the school to which the late Holman Hunt belonged are destined to be classed during all time among the most distinguished in the whole gallery of British art from its earliest days. It naturally brings to us oldsters a certain sense of relief to find that the public attention of the present generation is not wholly given up to what is called aviation, the rival flights and rival falls of cross-Channel balloons, the freaks of the problem novel and the various realizations of woman's claim to the suffrage. There are still delightful and expansive memories associated with the sad news of Holman Hunt's death.

A. C. SWINBURNE.

The British islands have just been astonished and I am sure delighted by the publication of a series described as the "Sixpenny Dickens." This series consists of thirty-four paper-bound volumes having the size and shape each of an ordinary monthly magazine, the whole set containing among them a complete reproduction of Dickens's novels and in most cases each number containing one complete novel. All are illustrated by admirable reproductions of the original engravings which under the great novelist's own supervision and that of his publishers were given for the adornment of the stories when these were first offered to the attention of the world. Now it would not perhaps be very surprising to any one at home or abroad to be informed that a new and complete edition of Dickens's works had just been offered to the world by a London publishing firm. But it might be indeed very surprising to this personage if he were informed at the same time that in this newest series of the immortal author each volume was to be sold at the price of sixpence. I believe this enterprise has been undertaken by the proprietors of *The Daily Chronicle,* a London journal well known thruout the United States, and I feel thoroly satisfied that they are undertaking an enterprise which would have won the cordial approbation of Dickens himself if it could have been announced within his lifetime. There must be a great mass of the British population whose means of living will allow them no chance whatever of obtaining the possession of even one novel by Dickens at the ordinary rates of hire or purchase. Literary and beneficent enterprise will, I hope and believe, enable the residents of even our humblest village cottages and city garrets to obtain permanent possession of some of Dickens's greatest novels and to benefit by their most healthy influence. The Dickens enterprise is sure to find followers.



The political world has had no remarkable developments since my previous letter. The political world is none the brighter or the better satisfied for

this, but on the contrary is only more and more anxious and the more and more inclined to give way to an outburst of vehement impatience with everybody and everything in general. We all know that the Conference is going on but we cannot get the least idea as to the course its counsels are

CHRISTINA ROSSETTI.

taking or when these counsels are likely to let us of the outer public know anything whatever as to the new constitutional forms which the Conference proposes to hand over to the public of these countries for instantaneous acceptance. We know that the great battle with the House of Lords will have to be fought out to its final settlement before the settlement of anything else can even be talked about and we do not yet know any more than we did three months ago how soon or how late is the indispensable appeal to be made to the constituencies at a general election. In the meantime it would appear that the troubles between the employers and the workers, the capitalists and the artizans, are growing keener and fiercer and more alarming in many fields of capital and labor. In the very important case of the dispute between the boilermakers and their artizans there has been quite recently an incident in the dispute wholly, I believe, unknown to any previous experience and well calculated to stir up much alarm. I shall not attempt to go at any length into the story of this controversy but shall only tell my American readers in the briefest terms how the new alarm came about. The boilermakers consented to submit the questions in dispute to the consideration of a conference representing the employers and the employed in order to come to an agreement as to terms of settlement. The conference did actually agree upon a plan of settlement and then it suddenly became known that the working men were as a body dissatisfied with the agreement which had been made by their own appointed representatives. This, we are told, is an entirely novel incident in the history of such disputes. The bewildering question appears to be as to how the employers can in any case of dispute between them and their fiery workmen be prevailed upon to consent to refer the disputed questions to the

WILLIAM MORRIS.

arbitration of a body representing both the disputants if there is no longer any certainty that the workmen as a body may be expected to accept the terms agreed upon by their own chosen representatives. I only mention this strange and surprising incident as one illustration out of many which tell us of the unusual troubles that have lately come up in the history of capital and labor. I cannot form any well-supported conjecture as to how the trouble in the boilermaker's business is likely to come to an end. But the incident just at present has done much to add to the prevailing alarms as to the relations between capital and labor.

Much interest is felt thruout most parts of Great Britain in the visit which the appointed representatives of the Irish National Parliamentary party are about to pay to the United States. That the Irish delegation will be thoroly representative of the Home Rule movement must be evident to all who read the names of those who compose it and find at their front such names as those of John E. Redmond, the chairman of the party; of T. P. O'Connor, of Joseph Devlin and others. An article in the *Freeman's Journal,* of Dublin, one of Ireland's leading National newspapers, says:

"The forthcoming visit of a strong delegation of the Irish Nationalist party to America will be regarded with extraordinary and enthusiastic interest on both sides of the Atlantic, and by many who have no direct connection with the course of our political affairs."

The *Freeman* further says:

"The visit takes place at a juncture of singular importance to the future of the National cause, and there cannot be any doubt as to either its financial success or as to its beneficial influence on the movement in America and at home."

I cannot help yielding to an impulse to say something here on my own account and to declare how much I wish that it were in my power to offer myself as one of this National delegation and thus have an opportunity of saying something once again as I had several opportunities in former years on behalf of the National cause of Ireland to listeners in the United States. But I am sure my American readers are quite willing to believe that the ill health which has compelled me to retire from active political life has had no power and could have none to sever me from my political convictions.

We have not had lately any new and remarkable developments in the field of literature. There have been indeed some novels belonging to the order of sensational fiction in its more modern form but I do not know that any of these call for especial notice on my part. In the department of periodical literature we are promised a new monthly magazine to be created and conducted by T. P. O'Connor, who won great success some years ago, a success increasing up to the present day, by the production of his *T. P.'s Weekly.* But the field of literature in general has not been blossoming very much during the last few months. Perhaps the attention of the public has been too closely absorbed in anxieties about the imminence of German invasion and the question as to the additional numbers of warships we ought to build at whatever cost in order to protect our shores from that expected invasion the coming of which is to a great mass of Englishmen a positive article of faith. I know many with whom I come into frequent association and who are in general perfectly rational and intelligent creatures and yet who have created for themselves a German people the main passion of whose whole lives is the longing to fulfil what they firmly believe to be their heaven-appointed destiny of landing from their warships on British coasts or descending from their airships on British soil. I hope, however, that no such passionate convictions have yet taken hold of the minds of any among our British statesmen and that the time may be near when this looked-for, and one might almost say longed-for, German invasion having come like a shadow, may be allowed like a shadow to depart. But in the meantime it is a discomforting shadow even for those who like myself do not believe in its substance and whose prevailing sentiments toward Germany are mainly inspired by an affection for her literature and a memory of happy seasons passed in some of her delightful regions.

London, England.

Senator Dolliver on the "Tariff Hoax"

BY A COUNTRYMAN

TO one of that great majority (the common people) who have not time to study economic questions Senator Dolliver's article on "The Downward Revision Hoax," in THE INDEPENDENT of September 8, was interesting, but the bulk of it was not understood—that is to say "we" could not grasp it.

Not by way of criticism but more by way of explanation of inquiry, we would mention some few phases of it. As to the majorities the Senator speaks of there can be no doubt that he is right. All were looking out for self and the "de'il" take the hindmost—(hence some disappointments). Some got their feet in the trough but we don't understand that us common people got hurt much.

Lead—$42.50 per ton duty when the Senator tells us it only costs $8 to smelt, seems high! The statement is no doubt correct but confusing. Some of my friends claim that the lead trust is making $34.50 per ton on basis of these figures, but I think they must be mistaken. I tell them we don't know what it costs to secure mines and mine it and get it to market. These statements are confusing statistics to some of us and I presume there are explanations that could be made that would set our ideas right, but we don't seem to be able to keep our minds on lead long enough to get it clear. The common citizens do not consume much lead anyway and doesn't take much interest in lead beyond being "agin" all trusts on general principles (right or wrong) and we can't blame them much for they are too busy with the immediate and personal matter of financing their butter, egg and meat bills that come in regularly from the farmer "interests" of Iowa and other States, to watch lead.

Moreover, most of my friends who "went in" for lead or lead mines came out sheared and so it is not attractive.

Item 2—Rubber. Duty 30 per cent. ad valorem. Senator Dolliver does not state what raise in duty there was on this but I read somewhere it was placed at 35 per cent. ad valorem. I guess both figures are too high. My friends and I talked it over the other day but concluded to drop it till some one had time to look up that word "ad valorem," and afterward I was surprised to find so many who didn't know the meaning of the word. At a further consultation the boys concluded that what the Akron folks' profits were didn't interest them, tariff or no tariff—the profit didn't come out of them, but mostly from the "joy riders" who, of course, were rich for they had automobiles. However, one of my friends stated that he once had an opportunity to take some stock in one of those rubber companies but didn't have the money. He now wishes he had borrowed it and gone in but, of course, that is selfish and personal and has no bearing on the subject. And so, while my folks don't use much rubber, they seem to think it would be well to cut out the tariff on that altogether, but they are not clear why or how it would affect them. In the item of woolen goods we don't seem to get it clear from the Senator. I guess he is right, but we don't know exactly why. Talking of tariff on wool goods confuses us and we don't understand it, which is probably our fault, but we do know, putting tariff one side, that in our experience we never got such woolen goods as we consume at cheaper prices than now. Men's wearing apparel at present prices looks cheap to us! Our fellows get all tangled up when they hear tariff talk but they do understand steak, veal and chops at 30 cents a pound; roast beef at 22 cents a pound; milk at 8 cents per quart; butter at 36 cents a pound; eggs at 36 cents per dozen; one good wool suit of clothes, coat and vest and pants, $12 to $20. (Statistics like these they can get thru their heads.)

Now as to lumber, my friends seem to think that tariff talk on that article don't count. They say we import practically no lumber nor would we tariff or no tariff. The price of lumber in the States is made in the States on basis of supply and demand, whether local or imported stock. One of my acquaintances who is in that business says he would be willing to have all tariff taken off lumber. He says the point is simply this—that with one, one and one-half, two or three dollars (per thousand feet) tariff *Canada* (and that is the only place where lumber

can be shipped to the States) *lumber pays that duty* but it does not alter the sales price here! And so, if you take off that duty, the Canadians don't have to pay it and so get just that much more for their stock delivered in the States, the price being *made in the States.* And I guess that is so, too, for another man who I am sure knows as much about that article as Senator Dolliver can, told me the same thing, and he said further that in all his experience he never heard before of those contracts between Canadian and United States lumbermen, whereby they divided up a portion of any tariff and he thought the Senator from Iowa must be wrong. And if Senator Dolliver has declared something that he believes to be so (and he would not declare anything that he did not believe) but should possibly be mistaken, then it confuses further the average daily worker. There were some good States people that we know took their money and bought Canadian timber and in operating it and bringing it to their yards in the States of course don't want any tariff, but this for their benefit and not the consumer's. I feel quite sure that the tariff does not affect the price of lumber now nor has for many years. But as to the price of lumber without regard to tariff, it seems to us here that it must advance if the Government withdraws all timber lands, so that it cannot be purchased for cash or scrip, or by homestead entry, and, of course, the Government could hardly operate it themselves, but this has not to do with our subject.

As to boots and shoes, we think the same may be said as of woolen goods — little money buys a good article. We don't know whether it comes about by tariff or lack of tariff and me and my friends are not interested nor can we see that it affects us as to how a tariff is juggled on or between the hides or manufactured articles. We have got some business to attend to ourselves and if shoes are cheap and good, we are satisfied on that point so long as it comes about honestly. At the same time our discussion club does not think we were born to right the world. And now comes sugar. We notice by the papers that the General Government is chasing sugar now, and rightly, too, we guess. Sugar has done some pretty bad things if what we read is true and round here we imagine it to be true. It made our folks laugh tho to read Senator Dolliver's statement that we have got to eat a ton of sugar to get one dollar's worth of tariff value. We don't presume, however, that the Senator was in earnest about this. As intimated before, our folks make no pretensions along the line of political economy, but the boys seem to think that the old tariff or the new tariff did not or will not affect the price of sugar to the consumer. We have been getting 16 pounds or more of fine granulated or other equally good sugar for $1, and for a long time now, and it is within our memory when we only had brown sugar, at a *very* much higher price, and we only had that when company came. Of course, if we could get 25 pounds for a dollar it would please us better. Perhaps the Government will make the trust do it.

As to tobacco, the Senator does not say much, and mostly as to the crime of abolishing the "pail" used heretofore for holding fine cut in bulk. Now one of my friends thinks that is a good thing. He kept a country grocery store once and states that he found his clerk doling out five cents worth with his hand by guess, as little as the customer would stand for, and he fears the clerk never made a mistake against the store, while now, as we understand it, the consumer is to pay so much for actual weight and get it or know the reason why!

But what's the use? We are legislating a whole lot and if not careful will legislate ourselves out of business—it looks near it now. If my boss don't have a fair year I am afraid it will be hard for me and my family. We are being reformed a lot and yet some of us insist that we are honest and I presume we are. Let's take new thought and have a little rest and if some folks *must* be busy, let them "go for" Standard Oil. They can stand it and we will have time to catch our breath and the country will be saved (?). It's not material as to what political party gets credit for it. The discovery of *some* dishonesty is not new. The cry of "turn the rascals out" has been with us a long time—but our club thinks it's mostly politics.

CHICAGO, ILL.

Literature

The Book of the Great Safari*

Altho forestalled to the limit of human ingenuity by other African hunters, and by writers who never saw Africa, Col. Theodore Roosevelt's book now looms into view as fresh, as original and genuinely thrilling as if no one else had written on this subject in half a score of years; and the grand army of forestallers fades away into well-merited oblivion.

Usually the man who goes forth, rifle in hand, in quest of a book, or in the deliberate expectation of making one, falls short of an ideal result; but this marvelous man, who so often sets the regular rules at defiance, again scores a notable exception. Take it any way you please, read it up or down, forward or backward, and even the most captious critic must admit that *African Game Trails* is a "bully" book. We really regret that there is nothing in it that is fairly subject to sharp criticism; and we are almost ready to forgive and forget the "Pig-Skin Library," that once went so far as to rear its head beside a dead lion of mighty proportions.

In the light of the magnificent series of rare specimens, big and little, that have been so skilfully added to the hitherto very poor African exhibit of the United States National Museum, the past performances of well-meaning persons who have talked of "butchery" by Colonel Roosevelt now dissolve in thin air.

The Colonel and Kermit shot exactly 512 mammals of all sizes, large birds and reptiles, every one of which save a very few personal trophies was preserved for the National Museum, or other museums, in condition to mount. For example, the expedition to the Lado District, on the Nile, yielded nine specimens of the rare and little known "white" rhinoceros, six of which have gone to the National Museum, two to the American Museum in New York, and one to the National Collection of Heads and Horns, in the Zoological Park. It is well within bounds to say that the Roosevelt expedition made not the slightest permanent impression on the species that contributed to it. The gold medal for eminent service presented to Colonel Roosevelt on June 22 by the Camp-Fire Club of America bore, as a part of its inscription, the words, "And for his contributions to Zoology."

African Game Trails is very much to our mind. Altho it chronicles, and portrays in its 200 illustrations, the greatest hunting trip ever made, it is a very level-headed and sensible volume. It is not too large nor too ponderous—barely large enough, in fact—and, taking all things into consideration, it is a miracle of moderate cost. In our view, the subscription edition at $3.75 is preferable to the library edition at $4, with all its illustrations on plate paper—and not nearly so many of them. We think also that the average reader is, like others of us, just enough of a barbarian to like the really thrilling side-stamp from Kermit Roosevelt's great elephant-herd picture that appears on the subscription edition.

The great feature of the book is Colonel Roosevelt's keen and precise observations on the wild life and its surroundings as he saw it. We who remained at home wish to know what the hunter-naturalist found, and *how it impressed him, on the spot,* as *he* saw it! The most successful writer of hunting narratives is he who first sees everything that is in sight, and then makes his reader see it as vividly as he saw it. Many men who are good with the rifle are good only at the killing.

Colonel Roosevelt's great safari swept thru the best game region of Africa like a cyclone. From the Kapiti Plains to the Lado, its progress was an unbroken series of successful ventures; and well

*African Game Trails: An Account of the African Wanderings of an American Hunter-Naturalist. *By Theodore Roosevelt.* New York: Charles Scribner's Sons. 1910. Royal octavo. Subscription edition; pp. 583; maps and more than 200 illustrations. $3.75.

MR. ROOSEVELT AND KERMIT ROOSEVELT WITH THE FIRST BUFFALO.
From Roosevelt's "African Game Trails." (Scribner's.)

it might be, with all Africa turning out to give advice regarding the lurking places of the big game. Despite all the experience and the good shooting, there were several conspicuous instances when charging elephants, lions, leopards, buf-

faloes and rhinos very nearly scored, and we are heartily glad that only two persons, both of them members of the native contingent, were injured by infuriated animals. The death of the big lion in the open, at the hands of the Nandi spearman, is the most dramatic and thrilling narrative of big game hunting that we have read in many a year.

To the student of animal intelligence and ways in the wilds, the multitude of observations such as the following will be of lively interest:

"Watching the game, one was struck by the intensity and evanescence of their emotions. It was to me a perpetual source of wonderment to notice the difference in the behavior of different individuals of the same species, and in the behavior of the same individual at different times. . . . The zebras were the noisiest of the game. After them came the wildebeest (gnu), which often uttered their queer grunt; sometimes a herd would stand and grunt at me for some minutes as I passed, a few hundred yards distant. The topi uttered a kind of sneeze, and the hartebeest a somewhat similar sound. . . . The males of all the antelopes fought much among themselves. The gazelle bucks of both species would face one another, their heads between the forelegs and the horns level with the ground, and each would punch his opponent until the hair flew. . . . Death by violence, death by cold, and death by starvation—these are the normal endings of the stately and beautiful creatures of the wilderness."

For nearly twenty years the white rhinoceros species, of South Africa, has been regarded as within about ten individuals of being extinct. The rumors of the discovery of the species two thousand miles from its accredited home, west of the headwaters of the Nile, have by most persons been regarded merely as rumors, lacking confirmation. The search for the white rhino in the Lado Enclave by Colonel Roosevelt is by long odds the most valuable single contribution to science that was made by the great safari. It was very fruitful of valuable results, and brings out into sharp prominence the astonishing fact of the "white" or square-mouthed rhino's existence, in abundant numbers, in a region vastly removed from its most northerly known habitat in South Africa, which was Northern Rhodesia.

Like all other books on hunting in Africa, Colonel Roosevelt's volume is pitched in a very serious key, and is utterly devoid of all traces of humor. For half a century it was the rule to make all African hunting books as dry as the plains over which they traveled. Some of them are really mournful in their seriousness. If Selous ever saw anything amusing in Africa he was careful not to record it. Colonel Roosevelt is at least cheerful, all the way thru; but can it be possible that on the great safari nothing amusing occurred? And was there really nothing with a humorous aspect? It does not seem possible that from Nairobi to Gondokoro there was nothing at which to laugh.

Despite the fact that in the subscription edition some of the illustrations are lacking in sharpness of detail—probably on account of the paper—the great number of them compensates for that, and the book is well illustrated. Mr. Kermit Roosevelt's elephant pictures deserve special commendation, and the pictures drawn by Philip R. Goodwin form a very welcome addition to the volume.

Another pleasing feature of the book is the delightful spirit of generosity and good fellowship that pervades it thruout. Incidentally, we know that at least two of Mr. Roosevelt's companions speak in glowing terms of "the Colonel" as a leader, both in camp and on the trail—always kind, generous, patient and companionable.

It was a great safari; and this living, breathing portrayal of it in word and picture will give pleasure to millions of men and women, boys and girls, who by the evening lamp will follow "the Colonel" step by step and day by day, until it is all accomplished. The expedition of the hunter-naturalist now belongs to the world; and it will inure to the lasting benefit of the world at large.

Simon the Jester. By D. R. Locke. New York. The John Lane Co. $1.50.

What would you do if told on the highest medical authority that you had but six months to live? Would you go on in the daily routine of professional life, or feel your right to six months of pleasure, travel or rest? What would be your attitude toward life and the people of the small planet you were about to leave? This is the situation that confronts *Simon the Jester,* another

of Mr. Locke's self-forgetting, whimsical, lovable heroes, who steal so quietly into our hearts under cover of his books. Since "The Beloved Vagabond" and "Simple Septimus," none has been dearer than this Simon de Gex, who chooses "eumoiriety" as his avocation when the

HER HAND SHIELDING THE SIDE OF HER FACE.
From Locke's "Simon the Jester." (John Lane.)

London specialist gives him a short lease of life. It is not exactly altruism or philanthropy that he pursues; it is a sort of doing good to others to please his own fancy. "The fun of doing good" Simon hopes to find the greatest fun in the world; and that it may furnish an interest for the few months left him to live. If the story does not turn out so it is because Mr. Locke has the gift of unexpectedness in his equipment as a story writer. Simon attempts to solve several social complexities in his immediate circle, to break up a young friend's infatuation by reuniting a wife and her errant husband. The wife is a strange and lovely horse trainer, who shares our interest with Simon himself. Lola Brandt has a human and appealing per-

A DEVONSHIRE LANE.
From Adams's "Photographing in Old England." (Baker & Taylor.)

sonality; she is not at all the adventuress who has ensnared a guileless boy, but a great-hearted woman who wins our regard because of her richly dowered nature and her unselfishness. We do not expect a trainer and exhibitor of horses to be of just her type, altho when she ingenuously says she "never met a lady in her life," we agree with Simon in assuring her that she sees one every time she looks in the glass. Mr. Locke has an insight into the unusual in life and character; he is the protagonist of the eccentric; the little twist he gives his characters always adds to their fascination; his mirror slightly distorts but never destroys the charm of the faces reflected in it; he knows the attraction the imperfect man or woman has for us, if there is an essential sweetness and soundness to endear these faulty people to their friends. And so we love them unaffectedly; the Vagabond with his bohemianism, Septimus with his helplessness, and Simon the Jester with his touch of cynicism, his mortal illness which he bears so gallantly, and his ill-starred meddling in other people's affairs. He is always the gentleman, without fear and without reproach.

Photographing in Old England, With Some Snap-Shots in Scotland and Wales. By W. I. Lincoln Adams. New York: The Baker & Taylor Co. $2.50.

Landscape and Figure Composition. By Sadakichi Hartmann. The same.

The first of these handsome books is a record of travels, representing the assembling of letters addressed to the *Photographic Times*. The photographs which embellish the admirable letterpress are the product of various cameras, including the author's. These photographs include scenes as familiar as Melrose Abbey and Ann Hathaway's Cottage, but there are, besides, many characteristic "snap-shots." Specially alluring are the scenes from the Lorna Doone country. Clovelly, that is nowadays the retired village no longer, but the tourist's stamping ground, with every house in it a tea-shop, has a whole chapter to itself, and some ravishing illustrations. Other chapters are Motoring in Wales and Coaching Through the English Lake Country. The text itself is quite unambitious—a discreet commentary. In the book, *Landscape and Figure Composition*, on the other hand, the text is far more important. There the illustrations are photo-engravings from well known

paintings and original photographs, and vary widely in genre and treatment. Here, too, however, we have matter reprinted from the *Photographic Times*. Scant attention is given to the history of the landscape art; this book is richer in diagrams and principles. The pictures are chosen directly to illustrate those diagrams and principles, which they most handsomely do. For the more or less ambitious amateur there is offered here a work of high worth. There is a minimum of jargon—if, indeed, there is any at all. Mechanically, this volume is of the same distinction as *Photographing in Old England.*

LINCOLN CATHEDRAL.
From Pratt's "Cathedral Churches of England." (Duffield.)

The Cathedral Churches of England. Their Architecture, History and Antiquities, with Bibliography, Itinerary, and Glossary. A Practical Handbook for Students and Travelers. By Helen Marshall Pratt. Illustrated. New York: Duffield & Co. $2.50.

This volume on English cathedral churches will prove a valuable addition to the guide books of any intelligent traveler in England, and the reviewer makes bold to prophesy that a cathedral itinerary properly carried out as here outlined would transform even the careless sightseer into an appreciative observer of things worth while. Miss Pratt has brought together in less than six hundred pages a large amount of accurate and well-digested information in regard to the history, architecture and antiquities of these great monuments to the genius of the Middle Ages. The writer's years of serious study are evidenced on every page. A short sketch of architectural styles, a valuable chapter on stained glass—a cathedral feature which travelers are prone to admire with enthusiasm, but with too little discrimination—and a good "popular glossary," add materially to the usefulness of the book as an amateur's handbook and guide. The few illustrations are good, but the home reader will feel the need of many more.

A Motley. By John Galsworthy. New York: Charles Scribner's Sons. $1.25.

In this collection of thumb-nail sketches of moods and people Mr. Galsworthy is a type of the refined Socialist who expresses himself with sympathetic understanding rather than in vituperative hysterics. He has walked down the street, stepped into a 'bus, gone to an animal show, strolled thru a garden, talked with friends, and withal seen and understood till every word of analysis or description is poignant with the pain of comprehension, vivid with satire, or tender with humor and pathos. The majority of the sketches are of those sad "workers" who sit in hovels and bow under the burden of a helplessness imposed by some hard social tyranny.

The Healthful Art of Dancing. By Luther H. Gulick. New York: Doubleday, Page & Co. $1.40.

The dancing which Dr. Gulick calls "The Healthful Art" and advocates so enthusiastically is a very different thing from dancing as it is commonly practised in America. The book is chiefly devoted to the success of the revival of folk dances in the schools of New York and Chicago as a gymnasium or outdoor exercise. Scotland, Ireland, Hungary, Poland, Sweden, Germany and Amerindia have been searched to find forms of dancing suitable for adapting and teaching to the boys and girls of our own land and age. The book is not a manual of instruction but a plea for the cultivation of the dance in a variety of forms.

STREET DANCING.
From Gulick's "Healthful Art of Dancing." (Doubleday, Page.)

Bernard Shaw as Artist-Philosopher: An Exposition of Shavianism. By Renée M. Deacon. New York: John Lane Co. $1.00.

So far as we are concerned, the writer of this little book might have saved herself the trouble of it all. Tho a Scottish newspaper calls it the best examination of Mr. Shaw's work yet published in English, the barbarity of the title itself seems to us to be matched by the text. Women's clubs may find it a good book for the subject of a *conversazione,* but that is really the highest praise honestly to be accorded to it; and we mean that praise to be equivocal. For the majority of readers the plays themselves, and their more or less critical prefaces, are a great plenty, without scholia by the present writer, or even Mr. Chesterton. Perhaps it goes without saying that the former, at least, is an unqualified admirer. She delights to prate of the "Life Force," and is so fond of quoting Mr. Shaw that she does not hesitate to quote the same passage in more than one of her sententious chapters. Peculiarly unsatisfactory is her superficial treatment of the playwright's "Revolt Against Romance." What is "Romance," by the way? We know no better after reading this volume than we knew before. Little is said of Mr. Shaw as dramatist, and for that we are thankful. His pretensions to philosophy are, on the other hand, too charitably regarded. On page 66 a quotation is made from the *Daily Telegraph,* apropos of "Getting Married," which, in part, we append:

> INTERVIEWER: Would it be indiscreet to ask you to . . . give some notion of the plot? . . .
> MR. SHAW: The play has no plot. . . . If you will look at any of the old editions of our classical plays, you will see that the description of the play is not called a plot or a story, but an argument. That exactly describes the material of my play.

Puerilities like the above are reproduced without apology by the author of *Bernard Shaw as Artist-Philosopher.* Is not that fact rather suggestive of the thinness of the volume—intellectually as well as physically?

Health: Progress and Administration in the West Indies. By Sir Rubert W. Boyce. New York: E. P. Dutton & Co. $3.50.

This is an excellent tho somewhat desultory account of the campaign against yellow fever, malarial fever and filaria in the British West Indies. The

frightful mortality from fever in the earlier days is illustrated by some of the instances of epidemics given. From the time of the first outbreak in Isabella, Santo Domingo, in 1493, these epidemics were recurrent at frequent intervals until within the last few years. One of the greatest disasters was in 1741, when of the 12,000 English troops and sailors investing Cartagena 8,431 were lost by yellow fever. This dreaded scourge and the scarcely less dreaded scourge of malarial fever have now been virtually wiped out. The discovery that the Stegomyia mosquito was the only transmitter of yellow fever and the Anophelines mosquito the only transmitter of malarial fever has made possible the success of the campaign waged against these two diseases. The author describes this campaign in detail. The efforts to do away with open drains, cesspools, uncovered water barrels and other receptacles of still water were at first resisted, but have gradually been successful. In most towns water pipes have been laid; water barrels, if still used, have been screened, hollows and water pockets have been leveled up, and tin cans and bottles have been gathered up and buried. As a result, the mosquito is being exterminated, and fever is rapidly disappearing.

Thomas Nelson & Sons, of New York, will begin immediately the publication in fifteen to twenty volumes of the romances of Alexandre Dumas, publishing one each month, beginning with "The Three Musketeers," "Twenty Years After," "Vicomte de Bragelonne" and "The Count of Monte Cristo."

The Fall Books

....This is the season when the Editor is annually reduced to a state of despair. But his present state is much more desperate than any of the previous states. Because there are more books than ever. This year the United States will beat the record, not merely its own record, but the world's, for the number of books published, something over 12,000 altogether. And since they mostly come out at this season of the year it is altogether impossible to give them the attention they deserve. If they were trash one could complacently ignore them. But they are not. Nearly all of them are well enough written and printed and are conceivably of interest to somebody. But there is not space enough to call every book to the attention of the somebody who would want it if he knew about it. Under the circumstances we can only follow the example of the hostess at a reception, who introduces as many people as she can and reserves her private opinion of them for her later leisure. Here are the names of a few of the recently published or forthcoming books which seem to us especially noteworthy.

Fiction. *Clayhanger,* by Arnold Bennett (Dutton). *An Affair of Dishonor,* by William De Morgan (Holt). *Ailsa Page,* by Robert W. Chambers (Appleton). *Cumner's Son,* by Sir Gilbert Parker (Harper). *The Way of Peace,* by Margaret Deland (Harper). *Rest Harrow,* by Maurice Hewlett (Scribner). *Celt and Saxon,* by George Meredith (Scribner). *The New Machiavelli,* by H. G. Wells (Duffield). *Second String,* by Anthony Hope (Doubleday). *Queen Sheba's Ring,* by H. Rider Haggard (Doubleday). *The Shears of Destiny,* by Leroy Scott (Doubleday). *The Creators,* by May Sinclair (Century). *Rose in the Ring,* by George B. McCutcheon (Dodd). *Love's Young Dream,* by S. R. Crockett (Macmillan). *Pan's Mountain,* by Amelie Rives (Harper). *The Window at the White Cat,* by Mary R. Rinehart (Bobbs-M). *The Murder at the Villa Rose,* by A. E. W. Mason (Scribner). *When God Laughs,* by Jack London (Macmillan). *The Other Side,* by H. A. Vachell (Doran). *The Mistress of Shenstone,* by Florence L. Barclay (Putnam). *Freebooters of the Wilderness,* by Agnes C. Laut (Moffat). *The Impostor,* by John Reed Scott (Lippincott). *The Caravaners,* by the author of *Elizabeth and Her German Garden* (Doubleday). *Mrs. Fitz,* by J. C. Smith (Moffat). *No Man's Land,* by L. J. Vance (Dodd). *The Sword of the Mountains,* by Alice MacGowan (Putnam). *Jean Cristophe,* by Romaine Rolland (Holt). *The Prodigal Pro Tem,* by F. O. Bartlett (Small). *Flamsted Quarries,* by Mary E. Waller (Little). *A Man's Man,* by Ian Hay (Houghton). *The Siege of the Seven Suitors,* by Meredith Nicholson (Houghton). *The Sword Maker,* by Robert Barr (Stokes). *The Suffragette,* by E. Sylvia Pankhurst (Sturgis-Walton). *Westover of Wanalah,* by G. C. Eggleston (Lothrop). *The Husband's Story,* by David Graham Phillips (Appleton). *The Steering Wheel,* by R. A. Wason (Bobbs). *Mad Shepherds,* by L. P. Jacks (Holt). *Periwinkle,* by W. F. Payson (Sturgis). *The Green Patch,* by Bettina von Hutten (Stokes). *John Winterburn's Family,* by Alice Brown (Houghton). *Molly Make-Believe,* by E. H. Abbott (Century). *Max,* by Katherine Cecil Thurston (Harper). *The Empty House,* by Elizabeth Stuart Phelps (Houghton). *Lady Good-For-Nothing,* by Sir A. T. Quiller-Couch (Scribner). *Mr. Ingleside,* by E. V. Lucas (Macmillan). *Keith of the Border,* by Randall Parrish (McClurg).

History. *A History of Sumer and Akkad,* by Leonard W. King (Stokes). *China Under the Empress Dowager,* by J. O. P. Bland (Lippincott). *Medieval Italy,* by Pasquale Villari (Scribner). *France Under the Republic,* by J. C. Bracq (Scribner). *History of*

Perugia, by W. Heywood (Putnam). *History of Verona,* by M. Allen (Putnam). *Controversial Ground in Scottish History,* by W. H. Gregg (Putnam). *Political History of England,* by W. Hunt, Vol. IV (Longmans). *Passing of the Shereefian Empire,* by E. Ashmead-Bartlett (Dodd). *Relations of the United States and Spain,* by F. E. Chadwick (Scribner). *The French Revolution,* by A. Aulard (Scribner). *The Stone Age in North America,* by W. K. Moorehead (Houghton). *The Influence of Wealth in Imperial Rome,* by W. S. Davis (Macmillan). *The Roman Empire,* by F. W. Russell (Longmans).

Philosophy and Religion. *Creative Evolution,* by Henri Bergson (Holt). *Natural Philosophy,* by Wilhelm Ostwald (Holt). *Psychology of Religious Experince,* by E. S. Ames (Houghton). *Scientific Christianity,* by Gerald Leighton (Moffat). *The Infinite Presence,* by George M. Gould (Moffat). *The Church and the Individual,* by F. I. Paradise (Moffat). *The Ecclesiastical and Religious Correspondence of Gladstone* (Macmillan). *The World a Spiritual System,* by James H. Snowdon (Macmillan). *The Day of the Country Church,* by I. O. Ashenhurst (Funk). *History of Ethics Within Organized Christianity,* by T. C. Hall (Scribner). *Theology and Human Problems,* by N. W. Taylor (Scribner). *My Religion in Daily Life,* by Josiah Strong (Baker). *The Work of Christ,* by P. T. Forsyth (Doran). *The Study and Teaching of the English Bible,* by G. Campbell Morgan (Revell). *In the School of Christ,* by W. F. McDowell (Revell). *Behind the World and Beyond,* by Henry A. Stimson (Eaton). *Beyond the Borderland of Life,* by Gustavus Myers (Ball). *Studies in Spiritism,* by Amy E. Tanner (Appleton). *The Marvels Beyond Science,* by Joseph Grasset (Funk). *Primitive Psychotherapy and Quackery,* by Robert M. Lawrence (Houghton).

Political and Social Science. *The Foundations of the Nineteenth Century,* by Houston Stewart Chamberlain (Lane). *Presidential Addresses and State Papers,* by W. H. Taft (Doubleday). *African and European Addresses,* by Theodore Roosevelt (Putnam). *Conservation of Natural Resources,* by C. R. Van Hise (Macmillan). *Transportation in Europe,* by L. G. McPherson (Holt). *Government Ownership of Railways,* by A. Van Wagenen (Putnam). *The Commercial Power of Congress,* by D. W. Brown (Putnam). *The Interest of America in International Relations,* by A. T. Mahan (Little). *What Eight Million Women Want,* by Rheta Childe Dorr (Small). *Twenty Years at Hull House,* by Jane Addams (Macmillan). *Great Cities in America,* by Delos F. Wilcox (Macmillan). *Second Chambers,* by J. A. R. Marriott (Oxford University Press). *Criminal Psychology,* by Hans Gross (Little). *Popular Lawmaking,* by F. J. Stimson (Scribner). *The Conflict Between Collectivism and Individualism,* by Charles W. Eliot (Scribner). *The Temples of Peace Built of Untempered Mortar,* by John Bigelow (Huebsch). *State Socialism in New Zealand,* by J. E. Le Rossignol (Crowell). *The Procedure of the House of Commons,* by Joseph Redlich (Dutton).

Biography. *Grover Cleveland,* by R. W. Gilder (Century). *Molière,* by Brander Mathews (Scribner). *Edmund Clarence Stedman,* by Laura Stedman (Moffat). *The Life of Tolstoy,* by Aylmer Maude (Dodd). *Leopold the Second,* by Angelo S. Rappaport (Sturgis). *Leading American Scientists,* edited by David Starr Jordan (Holt). *John Brown,* by O. G. Villard (Houghton). *Napoleon in His Own Defence,* by C. K. Shorter (Cassell). *Napoleon and the End of the French Revolution,* by C. F. Watwick (Jacobs). *Reminiscences,* by Goldwin Smith (Macmillan). *The Empress Eugenie 1870-1910,* by Edward Legge (Scribner). *The Black Prince,* by R. P. D. Pattison (Dutton). *Louise Chandler Moulton,* by Lilian Whiting (Little). *Life and Letters of William Sharp,* by Mrs. W. Sharp (Duffield). *A Diplomatist's Wife in Many Lands,* by Mrs. Hugh Fraser (Dodd). *William H. Seward,* by E. E. Hale, Jr. (Jacobs). *Life of Benjamin Disraeli* (Macmillan). *Memories of Helena Modjeska* (Macmillan). *Balzac,* by F. Lawton (Wessels). *Edison: His Life and Inventions,* by F. L. Dyer (Harper). *Life of Charles Sumner,* by Walter G. Shotwell (Crowell).

Travel and Description. *The North Pole,* by Robert E. Peary (Stokes). *Hunting with the Eskimos,* by Harry Whitney (Century). *The Great White North,* by Helen S. Wright (Macmillan). *The Holy Land,* by Robert Hichens (Century). *To Abyssinia,* by C. H. Stigand (Lippincott). *Argentina,* by W. A. Hirst (Scribner). *Portugal,* by E. Oldmeadow (Lippincott). *Bermuda: Past and Present,* by Walter B. Hayward (Dodd). *Overland to India,* by Sven Hedin (Macmillan). *From the Thames to the Seine,* by Charles Pears (Jacobs). *Toll of the Arctic Seas,* by D. M. Edwards (Holt). *Bohemia and the Czechs,* by W. S. Monroe (Page). *In Unfamiliar England,* by Thomas Murphy (Page). *Brazil and Her People of Today,* by Nevin O. Winter (Page). *Panama and the Canal Today,* by Forbes Lindsay (Page). *The Grand Canyon of Arizona,* by G. W. James (Little). *Hunting Camps in Wood and Wilderness,* by H. H. Prichard (Sturgis). *The Mississippi,* by Julius Chambers (Putnam). *In and Out of Florence,* by Max Vernon (Holt). *The Island of Stone Money,* by W. H. Furness (Lippincott). *Japanese Letters of Lafcadio Hearn* (Houghton). *Australia,* by J. F. Fraser (Cassell). *Brittany and the Bretons,* by G. W. Edwards (Moffat). *Jungle By Ways in India,* by E. B. Stebbing (Lane). *Finland As It Is,* by Harry de Windt (Dutton). *Camp and Cabin in Lower California,* by A. W. North (Baker). *Under the Roof of the Jungle,* by C. L. Bull (Page). *Beautiful England,* by E. W. Hazelhurst (Dana Estes). *Rambles in Spain,* by J. D. Fitz-Gerald (Crowell). *A Chateau in Brittany,* by Mary J. Atkinson (Pott). *A Corner of Spain,* by Walter Wood (Pott).

Essays and Criticism. *Essays Modern and Elizabethan,* by Edward Dowden (Dutton).

The Spirit of Romance, by Ezra Pound (Dutton). *Shelburne Essays,* seventh series, by Paul Elmer More (Putnam). *The Literature of the Victorian Era,* by Hugh Walker (Putnam). *What's Wrong With the World?* by G. K. Chesterton (Dodd). *Constrained Attitudes,* by Frank Moore Colby (Dodd). *The Man Forbid and Other Essays,* by John Davidson (Ball). *Journals of Ralph Waldo Emerson,* Vols. III and IV (Houghton). *How To Judge a Book,* by Edwin N. Shuman (Houghton). *Copyright,* by R. R. Bowker (Houghton). *My Mark Twain,* by W. D. Howells (Harper).

Drama. *Mary Magdalen,* by Maurice Maeterlinck (Dodd). *Chantecler,* by Edmond Rostand (Duffield). *Morituri,* by Hermann Sudermann (Scribner). *Justice,* by John Galsworthy (Scribner). *The Husband,* by John Corbin (Houghton). *At the New Theater,* by W. P. Eaton (Small). *Anathema,* by Leonid Andreyev (Macmillan). *The Nigger,* by Edward Sheldon (Macmillan). *Pietro of Siena,* by Stephen Phillips (Macmillan).

Education. *The Cyclopedia of Education,* edited by Paul Monroe (Macmillan). *History of Education During the Middle Ages,* by F. P. Graves (Macmillan). *Education in the United States Since the Civil War,* by Charles F. Thwing (Houghton). *Riverside Educational Monographs,* by Hyde, Snedden, Palmer and others (Houghton). *Principles of Education,* by F. E. Bolton (Scribner). *Domestic Art in Woman's Education,* by Anna M. Cooley (Scribner). *The Teacher and the School,* by C. P. Colgrave (Scribner). *Fundamentals in Education, Art and Citizenship,* by G. M. Raymond (Funk). *The Educational Problem,* by G. Stanley Hall (Appleton). *Great American Universities,* by Edwin E. Slosson (Macmillan).

Fine Arts. The art, illustrated and gift books of the season will be discussed in our Holiday Book Number of December 15. In the meantime here are a few hints: *Digressions of V,* by Elihu Vedder (Houghton). *One Hundred Masterpieces of Sculpture,* by G. F. Hill (Lane). *History of Japanese Color Prints,* by W. Von Seidlitz (Lippincott). *Great Masters of Landscape Painting,* by Emile Michel (Lippincott). *Design in Theory and Practice,* by E. A. Batcheler (Macmillan). *The Lure of the Antique,* by W. A. Dyer (Century). *The Story of Spanish Painting,* by Charles H. Caffin (Century). *Porcelain of All Countries,* by R. L. Hobson (Stokes). *The Golden Age of Engraving,* by Frederick Keppel (Baker). *The Book of Decorative Furniture,* by Edwin Foley (Putnam). *Schools of Painting,* by Mary Innes (Putnam). *Art of Northern Italy,* by Corrado Ricci (Scribner). *What Is Art?* by John C. Van Dyke (Scribner). *A Painter's Progress,* by Will H. Low (Scribner). *The Whistler Book,* by Sadakichi Hartmann (Page). *The Art of the Munich Galleries,* by Florence J. Ansell and Frank P. Fraprie (Page). *Cathedrals and Cloisters of the Isle de France,* by Elise W. Rose and Vida H. Francis (Putnam). *Landscape Gardening Studies,* by Samuel Parsons (Lane). *Grove's Dictionary of Music and Musicians,* Vol. V (Macmillan). *Song Lore of Ireland,* by Redfern Mason (Wessels).

Sciences and Technics. *African Mimetic Butterflies,* by H. Eltringham (Oxford). *Steamships and their Story,* by R. G. Fletcher (Lippincott). *The Mineral Kingdom,* by Reinhard Brauns (Lippincott). *Our Inland Seas,* by J. C. Mills (McClurg). *Dictionary of Aviation,* by R. M. Pierce (Baker). *Bird Flight,* by Otto Lilienthal (Longmans). *Aerial Navigation,* by A. F. Zahm (Appleton). *Breeding and the Mendelian Discovery,* by A. D. Darbishire (Cassell). *Hypnoidal Psychology,* by Boris Sidis (Moffat). *Insects and Disease,* by R. W. Doane (Holt). *Darwinism and Human Life,* by J. A. Thomson (Holt). *The Romance of the Telephone,* by H. N. Casson (McClurg). *The Conservation of Water,* by J. L. Matthews (Small). *The Young Farmer's Practical Library,* edited by Ernest Ingersoll (Sturgis). *Gardens Near the Sea,* by Alice Lounsbury (Stokes).

Juveniles. In our Holiday Book Number a special article will be devoted to the books for young people, so only a few of them need be mentioned here. *Hero Tales of the Far North,* by Jacob A. Riis (Macmillan). *The Fugitive Freshman,* by Ralph D. Paine (Scribners). *The Story of Our Navy,* by Willis J. Abbott (Dodd). *Winning his "Y,"* by R. H. Barbour (Appleton). *Light Horse Harry's Legion,* by Everett T. Tomlinson (Houghton). *Three Hundred Things a Bright Boy Can Do* (Lippincott). *Famous Voyages,* by Eric Wood (Crowell). *The Boys' Book of Model Aeroplanes,* by F. A. Collins (Century). *Don Macrath,* by Randall Parrish (McClurg). *Sistney; Her Senior Year,* by Anna Chapin Ray (Little). *Dave Porter at Star Ranch,* by Edward Stratemeyer (Lothrop). *Folk Tales Every Child Should Know,* edited by Hamilton W. Mabie (Doubleday). *The Green Door,* by Mary E. Wilkins-Freeman (Moffat). *The Animal Trainer,* by P. Guigou (Duffield). *A Freshman Co-ed,* by Alice L. Lee (Penn). *Steps to Nowhere,* by Grace D. Boylan (Baker). *Fighting with Fremont,* by Everett McNeil (Dutton). *Bible Stories to Tell Children,* by W. D. Murray (Revell). *Fairy Tales of All Nations,* edited by Logan Marshall (Winston). *The Children's City,* by Esther Singleton (Sturgis). *The Sun's Babies,* by Edith Howe (Cassell). *The Boy Aviators,* by Wilbur Lawton (Hurst). *The Bird Book* (Doran). *The Bob's Hill Braves,* by Charles P. Burton (Holt). *The Boy's Book of Railways,* by J. R. Howden (Stokes). *A Chip of the Old Block,* by E. J. Houston (Griffith). *The Giant of Treasure Caves,* by Mrs. E. G. Mallicken (Dana Estes). *Famous Scouts,* by C. H. L. Johnson (Page.) *The Great Aeroplane,* by F. S. Brereton (Caldwell). *Legends and Stories of Italy,* by Amy Steedman (Putnam). *The Boys of Bellward School,* by Frank V. Webster (Cupples). *With the Flag at Panama,* by Hugh C. Weir (Wilde). *The Revel of the Toys,* by H. A. Ingalls (Ball). *A Wilderness Dog,* by Clarence A. Hawkes (Jacobs).

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Politics in New York

THE convention of the Republicans in New York was marked by a bitter contest between Mr. Roosevelt and the little bosses who had sought to prevent him from holding the office of temporary chairman. Mr. Roosevelt was too strong for them. Within certain limits, he controlled the convention. The platform is not what he desired, but he chose the candidate for Governor. The effect of such a convention upon the fortunes of the party at the polls cannot be favorable. The attitude of the defeated leaders of the minority tends to prevent that united and vigorous action which is commonly essential to success. The Democratic convention, on the other hand, was peaceful and harmonious. There is evidence that it was controlled by one man, the Tammany leader in New York City, but he dictated neither the selection of the nominee for Governor nor the declarations of the platform. So far as the character of the two conventions is concerned, the Republicans are at a disadvantage.

Both of the candidates for the highest office on the ticket are good men. Mr. Stimson has made an excellent record as the Federal prosecutor in New York City. Voters will not forget that he brought Sugar Trust thieves to justice, constrained the Trust and other sugar companies to pay $3,500,000 into the Federal Treasury, procured the conviction of powerful railroad companies for rebating, and sent Morse to the penitentiary. He will not be embarrassed by political associations or acts in the past, and he will have the support in the field of one of the greatest campaigners this country has ever known. Mr. Dix is a successful business man, trustworthy, safe, and free from any entanglement with those in his party whom the people distrust. He declined to vote for Mr. Hearst, when the latter was the nominee of his party; he assisted in procuring the retirement of the unworthy Conners from the chairmanship of the State Committee, and he did not seek the nomination which was given to him last week.

In comparing the two platforms we think that the tariff issue should first be considered. In the Republican platform there is no attempt to conciliate those in the party who dislike the recent revision. The Payne tariff was the cause of insurgency in the West. There are insurgents in the East. The election of Foss in the Fourteenth Massachusetts District, and of Havens in the Rochester district of New York proves this. But the tariff plank of the Republican platform might have been written by Mr. Payne or Mr. Aldrich. This was not good politics. It may be observed that in his opening speech at the convention, Mr. Roosevelt avoided the revision of duties, altho he commended the maximum and minimum provisions and the creation of a tariff board. The platform even asserts that the average rate of all duties was reduced by 11 per cent., in the face of the official report that the average rate is now 41.3 per cent., against 42.2, 42.8 and 42.4 in the last three years of the old law. Many who commonly vote the Republican ticket believe that the current high prices are due mainly to the recent revision, altho they are not. Many others resent what they regard as the failure to keep a promise that the revision should be distinctly downward. The elections already held show that the party is bound to suffer at the polls by reason of the dissatisfaction

of such men. They will find the New York Democratic platform much more attractive than the one adopted at Saratoga.

Another prominent issue is that of direct nominations. Mr. Roosevelt made a forcible argument for such nominations in the convention, and the attempt to construct the platform in opposition to them was defeated by a vote of 610 to 403, but still the Republican utterance on this subject is not sufficiently definite. It commends Governor Hughes for convincing the people "of the need of directly electing their party officers and directly nominating their party candidates," and then promises "legislation which will enact these principles into law." Several differing propositions relating to direct nominations were advocated by Governor Hughes. The discussion in the convention shows that the plank which was adopted was not regarded as one that called for a comprehensive system of direct nominations. On the other hand, the Democrats stand for "State-wide direct primaries." If there is in the State a popular demand for direct nominations, the Democratic platform will be more attractive in this respect than that upon which Mr. Stimson stands.

It is said that Mr. Roosevelt himself will be an issue, and that his "new nationalism" will be opposed. Probably the political effect in the New York campaign of his recent utterances on this subject has been overestimated by some. There is nothing about "new nationalism" in the Republican platform. He said nothing about it in his opening address at Saratoga. But the Democrats at Rochester sought to make much of it. We do not at present see how the Republicans of New York are to be held responsible for it, unless Mr. Roosevelt himself insists upon putting it into the campaign. It is also alleged that the ex-President, in all that he has been doing in New York, has been plotting to promote his own nomination for the Presidency in 1912, and certain journals make dire predictions about a coming American Diaz or a "twentieth century Cæsar." All this seems to us unwarranted and even absurd.

Mr. Roosevelt desires to see his party retain power. He also desires to promote certain policies, being firmly convinced that they are for the public good. If his party should be successful this year in New York and elsewhere, it does not necessarily follow that this would give him greater strength as a possible candidate than he now has. On the other hand, if his party should be defeated in New York and should lose its majority in the House, there might be a popular movement in favor of his candidacy. Many might then think that with no other candidate could the party expect to be victorious in 1912. But if defeat this year should be followed by such a movement, we are by no means sure that he would yield to it. We have seen no evidence that he is not loyal to Mr. Taft. Some are saying that defeat of the Republicans in New York this year would be the end of him, would eliminate him as a political force to be reckoned with. In our judgment, they are in error. So long as he has life and health he cannot be eliminated. It is on account of his prominence in the field, and of the guesses and assertions about his motives, that the campaign in New York is exceptionally interesting.

The Los Angeles Atrocity

Some three or four years ago some negro soldiers encamped near Brownsville, Texas, shot up the town one night, or were said to. Very possibly some of them did, but there was more fright than damage. A strict investigation was made—indeed, three of them—but not one soldier would confess or give incriminating testimony. Therefore all the soldiers were dismissed from the army "without honor." They had not helped to discover those who were guilty, altho it was assumed that they must know. They were, therefore, treated as accessories after the event, guilty because those who were innocent of the act had not discovered and exposed the guilty.

In Los Angeles last week a frightful tragedy took place. The printing establishment of the Los Angeles *Times* was blown up by a bomb, and over twenty employees were killed and more will die; while attempts were made to blow up the residences of the owner and of another who had been his ally in the

labor fight. The *Times* was an anti-union paper, and it is generally believed that the crime was committed by union men, or by those instigated by union men. That the great body of union men are too decent to be guilty of such a crime or to approve it is beyond question, but among the members there must be those who are lawless and desperate, and who will do anything to injure those whom they regard as their enemies. Who such men are must be known to many members. It is in every way likely that the very persons who made these dynamite bombs must be known to quite a number of their associates, and suspected by more; so that it would not be difficult to discover them and report them to the police, if this were desired. And yet in such cases it is the rarest thing that the guilty are exposed by the body which, as a whole, is held responsible for these atrocities. If the unions in Los Angeles do not do stern detective work to find out and secure the punishment of those who have been guilty of these murders, then the precedent of Brownsville would break up the Los Angeles unions and drive its members out of town.

Far be it from us to imply that as a body the union men in Los Angeles or anywhere else would approve this crime. We rejoice that the labor organizations there have added their offer of reward for the detection of the criminals, and the leaders promise to give their help. They doubtless condemn and deplore it, even as the labor unions have over and over again spoken against violence and have declared that acts of violence are generally due to excitable and irresponsible outsiders. But these outrages are committed in their supposed interest; and it is their peculiar duty in every way to assist in ferreting out the criminals, and they have the best means of doing it. We properly find fault with negroes when they shield their criminals, and the same should hold of all other classes of society. The public lays these outrages to the unions, and the unions in Los Angeles ought to bestir themselves on their own account, and for their own credit, to find out and expose those guilty of this dastardly and wholesale assassination. Will they do it? If not, the people will believe that they are condoning the crime. That is what three courts of investigation said at Brownsville.

Civilization's Tribute of Life

WHAT the Cretan Minotaur demanded of human life to gorge its hunger, civilization requires in its every step of progress. Men and women must die, like the Athenian youths and maidens, that the public comfort and welfare may grow. Civilization is a Juggernaut whose remorseless wheels roll over the bodies of its worshipers.

At the Vanderbilt contest for motor speed last Saturday four persons were killed and twenty were seriously wounded. Twenty-one aviators have lost their lives trying to perfect a most important invention and probably several more will die this week. It is a heavy price to pay, but not too heavy for the value received. We do not say that all this cost of life was necessary, for there may have been no little carelessness; and yet, as human nature goes, carelessness and undue eagerness are unavoidable concomitants of every advance; and ambition to excel, with the running of risks, is rather creditable to human nature than the opposite.

There is no business that does not involve risk of life. The engine may blow up; the grindstone may fly in fragments; the child may run before the car; the switch may be misplaced; the bow of the launch may go under water in a quiet harbor and dozens of sailors be drowned; the ship may be struck by a squall at sea; fire-damp in a mine may kill a hundred men; the best sanitary inspection may bring the cholera with the steamer into a busy port; fertile fields of needful agriculture may be devastated by flood. The very reservoirs and dams made to serve agriculture or manufacture may break and destroy the lives they are meant to preserve. Such is the inscrutable, the unescapable malignity of chance that attends every effort to advance the conditions of life. The specter of death attends every step of progress. Civilization fills a larger graveyard than does savagery.

But what is human life? It is the cheapest of all commodities. We have raised men to be the food of powder.

Who would not brave danger for the fun of sport? We kill a man a day in the Northern woods just for the amusement of shooting deer. We hunt wild beasts, and the excitement of it is the risk of life. To reduce by a penny the cost of a kind of food we send fishermen to the Banks and scores of them never come back—Gloucester is peopled by widows. That we may bind an elastic rim to our wheels we slaughter multitudes of people in the forests of the Kongo.

It is the law of civilization, the good, altruistic law, that many must die that the larger multitude may have more ease, more comfort, more happiness. These are the martyrs of civilization, hunters, sailors, mechanics, trainmen, miners, inventors, physicians, all whose business involves risks, as whose does not? They die as Socrates died, as Jesus died; for human life is cheap. It is civilization that is rich and worth all cost.

Coming Religious Conventions

THE Protestant Episcopal Church and the Congregational churches will hold their triennial national assemblies at the same time this month, altho the Episcopal Convention will continue its sessions for a longer time than the Congregational National Council.

The Protestant Episcopal Church claims 929,117 communicants. It is the seventh in order of size of the Protestant churches. Because of its strength in our cities it is one of the most rapidly growing of our denominations, and its city strength makes it influential beyond its numerical rank. Perhaps the superior dignity claimed for its bishops gives it a further prominence beyond that of Churches which grade all the clergy alike. In its General Convention meeting in Cincinnati the 103 bishops form one House, while the 929,114 other members of the Church, clergy and laity, by their delegates, constitute the other House; and the concurrence of the two Houses is required to enact any legislation. In the Lower House the delegates of the 5,516 clergy and those of the 923,598 laity must agree for any action.

The business of the Convention will be almost wholly confined to internal government. One important amendment to the constitution is likely to be adopted making the Presiding Bishop elective instead of serving by seniority. We cannot see why the Church should not have three or four archbishops, and perhaps a patriarch. The genius of the Church seems to demand this development. A Presiding Bishop is not a term of dignity. At the last General Convention a canon was approved by the House of Bishops establishing a system distributing the dioceses into provinces, which would logically require an archbishop for each province, but while approved by the vote of the clergy in the House of Delegates it was defeated by the lay vote, and the project is likely to slumber now for a while.

An even more important question is that of the policy of electing suffragan bishops, not having the right of succession but attached usually to a diocese, and devoted to the care of a class of members not easily reached by the bishop. The plan was first proposed to provide bishops of their own color for negro churches, but is now urged for other classes or languages, and is therefore more likely to be approved by the Convention. It is thought to be needed in a city like New York. Instead of suffragan bishops a number of missionary bishops may be chosen, but not necessarily colored for colored work.

The puzzle of a new name for the Church, which will drop the word "Protestant" will hardly be settled at the Convention, and the bishops and delegates are tired of the fruitless discussion, much as they dislike the present name. Much more important will be the development of the missionary work, now that their Missionary Society is $100,000 in debt, while the Edinburgh Missionary Conference has stirred up some of its members.

Another subject which may be brought up, and ought to be, is the relation of the Episcopal Church to the Federal Council of Churches. At present the Episcopal Church is a member of that Federal Council not officially but by the action of one of its committees and by the sympathy and attendance of its representatives. At the last session of the Convention the invitation sent to it was somehow overlooked by both the House

of Bishops and the House of Delegates. This oversight may now be corrected.

The National Council of the Congregational Churches will meet in Boston for ten days, but most of its time will be given to the centennial of the American Board and to the meetings of the other benevolent societies, seven in all, they taking six days; and one of the remaining days is Sunday. This leaves very little time for business, and the program devotes most of what time there is to prepared addresses; but that can be broken up. The Congregationalists had at the Census of 1890 about the same number of communicants as the Protestant Episcopal Church, but has now fallen considerably behind thru its slower growth, and it now claims 720,718 communicants. The history of the Congregational denomination goes back to Plymouth Rock, and by good rights, if it had had foresight and statesmanship, it might have been among the very first in the country instead of one of the second class; but by an astonishing act of self-sacrifice it gave all its right to the territory west of New England over to the Presbyterians more than a hundred years ago, and thus created the New School Presbyterian Church, which forty years ago united with the Old School Presbyterian Church to create a denomination of the first rank, an example of what union can do; and Presbyterianism has had the sense to continue adding allied denominations, as when it took the generous gift of Western Congregationalism. When the New England churches recognized the mistake of their fathers it was too late to recover what was lost.

At the meeting of the Council in Boston the principal matter which is expected to excite discussion is the relation to the denomination of its benevolent societies. They were at first quite independent and self-perpetuating, and appealed to the churches, which had no control over them. In that way they have done finely, and no complaint is made, except that, while it works because the trustees are faithful, yet theoretically those who gave the money should have the rule. Gradually this is coming to pass. The corporate or ruling members of the American Board are a self-perpetuating body, but they have come to elect only those whom the conferences of the several States nominate to them. So the several States are assuming control of their own home mission work, and are thus leaving to the Home Missionary Society little more than to direct the work in new territory, where the churches are too sparse and weak to attend to the task. But there are other societies, such as care for assigning Eastern money to build Western churches, or Northern money for educating Southern negroes, whose local control is impossible, and the question arises whether it is theoretically wise to have the National Council directly control them by electing their boards. Then not a few people believe that seven mission boards are too many, and that all the care of educational institutions should be put under one society, and equally that the support of churches and the erecting of their houses of worship should be under another society. There are those who do not like so many collections, and call for only three societies—one for foreign missions, one for home missions of all sorts, and one for education—and who would have the three under the direction of the National Council. That is quite a new and radical change in the constitution of the Council, which has been solely an advisory body, but with advice that usually counts and controls. On this and kindred subjects bearing on the development of the Congregational polity committees will make reports. And all this is related to the new plan by which the desired benevolences of the churches are apportioned to them, for them to raise if they will.

Another matter is the giving to the denomination an efficient executive head. During the three years that Dr. Bradford was Moderator he assumed that it was his duty to act as the spiritual leader of the churches, and he traveled over the country encouraging them for service. Then Dr. Gladden as Moderator did the same for three years. In 1897 a layman was elected as Moderator, and he did not feel this to be his province, and he reverted to the old custom by which the Moderator laid down his duties with his gavel. The denomination may want its

unpaid Moderator, who will be on duty for three years instead of ten days; but it will not be satisfied without a paid secretary, and one sufficiently supported, who will do much more than it has been possible for the secretary to do hitherto; one who shall be the active initiative brain of the body, who shall have a statesman's instincts, courage and forcefulness, and who shall, besides his duty as editor of the statistics of the denomination, direct the work of apportionment for the support of the benevolent societies, and, we may add, shall look beyond the limits of his denomination and have it in his heart to guide the union sentiment so far as it may be the privilege of Congregationalists.

Another matter has not been talked of much of late, but it ought to be of the first interest to the National Council. At the last session of the Council a plan of corporate union was presented, agreed upon by very large commissions from the Congregationalists, the United Brethren and the Methodist Protestants. It could then have been probably accomplished. But a small number of Congregationalists doubted or were opposed; and, for the sole sake of unanimity, the last Council, approving the union and promising to go forward to accomplish it, yet sent the plan back for further possible amendment. But the two other bodies perhaps felt that they were snubbed, and the Methodist Episcopal Church took advantage to say that if the Congregationalists were not ready they were, and both denominations declined to appoint commissions to amend the "Act of Union." What now will the National Council do about it? Is there nothing they can do, or do they not care to do anything and are they content to let the project drop? *The Congregationalist* says in its last issue that during these three years "we have taken no further steps toward an act of union." This is true, for nothing could be done until the Council should meet. But it says further: "In the form presented at that time the question of union seems no longer to be a live issue." Then the form should be changed. It is too great a thing to be lightly dropped, the most important matter before the denomination if it wants to grow. But if it is no longer a live issue it is greatly to the discredit of Congregationalists.

The Episcopalians and the Congregationalists will both have enough to do to occupy their time with important business, without wasting it in hearing set speeches. It is for business they meet, the Lord's business, and not for sentiment or oratory. They and all our denominations are moving forward, giving us better churches and a purer nation.

Paintings on the Ceiling

THE representatives of the American people, who in squads, companies and regiments have been marching thru the museums of Europe this summer, have most of them returned with some knowledge of what art is. Not so many of them have learned what art is for. That is because they have been studying misplaced art. They have seen miles of pictures on gallery walls, numbered, classified and cataloged, and they naturally get the idea that is what these pictures were painted for, to be numbered, classified, cataloged and studied. So when a picture starred by Baedeker has to be sought for elsewhere than in a gallery, say in a church, a town hall or palace, the tourist resents the inconvenience. Sometimes there are worshippers in the church, and these get in the way. Sometimes the town council is using its hall. Sometimes the people who inherit or rent the palace are living in it. Even when accessible such extramural pictures are apt to be badly placed or poorly lighted. If brought together into a gallery, where he thinks they belong, he would be able to see more of them between ten and three, or to go over them inch by inch with a strong glass.

Especially is he exasperated by the ceiling paintings. Why anybody should put a picture in this most awkward of all places beats him. He suspects that it was done in order that the custodian could get half a lira out of him for the loan of a looking glass. He reads with pleasure that Michael Angelo had to spend twenty-two months on his back in painting the ceiling of the Sistine Chapel, tho he does not see why Michael

Angelo put himself to such inconvenience in order that his admirers for the next four centuries should get cricks in their necks.

The mistake of the tourist results from his disregard of the fact that the Sistine Chapel was not originally intended for the worship of Michael Angelo. Even now it has other uses not unworthy of consideration, such as divine worship and the election of Popes. The average tourist could hardly tell you whether there was an altar in the room or not. If there was one he looked over it. Yet the altar was designed to be the center of attraction. The "Last Judgment" was its background, and the "Creation of the World" the canopy of the miracle that was performed there, the miracle of the bread being made God. Michael Angelo was not what you would call a modest man, but he did not put on the airs of the modern representatives of his craft. He did not presume to rival the priest. He was proud to be able to assist him. He realized that eyes would rove and thoughts wander even in the presence of a miracle, especially when the miracle is oft repeated and long drawn out. It was his purpose to catch these straying eyes and thoughts before they should get out into the world and focus them again upon the priest. If the worshipper allowed his eyes to slip past the Christ on the altar he saw the Christ of the Last Day, making the final division of the sheep from the goats. If he rested his head back on the stall he saw prophets and sibyls foretelling the coming of the Christ of the altar. The frescoes were merely aids to the server's bell.

Ruskin confesses that it was forty years after he began his study of St. Mark's at Venice that the thought entered his "pert little Protestant mind" to ask what the church had been built for. No wonder that the hundred-day tourist misses the same point. His misconception of the importance and purpose of art has been fostered by the artists of the day, who have a conceit of themselves quite beyond anything seen in the times when artists were more honored than they are now. The artist of the Renaissance knew his place. He was a handy man about the ducal or papal court, ready to paint a picture, design a church, cast a cannon or glaze a cake, as might be needed.

It has fortunately not been possible to convey Leonardo's "Last Supper" to a museum. Much better let it die at its post than to transfer it to a foreign environment. It was painted for a dining-room and that is where it belongs. As a dining-room picture it compares favorably with the steel engraving of the stag at bay or the fruit plate in colors, with which the American citizen is familiar. We do not refer to the painting of it, because it has been easy enough to get good painting ever since men got the knack of it 500 years ago, but it makes a difference whether one's thoughts at a meal are directed downward or upward. Thinking about the meat and vegetables, the crude materials of the food, is not so inspiring to the mind and probably not so good for the digestion as thinking about the most wonderful meal of all history. Leonardo da Vinci did expect his picture to be the principal attraction of the room. He knew that people would come there primarily to eat, but he knew also that when once the keen edge was taken off their appetites they would begin to look around a bit and he could seize that opportunity to remind them that man shall not live by bread alone, that the act of nutrition in which they had been absorbed had once been spiritualized and that they should think of its spiritual significance so oft as they did eat and drink.

Tintoretto was under no delusions as to the character of the Grand Council of Venice. He knew that they were as crafty and ambitious a lot of politicians and financiers as ever got together in one room. He realized that when they got together in that room they would be wondering who were the secret Committee of Three and what names had been dropped into the Lion's Mouth, rather than admiring his frescoes. But he was willing to do his best with their casual glances and secondary attention. When speeches were dull or voting slow the members of the Council would see the glories of Venetian history wherever they looked, and they must be reminded that this republic now in their hands had lasted a long time, had cost a lot of bloodshed and was

not a thing to be spoiled for a personal advantage or a petty spite.

Guido Reni did not expect the guests at the Rospigliosi Palace to go about the room with mirrors bumping up against each other, as the tourists do now, in order to gaze on his "Aurora." He knew that a man was a fool who would look at his painted nymphs when he could look on real live ladies, and he was not painting for fools. He aspired merely to produce a suitable crown to the gay scenes beneath, and to suggest to those who chanced to glance at the ceiling that other costumes than those in vogue might be more favorable to the cultivation of beauty of form and grace of motion.

If the tourist would start with the idea that frescoes are only a superior kind of wall paper he would have a better chance to learn how to appreciate their true value. Then he would come to realize that the periods men call greatest in artistic sense were when art was applied art, art applied to life, not existing for its own sake. Then he would see that one can no more understand art in a gallery than he can understand butterflies in a museum. Then he would begin to demand of modern painters that they do something to make his daily life more attractive and significant, and in this way he would give them a chance to become as great as the old masters, who were in their day the servants of people and rulers.

"The Common People"

Bishop Benjamin Tucker Tanner, of the African Methodist Church, sends us the following communication and question:

No especial objection can be made to the INDEPENDENT'S kindly mention of the Democratic candidate for the position of Governor of New Jersey; for its words are highly esteemed by those of us who have read that journal for more than a third of a century. Nor can any very great objection be made to President Wilson personally. In all sincerity, however, would we like to know what he meant when in his first political speech, as given in the Philadelphia *Press*, he said:

"Democrats have made many blunders, but the Democratic party is the party that has longest felt a close connection with the common people of the country."

To substantiate this, the president refers to history of which he is an accepted master; but really we should like to know where the colored man comes in? Will the INDEPENDENT be kind enough to tell us?

We really cannot answer this question, and we refer it to President Wilson asking him for a reply. Some people, when they refer to "the common people," leave the negro out; just as many Southerners when speaking of Southern people quite forget that there are any Southern people who are not white.

Deep Waterways

The third annual convention of the Atlantic Deep Waterways Association was held at Providence, and has adjourned to hold its next meeting in Richmond, Va. The three days session of the Association was marked with enthusiasm, and there were present 600 delegates from all the Atlantic seaboard. The commercial interests of the East demand that the waterways system shall not stop with the water route from Chicago to New Orleans, and from Chicago to Montreal and New York. The survey from Boston to North Carolina has been practically completed. Estimates have been made for each section of the waterways and inlets, while the routes have been selected, except from Boston to Narragansett Bay. The work that now remains to be done is to determine the width and depth requisite for each section. It is believed that this canal from Maine to Florida will not only greatly increase the safety of the vessels using it, but will remove barges and slow-moving transports out of the way of ocean travel, and in this way make the Atlantic Coast far safer for the line steamers. Regular ocean commerce is always liable to come in collision when barges break loose in a storm, or are cast adrift. It is strongly urged that this inland canal will go very far to bring back an American merchant marine. There are today but fourteen vessels flying the American flag, and only two that carry the American emblem to foreign shores.

The Solid South

With Maine gone Democratic and Tennessee likely to go Republican it would seem that the solid South and the solid North are breaking up simultaneously. But the State of Georgia is presenting a most peculiar sit-

uation. It will be recalled that Hoke Smith, who was Secretary of the Interior under Cleveland, beat the Democratic political machine some years ago and won the gubernatorial nomination on the rate and race questions. During his term of office he offended the corporations by dismissing Joseph E. Brown, the railroad commissioner supposed to be favorable to corporations. In turn Mr. Brown became a candidate for the gubernatorial nomination as a rival of Smith, and took from his former chief the customary second nomination. But hardly had Brown finished out half his term before the time for the next primary, which is tantamount to an election; and Smith, whose favorite doctrines had been attacked in a message by Governor Brown to the Legislature, again entered the race, and by a few thousand votes he won the gubernatorial nomination over Brown, altho Smith's victory cost him over $7,000 more than both years' salary of the office will yield. But the story does not end here. Meanwhile, Thomas E. Watson, formerly Presidential nominee of the Populists, had returned to the Democratic fold. Offended by the high-handed methods employed by the Smith faction in even denying a voice to the Brown faction in the nominating convention, altho Governor Brown received only 3,000 votes less than former Governor Smith, Watson, in a series of public speches, is calling upon Governor Brown to run as an independent, and it would seem that the Governor is not wholly averse to the suggestion. If the Republican party in the State, which Mr. Taft is attempting to reconstruct by appointing only white men to office, had any real stamina and would put out a full State ticket there might be some hope of still further making inroads into the solid South.

Fraternity and Trade

Food for reflection may be found in a magazine article by one K. Tajimi, quoted in a recent issue of the *Japan Weekly Mail*. His paper is entitled, "Why Are Our Traders in China Defeated by the Germans?" Some Americans will be surprised that such an article can, indeed, be written. For the Japanese have great advantages in Oriental competition; in race and in place they are so much nearer than their rivals to the potential customer. Part of this advantage seems to have been lost thru the arrogance of success, as Korean sympathy was long since sacrificed. For Mr. Tajimi finds that Japanese traders neglect to study Chinese customs and usages. They hold aloof from the population, fraternizing only with fellow countrymen and with Europeans. Now the Germans adopt better tactics. There are today over two hundred German traders in China who have donned Chinese dress. Many more have, without going so far, won favor by displaying sympathy with that people in all possible ways. Japan has made the mistake of imitating the Occidental in his scorn for the inefficient. But now that her chief commercial rival has seen the importance of assuming, if not really feeling, the equality of the races and the nationalities—while sales are going on—Japan may be expected to become as benevolent as Hans himself. What of Uncle Sam, meanwhile?

For the Religious Census

We have the Latin text of the papal order which directs that children shall be admitted to the sacrament at the age of seven instead of from nine to fourteen. It is given out by the "Congregation of Sacraments," and it lays down the old rule of the Church that the bread of the sacrament is to be given to children when they have reached the "age of discretion," which is explained as the age when they can sin by understanding the difference between right and wrong, and can distinguish between ordinary bread and the consecrated bread and take it with devotion. It is not required, they say, that children shall have a full knowledge of religion, but only a moderate power of discernment. Accordingly the "age of discretion" is more fully defined. It is "about the seventh year or a little more or even less." From this age children should go to confession and communion. "After this first confession and communion the child ought to learn his whole catechism by degrees, according to the measure of his intelligence." The proper understanding of religion to be required of him is "that in which he can so distinguish eucharistic

bread from common bread that he can approach the holy eucharist with such devotion as befits his years." The rest of the document is given to the proper instruction of children after their first communion and the insistence on frequent confession and communion. This new rule, which is really revolutionary, will make a difference in our religious census. Hitherto all born as Catholics have been counted as communicants after they have reached the age of nine years, and the total number for the United States is 12,079,142, almost double the number, 6,231,417, given by the Census of 1890. Probably the age of nine is considerably below the age at which confirmation usually has taken place. The method has been to receive reports from all the dioceses of the total Catholic population, and then deduct 15 per cent. for those under nine; but hereafter the age will have to be reduced to seven, adding some tens of thousands more. A similar method applied to Protestant denominations would vastly enlarge the number of their adherents.

We welcome the announcement that from the 1st of October *The Interior,* of Chicago, and *The Westminster,* of Philadelphia, will be consolidated under the name of *The Continent,* the purpose being to issue from its main office in Chicago what will be truly a national Presbyterian paper, the denominational papers hitherto having been local. The plan is a good one, and the spirit of the two journals has been generous and liberal, for the direction given to *The Interior* by Dr. Gray has never been lost. *The Continent* will start off by sending William T. Ellis, distinguished as traveler and journalist, thru Asia Minor, Mesopotamia, Persia, Arabia, Egypt, India and China to report on the movements that are transforming all these old lands. We heartily commend the journal to Presbyterians and others.

Prof. Harry Thurston Peck, of Columbia College, has been sued for breach of promise, and the woman has given some of his letters to be printed. The result is that he has been asked to resign his professorship, which he refuses to do, on the ground that the woman has tried to blackmail him and has forged the letters. That is reasonable, if true; but it is not reasonable that to protect himself he should put in parallel columns the list of Latin books he has published while professor, against the blank column of nothing that some of his associates have written. It is not pertinent to the case and not courteous. His industry is much to his credit and their sterility may be to their discredit, but all this has nothing to do with a breach of promise.

The leading Irish members of Parliament are in this country, holding meetings to collect Irish money to support Irish members of Parliament who are trying to secure for the people of Ireland the local self-government which all of our States enjoy. It is all right that they should get help here; but we wonder why the English Laborites do not follow the Irish example now that the British courts forbid the labor unions to pay the salaries of their members of Parliament.

That over twenty seamen should have been drowned in smooth water in New York harbor, while going in a launch from the shore to their vessel seems incredible. The midshipman in command jumped into the water and saved ten of his men; but why could not seamen swim? College boys are taught to swim as a part of their education nowadays. Such inability is a disgrace to the service, for their life is on the water.

In our last issue we gave not quite correctly the political question in Nebraska as to the eight o'clock closing hour for saloons. Such a law was enacted in 1909 and the question is as to its repeal. Mr Dahlman, Democratic candidate for Governor, says he will not use his influence to repeal the law, but if the Legislature does repeal it he will not veto it. Mr. Bryan refuses to speak for Dahlman.

The West Point cadets seem to have adopted the tactics of the suffraget prisoners, but we hope that our Government will not resort to British methods to make them eat.

Insurance

"He Can Who Thinks He Can"

THE life insurance agent can who thinks he can. That is to say success in soliciting depends to a very large extent on self-confidence. Success or failure is controlled more than we sometimes think by mental attitude. The agent who says "I can" or "I will" is a thousand times more likely to write applications than is the same agent dominated by the thought "I can't." Will power is transcendent. It overcomes obstacles as nothing else can. The secret of salesmanship is to be able to project the seller's personality into the buyer, so that by means of psychology, or whatever it is, the buyer yields to the subtile influence of the seller and there is merchandizing in its perfection. Life insurance is to a very large extent based upon salesmanship, for all that governs the one governs the other. If the agent has no confidence in himself how on earth can he inspire confidence on the part of others? The answer obviously is, he cannot! Think success and think it hard enough and success will come. Think failure and that, too, is certain. No man can tell what his power is or what he can do until he tries. That is the vital test, trial. If the insurance agent is mentally equipped as he should be and he only thinks he can, then he can. There may be a forcing process required. There may be a need of every energy. There may be a dozen other requirements, but in due time there will be a harvest if he faints not. "He can who thinks he can." These words are full of hope and cheer. They open up vistas and they make for achievement as nothing else will or ever will. The agent may not dream. He must work and work hard. By day or by night or even both by day and by night. The time and labor spent are nothing provided there be triumph at last. Wishing for something, wishing for prospects, wishing for contracts, wishing for houses and lands is all very well as an inspiration, but wishing is all very intangible and must be followed up by a very vigorous campaign in which endeavor, enthusiasm, determination and grit are judiciously mingled and intermingled. And the sooner all this is done the better it will be for the agent as well as the prospect.

RECHT'S Broadway Agency of the Northwestern Mutual Life Insurance Company sends out cards timed to reach men on their natal days and reading:

"On this your birthday accept my best wishes for joy, happiness, good health and the reward of successful endeavor."

"Sincerely yours,
"RUDOLPH RECHT.
"Three-Twenty Broadway."

GOOD intentions are excellent, but they do not serve any good purpose as paving stones. It is far better, for example, to have a $1,000 or a $2,000 policy in force in case you die than to have had the good intention of taking out a $5,000 or $10,000 policy but which never materialized because of a sad neglect on the part of the dead one.

The following is a good story irrespective of whether or not it is true:

A lady came down from upstairs and asked the manager of the summer hotel if she could get a glass of water at once. "Why, certainly, madam," said the manager, filling up a glass from the water-cooler. Two minutes later she was back in the office again. "I don't like to trouble you," she said, "but could I get another glass of water right away?" "No trouble at all, madam," said the manager, handing her another glass Two minutes later she appeared again. This time she asked for two glasses. "Certainly, madam," said the affable manager, "but could I inquire what you are doing with so much water?" "Well," she said, "I don't want to frighten you, but my room is on fire and I'm trying to put it out."—*Eastern Underwriter.*

Financial

The Illinois Central Frauds

In the year which ended with June last the net earnings of the Illinois Central Railroad Company were only slightly in excess of the sum required for the 7 per cent. dividend. Altho the gross receipts increased by 9 per cent., the increase of expenditures was nearly 14 per cent. A large part of this increase was due to the frauds of prominent officers and their confederates in connection with the repairs of freight cars. The cost of freight car maintenance during the year was almost $8,000,000, altho it had been less than $4,000,000 in 1906. In the last named year the cost of repairs per car for each mile was 82 cents. This cost rose to $1.11 in 1907, $1.05 in 1908, $1.30 in 1909, and $1.52 in 1910, when the corresponding cost on the Union Pacific (which controls the Illinois Central) was only 64 cents. In the annual report, issued last week, President Harahan said:

"The excessive cost of repairs to freight train cars, which had increased steadily for several years past, and particularly the extremely heavy cost of repairs made during the current year, attracted attention and a thoro investigation was instituted in the early part of the present calendar year.

"The disclosures resulting from this investigation have shown that, thru the collusion of a number of your company's most trusted officials and certain car repair companies, your company has been defrauded of an amount estimated at from $1,000,000 to $1,500,000.

"Settlements of the civil suits against two of the car companies involved have been made, and the amount recovered was credited to the account 'Freight Train Cars—Repairs' during the current year. The Board of Directors is pursuing this matter to a conclusion and will vigorously prosecute criminally all persons engaged in this conspiracy."

An impression prevails that the company's loss on account of these frauds considerably exceeds $1,500,000. The increase of the cost of freight car repairs last year was $1,605,471, and the thieves have been at work for three or four years. The great difference between the mile rate of cost on the Illinois Central and the mile rate on the Union Pacific and other roads should have excited the suspicions of directors and honest officers two or three years ago. Careful inquiry may show that other companies have suffered by similar frauds.

Testimony given at Chicago last week in the case against General Manager Harriman and others shows what the methods of the thieves were. Two of them have made full confessions. There is no longer any mystery about the death of Ira G. Rawn, formerly vice-president of the company, who died in his house, last July, of a bullet wound. Foreseeing exposure, he committed suicide. His family asserted that he had been shot by a burglar. Rawn held stock in the thieving repair companies and also exacted from them $15 for every car sent to their shops. When he died he was president of the Chicago, Indianapolis & Louisville Railroad Company.

....A company of Mexican capitalists is about to place contracts for an irrigation project involving an expenditure of $10,000,000 and providing for the irrigation of 600,000 acres lying near the Rio Grande and between Matamoros and the San Juan River. A great dam across the San Juan near its mouth will divert nearly all its waters into the company's main canal, which will be 63 miles long.

....In the first year of the new tariff trade between the States and the Philippine Islands increased 84 per cent. Imports from the islands rose to $18,017,372, and the exports to them were $17,517,675. The increase of sugar imported was from $1,129,750 in 1909 to $5,126,707 in 1910. The value of cigars and cigarettes brought to the States advanced from only $5,374 to $1,832,970.

....A reduction of the size of our paper currency is under contemplation at the Treasury Department. When this is accomplished, the nineteen miscellaneous portraits upon the issues now current will be replaced by nine designs selected with some regard to the importance and position of their subjects in American history. The size of the bills, which are now 3.04 inches wide by 7.28 long, will probably be 2½ inches wide by 6 inches long.

The Independent

VOL. LXIX NEW YORK, THURSDAY, OCTOBER 13, 1910 No. 3228

Survey of the World

Mr. Roosevelt's Speeches

The criticism of Republican insurgent journals in the West and the comments of journals elsewhere have led Mr. Roosevelt to speak briefly, in recent public addresses, about the tariff plank in the platform adopted by the Republicans of New York at the Saratoga convention. In the Brooklyn Academy of Music, before starting on his trip thru the South, he said:

"It was a matter of duty for me to go to Saratoga. But, in addition to feeling that I did my duty there, I had a good time. If I had been as much in power up there as some of the newspapers seemed to think I was I would have written the tariff plank a little differently, but, on the whole, I think we came out of it very well."

In Atlanta, Ga., on the 8th, at the conclusion of his tribute to the memory of Joel Chandler Harris ("Uncle Remus") he said:

"I have been asked here by two newspaper men how I reconcile my speeches in the West about the tariff with the tariff plank in the New York platform. I do not reconcile them with that part of the platform. I must refuse to be judged by what the platform said, but must be judged by what I myself said. You may have noticed that we had quite a lively time at Saratoga. I was elected temporary chairman, and I served as such with reasonable efficiency before the platform was adopted. There were a number of men who voted for me and who were with me on most of the points, but who disagreed with me on others, and so as temporary chairman I was careful to make my speech in clear language. If what the platform said differs from what I said, I must be judged by what I said. The fight was for the great fundamentals of citizenship, a fight against corruption in politics, against bossism and for genuine popular rule. We carried the contest to a triumphant conclusion."

In his Brooklyn speech he warned his audience against men who were interested in all kinds of reform that did not harm them. There were men of large fortunes, with big lawyers on their side, who wanted to see all forms of little graft and all the corrupt little politicians swept aside, but were not willing that big graft in big business should be stopped. They did not want reform to go so far as that. At Bristol, Va., on the 7th, his chief subject was the "new nationalism," which he defined as the efficient application of old moralities to new conditions. There should be closer governmental supervision of the business use of great wealth. Little crooked men could be handled by their neighbors, but for big crooked men there should be national control. The new conditions required new methods. Men in Wall Street who were honest had no reason to fear the new nationalism. At Knoxville, Tenn., he spoke in the same strain, also saying that we needed a first-class navy. "Speak softly and carry a big stick." At Rome, Ga., he said:

"Now I am going to do to you what I do not think I have to any other audience, and that is to speak a little about myself personally. Wait! I do not think you will find it amounts to so much when you hear it. It was suggested by what Judge Wright said in introducing me when he spoke of my having been a success. Now in so far as I have been a success it has been absolutely and solely from doing the ordinary things of life that any man could do, but that nobody does do. I won't say that nobody does do it, but that so many people don't do it to the point that they ought to. Among my intellectual opponents it is often stated as a matter of complaint that I preach what is commonplace and humdrum. So I do, and so I intend to do. Honesty, courage, tenderness and force are the kind of things I want to see developed in the American man, the American woman, and therefore in the American boy and the American girl. I never got anything in my life by an unusual display of genius or even by an unusual display of talent. Whatever I got has always come

from doing a number of things just as hard as I knew how."

Gifford Pinchot accompanied him to a session of the Southern Conservation Congress, where he advocated governmental supervision of the country's resources, remarking that certain newspapers in his home city, "edited under the shadow of Wall Street," thought that what he had just said was anarchy. He believed it was conservatism.

Political Topics

It now appears that Judge Gaynor, the Mayor of New York, decided several days before the Rochester convention that he would not be a candidate for Governor of the State. Henry Watterson had said, in a letter to one of the Mayor's friends, that the Mayor was "the strongest man the Democrats could nominate for President." This letter was shown to the Mayor. John A. Dix, chairman of the State Committee (since nominated for Governor), and Norman E. Mack, of the national committee, visited the Mayor and told him that he would be nominated for Governor by acclamation. After this visit, on September 25, he sent the following letter to a friend:

"Your note, with Mr. Watterson's, is at hand. Mr. Dix and Mr. Mack have been here and I have told them finally and positively that I am not a candidate for Governor and cannot be made a candidate. I do not intend to abandon the city. They say that it seems certain that the convention will nominate me, even tho I am not a candidate. That does not seem probable, and I hope it does not occur, for in my present state of health it would weigh heavily on me. I am now worn with anxiety. The shock I received has proved more permanent than I had supposed possible, and my voice comes back only slowly. I am not certain that I can ever bear the strain of the Mayoralty again.

"Altho my mind is made up, I do not perceive any moral question in the case. I am under no obligation whatever to remain as Mayor. I certainly had no such compact with those who opposed me and voted against me; it takes two sides to make a compact; nor had I any with those who nominated and elected me; and if I had, they would have a right to release me. As for myself, or my political future, I shall not consider that at all. Mr. Watterson is in error in supposing that I have the Presidency in mind. Never! And it is too late for me to begin shaping my course for any ambitious purposes.

"And when a man has gone down into the Valley of the Shadow and looked the specter Death in the face, and said to it, 'I am ready,' nothing in this world looks very large to him, as I can assure you."

The Independence League, sometimes called Mr. Hearst's party, has nominated in New York a complete State ticket, seeking no alliance with either of the old organizations. The course of Mr. Hearst's papers indicates, however, that the movement is hostile to the Democratic ticket. They assert that the Democratic candidates were named by Charles F. Murphy, the Tammany leader, whom they bitterly denounce. —— Vice-President Sherman has accepted an invitation to attend a banquet in Chicago, where he will sit at the speakers' table with Senator Lorimer, in the room where the dinner was given which Mr. Roosevelt declined to attend unless an invitation to Lorimer were withdrawn.——At the end of a disorderly convention the Democrats of Massachusetts nominated F. W. Mansfield for Governor, with the understanding that he would resign within three days to make way for a candidate to be named by a committee of five. Mr. Mansfield was nominated in order that the party might have a ticket within the time allowed by law. The two candidates —E. N. Foss and James N. Vahey—in support of whom the convention was almost evenly divided, withdrew in order that this course might be taken. At the beginning of the present week the nominating committee had made no progress. Press reports asserted that all of those prominently mentioned for the place had declined to accept a nomination. The platform says that "Republican tariffs and policies have increased the cost of food, clothing and shelter beyond endurance." It calls for tariff revision downward, an income tax, popular election of Senators, a national parcels post, the initiative and referendum, pre-election publicity for campaign funds, and freer trade relations with Canada. The Republicans have renominated Governor Draper. They would have the tariff board made permanent, with clearly defined powers. The recent revision, they say, was downward, and they assert that the present tariff is not responsible for the price of necessities. They would have the revision of separate schedules of the tariff permitted. This is also proposed in the platform of the Republicans of Michigan.

——Governor Harmon, of Ohio, has directed the Attorney-General of the State to sue Lewis C. Laylin, formerly State Treasurer, and Carmi A. Thompson, formerly Secretary of State, for the recovery of money due for interest on large sums of public money deposited by them in banks while they were in office. Mr. Laylin is chairman of the Republican Executive Committee, and Mr. Thompson (a member of that committee) was a prominent candidate for the nomination for Governor in the recent Republican convention.

Payments to Albany Legislators

During the investigation, last week, concerning corruption affecting legislation at Albany, Henry F. Zimmelin, formerly vice-president and representative at Albany of the Lyons Beet Sugar Refining Company, testified that he had paid $3,000 a year for three years to the late John Raines, who was the leader of the Republican majority in the State Senate; also $3,000 to the late Representative Jean L. Burnett, and $550 to one Betts, clerk of a committee. The company was interested in the law giving a bounty for beet sugar and desired to prevent repeal of the statute. In eleven years, the State paid $545,000 in bounties, but payment ceased in 1908, owing to the opposition of Governor Hughes. The bankruptcy of the company has brought its accounts before the public. The money was paid, Zimmerlin said, as a token of the company's appreciation of the two legislators' services. Betts denies that any was paid to him. There was also testimony about the sums collected, by assessment, by the Street Railway Association, for use at Albany and in political campaigns. One assessment of $8,000, paid by the Metropolitan Street Railway Company, was disguised as the payment of damages to an imaginary person for injuries received. Considerable sums were contributed to the campaign funds of members of the Legislature nominated for reelection. It was explained that this was done to insure the retention in the Legislature of good and honest men. It was admitted, however, that the men, as a rule, were candidates in districts where their party had safe majorities. Much inquiry was made concerning the speculative accounts of several prominent legislators in a certain brokerage house, the aim of the committee's counsel being to show that stocks were carried for these men. It appears that in one instance a Senator was paid $14 a share for 1,500 shares of stock, altho the market price of the stock at the time did not exceed $4 a share.

Punishment for Smuggling

In the Federal Court at New York, last week, M. L. Morgenthau, the millionaire president of a prominent candy company, who had been indicted for making false statements while trying to avoid the payment of duties on jewelry and clothing brought from Europe and valued at $17,000, pleaded guilty and was fined $5,000. His counsel said to the court that Mr. Morgenthau was a man of high standing in religious and commercial circles, who had yielded to temptation, as many other travelers had done. In pronouncing sentence Judge Hand said:

"This is the last fine that will be imposed for any offense of this character that is committed. I have discussed this matter with Judge Holt and Judge Hough, and they agree that there shall be no more fines imposed on tourists in future; and I wish to make this a formal announcement so that it will be as public as possible. Any tourist in the future who smuggles in goods and accompanies the smuggling by false declarations will be sentenced not only to a fine but to some period of imprisonment."

In addition to the fine, Mr. Morgenthau lost the goods in question, which were forfeited to the Government. On the following day Mrs. I. Reynolds Adriance, of Poughkeepsie, N. Y., pleaded guilty to an indictment charging her with a similar offense. She had attempted to conceal a costly necklace in the lining of her hat. Another necklace had been hidden by her daughter. The value of this jewelry and of other goods seized was about $20,000. Judge Hand imposed a fine of $5,000, explaining that what he had said about imprisonment applied only to offenses committed after October 6, the date of the announcement. He added that as such persons as ex-Governor Rollins, of New Hampshire; Mr. Morgenthau and Mrs. Adriance did not

seem to think it was wrong to evade the revenue laws, punishment more severe than the payment of a fine was required for the enlightenment of tourists.

Countries South of Us

Francisco Madero, who was the Presidential candidate of the opponents of Diaz in Mexico, and who was placed in prison during the campaign, was released on the 7th. Altho he had been required to remain in Mexico, he fled to Texas, disguised as a peon. It is said that Manuel Cardenas, who was removed from the office of Governor of Coahuila after he had become a prominent supporter of the candidacy of General Reyes, will seek a home in Texas.——Colonel Goethals, who is directing the construction of the Panama Canal, says that the Canal will surely be opened on January 1, 1915.—— In London there were published, last week, dispatches from Nicaragua saying that an agreement had been made with the United States for a loan of $20,000,000. State Department officers at Washington say they know nothing about such a transaction. Madriz, recently President of Nicaragua, has gone from Honduras to Mexico.——A report written by General Rivas, Chief of Police at Havana, speaks of a deplorable increase of idleness and mendicancy since the establishment of the national lottery in Cuba. He suggests that a committee of prominent Cubans should make an investigation and point out a remedy.——Owing to the conduct of General Valladares, the Governor of Amapala, the chief Pacific port of Honduras, foreign residents have fled from the city, and the gunboat "Princeton" has been sent to protect the property of Americans there. Valladares hates foreigners, and especially those from the United States. He recently ordered the imprisonment of all American and English residents and the confiscation of their property. When the new American Minister, Mr. McCreery, arrived at Amapala, Valladares was directed by President Davila to receive him with the customary honors. He refused to do this, and exprest his contempt for President Taft by giving his name to a dog. All the Consuls asked that the Governor be removed. He does not recognize the authority of President Davila. The latter has sent an armed force to dislodge him.

The Revolution in Portugal

The long impending revolt has taken place and the Portuguese monarchy was overthrown in a night. The republicans had everything prepared for a revolution, but its actual outbreak was premature, being forced upon the conspirators by the act of a crazy man. A fanatical royalist named Santos, a lieutenant of the General Staff, recently released from an insane asylum, shot and mortally wounded Professor Bombarda, whom he regarded as responsible for his detention in the asylum. The republican newspaper *Seculo* on Monday evening, October 3, denounced this as a political assassination, since Professor Bombarda was one of the republican delegates recently elected to the Cortes. A mob formed in the street, a couple of priests were stoned and a few shots exchanged with the police. About midnight the First Battery of Artillery, aroused by the people, seized their officers and trampled on the royal standard. Then they distributed arms among the people, and, taking their field guns, marched to the hights at the Parca Marques Pombal, dominating the city, and there intrenched themselves. The Sixteenth Infantry was divided in its allegiance, and when called from their barracks by the republican leaders, a fight ensued in which several officers and men were killed. The majority of the regiment then joined the artillery. The revolutionary forces attempted to march down thru the center of the city by means of the Avenida da Liberdade, a parked street occupied by a fair, the booths of which were used as barricades. Here they met with a stubborn resistance by the Municipal Guards and such of the troops as remained to the monarchy under the command of the King's uncle, the Duke of Oporto. The electric lights went out, and after several hours of fierce and confused conflict the republicans were driven back up the avenue. Their leader, Carlos Reis, a retired admiral, thinking the cause lost because he did not hear the signal guns indicating that the navy had mutinied,

committed suicide. The republicans rallied, however, in another quarter, and being augmented by more deserters from the army and well-armed civilians, they made an attack upon the royal palace of Necessidades. Here they again encountered the monarchical forces and were at first repulsed, but at daybreak the navy came to their aid. Three of the Portuguese cruisers at anchor in the Tagus, the "Adamastor," "San Rafael" and "Dom Fernando," hoisted the republican flag of red and green, and taking positions close to the shore, opened a bombardment of the city. The flagship "Dom Pedro" and the cruiser "Dom Carlos" did not desert the royalist cause until the following morning, but they abstained from firing on the rebel vessels. The bombardment did little damage, as most of the shots, either intentionally or from lack of skill, went wild. The palaces of Necessidades and Ajuda, and the public buildings about the Square of Commerce on the quay, were, however, hit often enough to secure their speedy surrender. The bluejackets from the marine barracks at Alcantara were among the first to join the insurgents and assisted in the attack on the Necessidades palace by sharpshooting from the hills. The people of Lisbon who did not actively assist in the insurrection kept to their homes, and the defense of the old *régime* devolved upon the Municipal Guard and a remnant of the soldiers, who held out until Wednesday morning, altho they were without food or reinforcements. The number of casualties amounted to several hundred, but no accurate figures have been reported. The plans of the revolutionists were carried out with great efficiency. Immediately upon the signal for the revolt detachments were sent out to hold or blockade all the roads leading into the capital, and the cables and telegraph lines were cut, so there was no communication with the outside world until the revolution was accomplished.

MANUEL II,
The deposed King of Portugal.

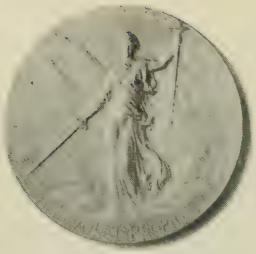
The Flight of the King

The visit of President-elect Fonseca, of Brazil, on the "Sao Paulo" had roused the republican sentiment of the Portuguese and so assisted in bringing on the revolution. A few hours after he had returned to the Brazilian warship from the Necessidades Palace, where he had been banqueted by King Manuel, the palace was bombarded and the King was a fugitive. With a few attendants King Manuel had slipped out of the back door of the palace while the insurgent soldiery and armed subjects were besieging its front, and was conveyed in an automobile to Mafra, a town about 18 miles to the northwest of Lisbon. Here he was joined on Wednesday morning by the Queen Mother Amelie and the Dowager Queen Maria Pia, who had fled the night of the bombardment from the Ajuda Palace to Cintra. The Infante Affonso, Duke of Oporto and uncle of the King, after making a brave stand with the few loyal forces, embarked upon the royal yacht "Amelie" at Cascaes, which he brought around to Ericeira, a fishing village a few miles beyond Mafra. Here the royal fugitives arrived in the afternoon under escort of twenty horsemen from the Mafra Cavalry School, and were transferred from their automobiles to fishing boats to be taken on board the yacht. The "Amelie"

then steamed to Gibraltar where it was received with a royal salute. The revolutionists made no attempt to prevent the escape of the King from Portugal and were doubtless much relieved to get him safely out of the way. Manuel is staying at the Governor's House, Gibraltar, and the yacht has returned to Lisbon and surrendered to the new Government.

The Provisional Government

The establishment of the republic in Portugal met with no opposition outside of Lisbon, and no reaction in favor of the monarchy is yet apparent. The republic was acclaimed by the people in Oporto and other Portuguese cities with much enthusiasm and with but slight disturbance, and the governors of the Portuguese colonies in Africa and Asia raised the flag of the new Government as soon as they found out what it was. Dom Miguel of Braganza, the pretender now living in Munich, prophesies that the republic will not last long, but disclaims any intention of upsetting it. He is content to wait, he says, until Portugal realizes its need of him and calls its rightful sovereign. The ministers in power at the time of the revolution turned over their bureaus to the Provisional Government without delay, and the leaders of opposing political parties hastened to declare their allegiance to the republic. The people who had taken part in the insurrection disbanded voluntarily and returned their arms to the Government. The custom houses, banks and stores were opened on the second day, and the streets were for the most part as orderly as usual. The Provisional Government is composed of men of good reputation and ability, altho their opponents call them intolerant, fanatical and visionary. The President of the republic is Theophile Braga, a poet and philosopher, one of the most distinguished of Portuguese men of letters and a member of the several foreign academies. He worked his own way thru the University of Coimbra, and in 1872 secured the appointment of Professor of Modern European Literature in Lisbon, in spite of religious and political opposition. His first publication was a volume of poems in 1859. Since then he has issued a history of Portuguese literature in twenty volumes and many works on history and philosophy. He has always refused to accept any pay from his books, living in a quiet way upon his professorial salary. After completing his first day of office work as President of the new republic, he returned as usual in a second-class carriage to his modest home in the suburbs. He is a positivist, a free thinker and an ardent republican. Dr. Alfonso Costa, Minister of Justice, is a professor in the University of Coimbra and a prominent lawyer. He has been several times exiled and imprisoned for attacks upon the monarchy and attempts to establish a republic. The new Minister of Foreign Affairs, Dr. Bernardino Machado, was formerly professor of philosophy in Coimbra University, but deposed for his anti-clerical activity. Senhor Machado was Portuguese Minister at Washington twelve years ago, when, curiously



THE ROYAL PALACE AT LISBON.
Bombarded by the revolutionary cruisers.

enough, he bore the title of Viscount de Santo Thyrso, conferred upon him by the Pope for the purpose of making a good impression upon the American people, and resigned by him after he returned to Portugal. He is wealthy and has distinguished himself in journalism and politics. The Provisional Government expects to turn over its authority to a Government elected by the people within three months. Its policy is to promote decentralization in government and colonial autonomy; to rescue Portugal from its disgraceful illiteracy by enforcing a system of universal secular education; to secure freedom of speech; to reform the finances of the country and to separate Church and State. The anti-clerical attitude of the Government is the most prominent characteristic so far manifested. The religious orders, which have gradually acquired a foothold in Portugal without authority of law, are to be at once expelled. The convents and monasteries will be broken up and the children at the clerical schools have been sent to their homes. Marquis de Pombal, the Jesuit leader, has been arrested, and Cardinal José Sebastias Netto and Bishop Liete de Vascouncellos of Beja have been exiled. The disorderly elements of the Portuguese population have interpreted this policy in their own way, and disgraceful scenes of anti-clerical violence are reported. Mobs bent on plunder and sacrilege have attacked the Jesuit school in Lisbon and other convents and monasteries.

Hong-Kong University

Sir Frederick Lugard is now making an appeal to England for funds for the endowment and equipment of a university situated in Hong-Kong and primarily intended for Chinese. The aim is to incorporate the existing institutions of higher education at Hong-Kong, particularly the College of Medicine, which has been running for twenty years, and to establish a university giving instruction in the liberal arts and applied sciences of the same standing as the leading universities of England and America. The Hong-Kong University will differ from the other university to be established in China with the co-operation of Oxford and Cambridge in two important respects; that is, it will be located upon British territory and the instruction will be given in English. The university promoted by the Oxford and Cambridge men is to be located in the heart of China, at Hankau, on the Yang-tsze, incorporating a number of surrounding mission schools and carrying on its instruction in the Mandarin dialect. The Hong-Kong University has adopted the English language on the ground that the Chinese language is not at present capable of expressing the technical terms of Western science, and besides, there is no common spoken language in China which students from different provinces are able to understand. It would be impossible to obtain competent professors of university grade who speak Chinese, and it would require two or three years of training at the expense of the university to give its professors the required proficiency. In addition to these reasons, it is frankly avowed that one of the purposes of the institution is to promote the use of the English language in the Far East. It is claimed by the promoters of the university that its situation in Hong-Kong gives it decided advantage over any other place. It will be able to utilize the hospitals and the industrial and commercial establishments of Hong-Kong in the training of physicians and engineers, facilities which are not to be found in the interior of China. At the same time it is easily accessible to the Chinese students, who will be able to return home in vacations and will therefore not be alienated from their own civilization and family relations for a number of years during the formative period of their characters. The expense will be much less than the transportation and support of Chinese students in European and American schools, or even in Japan. The religious question is to be settled in very much the same way as it is being settled in this country. The instruction will be exclusively secular, altho it is expected that it will be feasible to include the study of Christian ethics as well as precepts of Confucius and Mencius. The establishment of denominational halls or hostels by religious bodies for the housing and religious instruction of the students will be encouraged by the university.

Mexico

BY HAMILTON HOLT

[Mr. Holt, our Managing Editor, has just returned from a three weeks' tour of Mexico, where, in company with a party of thirty-seven representative American and Canadian journalists, all guests of the National Centennial Commission, he visited the chief cities of the republic and was present at the principal exercises in Mexico City in connection with the celebration of the Centenary of Mexican Independence. This was the first time, we believe, that a party of journalists have ever been the official guests of a foreign government.—EDITOR.]

AT 11 o'clock on the night of the 15th of September, in the year 1810, at the town of Dolores, Mexico, Miguel Hidalgo, a parish priest, rang the church bell which summoned the people to arms and started the revolution which won for Mexico her independence.

Last month the great Republic of Mexico celebrated her centennial of independence. All of September was given over to the event. Not only were parades, processions and pageants held in all the principal cities of the land, but statues were unveiled, cornerstones laid, public buildings dedicated, congresses convoked, and even a great national university was established. Nearly forty nations of the world sent special embassies to do honor to the occasion, while France, Germany, Argentina and Brazil were represented by great battleships of Peace. Tho the United States marines did not participate in the military parade —owing, it is said, to an unfortunate mistake of the American Embassy in not transmitting the invitation in time—the United States was represented at the centennial by no less than ten official delegates, including the resident and a special ambassador from President Taft, and two members from the United States Senate and three from the House of Representatives. This is the first time in its history that our Congress has been officially represented abroad, a compliment to Mexico which was greatly appreciated by the Government and people.

With unprecedented hospitality and lavishness the distinguished foreign visitors were entertained. Private houses and entire hotels were turned over to the special ambassadors, while the members of the United States delegation and their wives were domiciled in a huge palace, with five automobiles and twenty-four house servants at their beck and call.

It is needless to say that this infusion of diplomatic life into the capital was the occasion for innumerable receptions, banquets and balls, where the dazzling gold lace and orders of the diplomats and the jewels and superb costumes of the ladies made a scene of gorgeous display unsurpassed in the history of North America.

It was to these political and social festivities that the National Centennial Commission invited our party of Canadian and American journalists. But it was also felt that the occasion offered a splendid opportunity to give us a glimpse of the whole country and to show us at first hand something of the social, economic and political conditions now obtaining in the republic. Accordingly, a special train was provided, which left St. Louis on September 8 and returned exactly three weeks later. Entering Mexico by the Eagle Pass route, we stopped for half a day each at Guanajuato, one of the greatest silver mining towns of the world, and at Queretaro, famous for its opal mines and as the place where the ill-starred Emperor Maximilian was captured by the revolutionists and executed. At Mexico City the party spent nearly a week. There they saw the pageants and parades, met President Diaz and the leading men of the republic, and, of course, visited all the historic and not-

able sights of the city, including the Church of San Hipolito, the Shrine of Guadalaupe, Chapultepec Castle (formerly the ancient home of Montezuma, the last King of the Aztecs, and now the President's summer home), the Government pawnshop, the thieves' market, the National Museum and Art Gallery, the post office (which is an exact replica of a famous Venetian palace), and the new opera house, which, when completed, is expected to be the largest and most beautiful building of its kind in the world.

Leaving the capital on the 18th, the party proceeded up over the mountains, whose scenery surpassed the Rockies, and then down to the plains below and the quaint old town of Cuernavaca, famous for its pottery and its Italian garden, which Maximilian and Carlotta used to visit for a respite from the cares of state at the capital.

From Cuernavaca we returned to Mexico City and then started due south, stopping at Puebla, the city of many and beautiful churches, thence to the very heart of the tropics, where the heat quivers by day, the mosquitoes buzz by night, the parrots and monkeys disport themselves in the jungle's foliage, the natives live in bamboo huts with thatched roofs, and the children go naked.

Our first long stop was at Puerto Mexico, the Atlantic terminal of the Tehuantepec Railroad. The town is located about a mile from the mouth and on the left bank of the Coatzacoalcos River, which at this point is about 2,000 feet wide, with an average depth of 50 feet. Here the Mexican Government has constructed seven steel wharves, each provided with a warehouse 420 feet long by 110 feet wide, with holding capacity of 10,000 tons of freight each, and equipped with powerful electric cranes, each crane having a radius of 52 feet. A solid mile of wharf frontage and an absolutely safe harbor destine

THE VISITING EDITORS BEFORE THE MEXICAN HERALD OFFICE ON THEIR WAY TO MEET PRESIDENT DIAZ.

Puerto Mexico to be the most important Mexican port of call for the steamers of all nations trading on the Gulf. As the Tehuantepec National Railway is to be the chief rival of the Panama Canal for the interoceanic trade of the world, it was very interesting the next morning to travel over the entire 190 miles of the road to the Pacific port of Salina Cruz. The roadbed is ballasted with crushed rock and gravel, and 80-pound steel rails are used. The rolling stock is new and the engines burn oil. Two regular trains cross the road each way daily in about twelve hours, tho our special train made the distance in eight hours. For the first hundred miles the line is flanked on either side by dense tropical vegetation, but as the train ascends the divide the vegetation thins out and its character changes completely on the Pacific slope, where the air is dry and the rains very infrequent. Salina Cruz is even more a triumph of engineering skill than Puerto Mexico. From the open roadstead which formerly existed there and where the heavy northers used to make landing impossible sometimes for days together, two great converging jetties, with a total length of over a mile, now provide a safe harbor for the largest vessels afloat. Wharves and warehouses of the same size and capacity of those at Puerto Mexico are in operation. The town is laid out on high and healthy ground and provision is made there for the comfortable housing of the company's employees. I found a great difference of opinion as to whether the Panama Canal, when completed, would cut into the trade of this trans-isthmian route. The ship captains seem to think that the Panama Canal will prove to be the more popular, tho many others whom I interrogated in the matter held that there would be enough commerce for both routes. The advantages of the Tehuantepec route in point of time,

In the costumes of the time of the Spanish Viceroys. In the Historical Pageant, September 15.

however, would tend to be offset by the cost of unloading and reloading cargoes, the incidental breakage of goods in the operation, and the fact that it is very difficult so to time the mutual arrival of Atlantic and Pacific boats that one can unload and then find a cargo on the wharf ready to be loaded again without loss of time. In any case, until the tariff rates of the Panama Canal are published it will be only conjecture as to which will get the most trade.

One hour's ride from Salina Cruz is Tehuantepec, the largest and most important town on the railway. The word "Tehuantepec" signifies in the original Aztec tongue, "Mountain of Man-eaters," and was given to this locality by reason of the great number of man-eating tigers and other ferocious wild beasts which used to infest the neighboring hills. The population today consists of Indian descendants of the Aztecs found there by Cortez in 1519. They have retained the language, dress and customs to a large extent of their forefathers. All the trade of the town is in the hands of the women, who are famed all over Mexico for their beauty and splendid physique.

A SEVENTEENTH CENTURY SPANISH HERALD.

In the costume of the Viceroy period of Mexican history. One of the figures in the Historical Pageant of September 15.

Our party will long remember the waltzes and two-steps we danced with these bare-footed ladies at a ball given in our honor within a bamboo inclosure, and some of us will never forget the pure gold necklaces they sold us directly off their necks, but which the unsentimental jewelers' acid at Mexico City subsequently proclaimed to be 18 karat brass.

Our next stop was Vera Cruz, the chief port of Mexico City and now a very old-fashioned Spanish town. From thence we proceeded back to Mexico City, stopping for two hours at Teotihuacán, where two enormous pyramids, dedicated to the sun and moon, are being excavated. The next night we left the capital, returning to the United States by the Laredo or the eastern route and arriving at St. Louis on the 30th.

Thus in three weeks the editorial party visited the principal cities of Mexico, traversed the northern desert, the central plateau and the southern tropical lowlands. They experienced all altitudes, from the tugboat rides on the Pacific and Atlantic oceans at Salina Cruz and Puerto Mexico, up to the mountain range 10,000 feet above the sea level at the foot of snow-clad Mt. Popocatapetl. Every day was a surprise, and long before our too brief journey came to an end each one of us realized that in Mexico the American people have as interesting and fascinating a place to visit as any country in the Old World.

Of course, only the most casual impressions of Mexico could be received. The hurried traveler takes in only differences and oddities, which are always superficial. A real understanding and appreciation of a country is possible only after a very long sojourn in it and much study. All I can hope to do, therefore, is to give such an impression as any one is likely to get after making a brief tour of the country and talking with all manner of people. Even then my impressions may be erroneous, for one does not have the opportunity to verify or the knowledge to weigh the testimony given.

The first impression one gets of Mexico is its richness of color. This applies not only to the azure sky and the olive green scenery, but to the sunny cities, the multi-colored buildings and to the people themselves. Except in the trop-

ical jungles of the south there are few or no wooded stretches. The bare hills are dotted with small, conical-shaped trees and the inevitable cactus. The mountains which fringe the vast plains of the central plateau are rounded and have no jagged projections, like our Rockies.

The people are mostly descended from the very Indians who built up such a wonderful civilization before the Spanish conquest. The men generally wear a white shirt and trousers and a large straw sombrero. They also carry a brilliant colored blanket or serape to wrap about themselves when it gets cool or when they wish to go to sleep. The women prefer more subdued colors. Their dress is darker and the shawl or robozo which covers the head and shoulders is generally blue or black. Both sexes wear sandals or go barefooted. The children dress much the same as their elders, tho in the tropics they usually go stark naked.

The houses are of the usual Spanish design, with high adobe walls on the street, painted usually in reds, pinks, blues, yellows or greens, and with large open courts or patios within, filled with flowers and sunshine. The streets of the cities are narrow and winding, the life there is gay and animated, while innumerable heavy laden donkeys contribute by no means the least of the local color.

In the country districts are to be found the large farms or haciendas of the great landowners. The Indians or peons live in adobe homes in the North, like those in New Mexico, and in bamboo huts in the South, like those in the Philippines.

The population of Mexico is now about 18,000,000. They are divided roughly into the capitalistic, military and professional classes, who govern the country, and the peons, who do all the unskilled and some of the skilled work, and are governed. There seems to be no important middle class, as in the United States, to serve as the backbone of the nation. We therefore found extreme wealth, culture and ability in the governing minority, and much poverty, ignorance and squalor in the governed majority. There seems to be no general agreement as to the present condition or future prospects of the workers. Their wages have certainly never been so high as today. Yet it is a question whether the increased cost of living has not more than kept pace with their earning power. They are learning better methods of sanitation, however, all the time, tho disease and infant mortality are still appalling. They have also more educational opportunities than ever before. Literacy is increasing marvelously. Many good people tell me, however, that the peons are incapable of going beyond a certain point; that the law of diminishing returns sets in very early when one tries to educate them. On the other hand, one of the largest employers of labor in all Mexico told me that the peons could be made into the best skilled laborers in the world. When I asked which was the better off, the Mexican Indian or the Southern negro, the answers were about equally divided. But all agreed on this: It is not race prejudice, but class prejudice, that the upper class Mexican has for the Indian. It also seems to be the general opinion that the Indians are very docile and easy to dominate. As to their political rights, they seem to have few that the governing class are bound to respect. They do not have any redress thru the ballot for their wrongs, they do not get strict justice in the courts, and deplorably many of them are kept in a virtual state of slavery on account of debt, just like some of our Southern negroes. Yet to say that the peons as a class are directly oppressed and exploited would be a statement both misleading and unfair. If I can trust my personal observation I should say that tho they seemed a very poor and ignorant people, they are well nourished, peaceful and in the main contented.

The governing classes are much the same as one finds elsewhere in the world. They are powerful, class conscious, cultured and benevolent in the old-fashioned sense of the word. Owing to the vast influx of foreign business and professional men, the governing class is becoming very cosmopolitan, and tho the old Spanish families still keep pretty much to themselves socially, there is absolute intermingling in busi-

ness and politics. Money in Mexico, as elsewhere, breaks thru caste and class. Aside from the great landed estates, which are still in the hands of the old Mexican families, and the railroads, which are predominantly nationalized, the great businesses of the country are financed mostly in the United States, England, Canada, France and Germany. The United States, however, enjoys by far the closest trade relations with Mexico. During the fiscal year 1909-1910 57.93 per cent. of Mexico's imports came from the United States and 75.74 per cent. of her exports went to us. The tables for the other countries are as follows:

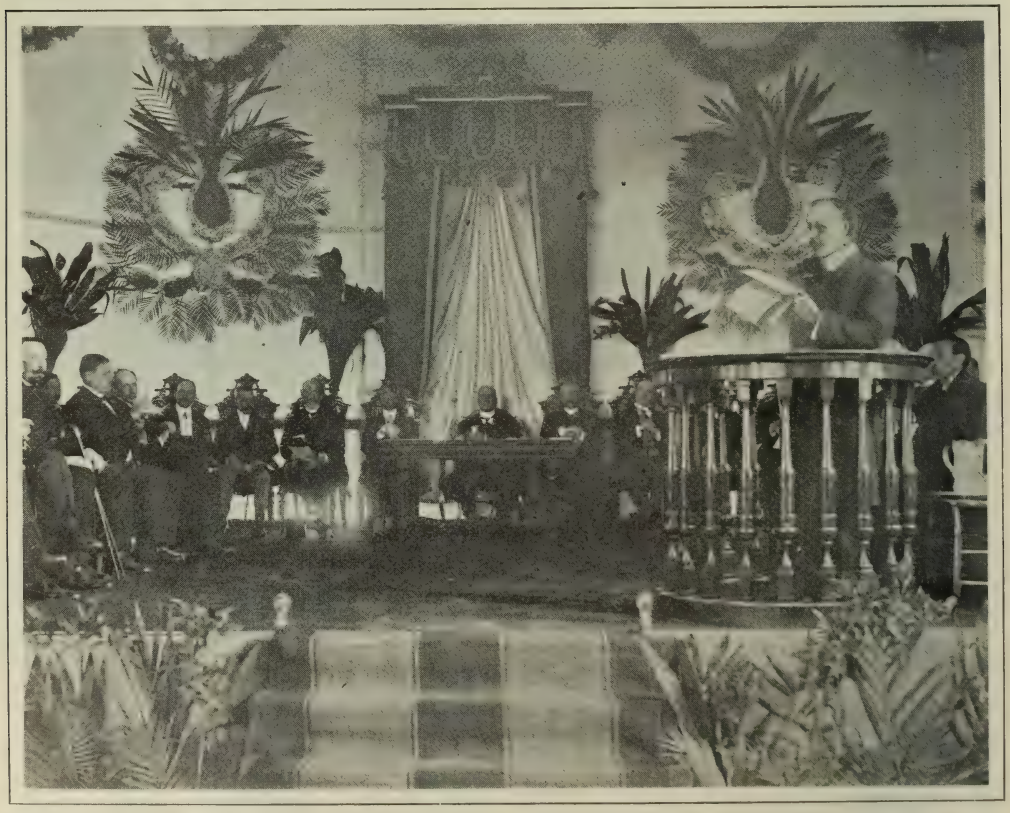
11.42%	of Mexican	imports	came	from	Great Britain
10.35%	"	"	"	"	Germany
8.98%	"	"	"	"	France
2.71%	"	"	"	"	Spain
0.06%	"	"	"	"	Latin America

10.97%	of Mexican	exports	went	to	Great Britain
3.25%	"	"	"	"	Germany
4.72%	"	"	"	"	France
0.74%	"	"	"	"	Spain
0.48%	"	"	"	"	Latin America

This shows that despite Mexico's sentimental attachment to Spain, she is bound more closely by all material ties to the principal non-Latin countries,

What effect this will have on the future of the republic remains to be seen. At present the United States is very unpopular, first, because of our insolent and superior manners, and second, because Mexicans fear that sooner or later some pretext will be found by which we will step in and annex the country. They do not think the United States could for a moment remain inactive if, after the death of Diaz, a revolution should break out threatening to upset business conditions and destroy values. Still, American capital is encouraged in every way to seek investment in Mexico, and no American with money is repulsed.

The Mexican Government is President Diaz, assisted by a small group of able and rich men. Diaz is by all odds the strongest man in the republic. There is nobody behind his throne. His sway in Mexico might appropriately be called a benevolent autocracy. There is no doubt but that his will is law. There is equally no doubt but that his will is to upbuild the institutions of his country and bring progress and prosperity to the people. Tho he rules as an autocrat, he is no Castro, who milks the country dry for his own profit. He is said not even to be a very rich man. He uses the public treasury without stint for public improvements. In short, Diaz is a patriot and lover of his country. The money he has spent on schools, roads and railroads is but one proof of this. He found Mexico in the throes of internecine strife, exhausted and on the verge of anarchy. He restored order, maintained internal and external peace, and has, with astounding success, developed the resources of the country. According to the *Mexican Herald,* the republic owes to him its financial rehabilitation, the conversion of the national debt, the wiping out of the national de-



Curtis Guild, Jr., the Special Ambassador from the United States, and Judge James W. Gerard, of the United States Delegation.

ficit, the accumulation of large treasury reserves for public improvements, the abolition of the alcabalas or taxes on internal commerce, banking and currency reform, the sanitation and embellishment of the capital, the encouragement of agriculture and irrigation, the nationalization of the railways, the building of the trans-isthmian railway at Tehuantepec, the drainage of the Valley of Mexico, and the abolition of brigandage. Perhaps, in view of these reforms, Mr. Curtis Guild, Jr., the special ambassador of the United States to the centenary celebration, was not far wrong when he publicly toasted Porfirio Diaz as the greatest living American.

Of the President's personal popularity we had ocular proof. When he rode along the thronged avenues during the parades, he was always acclaimed with spontaneous "vivas," while flowers were thrown down upon him from the balconies above. An assassin might easily have killed him from some point of vantage, yet he has always gone about among the people without fear.

President Diaz is now eighty-one years old, tho he looks fifteen years younger. What will happen when he goes no one can tell. But the universal opinion among the best informed seems to be that nothing at all is likely to happen. The men most talked about as his successor are the somewhat unpopular Vice-President Corral, Enrique C. Creel, the very able Minister of Foreign Affairs, and General Reyes, the idol of the army. But whoever succeeds to the Presidency will hardly be able to be reelected indefinitely, as Diaz has been.

At present Diaz rules with all the form and ceremony of a European monarch. There is nothing of the simplicity of Benjamin Franklin in his entourage. Our audience with him had all the formality and feathers of an audience with the Czar or Pope. He dominates Congress and the courts do his will. His opponents are jailed and the press is

DEDICATION OF THE GENERAL INSANE ASYLUM DURING THE CENTENNIAL.
General Diaz in the center, and to the left Vice-President Ramon Corral, Enrique C. Creel, Minister of Foreign Affairs.

muzzled. Whether all this can be excused on the ground that the end justifies the means I do not say, tho I am quite sure that the end is good and the means are bad. But despite abuses which we would not tolerate for a minute in the United States, Mexico is, on the whole, well governed, and the life and property of the man who minds his own business are as safe there as anywhere else in Christendom.

There is one thing that Diaz has failed to do. He has failed to tax adequately the great landed estates which comprise a half or two-thirds of the entire republic. Several bills have been introduced into Congress for this purpose, and tho this must have been done with his approval, if not at his instigation, the great landowners were able to defeat the measures every time. These great estates sometimes embrace a million acres and one of them is so large that it takes a train half a day to cross it. There have been some American companies formed to buy up these estates and subdivide them into 100 acre farms and sell them to American farmers. As yet, however, only a beginning has been made in this direction.

I shall be expected to express some opinion as to the numerous charges that have recently been made in the American press against Diaz and his advisers, who, it is claimed, deserve the hatred of all civilized peoples for their misgovernment of Mexico. I have talked with nearly everybody I have met in regard to these charges. I find their views somewhat as follows: The facts, or a certain percentage of them, are true. The picture of "Barbarous Mexico," as intended to be conveyed, is utterly misleading and false. An analogous picture of "Barbarous United States" could be drawn by expatiating on the 300,000 unhung murderers in our Southern States, the 500,000 unpunished felons in our Northern States, the lawless Night Riders in Kentucky and Tennessee, the sins of the malefactors of great wealth, the graft exposures, the whited sepulchres in our Sunday schools, the grand army of unpunished rebaters, the economic exploitation of children, the prostitution of women, the peonage of men, the criminal alliance of politics and business, etc. Such a picture might have every statement of fact in it authenticated by court records and yet as a portrayal of the United States be libelous and false. The best-informed American I met in Mexico City told me that the muckraking articles in question were 80 per cent. wrong as to facts and 100 per cent. wrong as a picture of modern Mexico.

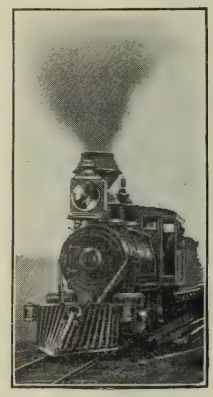
A TEHUANTEPEC BELLE.

In conclusion, let me advise all who can to visit Mexico. They will find it a combination of Spain of the Middle Ages with all the twentieth century improvements.

Mexico is our next-door neighbor. She is bound to play a great rôle in the twentieth century. Above all peoples, it behooves us to help her come into her heritage. And this we can best do by encouraging friendly visits between her people and ours, by a just appreciation of her virtues and kindly criticism of her faults, by the promotion of trade and commerce across the border, and finally by the negotiation of treaties of arbitration to preserve perpetual peace between the two republics.

NEW YORK CITY.

Should Railway Rates Be Increased?



BY HARRISON STANDISH SMALLEY

[The author is Assistant Professor of Political Economy in the University of Michigan The action of the combined railway employees in supporting the railroads for higher rates gives special timeliness to this article.—EDITOR.]

For two or three years many of the railway managers in this country have been conducting a campaign of education, the purpose of which has been to persuade the people that the railways would be justified in making a general and substantial increase in their rates. This campaign has been conducted in part thru correspondence with shippers, some of which has been printed for general circulation, in part thru public speeches, addresses before associations of commerce and the like, and in part thru articles and pamphlets, some in the form of "primers," which have been spread abroad thruout the country. Obviously behind these efforts lay the intention of raising rates as soon as the popular mind seemed sufficiently prepared for such a move.

About a year ago it was reported that a number of leading roads were on the point of carrying this intention into effect, but such vigorous protests arose from shippers and commercial organizations that influential railway men hastened to disclaim any immediate idea of a general advance in rates. It is now evident, however, that they simply postponed the contemplated action, but did not abandon their purpose, for on Saturday, the 30th of April, the Western trunk lines united in filing with the Interstate Commerce Commission schedules intended to become effective June 1, which showed a substantial increase in many important rates, an increase which was in some cases as high as 23 per cent., and was reported to average more than 15 per cent. At the time it was widely believed that this was simply the first step in a sweeping upward movement which would affect the general body of rates in many, if not all, sections of the country. That there was some measure of truth in this supposition was manifest when, one month after the action of the Western roads, the trunk lines east of Chicago filed schedules, effective July 1, embodying decided advances in a large number of class rates, while, about the same time, minor increases were made locally in various parts of the country.

However, just before the Western schedules were to go into effect, proceedings were instituted at the instance of the Attorney-General in a Federal court in Missouri with the purpose of securing an injunction to restrain the operation of the rates on the ground that the various roads affected had agreed upon them in violation of the Sherman Anti-Trust Law. A temporary injunction was granted. The consternation which this sudden move produced among railway officers led to a conference between the President and some of their number, the outcome of which was an agreement that the Government would abandon the injunction proceedings if the railways would make no effort to advance rates until the pending railway bill was passed, when the Interstate Commerce Commission could use the authority therein granted to suspend the advances temporarily while investigating their reasonableness. A few days later representative officers of Eastern lines exprest willingness to delay their contemplated increases until the new schedules could be passed upon under the

terms of the railway bill, which was finally enacted into law on June 18.

All of these events have raised and have imprest with considerable importance the following questions: How do the railways seek to justify a general increase in their schedules, and is their argument for higher rates sound?

The leading argument of the railway managers is that the expenses of maintaining and operating their roads have increased so decidedly that it is necessary to raise rates in order to meet these expenses. In their published statements they have called attention to the fact that within the last ten years or so the wages of their employees have been raised and the prices of materials and supplies have also increased, in common with the general advance which has taken place in the prices of almost all commodities. The railways further argue that in the face of these increased costs their rates, instead of advancing, have actually been reduced, with the result that now they are in a position where a readjustment is imperatively necessary. They claim that on account of greatly augmented expenditures, it is rapidly becoming impossible for them to get along on the present low level of rates.

That the facts and figures given by railway advocates are in general correct, no one can deny. It is certainly true that many items of railway expense have increased since the depression which followed the panic of 1893. In a pamphlet entitled "The Diminished Purchasing Power of Railway Earnings," which may be regarded as an authoritative statement of the railways' case, inasmuch as it was prepared by Mr. C. C. McCain, the chairman of the Trunk Line Association, it is shown from official Government statistics that between 1897 and 1907 the wages of the different classes of railway employees increased in varying degrees, ranging from 9 to 39 per cent.; that between the same years the average price of coal at the mines, while it decreased in at least one State, advanced in others from 6 to 58 per cent.; and that in the same decade, altho the prices of a few railway supplies fell off, the prices of most advanced from 14 per cent. up, the increase in a few cases exceeding 100 per cent. It must be noticed, however, that these figures given by Government bureaus simply state the general level of prices in the two years, and do not indicate what prices the railways actually paid. It is probable that in respect to many articles the railways, being heavy and influential purchasers, suffered less from the general rise in prices than did the public at large, and that hence the percentages of increase just given exaggerate to some extent the added burden which the railways have been called upon to bear. The same pamphlet also shows that between 1897 and 1907 taxes per mile of line increased 50 per cent. It further calls attention to added expenses which have resulted from legislation and consequent litigation, tho any estimate of the amount of such expenses must be only an approximation. And it finally claims that the rate of interest at which capital can be borrowed has increased. This claim is supported only by comparisons between 1897, on the one hand, and 1907 and the first six months of 1908 on the other. The latter period of eighteen months, however, was one of panic and of unsettled financial conditions, when interest rates were abnormally high. Since 1897 the rate of interest on railway loans has shown but a slight tendency to rise, except that there have been temporary periods of elevation as a result of stock market conditions in 1903-4 and of financial conditions in 1907-8.

Nevertheless, when all proper qualifications are made, there can be little doubt of the justice of Mr. McCain's conclusion that in the course of the decade 1897-1907 the railways found themselves compelled to pay "not less on the average than 25 per cent. more for everything they require in the conduct of their business, including labor." Still other figures may be given which point to the same conclusion. In 1897 the total expenses of American railways, including all expenditures for maintenance, operation, taxes, rentals, interest on bonds, interest on other obligations and miscellaneous items, amounted to $1,161,377,464. In 1907 the sum was $2,387,075,442. There was thus an increase of 106 per cent. in the expenses of our railways. This increase was in part due to the expansion of the railway system, which grew from 184,428 miles to 229,951 miles, or 25 per cent. It was also

due in part to the cost of handling a greatly increased business. But no doubt it was also to some extent caused by the undeniable advance in prices, wages and other items of expense.

There is also some measure of justice in the other branch of the railway argument—that in spite of the increase in expense rates have been lowered rather than raised. The reduction in rates, however, has not been so great as is often implied in railway statements. Comparing the years 1897 and 1907 we find that on the average passenger rates remained practically stationary. Official statistics show that the average revenue per passenger mile decreased only one-twelfth of a mill between 1897 and 1907, and that at no time during the decade was it as much as one-half of a mill lower than at the outset. It is evident, therefore, that the reduction in passenger rates was trifling. Freight rates, however, showed a decrease which is worthy of consideration. According to official statistics the average revenue per ton mile fell off almost 5 per cent. Whether this decrease in revenue correctly represents the reduction in rates involves the consideration of such questions as the proportion of high to low class freight, and the respective quantities of freight carried in sections of the country in which the prevailing levels of rates are different. But without going into these complicated questions it must here suffice to say that the average reduction in freight rates from 1897 to 1907 was doubtless as much as 5 per cent., and may have been a little more.

From facts and figures such as have just been considered railway men conclude that since, within the last ten years or so, wages, prices and the like have advanced, the cost to a railway of furnishing its services has increased. And, of course, if this conclusion is correct, it is high time to readjust rates, which have tended to decline, by increasing them so that they may cover at least a part of the added expense.

But the conclusion reached by railway advocates from their study of wages, prices and other items of cost is not correct. On the contrary, it is altogether erroneous. It is erroneous because it is reached only by ignoring an element which is vital in the case. When that element is taken into account the fact becomes evident that the cost to a railway of furnishing its services, instead of increasing, has actually diminished in a decided manner—so much, in fact, that the reduction in rates has not begun to keep pace with the reduction in cost.

This element in determining the cost of railway services, which has been generally ignored in the railway propaganda, is the volume or density of traffic. One of the most familiar facts about the railway business is that the cost of each service diminishes rapidly as traffic increases, while, on the other hand, it advances rapidly as the volume of business falls off.

While this fact is familiar the reasons for it are not so well understood. Yet they are simple. The main reason is that a considerable portion of a railway's expenses are, to use a common term, "fixt." Under this head of fixt expenses must be included taxes, rentals,* interest on capital invested in roadbed, track, bridges, buildings, and all other structures; payments to sinking funds; payments to certain depreciation funds; payments on guaranties; the cost of remedying wear and tear from all causes other than traffic, such as wind, rain, cold, snow, flood, fire, etc.; the cost of maintaining the corporate organization; and the cost of providing and maintaining a minimum equipment, a minimum force of officers and employees, and a minimum quantity of supplies, all of which are necessary if the road is to handle any traffic at all.

Now it is evident that as applied to these items the term "fixt expenses" is, strictly speaking, a misnomer. For they are manifestly not invariable amounts. A moment's reflection will show that they must increase with the growth of a railway's mileage. Moreover, if tax laws are modified, if the terms of leases are altered, or if any change occurs in interest rates, wages or prices, a corresponding effect will be produced on the expenditures of the company.

But while this is true, these expenses are, nevertheless, "fixt" in one sense: they do not depend upon the volume of

*Tho rentals are sometimes contingent and depend upon the amount of traffic or of earnings.

the traffic. They remain the same whether traffic is light or heavy. And this is the reason why the volume of business is such a potent factor in determining the cost of railway services. If a railway carries a heavy traffic, each shipment will have to bear but a small share of the fixt expenses; but if, on the other hand, the road handles little business, each shipment must bear a larger proportion of those expenses. For example, take a road having fixt expenses of which, say, $2,000,000 a year are properly assignable to freight traffic. If the road is carrying only 100,000 ton miles of freight per year each ton mile costs, in addition to the variable operating expenses, 1-100,000 of $2,000,000, or $20; while if the road were doing a large business, amounting, let us say, to 500,000,000 ton miles a year, each ton mile would cost, in addition to variable operating expenses, only 1-500,000,000 of $2,000,000, or two-fifths of a cent. This illustration shows in a striking way to what a remarkable extent the cost of each railway service depends upon the volume of traffic handled by the company. And the fact gains further force when it is considered that the fixt expenses amount in general to about two-thirds of all of the expenses of the railway business.

The chief explanation, then, of the fact that railway costs depend upon traffic is to be found in the presence of a large number of expenses which do not vary with the traffic. A minor reason is that the remaining expenses of maintenance and operation, tho they vary with the traffic, do not, on the whole, vary in proportion. Thus an increase of 50 per cent. in traffic augments these variable costs, but not to the full extent of 50 per cent. With a growing business, therefore, the amount of these expenses to be borne by each unit of the traffic tends to become steadily less.

Such are the reasons which explain the familiar fact that the volume of a railway's business is an important factor in determining the expense which it incurs in furnishing each of its services. Keeping these points in mind it is clear that with augmenting traffic the cost of handling each unit tends rapidly to diminish. And hence if the growth of traffic is great enough it may offset, or even more than offset, the effect of higher wages, higher prices, higher taxes and higher interest, and may enable the railway to handle each passenger and each shipment at a lower cost than formerly, in spite of its increased expenditures for labor, supplies and so forth.

Now, as already shown, there is no doubt that the absolute amount of the variable expenses and, to a less extent, of the fixt expenses of our railways has increased; and that higher prices, wages, taxes and the like have played an important part in producing this effect. But the significant fact—and the heart of the whole matter—is this: *While expenses have decidedly increased, traffic has also increased in even greater proportion, with the result that the expense of furnishing railway services has actually diminished.* There has been a very rapid growth in the volume of traffice. Between 1897 and 1907, while railway mileage expanded 25 per cent., and the total expenses of all railway companies were augmented 106 per cent., passenger traffic increased 126 per cent., from 12,256,939,647 to 27,718,554,030 passenger miles, and freight traffic grew 149 per cent., from 95,139,022,225 to 236,601,390,103 ton miles. These facts show a very great increase in the density of traffic. And this increase in density has produced remarkable results. It has much more than offset the advance in wages, prices and other items of expense. In other words, it has diminished considerably the cost of carrying each passenger and each shipment of freight, and this lowering of cost has been decidedly greater than the decrease in rates.

That this is the case is evident from a consideration of the financial history of our railways during the last decade or so. Judging from the complaints made by railway advocates that rates are lower and expenses higher, one would naturally expect to see railway net earnings steadily falling off and our roads approaching nearer and nearer to the brink of bankruptcy. But just the reverse has been the tendency. Net earinngs have in general become progressively larger and our roads are now, even in spite of the recent depression, in a remarkably

sound and flourishing financial condition. Thus it is manifest that there is a flaw in the logic of railway advocates. Advancing wages and prices have not meant advancing costs. Costs, on the contrary, must have decidedly decreased.

As evidence of the increasing financial prosperity of our roads the following facts may be given.

Between 1897 and 1907 the net earnings of our railways increased so greatly that the companies were enabled to meet much more adequately their funded obligations. In 1897 numerous railways were unable to make interest payments on their mortgage bonds; and only one-sixth of the income bonds, upon which the payment of interest was optional, were receiving any return at all. Ten years later, however, practically all of the interest obligations were being met, and about four-fifths of the income bonds were receiving interest, at an average rate close to 5 per cent. But earnings were not only sufficient to enable the railways to care well for their bonds: during the decade they grew so remarkably that the clear profits of the railway business increased enormously. The amount of income available for dividends, that is, the net earnings remaining after all expenses and obligations of every sort were met, increased from $81,257,506 in 1897 to $449,461,188 in 1907, a gain of 453 per cent. Hence there was naturally a marked increase in dividends, which amounted to $308,088,627 in 1907, as compared with $87,110,599 in 1897, a gain of $220,978,028, or 253 per cent. Thus a great deal of railway stock which could not pay dividends in 1897 was enabled by the rapidly growing net revenue to establish itself upon a dividend-paying basis, while in many other cases the rate of dividends was raised. In fact, the average rate of dividends on all dividend-paying stock increased from 5.43 per cent. to 6.23 per cent. But even with the great advance of 253 per cent. in the amount of dividends paid, the net income was in no year after 1897 exhausted. On the contrary, a large surplus remained each year, which amounted to considerably more than a billion dollars in the course of the decade, and which the railways have been enabled to devote to reserve funds and to betterments.

Thus it is evident that between 1897 and 1907 the profitableness of the railway business increased in a remarkable manner, which proves conclusively the fallacious character of the railway argument that advancing wages and prices have increased the expense of furnishing railway services. Since rates have slightly declined it is manifest that costs must have diminished still more, else the roads would not have been able to show, thru the entire decade, a progressively increasing amount of clear net income.

The years 1897 and 1907 have been taken for purposes of comparison because they have been frequently selected by railway men themselves to show the increase in operating costs, and indeed until within the last few months the latest official statistics which had been published were for the year 1907. But if any other two years are chosen, from the time when the lamented increase in railway expenses began, up to 1907, the figures will give the same results. They will disclose a constantly increasing density of traffic, growing so rapidly as to outdistance the increase of expense, thereby reducing costs faster than rates and thus leading to increased net income and generally improved financial conditions.* Moreover, from a consideration of the official statistics for 1908, recently published, and of the reports on traffic and earnings which are made public from time to time by the leading railways, it is clear that even the recent depression has not succeeded in reversing the tendencies which we have noted, but that those tendencies have, on the whole, persisted and are very strong at the present time. In fact, our railways are now enjoying a rather remarkable prosperity. It is true that the wage scales of several roads have recently been readjusted upon a higher level, and that on still other lines negotiations are now pending for an advance in wages. Of course these increases will amount to a sum which will impose a considerable burden upon the revenues of the compa-

*This statement requires one qualification. A comparison of the year 1904 with 1903 will show a slight and temporary reaction against the tendency portrayed, which, however, was more than offset during the following year.

nies, yet there can be no doubt that in almost every case, if not in every case, the revenues will be fully able to bear the burden. The receipts of some railways are even now large enough to permit an increase of wages, and the earnings of many other companies are rapidly approaching that condition. Indeed, the reports which the railways are publishing from week to week and from month to month indicate that traffic is growing at a rate which will speedily suffice to compensate for any wage advances that have been made or are likely to be made.

In the light of all these facts the concerted effort which has been made by both Western and Eastern roads to advance many important rates from 10 to 23 per cent. seems strangely timed. Some of these advances may, of course, be just. It is possible that the advantages of constantly increasing railway prosperity have not been distributed among all roads, and that some companies should therefore be allowed to increase their rates. Hence it may be possible for a few of these roads to show a sufficient element of justice in some or all of the advances recently attempted; tho, frankly, one cannot but entertain grave doubts about the matter. But, however that may be, it is perfectly clear that any general increase in railway rates thruout the country would be entirely without justification. Indeed, if current developments in railway traffic continue, the people of this country will have a right to expect from time to time, not advances, but moderate reductions in the general level of rates.

This discussion has a direct bearing on two of the questions which were debated by Congress in connection with the railway bill recently passed. For several months an effort was made to secure the enactment of a provision which would legalize agreements made by competing railways for the purpose of doing away with competition in fixing rates, *without requiring that such agreements receive the approval of the Interstate Commerce Commission,* or any other body representing the public interests. Fortunately this effort failed. For in view of the disposition recently shown by railways to brave public sentiment by raising rates at this time, one does not find it difficult to imagine what their policy would be if competing roads should find themselves able, without any restriction whatever, to enter into lawful agreements for the elimination of competition in the establishment of rates. The Republican platform of 1908, it is true, advocated the legalizing of inter-railway agreements, but with the proviso that all such arrangements should be subject to the approval of the Interstate Commerce Commission. The importance of this proviso would seem to be beyond question.

In the railway bill as passed there is a clause which provides that the Interstate Commerce Commission may suspend advances in rates for ten months. In contemplating such advances as have recently been attempted one wonders whether the Commission should not be authorized to suspend rates, not merely for ten months, but during the entire period in which their reasonableness is being determined by the Commission and the courts—a period which, even under the new law, will seldom, if ever, be less than eighteen months, and will often be more. Such a provision would seem to be only just to the public. When the Commission issues an order reducing a rate, the railway affected is allowed to secure an injunction which suspends the order and prevents its enforcement until the courts have investigated and finally settled the question of its reasonableness. Since the railway is thus secured against any possible injustice in reductions ordered by the Government, would it be more than fair for the public to be similarly protected against advances made by the railway itself?

ANN ARBOR, MICH.

Marrying of Black Folk

BY W. E. BURGHARDT DU BOIS, Ph.D.

Author of "The Souls of Black Folk," Etc.

A white man of the South writes me:

The crux of the race problem is intermarriage, and on that you do not deliver yourself. . . . If some Southern white men seem to deny to the negro those rights which are called civil and political, it is because they fear the exercise of them by the negro will lead to race amalgamation.

The Southern white man is not moved, I think, by hatred of the negro; he is moved by the fear of amalgamation.

A Northern white man writes concerning me:

Is he asking for social equality in the sense that the races shall freely intermarry?

A brown man of India follows with these words:

I am sending you the following questions on which I would like to have your opinion, which if you so desire may be kept confidential as long as you wish:

1. Whether the industrial and intellectual progress of the negro would minimize or on the contrary highten the race conflict?

2. Whether the intermarriage of the whites and the negroes would be beneficial to the two races?

I recognize the various difficulties in answering the two questions and so I assure you of the secrecy again, if you so desire. It is a known fact that the whites in the United States would hate to marry with the negroes. They also claim that such intermarriage would produce a progeny inferior to both the races.

Wherefore as a black man of America who has thought much on these problems I offer the following:

MARRIAGE CREDO.

I believe that a grown man of sound body and mind has a right to marry any sane, healthy woman of marriageable age who wishes to marry him.

I believe that a man has a right to choose his own wife, but not to choose wives for other men.

I believe that in general the best results follow when persons marry in their own social group; provided there is such freedom in the formation of social classes as will permit the grouping of persons on the whole, according to intellectual culture, physical and moral health and personal agreeableness.

I believe that there are human stocks with whom it is physically unwise to intermarry, but to think that these stocks are all colored or that there are no such white stocks is unscientific and false.

I believe that intermarriage between races is apt to unite incompatible personalities, irreconcilable ideals and different grades of culture. In so far as they do this they should be discouraged. Where, however, this is not the case, such unions are not necessarily undesirable and race blending may lead, and often has led, to new, gifted, and desirable stocks and individuals, as witness the English nation, the "Homo Europæus," the Egyptians, and such men as Robert Browning, Alexander Hamilton, Lew Wallace, Lafcadio Hearn, Alexander Dumas, Alexander Poushkin and Frederick Douglass.

I believe that the mingling of blood between white and black and yellow races is neither "unnatural" nor physically deleterious. Mulattoes, Eurasians and the like have been insulted and hated and loaded with obloquy for obvious reasons, but there is no adequate scientific proof of their necessary physical degeneracy, nor has the will of God in the matter of race purity been revealed to persons whose credibility and scientific poise command general respect.

I believe that the bad social effects often seen in "colored" strains of blood are for the most part due to the character of the unions and the social tabu on the offspring. Within bounds of reason and decency such tabu is justified in so far as it seeks to preserve family morality, guard the transmission of culture and foster group ideals. It is unjustifiable and monstrous when it seeks without rule or reason to preserve mankind in separate air-tight apartments, despite the tremendous economic and intellectual trend toward human brotherhood; when it arbitrarily limits human friendships and courtesies, penalizes affections, undermines sexual morals, and bans, excommunicates and exorcises millions of honest men and women of mixed blood for no fault of theirs; and when it cruelly punishes hundreds of others who refuse to submit to impudent dictation in the sacredly personal matter of the choice of their consorts.

I believe that the man who fears to train and civilize negroes lest eventually they intermarry with whites, faces a curious dilemma; either he assumes that whites object to negroes on purely racial grounds, in which case education can have absolutely no effect, or he makes the antipathy mainly cultural and then opposes human culture. If further he thinks the racial objection valid but unrealized by the mass, and therefore seeks to emphasize it by the repression, injustice and deliberate lying of a caste system, then, as all history teaches, the proposed remedy is worse than the disease, and the true remedy lies not in further degradation of the degraded but in national training in ethics of marriage and the responsibilities of sexual selection.

I believe the world has so much to learn as to the physical results of marriage that it is not well to dogmatize; whether or not it eventually be proven true that the intermarriage of some races is physically or socially undesirable, the best and indeed the only way to secure on the part of the white men and black the world over the safest corresponding social conduct lies thru education and social justice to both races.

I believe that in this respect the South has sinned well-nigh beyond redemption and that any people who seek to save their own daughters by making other men's daughters helpless prostitutes before their sons, and who load a race with lies and chains lest that race prove themselves their equals, will have and deserve to have a resultant physical and moral degeneration far worse than any possible honest and open racial amalgamation could bring.

I believe that all so-called "laws against intermarriage" are simply wicked devices to make the seduction of women easy and without penalty, and should be forthwith repealed. Instead of such legislation each group should be trained to self-respect and not forced, ridiculed or ostracized into loss of individuality and into a dead level of absolute uniformity, on penalty of economic slavery and spiritual death. "Jim Crow" legislation is an open bribe to amalgamation. For this reason arbitrary and humiliating segregation and subordination should be abandoned and it should be made possible and desirable to be at once an American and a negro. In this way and in this way only will race integrity be maintained through race pride, as long as there is the slightest reason for or advantage in maintaining such integrity. After all most people even of the same race and nation and neighborhood do not marry each other; but despite this they may live together like national civilized beings in mutual help and progress.

I believe that practically there is little cause to regard the intermingling of the major groups of the earth's people as a serious present problem, and that in so far as it is a present or future problem it cannot be met by inhumanity, barbarism and the methods of the jungle. It is precisely this sort of treatment of black men in slavery and since that has produced two or three million mulattoes in the United States.

I believe that a wholesale intermarriage of races during the present generations would be a social calamity by reason of the wide cultural, ethical and traditional differences. Whether or not this will be true a hundred or a thousand years hence I do not know and I am not acquainted with any one who does know. I am willing in this matter to let the unborn future grapple with its own problems, for I believe that with regard to so personal a thing as marriage a desire to impose on future generations one's own judgment not by reason and argument, but by physical force, is *prima facie* evidence of the logical weakness of one's cause.

I believe, finally, that if we avoid hysteria, seek the uplift of all classes and races to their highest possibilities, promote international peace, and allow men to mingle naturally without artificial stimulus or attempted segregation, racial intermarriage, becoming thus a matter of intelligent individual judgment, will for many ages, if not forever, maintain in the world the integrity and individuality of the three great divisions of man; and this not simply for the good of and at the behest of any one race which recently arrogantly assumes the heritage of the earth, but for the highest upbuilding of all peoples in the great ideal of human brotherhood.

Atlanta, Ga.

College Training for Journalism

BY FRANK W. SCOTT

[Mr. Scott is an Associate Professor of English at the University of Illinois and has been in charge of the courses preparatory to journalism for several years.—EDITOR.]

COURSES of instruction especially planned for students who expect to enter journalism as a business or a profession are now being offered by at least a dozen colleges or universities in this country. More than four hundred students are enrolled in these courses; something between two or three score were graduated from there last year; and one professor reports that he has requests for more graduates in journalistic courses than he can recommend.

That the colleges should undertake to prepare students for journalism was as inevitable as that the idea of their doing so should be condemned by many journalists who got their training in some other way. Three or four facts made the experiment inevitable. One was the introduction into the colleges of courses in business administration and the development of courses in public affairs, political science and sociology. There is much doubt whether specialization in education has gone too far, and whether colleges should not deplore and restrain the demand of students that, whatever they wish to do after graduation, the college should offer a course specially seasoned to the student's particular taste, and should attach a minutely particularized label to the course, and to its product. That doubt has not been laid, and probably never will be. The point is that the student with journalism in mind has gone to college alongside the student who, having in mind banking, or insurance, or the consular service, or some other ramification and combination of economics, history and political science, found a course outlined for him. Why not one, then, for the prospective journalist?

Another fact to encourage the experiment has been an increasingly intelligent public interest in the press as an institution. Journalism has long been a profession that every one out of it could improve if he were in it, and every one in it could improve if he did not have to stay in it. A newer attitude is perceptible in the desire to gather more facts regarding the public press and its relation to other public or semi-public movements and institutions, and to refrain from criticism based on ignorance. In this the colleges are concerned only as they must, if they are alive, reflect or participate in the serious consideration of any subjects of great public concern. In doing so in this instance they are not in advance of European universities, those of Germany, for instance, where courses in the relations of politics, public opinion and the press were introduced four years ago.

Journalists themselves have recognized the increasing readiness of colleges to meet the demands of business and professional life; have seen the newspaper and magazine offices gradually filling with college graduates; and have suspected that in journalism, as elsewhere, specialization may make for efficiency. Twenty-five or thirty years ago a college training was a handicap to the young man applying for a job as reporter. A Yale graduate, now the oldest reporter on a great Chicago daily, secured his present job, he asserts, only by concealing the blot on his educational 'scutcheon. He was the only college man in the reporters' room then; now there are but two in the room who are not college men, and neither of those is the city editor. Men who have seen this change come about have perceived that the colleges now provide an education that can be put to use by the editor, and have reasoned that if some adaptation has done that, more adaptation can do more. How the colleges have adapted their resources to the work will appear from the courses here described.

The courses offered by various colleges show considerable differences, but include in all cases four kinds of studies: First, those that have to do with political, industrial and social conditions in the light of their history, development and

present tendencies; second, those in languages and literature; third, those intended to develop the adequate expression of ideas in good written English; fourth, those intended to give the necessary technical instruction in the history, organization and methods of journalism.

An outlined course of study fairly typical of all, except those that include a considerable number of technical journalistic studies, show how the four kinds of studies are proportioned and distributed thru the four years. This is the one at the University of Illinois. Most of the studies listed are required, but other courses in the same departments of knowledge may be substituted for some of these, and a number must be added to bring the total up to its requirements for graduation.

Freshman year: Foreign language, English literature, English composition, European history, military, physical training.

Sophomore year: English composition (continued), principles of economics, money and banking, American Federal government, American State government, business writing, science, library reference.

Junior year: Newspaper writing, English literature (continued), history of the United States, Federal Constitution, psychology, corporation management and finance, domestic commerce, foreign commerce, municipal government, industrial consolidations, commercial law.

Senior year: Advanced newspaper writing, editorial management, newspaper organization and management, political and social ethics, sociology, social reform, social control, charities and corrections, labor problems, public finance, American diplomacy, American history, European governments, Europe in the nineteenth century, international law.

Out of one hundred and thirty hours required for graduation, but twelve are necessarily earned in technical journalistic courses, though eighteen may be. But the student must earn twenty-four hours in English, economics, political science or history; in other words, altho he is a student in journalism, he must specialize in some one subject among those which will be of greatest service to him as a journalist. He must also secure at least eight hours' credit in English, foreign languages, social sciences, mathematics and philosophy, and the natural sciences. In this respect the journalistic courses at Indiana, Missouri, Kansas, Wisconsin, Nebraska and other universities are similar, altho the proportions vary. At the University of Washington, for instance, forty hours are supposed to be gained in technical journalistic courses, and even more may be taken for credit. But these include courses in English composition that elsewhere are not called journalistic.

And a word should be said about the third kind, the courses intended to develop the adequate expression of ideas in good written English. English composition is better taught in colleges now than ever before. Many mistakes have been made, and many are still being made, but not so many as some critics imagine. There are many persons who imagine that college composition classes encourage fine writing, flamboyancy, and all the other faults that arise from words and style without sense. These ideas are born of recollections of a prehistoric time when Rhetoric was abroad in the land, dragging behind it a long train of rules and definitions, a nightmare and a horror to students who fondly dreamt of writing as a means whereby to express themselves. This is all past and gone — nearly. Instead, students are urged to write simply, clearly and directly about subjects on which they have knowledge and ideas. No composition course has as yet been devised whereby the immature student is alchemically furnished with a mature and experienced mind; rather, courses have taken on something less of the nature of a dry kiln for the juices of the youthful brain. This improvement in composition courses is an important adjunct to courses in journalism, and the courses in journalism are an important item in improving composition courses. The student of journalism is given a definite purpose to serve; a definite, if changing, body of facts to record or comment on, and a definite body of readers for whom to write. Under proper instruction, these facts go far toward removing the most vital complaints of vagueness, words without thoughts, and other inanities

urged in criticism of college courses in composition.

What is there in the first three of the four kinds of studies represented in this outline that a student might not get in any university with well-developed departments of English history, economics, political science, etc.? Nothing, perhaps, and no description or analysis of such courses is necessary here. But it should be said that there is distinctly an advantage in organizing and correlating the studies that go to make up these three-fourths of the course, and in impressing the student with the central idea, in working away at these courses, that his chief purpose in them all is concrete, definite, single. There is a good deal gained when a student knows why he is taking this or that or the other course.

The fourth class of studies, and the only one making any innovations, is that made up of the technical or professional journalistic courses. These make up from one-tenth to one-third of the students' four years of work. At all but three or four institutions these consist of two or three courses in newspaper writing, given in the second or third and the fourth years, and include little or no work in actually turning out a newspaper. In other colleges the work includes two or three additional courses in special forms of newspaper or magazine writing, and other studies of service to prospective journalists; but, as in the first case, does not involve the producing of a newspaper. The names of the courses offered at the University of Wisconsin will give an idea of what these cover: Elements of Newspaper Writing; Newspaper Reporting and Correspondence; Newspaper Editing; Editorial Writing; Special Feature and Magazine Writing; Current Political Topics, and the Law of the Press. In courses of this second type, as in those of the first, actual newspaper conditions and methods are reproduced as nearly as possible, and the work turned in is treated in the classroom quite as it would be in the newspaper office, with this difference: the instructor, who is also a newspaper man in practically every case, has time to criticise as well as to correct, to explain as well as to damn. Much that is written primarily as class exercises is made use of by college papers and by the local newspapers, as well as by the newspapers of neighboring cities, for which many of these journalism students are correspondents. The conditions under which the students work are favorable to practical results. At Wisconsin, for instance, typewriters are provided, and the students are required to turn in their copy in the form in which they would be expected to give it to the city editor. As models, some five thousand clippings of well-written newspaper "stories" are filed according to subject-matter; files of leading metropolitan and country papers are accessible; quantities of biographical and statistical material, clippings and photographs are filed away, for use on occasion, and the students themselves continually add to the collections, as well as use them in working up their assignments.

The work at the University of Missouri is the most varied and complete. The list of courses issued by New York University is longer, but several of these courses are not given, others are largely lectures by journalists that abound in good ideas but do not make coherent courses, and the students have no opportunity for laboratory work, as at Missouri and Washington. The Missouri courses number eleven, covering history and principles of journalism, newspaper making, newspaper administration, magazine and class journalism, comparative journalism, newspaper publishing, newspaper jurisprudence, news gathering, correspondence, office equipment and advertising. The students not only gather and edit the news, but see it thru the press. Under the first dean of a college of journalism, with a fully equipped newspaper plant for their use, the students issue a daily paper, and get experience and instruction in proportions that are a happy but not a debilitating modification of the first few months of the real "cub" reporter. The paper is a six-column, four-page afternoon country daily that averages well up, in matter and manner, with the professionals of its kind. At the University of Washington a similar plant has been equipped; the daily paper is supplied

with telegraphic news service, and a special feature number is issued each Saturday.

The first proof of the efficacy of this sort of training for journalism is in the readiness with which the graduates find positions, keep them, and progress. In that respect they are undoubtedly justifying themselves and their training, altho certain Kansas editors are already blaming "college journalists" for all the wind in Kansas journalism. The graduates are securing good positions, are rising rapidly, and in many instances are successfully running papers of their own. The courses fit them for country papers, or minor positions on larger papers. In both places there is a growing demand for college-trained newspaper men. In Illinois, where two years ago a state press association listened with good-humored incredulity to an explanation of what the courses in journalism were trying to do, the editorial association has recently volunteered to use its influence in securing for the State university the equipment of a complete newspaper plant for the work.

But the final proof of usefulness lies elsewhere. There is some economy in improved methods of production, but real advance is made only when the product itself is improved. Improvement of the product will depend on the settlement of some hard problems. In the first place, the appeal of the immediately practical is strong; students, and sometimes their teachers, are likely to overrate the value of good journalistic writing, and the little tricks of the trade that are necessary in actually getting out a newspaper. Colleges of engineering find better use for their time than in turning out skillful mechanicians. With every additional dollar put into "journalism laboratories" there will come further need for insisting that a preponderance of solid knowledge of facts and affairs is essential.

The attention of a considerable body of students and instructors directed to collecting, classifying and studying the history and development of the public press will do much. There is no written history of journalism in any of its aspects—political, social, economic—as a business or as a profession. The material for such a history is uncollected; the knowledge for a clear understanding of present conditions or future developments is not now accessible. Truly, the colleges of journalism need not suffer for lack of work to do.

URBANA, ILL.

Ballade of Gracieuse and Percinet

BY ROSAMUND MARRIOTT WATSON

SOMETHING is gone from hill and plain,
The earth a dimmer radiance shows;
Softly as ever sings the rain,
Royal as ever blooms the rose,
But now no fairy palace glows
Thru the dark woods for folk astray,
The fairies are with last year's snows,
With Gracieuse and Percinet.

Today no fairy regents reign,
No fairy prince his aid bestows,
The captive damsel with her chain
Weeps on, and still no solace knows;
Where the enchanted garden grows
We cannot wander, come what may,
We cannot thread the orchard close
With Gracieuse and Percinet.

And yet, when all seems void and vain,
And all the world grown grey with prose,
Some whispering echo wakes again,
Some mountain wind of memory blows;
The blue bird sings, the fountain flows,
All golden shine the skies of grey—
Gladly the heart a-Maying goes
With Gracieuse and Percinet.

ENVOI.

Prince, tho the knightly years are fled,
You still may find the magic way;
Youth and enchantment are not dead
With Gracieuse and Percinet.

SHERE, GUILDFORD, ENGLAND.

The Premier of Japan in Karuizawa

BY J. H. DE FOREST, D.D.

[Our readers have found Dr. DeForest admirably informed on Japanese matters, for he has the outlook of a statesman as well as the heart of a missionary.—EDITOR.]

RIGHT in the geographical center of Japan, 3,000 feet above sea level, is a small Japanese village, Karuizawa, surrounded with imposing hills, beyond which only ten miles off is the Asama Volcano, from whose crater 8,000 feet above the sea issue gigantic clouds of sulfurous smoke and steam. Large regions around are magnificently wild and ragged from volcanic upheavals in very recent geological times. The railroad climbs along the side of one of these volcanic contortions, whose abrupt character can be inferred from the twenty-six tunnels thru which the train passes just before reaching Karuizawa.

The pure mountain atmosphere, the volcanic scenery, and its central position, make Karuizawa the most popular summer resort for foreigners in Japan. Indeed, foreigners discovered it and began building neat summer houses until now the foothills in every direction are dotted with their buildings, and their piazzas and dooryards are also dotted with babies and dogs and other implements of civilization. Here lovers discover themselves, here in the churches and groves marriages are solemnized, and here babies are born. Here all kinds of religious meetings are held, weekly musicals of high grade are given to enthusiastic audiences, lectures by prominent men (this year by Count Okuma, President of the Japan Peace Society) are well attended, and tennis tournaments and baseball conflicts in which Japanese and foreigners unite, and where afternoon teas are held on a princely scale—for five hundred at a time.

At one end of this mountain valley His Excellency, Marquis Katsura, the Premier, has just built a modest, inexpensive summer house, and I wondered whether it would be proper to call upon the soldier and statesman who, more than any other man, is responsible for the peace of the East as well as having the burdens of national welfare to bear.

It had been my good fortune to have two official interviews with him, of which the first was during the war with Russia, when he exprest his pleasure that I was going to the scene of war as representative of the Y. M. C. A. work among the soldiers. The second was just after the visit of our fleet when he told me of his hatred of war and wished me as a citizen of the United States to tell my fellow citizens as widely as possible of Japan's true friendship for America and the absolute impossibility of war.

And now after two years, I was within a mile or two of the Premier, and tho I wanted to meet him again, for meeting such a man is always illuminating, I decided not to intrude. But a Japanese friend sent me word that in a conversation with the Marquis he had kindly said he would be pleased to meet me

On entering his house I took off my shoes and was conducted to a room whose only furniture besides the spotless mats was two chairs. Presently the Premier entered, looking like a prosperous farmer in a *kimono,* and his smiling face of sixty-four years, with its scant grayish mustache, would not lead a stranger to guess his high and responsible station.

"What led Your Excellency to build

a villa in Karuizawa?" I asked. And the reply to even this simple question revealed something of his great make-up. "Over twenty years ago I bought this place and planted that row of trees over there, but one thing after another prevented me from coming here until this season. It's a fine place for my children now in their teens. I tell them to look at those trees and see how they grow! And then I tell them that their *seishin,* their moral and spiritual natures, must grow. Growth in every thro successive generations as a source of motive?"

Going back to his great-great-grandfather he told me how this ancestor was punished for too much political activity by the confiscation of two-thirds of his estate; how the descendants ceaselessly worked on loyal lines thru four generations, so that the government gradually restored a portion of the confiscation until, said he:

"In my day it is more than restored. And the moral force behind that pro-

ASAMA VOLCANO, WHICH PLAYS DAILY.

good way is a lesson I want them to learn from nature."

Now the moral education of a Samurai family is the secret of Japan's power, and you can often find the moral source of a successful family line in some motto or in the dying words of one of its ancestors. And since the Premier led the conversation enthusiastically toward moral growth, I ventured to ask:

"Did any of your immediate ancestors leave any dying injunction that has been a powerful moral force in your family line, or was there any motto that lives

longed effort is contained in the word *Nintai*—Patience. No matter how many difficulties accumulated, and they were numberless, the thing to do was to persist in loyal service even tho it meant twenty-five trips to Yeddo from Choshu (some 20,000 miles), on foot, for one ancestor, and thirty years of service in his lord's waiting room for another. Patience is the powerful word in my family line."

I do not remember the exact dates, as I could take no notes during the call, but he continued:

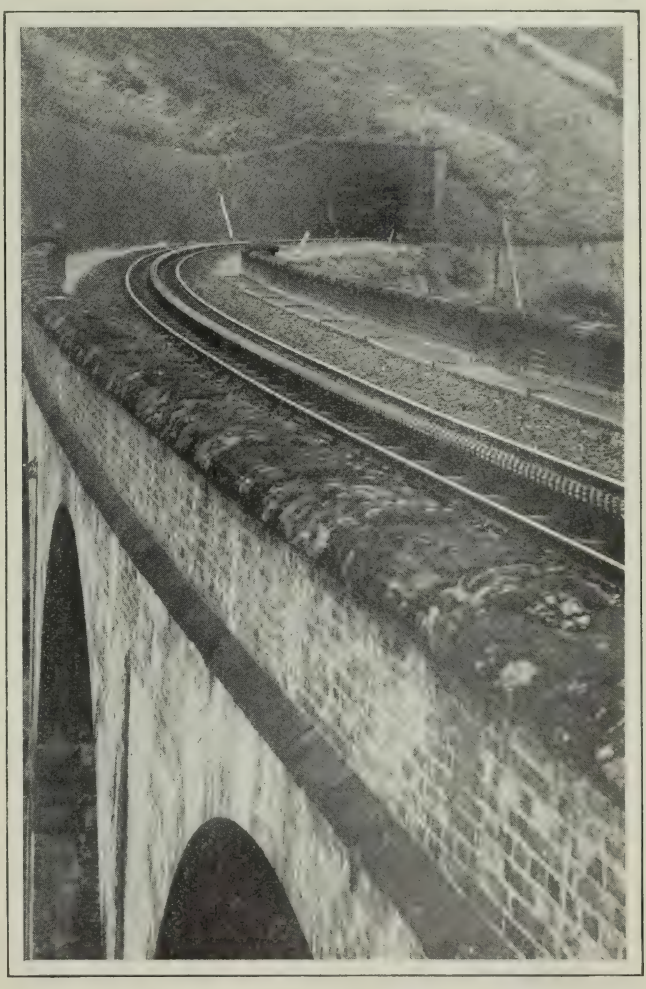
SOME OF THE FOREIGN HOUSES
On the foothills around Karuizawa, with the ragged crater edges of ancient days in the distance. "The Cathedral" is easily distinguished.

"As for myself, I was a soldier at sixteen with a gun in my hand, and had my part in the troubles of the Restoration. I then went to Europe and the United States on my own initiative and was gone over three years. Later the Government sent me to Berlin as military attaché, and again I was absent more than three years. Returning to Japan I continued in military service until at last I became Minister of War."

"How happened it that Your Excellency changed from a soldier to a statesman?"

"Well, it was a mistake," he smilingly replied. At which I couldn't but wish that all great generals would make the same mistake with the same success. For the Premier is first and foremost a man of peace. With his ancestors' patience and his own abounding good humor, he is recognized as most successful in harmonizing conflicting interests and opinions among his compeers, and his intense hatred of war makes him all the more devoted to promote international goodwill. He broke out with deep feeling in these words:

"I am the most unfortunate of men in what I have had to do with war and its horrors. I want to be known above all as a man of peace. To this end, in the war with Russia I gave myself an absolute sacrifice to bring about peace, and I will spend my utmost strength to have perpetual peace in this Far East. I have recently met Mr. Seitz, correspondent of the New York *World,* and I told him that war with his country is impossible for two reasons:



"I utterly abhor war. I know what fearful sacrifices it involves, and will do everything under heaven to prevent it. And the other reason is, the United States found us a hermit nation, just like a year-old baby, absolutely ignorant of the world, and you sympathetically taught us how to enter into intercourse with the nations. Whatever disagreements may arise, we can never forget America's kindness to us during our political minority. We are no longer a

baby, but fifty years have brought us to political manhood, capable of deciding affairs that affect us. You have during these decades led us, and we have followed; but now we have the natural desire to stand side by side with the nations and take our share of world responsibility. What you have done for us impels us to do everything in our power to show our gratitude and to repay your kindness. When your fleet came we tried to show this national feeling. We are under deep obligations to America, and these moral duties we shall scrupulously fulfil.

"All this and much more I told Mr. Seitz, and I want to tell it to you too, and ask you to pass it on to your friends. I mean to say these same things in the most forceful way every now and then, because there are always arising petty differences and disagreements which, unless checked by repeated avowals of peace by responsible statesmen, tend, in the minds of the thoughtless, to suggest possible war. There is nothing so perilous as misunderstandings between nations. We shall do the utmost to fulfil our international obligations on lines of peace."

It is difficult to produce from memory today a fitting translation into English of what he told me yesterday in Japanese. But I was imprest with the deep moral purpose of this soldier-statesman. His repetition of "fulfil our moral duty" is in Japanese a phrase rich with ethical content. I believe this man's idea of international righteousness is virtually the same as that of our great men, Roosevelt, Taft, Root and Hay. Katsura is as sincere and truthful and as far from deceit as are the men who are guiding our republic.

The two reasons against war given above are worthy of more than a passing notice. It never entered the heart of this man so much as to mention the fact that Japan cannot afford, for financial reasons, to try war with us. For the moral reasons with him are supreme, and all other reasons are not worth mentioning. And that this statesman represents his Emperor, the fountain of authority, the army and navy, and the all-controlling public opinion of his nation there can be no doubt. If those publicists in the United States who use "Peril from Japan" as a reason for increasing our battleships would stand on the same high level of international morality as does Japan's Premier they

NO. 7 OF THE TWENTY-SIX TUNNELS APPROACHING KARUIZAWA.

could not possibly talk as they do, their words would burn their mouths dry.

But to return to the interview. I asked whether he had visited Peking since the Boxer troubles, to which he shook his head. Then I spoke of the Von Ketteler Monument that the thirteen treaty powers, Japan among them, had forced China to erect in the Tartar City, with China's conspicuous apology high up on it in three languages, and asked whether that standing humiliation of a great nation ought to be kept there, deepening the hatred of every Chinese who saw it toward foreigners. He replied:

"China is a great problem. She has always called herself the Middle Kingdom, and this innate pride makes it difficult to deal with her. But she is waking up, and the nations have a more sympathetic attitude toward her now, as seen in the fact that we took no indemnities for the recent Changsha affair. We must not insist on any permanent public humiliation, and when some great joyful national occasion, like the opening of their parliament, takes place, then would be a good time for the nations to add to China's joy by allowing the removal of the monument."

Marquis Katsura knows only a little English, but speaks most European languages. Wanting to know his opinion of the value of foreign languages to diplomats I asked:

"Do your diplomats and consular agents all speak the language of the countries to which they are accredited?"

"Always, and it will be good when Western diplomats sent to the East can enter social life and perform their responsible duties in the language of the capitals where they reside."

On taking leave I said I hoped to go to Korea and Manchuria this fall on a preaching tour to Japanese Christians there. He replied:

"I sincerely hope you will go. You can do much good over there. Be sure and let me know when you go."

SENDAI, JAPAN.

A Song of Unity

BY MARGUERITE OGDEN BIGELOW

DEEP couched upon full breasted seas that lull us into slumber fair,
We safely cross from shore to shore, all other lands, all life to share,
And sundered peoples meet as one in knowledge new of each and each,
Whose voices cross the continents on vibrant wings of speech.

All poetry and melody ring clear from old worlds into new;
And from new worlds to old again, a myriad echoes, just as true
And quite as grand, ring out and join the ever swelling song divine,
The chorus of all humankind, of theirs and yours and mine.

New pictures and new tales shall give no hint of blood by brothers shed
In livid war, but they shall show our souls by human love swift sped;
For as the airships, circling high, attest a human victory sweet,
So all the world shall win the Sky when all the world shall meet!

By sympathy for progress joined, the fields of hemp shall greet the corn,
The orange groves shall hail the land where stalwart forests hide the morn,
The mines shall hail the fertile plains, the river quarries yield their best
To shelter all who labor here, when each shall love the rest.

From sunrise to the traveling night, around and round the swinging earth,
Wherever sons begotten are and daughters find a human birth,
At last shall rule one aim serene, abiding till our work is done—
To forward all the race to God, when all the world is one!

SUPERIOR, WIS.

Literature

The Mystery of the Hittites*

The author is Professor of Archeology in the University of Liverpool, and was at the head of the expedition into Asia Minor in searth of Hittite discoveries lately sent out by the Liverpool Museum. The book follows a succession of volumes on the general subject by Sayce, Conder, Wright, not to speak of such German works as those of Messerschmidt and Jensen. It differs from them in that it is more geographical, is founded more on the author's own explorations, and it avoids entirely any attempt to translate the inscriptions.

The study of the Hittite monuments had its beginning in this country with a careful copy of the Hittite inscriptions from Hamath, published in 1871 by the American Palestine Exploration Society. In that article the direction of the hieroglyphs was discovered, and a list of them compiled. This was copied and studied by Professor Sayce, who was the first to recognize the strange characters as Hittite. Mr. Garstang seems never to have seen that article, or he would have given it more credit. His bibliography also fails to include important papers in the *American Journal of Archeology*. We are indebted to him for a very extensive list of Hittite monuments, with good descriptions, and many plates. But many are not figured, and we could have spared a large number of photographs of mountains, bridges, etc., not described, in favor of the monuments. A scholar may have access to Wright or Conder, or even Messerschmidt, but it is almost too much to expect him to be able to refer to the "Liverpool Annals of Archæology"; and without figures of the monuments it is almost impossible to get a mental picture of them from the written description.

Nowhere will the reader be able to find a more careful and trustworthy account of the successive stages in the history of this famous and forgotten people than in Professor Garstang's pages. We follow them from their first emergence about 2000 B. C., when they invaded Babylonia, thru the wars and treaties with Egypt from the fifteenth to the thirteenth century, their conquest by the Phrygian Moschians, the revival of their power, about 1000 B. C., and the final fall of Carchemish, 718 B. C. The establishment of their capital at Boghaz-keui the author puts at about 1370 B. C., and like every other author, he interprets the monuments there, and gives us a study of the deities represented. We seem to get a fair view of the course of their history and of the nature of their civilization, so that this work is of the greatest value to the student of that early history which met Abraham when he entered Palestine.

Where so many points are discussed we naturally cannot agree with every conclusion. That the "father god" and the "son-god," and the "storm-god" were introduced by the Phrygians (p. 59), while their predecessors under a matriarchal system worshiped only a mother-goddess, does not seem supported by the monuments. The bas-reliefs and statue from Jerabis could have been better described from accounts in the *American Journal of Archæology*. We see no good reason for the notion of the worship of the dirk and of a "dirk-deity." The god who embraces the king (p. 240) need not be regarded as thus investing him with a priestly office, but is thereby simply protecting him, as in Egyptian and early Babylonian art the goddess is figured as holding the infant king. Our author appears to make too much of an imagined ritual, after the manner of Lajard in his "Culte de Mithra." We hesitate to agree with our author and Professor Sayce that the elaborate figure (p. 372) as drawn by Miss Dodd from Boghaz-keui represents a female warrior or Amazon. It is more likely to be the young storm-

*The Land of the Hittites: An Account of Recent Explorations and Discoveries in Asia Minor, with Descriptions of the Hittite Monuments. With Maps and Plans, Ninety-nine Photographs, and a Bibliography. *By John Garstang.* 12mo. Pp. xxiv-390. New York: E. P. Dutton & Co. $4 net.

god Teshub. We fail to discover any such confusion of the "father-god" and the "son-god" who meet each other on the cliffs of Boghaz-keui as our author discovers. A study of the smaller Hittite objects, of which there are scores in the museums, and which our author does not consider, will show two male deities whom Professor Garstang calls the father-god and the son-god, and two female deities, one seated and clothed and the other standing and often nearly nude. But these are among the questions of interpretation on which critics of this indispensable volume may differ.

Some Novels and Their Titles

THE titles of modern novels are singularly suggestive and veracious. Formerly authors were not so conscientious. They were content to christen their books with the hero or heroine's name and did not concern themselves with warning the reader previously that there might be a problem lurking in the pages for which he was unprepared. If we add to the information obtainable from the modern title the name of an author who has some literary habit which leads him to produce the same kind of fiction year in and year out we probably find our surmise as to the contents of the novel correct. For example, *A Splendid Hazard,*[1] by Harold MacGrath, suggests not only a dangerous escapade typical of his stories, but because it is "splendid" we guess that it may be especially dangerous or the people concerned may be especially great. We regret to say that in this instance the title is more bold and dashing than the adventure. It is the story of a search for a hidden treasure and a plot for a throne. A Napoleon pretender learns of the whereabouts of a large sum of money concealed on the island of Corsica, and intends to assist in placing a fourth Napoleon on the throne of France. After various adventures, which may have been hazardous, but certainly not splendid, he obtains the treasure only to find that he has been constantly shadowed by an emissary of the French Government and that but for the kindness of the latter he would have been duped by his colleagues. The conclusion is so flat and quiet it leaves the reader with the same disgusted feeling he has when he falls from a first-floor window. The hight is not much, but the fall is great.

The Crossways[2] is not, as we might suppose from the name and the author, an idyl of Pennsylvania Dutch life, but it is the story of a Southern tempest in a Pennsylvania Dutch teapot. A highly strung Southern girl marries a young New York doctor of Dutch descent. He takes her back to his native town, where under the pressure of an environment which this author is pastmaster in describing he reverts to his original stolid type. His attempts to force his wife to conform to the Dutch ideals of a housewife and her consequent rebellion form the crossways of the story. The tempest finally bursts the teapot, but out of the wreckage the author constructs a happy ending.

Probably the most self-revelatory title is the sterling character kind from which we know that the hero or heroine is very good or will grow to be very good. *The Right Stuff*[3] in very name assures us that whatever superficial judgments we may pass upon the crude Scotch youth on his way to the university we shall eventually perceive his innate worth which triumphs over obstacles and leads him to glory in politics and success in love. We suspect that the author and his hero rather enjoy prodding with their Scotch acumen and humor the slow-thinking Englishmen and their customs. The story, tho slight, is witty and well written. The hero of *The Up Grade*[4] is the kind who grows to goodness by tedious stages. Stephen Loring believes himself temperamentally fitted for failure, and he consequently drops from one low level to another till a friend pulls him up and gives him a chance. He "makes good" and becomes a successful man. This is a very cheerful and moral conclusion, but certainly the author has not recognized that his story would better be called "Down Grade," as the greater part of it is concerned with the retrogression

[1] A SPLENDID HAZARD. *By Harold MacGrath.* Indianapolis: The Bobbs-Merrill Company. $1.50.

[2] THE CROSSWAYS. *By Helen R. Martin.* New York: The Century Company. $1.50.

[3] THE RIGHT STUFF. *By Jan Hay.* Boston and New York: Houghton, Mifflin Company. $1.20.

[4] THE UP GRADE. *By Wilder Goodwin.* Boston: Little, Brown & Co. $1.50.

rather than the rise of the hero. The reader likes to see a palpaple improvement even if gradual. A sudden upward leap in a hundred pages is disconcerting.

The First Round[5] is a story, with the scenes in England, of a sensitive boy with an artistic temperament who suffers from the misfit of an irascible father with no sympathy for the eccentricities of his son. The "first round" is a rebellion of son against father both during the former's school days and later. Ultimately there is a complete estrangement, and the young man goes to London to seek a musical career. Aside from the accounts of the domestic disagreements this novel is not so much a story as a series of pen pictures of artists—their life and their point of view. *The Top of the Morning*[6] partakes of the same type of content, but the artists in it conduct their community life with a cheerfulness devoid of the melancholia of temperament.

Elizabeth Davenay[7] is a well-laid plot to entice the unsuspecting reader into a volume bearing a serious message. The title itself is enigmatical, but the severe and tailored aspect of the binding and the earnest solidarity of the closely printed pages indicate to the wary reader that Elizabeth will either illustrate or tell something about "Conditions," spelt with a capital C. She is in reality an impressionable young woman who gives a rehash of suffraget principles and arguments to an interested French public.

Women without honor and still unrepentant are common in modern novels, but occasionally we come upon a Magdalen type who leads an earnest and dramatic life of regret and pain. *Anne of Tréboul*[8] is such a character. The book takes on a somber dignity and simplicity from the sea that washes against the shores of the little fishing village and forms a solemn accompaniment to this tragedy of passion.

The Professional Aunt[9] is a witty primer for unattached maiden relatives and their respective brothers and sisters, nephews and nieces. Most readers have at some time suffered the consequences of an aunt or uncle kinship, and they will enjoy this quizzical analysis of the relationship.

The Vigilante Girl[10] is a more or less historical account of early life in California when law and disorder went hand in hand. The book abounds in feuds and lynchings, instigated either by private citizens or by the Vigilantes—a body of men who undertook with much success to execute a personal code of law fitted to their own interests. The title is misleading, but as the book is as carelessly written as it is named, the reader need not concern himself with accuracy.

Occasionally we find a book whose title spells the unknown and unexplored and whose pages are filled with the glamor cast by strange names, strange islands and strange ports. Such a novel is *The Magada,*[11] a story of the Spanish conquest of a wild people, part savage, part Indian, part Spanish. The Magada is their high priestess, and it is around her that the most dramatic scenes of the story are grouped. The book deserves a worthy position in the class of curio fiction.

The People's Law. By Charles S. Lobingier. New York: The Macmillan Co. $4.

The Hon. Charles Lobingier's painstaking and detailed study, *The People's Law,* is, as its subtitle informs us, a review of popular participation in law-making from the ancient folk-moot down to the modern referendum. The chapters on the submission of American State constitutions to popular ratification are especially valuable, because they supplement and correct the older work by Jameson in many important details. Those who fondly imagine that "implicit faith in the people" was borne westward by Puritan and Cavalier will be sadly disappointed to learn how slow and painful was the growth of the doctrine of popular ratification—to say nothing of

[5] The First Round. *By St. John Lucas.* New York: E. P. Dutton & Co. $1.25.
[6] The Top of the Morning. *By Juliet Wilbor Tompkins.* New York: The Baker & Taylor Company. $1.50.
[7] Elizabeth Davenay. *By Claire De Pratz.* New York: Mitchell Kinnerley. $1.50.
[8] Anne of Tréboul. *By Marie Louise Goetchius.* New York: The Century Company. $1.20.
[9] The Professional Aunt. *By Mary C. E. Nemyss.* Boston and New York: Houghton, Mifflin Company. $1.00.
[10] The Vigilante Girl. *By Jerome Hart.* Chicago: A. C. McClurg & Co. $1.50.
[11] The Magada. *By W. M. Ardach.* New York: John Lane Company. $1.50.

the initiative; and in the South of our day a distinct reaction has set in against the notion. Dr. Lobingier's studies in primitive folk-moots, despite their learned appearance are of little value even where the conclusions are correct; and they are generally wrong, being based on authorities now discarded: Freeman, Kemble, Fiske, Hannis Taylor and Waitz—all of whom simply read "Liberal" ideas of government into ancient documents. On the most modern of his topics—the initiative and referendum—Dr. Lobingier is strangely deficient, for his account of the development of this newer political device is confined to a meager outline. He gives less than ten pages to this subject and makes little or no attempt to enlighten his readers as to the real working and results of the system. The interesting Oregon experiment for educating the voters is dismissed with a paragraph; the Illinois public opinion bill seems to be left entirely out of account; and no mention is made of the fact that the South Dakota amendment establishing the initiative and referendum (p. 365) was defeated. Altogether it is a disappointing book in spite of a considerable show of learning; but it is worth having because the portions dealing with the development of constitutional ratification are fairly satisfactory.

The Dawn of the World. Myths and Weird Tales Told by the Mewan Indians of California. [Illustrated.] Collected and edited by C. Hart Merriam. Cleveland: The Arthur H. Clark Co. $3.50.

The Mewan Indians are confined to Central California. They have a wealth of myths regarding the dawn of the world and the creation of life. It can hardly be said that any of these myths are beautiful; rather, they are grotesque. They have to do with the exploits of the "first people," beings who inhabited the world before man was created; of the creation of the Indian peoples by a divinity known as Coyoteman and of the transformation of the "first people" into animals and natural objects. Coyoteman was all-powerful, or nearly so; he lived before the "first people" and was a most beneficent deity. Other divinities of power were the falcon, the condor and the lizard. The general notion of the sky among the Mewans is that of "a dome-shaped canopy resting on the earth and perforated, on the sides corresponding to the cardinal points, with four holes which are continually opening and closing." The myths have been collected direct from the people, and bear no evidence of fusion with the white man's knowledge. The book is handsomely printed and carries fifteen illustrations from paintings by Edwin W. Deming and Charles J. Hittell.

The Federalist Party in Massachusetts to the Year 1800. By A. E. Morse. Princeton, N. J.: Princeton Library.

Dr. A. E. Morse, in his dissertation on *The Federalist Party in Massachusetts to the Year 1800*, does in part for Massachusetts politics what Dr. Laprade has done for England. It is likewise a welcome contribution to a literature altogether too scant—the literature of partisan politics in the United States; but it does not go very deeply into the local forces which were operating in the Bay State aligning men into parties. It skims lightly over the surface of contemporary newspapers, broadsides, and pamphlets, and presents a history of party literature rather than a history of parties—but it is nevertheless an interesting history. However, in an age prone to look for "something" behind powerful political movements, we are inclined to attach little importance to the ideological processes which arise in connection with the functioning of interests. Nevertheless, the chapters on "American Opinion of the French Revolution" are exceedingly valuable and are made doubly entertaining by numerous quotations from contemporary quips and quirks. For example, these lines on Samuel Adams:

> And now, O Muse, throw candour's veil
> O'er aged Sam, in dotage frail,
> And let past services atone
> For recent deeds of folly done;
> When late aboard the Gallic ship
> Well fraught with democratic flip
> He praying fell on servile knees
> That France alone might rule the seas,
> While Sense and Reason took a nap
> And snored in Jacobin cap.

In fact the Civic Federation's attack on Socialism thru its official organ is reasoned and good tempered as compared with the Federalists' attack on the atheism, anarchy and blasphemy of the

Jeffersonians. The church and State and family were in danger in those days as now!

The Barrier. By René Bazin. Translated by Mary D. Frost. New York: Charles Scribner's Sons. $1 net.

The author of *The Barrier* is known to American readers by several novels treating of contemporary France from the standpoint of the devout Catholic—the devout Catholic rather than the artist. The play is not altogether the thing with M. Bazin. Furthermore, this fact is rather more evident in *The Barrier* than in earlier stories—"The Nun," "The Coming Harvest," etc. The artistic limitations of the novelist, which are, of course, self-imposed, receive accentuation here in view of the story's scene. It is not Brittany, this time, and it is only briefly Paris. For the action begins on the "smooth-shaven lawn of the Westgate-on-Sea Tennis Club," and the conclusion has an Italian setting. From the English watering-place to Rome, via the charitable institutions of Paris and the Sacré Cœur, is the route followed. A young Englishman loses faith in his own Church, and ends by being received into the "Church Universal"—not, however, without suffering family estrangement and disinheritance. A young Frenchman loses faith in the sacrament and thus loses the love of his sweetheart, who is resolved not to marry a "half-believer." Human love remains unsatisfied in both cases. Yet the tone of the story is not one of unrelieved gloom. M. Bazin is an optimist. He gives to his British hero, whom his French friends first call "cowboy" and in whom they later discover physical resemblances to Cardinal Newman in his youth, this little speech—and this, too, before he is altogether "converted":

> "I cannot say out of what truths the supreme truth is made, I do not know by what name it is called. But for me the religious question takes the lead of all others in the life of the people as well as of the individual. I believe that the spirit of Christ has never been so present in the world as now. Tho His name is less often pronounced, it is implied in every great movement whether in love or hate. I believe that this new spiritual drama will end in a resurrection."

M. Bazin's skill as a psychologist is not impressive in *The Barrier*. His appeal is largely sentimental, as it seems to us; and yet the sentiment here is so overweighted with facts and discussions and the representation of tendencies that its appeal is slight indeed.

Enchanted Ground: An Episode in the Life of a Young Man. By Harry James Smith. Boston: Houghton Mifflin Co. $1.50.

A New Englander goes to New York to win spurs in an architect's office. Burning with a fire for living and loving, this youth is a Puritan in whom faith is less strong than conscience. The type is modern enough. This exemplar is betrothed to a maiden more "New England" but less modern than himself. Unfortunately, his sweetheart leaves him too much alone—alone in New York—and an amorous passage is rendered while the orchestra, artistically concealed beneath Mr. Smith's stage, renders the Venice music out of the "Contes d'Hoffmann." The hero straightway repents and confesses to the real heroine. At the end, "I hope I shall never see you again," says she; whereupon:

> "She mounted the steps with the leisurely, confident grace of a king's daughter, and entered the house without turning her face."

We have here, obviously, a "hard" heroine, and it is especially hard to love her. She is "right," doubtless, but even Mr. Smith does not care for her; while the woman reader will, we know, be as cruel in regard to her as the heroine herself is in regard to Philip. But this heroine is humbled; she learns a salutary lesson of charity. In default of an agreeable heroine (and Katrinka, the heroine's rival, does not really count), Mr. Smith introduces us to a Greenwich Village household originally of Rouen: good folk, who remind us, as we read about them, that the author of *Enchanted Ground* wrote "Amédée's Son" not long ago. The way in which Philip attains character might not prove a safe way for the "typical college man" that Philip is, perhaps, in the author's intention; at any rate, the ethics are well meant and the tale of the Quixote whose shield was not spotless is admirably sentimental. *Enchanted Ground* is bound to justify its title in achieving popularity. It is so much more optimistic than Mr. Whitman's grim "Predestined!"

Literary Notes

....Rev. Dr. Ferdinand S. Schenck, Professor of Practical Theology in the New Brunswick Theological Seminary, has prepared a treatise on "The Sociology of the Bible," based on his lectures to divinity students (New York: The Board of Publication of the Reformed Church in America). His aim is to make ministers better practical workers in social movements.

....The London *Times* of July 19th issues a Japan supplement that in comprehensiveness and thoroness is a triumph of modern journalism. Seventy-two of its immense pages are devoted to it, comprising more matter than the usual travel books sold for two or three dollars and not inferior in quality. Geography, commerce, history, art, literature and religion in all of their phases are treated in special articles by competent writers, and the advertising pages are not less instructive.

....An annotated list of 250 books published in the year 1909, *A Selection from the Best Books of 1909*, is published at Albany for the New York State Library, as an Education Department Bulletin. These books are recommended to the public libraries of the State, but the pamphlet should prove valuable to schools as well. This list is classified; and following each title is given a brief account of the contents or nature of the volume, as well as references to reviews.

....The University of Cambridge (England) having acquired the copyright of the Encyclopedia Britannica, it is about to publish, at the University Press, an entirely new edition of that work. The secretary of the University Press states that this eleventh edition

"is a completely new and original survey of human knowledge, down to the summer of 1910, and that it has, for the first time in the case of any first-class work of reference, been constructed as a whole and will consequently be published as a whole,"

tho it will run to 28 quarto volumes. It is now more than 140 years since the famous Encyclopedia was projected, the first edition being published 1768-1771. This was a three-volume work; the second edition (1777-1784) ran to ten. In 1812 the copyright was purchased by Constable, who brought out the fifth edition, in 20 volumes, three years later. Preparations for the eleventh edition were begun by the London *Times* in 1903. Say the new publishers:

"Just as an English University often goes outside its own schools for professors and lecturers, so the editors of the Encyclopedia Britannica have drawn, not upon Cambridge alone, but upon many other universities, such as Oxford, Edinburgh, Manchester, Paris, Berlin, Göttingen, Vienna, Milan, Harvard, Yale, Chicago, Columbia and Kyoto. . . . Since Scott laid aside 'Waverly' at Constable's appeal on behalf of the Encyclopedia Britannica, and Macaulay turned from the composition of his history in his last years at the solicitation of Adam Black—though he had long refused to steal time from his *magnum opus* for any periodical work—an invitation to contribute to the Encyclopedia Britannica has been regarded as a testimony to sound scholarship. The late A. C. Swinburne said that the highest compliment ever paid to a 'mere poet' was an application for an article from the editor of the Encyclopedia Britannica, 'who might, as in Macaulay's time, almost command the services of the most eminent scholars and historians of the country.' "

Pebbles

EAT, drink and be merry today, for tomorrow you may diet.—*Chapparal.*

"THEN you think you won no permanent place in her heart?"

"I'm just a notch on her parasol handle, that is all."—Pittsburg *Post.*

REDD—Have a cigar?

Greene—No; I promised my wife I wouldn't smoke.

Redd—Then you don't mind if you do.—Yonkers *Statesman.*

"I NOTICE," said the young man's employer, "that you are always about the first in the office in the mornings."

"Thank you, sir."

"Why do you thank me?"

"For noticing it."—Chicago *Record-Herald.*

SHE—She told me you told her that secret I told you not to tell her.

He—The mean thing! I told her not to tell you I told her.

She—I promised her I wouldn't tell you she told me, so don't tell her I told you.

"HERE!" shouted the railway official; "what do you mean by throwing those trunks about like that?"

The porter gasped in astonishment and several travelers pinched themselves to make sure that it was real. Then the official spoke again:

"Don't you see that you're making big dents in this concrete platform?"

ON a busy day a woman walked into the office of the court rooms at Atlanta, Ga., and, addressing Judge Blank, said:

"Are you the reprobate judge?"

"I am the probate judge."

"That is what I was saying," she said, "and I have come to you because I am in trouble. My husband was studying to be a minister at a 'logical seminary, and he died detested, and left three little infidels, and I have come to be appointed their executioner."—*The Green Bag.*

THE DRUMMER'S SERMON.

"Certainly, I will make a few remarks," said the cigar salesman, who, because of his solemn garb, has been mistaken for a man of the cloth. Ascending the platform, he said:

"Men are much like cigars. Often you cannot tell by the wrapper what the filler is. Sometimes a good old stogie is more popular than an imported celebrity. Some men are all right in the show case, on display, but are great disappointments when you get them home. No matter how fine a man is, eventually he meets his match. A two-fer often puts on as many airs as a fifty-center. Some men never get to the front at all except during campaigns. Some are very fancy outside and are selected for presents. Others have a rough exterior but spread cheer and comfort about them because of what is inside. But all men, as all cigars, good or bad, two-fers, stogies, or rich or poor, come to ashes at the last."—*The Standard.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Dedication of St. Patrick's Cathedral

It is a good rule in the Catholic Church that no church shall be dedicated until it is free from debt. Protestants often dedicate a debt to the Lord with their churches. We do not observe that this rule prevents Catholic churches from contracting debts, for they are more likely than other Christian bodies to have very ambitious plans and magnificent churches which involve long and burdensome mortgages, and these have occasioned not a few financial crises. St. Patrick's Cathedral, the center of Catholic activity in the New York diocese, has from the first suffered under an enormous debt of more than half a million dollars, and it is greatly to the credit of Archbishop Farley and his lay associates that, by a supreme effort, they have now lifted the load and have this last week consecrated their cathedral with a wealth of ceremony and a magnificent assemblage of cardinals, archbishops, bishops, clergy and laity.

We congratulate and praise them. We do not pretend to understand all the meaning of the ceremony, its multiplied marchings and sprinklings around the Cathedral's exterior and about its walls within, and the separate cleansings and blessings of altar and shrines. It was all splendid and impressive, and we hope it will prove effective to expel the evil spirits that may have haunted the unconsecrated edifice. There is a great deal of the lingering residuals of earlier excess of faith that clings to ritual, but we are not to understand that belief in demoniac influences is retained even where its old form remains. Martin Luther saw the Devil and threw an inkstand at him, and he gave unsavory directions how to drive the little devils out of the churn when the butter would not come.

The Roman Catholic Church claims about 3,000,000 people in the State of New York, and over a million of them in this city. The churches are large and costly, and every language and nationality is provided for. Nearly every church has its parochial school, and an army of clergy, with thousands of members of various orders engaged in works of charity and education. In no other country in the world is the Catholic Church so happily situated, so well instructed and so loyal. Nearly every other Catholic country is in conflict with the Church, Italy, France, Spain, Portugal, Mexico and the South American republics, but our Catholics are loyal; and if there are priests or laymen who are Modernists, they are careful not to proclaim it.

And the reason for this loyalty is that this is a country in which Church and State are kept separate. The Church does not meddle with the State and is not allowed to. Think what trouble we should have if, as in England, the Church meddled with education. We teach morals in the schools, but not religion. We call that the business of the Church. We put it on the Church and hold the Church responsible for it. If the children do not grow up religious the Church is blamed; and there is no other country in Christendom in which religion is more honored and has more influence for good. It is very bad policy for the leaders in the Catholic Church—

or some of them—to cry because their parochial schools are not helped out of the public funds. That would give occasion for quarrels and ill will which are now avoided.

It is greatly to the credit of the Catholic Church that it has so nobly provided for its people. The vast bulk of them came here poor and largely ignorant. Earnest and devoted priests led them, almost drove them, to their humble places of worship. Then they increased; their children attended our public schools; they and their children acquired competence or even wealth, and their magnificent foundations of charity and religion followed. There was much self-sacrifice. It has been truly said that the savings of servant girls have built the cathedrals; but they would not have built them in Europe. There the age of faith has failed. Here they believe, for they have been well taught, and they have reason generally to respect their teachers. The Catholic Church has been a steadying influence for good character and for sound citizenship, and in this has worked with the public school, whose influence cannot be exaggerated.

Liberty is good for the Church as well as for the State. The New York Cathedral has a lay body of trustees such as the Vatican refused to allow in France. Such a "cultual association" holds the laity to the Church. Even without it, but free from State connection, the Catholic Church in France is gathering new courage and strength, while here it is one of the larger allied forces for all that is good. Of course, we do not accept the statements often made by Catholic ecclesiastics that Protestantism is losing its hold of the country. It is predominant and long will be, even altho New York may become Catholic and Hebrew, even as Boston is a Catholic city. But however much Catholicism may grow, it will not be the Catholicism of the Middle Ages, no matter how much one Pope tries to make it such. The world moves, and every Church with it feels the touch of all new truth. We fully believe that in a hundred years Catholicism and Protestantism will come closer together, so that their fraternity will be acknowledged, and those who prefer to hold to a spiritual head at Rome, and those who put him in Canterbury, and those who choose their own spiritual leader, will feel as brethren; and not even a canon like that the Episcopalians are debating over in Cincinnati will be needed to invite or allowed to forbid mutual recognition and fellowship.

World Wide Reforms

One cannot accomplish reform on a scale as wide as the world, but it is something to have principles adopted which may be applied anywhere on the globe, especially if properly appointed people have been selected to agree on such principles and carry them back to their respective governments. This seems to have been done in Washington last week at the International Prison Congress. Between thirty and forty countries were represented, and their delegates had the right of suffrage in the meeting, and after many hours' discussion the great principle of the indeterminate sentence was adopted. Since 1876 it has been acted on at Elmira, with much success, tho even there, as in all other places, it has been limited by a maximum term, which has had a dragging effect on what otherwise might have been accomplished.

The resolution adopted by the Washington Prison Congress looks to a time when that hindrance may be done away with. It declares that fixing a maximum duration of the sentence will be desirable only while the measure is novel and there is lack of experience. In other words, when the public is used to hearing a judge sentence a man to prison without any limit, and it is seen that the man works out his own salvation and has it in his own power to unlock the prison door, the maximum wall may be broken down. It is a fact that the time men serve under the indeterminate sentence is really longer, on an average, than if the same number of men had had fixt sentences, which shows there is no danger under it of men escaping with too little imprisonment. On the other hand, the best prisoners shorten their terms. It is only the evilly disposed who by their conduct increase the length of their incarceration, and undoubtedly they de-

serve the restraint and the community is safer with them behind the walls. The natural fear that men may be kept in beyond their deserts was met in Washington by the adoption of a resolution saying that there should be a releasing board, not subject to outside influence, with at least one judge on it, one of the prison administration and one medical man.

A number of European countries are employing the principle of the indeterminate sentence, with modifications, but this is the first time it has received endorsement from the International Prison Congress as a whole. Kindred measures were also accepted, such as an extension of probation, reformatory treatment of adults, with release on parole, and keeping children who are delinquent from the atmosphere of the court room. In other words, the idea of the juvenile court was endorsed. At the last International Congress, in Budapest, in 1905, the commissioner for the United States (S. J. Barrows), presented a report on children's courts. The substance of this was translated into German, and very soon Frankfort, Berlin and other German cities established such courts. It is surprising that in five years the reform should be so well recognized as to be accepted with unanimity by so diverse a body.

But, after all, the emphasis of the congress was placed on preventive work. The sections devoted to the young and how to keep them from falling into crime were the best attended, and resolutions in favor of better schools for training the hand, for more play places and other sensible ways of prevention, were accepted without a dissenting voice.

National Parks and Forest Reserves

It is time to sound a note of warning with regard to our national parks. A purely utilitarian conservationism is beginning to undermine the nation's purpose in creating national parks. A forester's training does not necessarily make him a judge and custodian of scenery. Indeed, the tendency is the other way. He is trained to look at forests as a commercial enterprise, not as a recreation ground or an asset of natural scenery. The management of a forest for a timber crop and for the purpose of a park are two very different things. We cannot but deem it fortunate that the national parks were retained under the direct control of Congress and of the Department of the Interior when the forest reserves were placed in charge of the forest service of the Department of Agriculture. In the very acts establishing our national parks the esthetic element, the desirability of preserving unique and wonderful scenery for the enjoyment of the people, was the supreme consideration. The forest reserves were established from utilitarian motives and represent the Federal Government's endeavor to adjust private gain to public welfare in the wise use of the nation's unappropriated resources.

Viewing the matter from this standpoint the public has reason to regard with suspicion any movement that tends to break down the fundamental distinction between a forest reserve and a national park. Unfortunately, Mr. Pinchot. during his incumbency as Chief Forester, has led the way in obscuring this distinction, as may be seen by reference to his writings, and by his attitude in the Hetch-Hetchy case. We favor his advocacy of a national conservation policy; but we desire to have that policy include the treatment and reservation of parks as parks, and not as forest reserves. In other words, we ask that conservation be made to include *the conservation of scenic beauty.* We have searched the proceedings of the Conservation Congress at Minneapolis in vain for an utterance upon this subject, and no specific mention was made of scenic beauty in the resolutions adopted there, altho it was urged upon the notice of the committee. This seems almost inexplicable when one considers why the most famous of our national parks were established by Congress:

> "The preservation by the Government in all its original beauty of a region like this seems to the committee to be a duty to the present and future generations."

So runs the committee's report on the bill establishing Yosemite National Park. Oddly enough the legal representatives of San Francisco, when cited to show cause why the Hetch-Hetchy grant should not be revoked, rested their case on the con-

tention that "the reservation commonly known as Yosemite National Park is in fact a forest reserve and not a national park." While this was a resort to a baseless technicality, it suggests the importance of maintaining a rigid distinction between a park and a forest reserve, and the very different purposes for which each should be preserved and administered.

Drafts and Colds

We are approaching the season of the year when colds are frequent and when most people are sure to blame them on their having sat in a draft or exposed themselves to cold, or something of the kind. There used to be a very great fear of drafts, and many people insisted on almost hermetically sealing the rooms in which they lived in order to prevent them. The over-solicitous have been known even to stuff the keyhole lest there should be an occasion for a draft, and small holes in window panes are supposed to be particularly provocative of fateful air currents carrying colds with them. The solicitude in this matter has never been so great in this country as in Europe. Indeed, it is rather amusing to be brought in contact with the consternation of an old-fashioned German who discovers that *Es zieht!* there is a draft. As for sleeping in a draft, it used to be considered an almost inevitable preliminary to a bad cold and an almost fatal procedure for old people. To have a window on both sides of a railroad car open or the doors at both ends open would make many Europeans so uncomfortable that they could not possibly continue their journey under such untoward circumstances.

The fear of drafts, however, like the fear of night air, has gradually dwindled until now it is a very vanishing quantity. We have learned that sufferers from tuberculosis do better in rooms where there is free ingress and egress of air, even tho there may be drafts in the room. When they began this mode of treatment with wide open windows and doors in the German sanatoria it seemed extremely foolhardy, but the results fully justified the procedure. Our hospitals now have adopted this same mode of treatment, and patients suffering from fevers particularly and from pneumonia have a special place at the ends of wards, where the windows can be wide open, or are treated, particularly if they are children, on the roof. We have learned, furthermore, that while drafts are good for the ailing they cannot be bad for the well. We have come to appreciate that with the strong current of air caused by the ship's motion blowing directly over one, it is perfectly possible for a passenger on an ocean liner to sleep hour after hour and be benefited rather than hurt in any way by the fresh air brought him by the draft. It is important, however, that the air should be fresh and that it should not be loaded with the dust of dirty streets, nor, above all, contain the emanations from the lungs of other people. The modern physician proceeds to tell a delicate person that it would be less dangerous to ride on the front platform of a car with the motorman, even in cold weather, than to ride on the rear platform where the emanations from other passengers might easily prove the source of respiratory affections. The traveling on these cars in the crowded hours is indeed one of the main sources of colds.

There is something, after all, in the old notion with regard to the danger of drafts. It is not because of the air, however, but because of its burden of dust, some of which is infectious material. The night air is not bad in itself we have learned; indeed it is rather better and purer, because it has less dust, but it is during the night that mosquitoes travel; and so in malarial and yellow fever countries the free ingress of night air thru unscreened windows may be extremely dangerous. In the same way the blowing past us while we breathe it in of the dust-laden atmosphere of the city, when a draft is carrying by many more bacterial particles and other irritant materials than usual, may be a source of danger. That is indeed one of the reasons why, when we sit in a draft, there is so often a tendency to sneeze. Nature's protective reaction against the breathing in of dust is by sneezing. The paroxysm brings about not only a forcible expulsion of air that carries dust particles out with it, but is followed by increased se-

cretion that still further serves to cleanse the nasal passages.

Some interesting observations have been made with regard to the dust content of air currents under various circumstances. A sanitary commission in Brussels found, as the result of an investigation of the effect of the ventilating fans in restaurants, dwellings, factories of various kinds, public buildings and offices, that there was a larger amount of bacteria in the air of the room when a fan was running for ventilation purposes than when this fan was still. This is not surprising, since the circulation of air produced by the fan carries with it dust that is lying round and that ordinarily would settle unless disturbed in some way. It was found that the direct current produced by a small electric cooling fan contained more bacteria to the cubic metre of air than there were outside of the current produced by the fan in other parts of the room, even those quite close to the area of disturbance produced by the instrument. Dr. Graham Rogers, the Medical Inspector of Factories of the New York State Labor Department, in a paper on the "Ventilation of Industrial Establishments," declared that he found that there was even more carbon dioxide in the air current created by the fans than in other portions of the workroom. He was asked to investigate the condition of the air of a large lecture room at a dental college, and found that after the room had been used during the day there was for the afternoon lectures three or four times the amount of carbon dioxide in it that is ordinarily compatible with healthy respiration. Fans did not relieve this condition unless there was some direct connection with the outer air.

While the old idea of the dangerousness of a draft in itself is without any more foundation than that with regard to night air, under ordinary living circumstances in the cities it is rather important to avoid drafts, since they are likely to carry to us for breathing purposes many infectious materials. Attempts at artificial ventilation may only add to the danger of the presence of dust unless care is taken to secure thoro dilution of the air in rooms by perfectly fresh and, as far as possible, dustless air from outside. High up in our office buildings, above the dust of city streets, it is very probably that drafts, as on shipboard and high up in mountainous regions, lose practically all of their dangers. Fresh air of itself, no matter how cold, far from predisposing to the catching of colds, prevents them, and even helps in their cure, as the experience of physicians has amply shown in this matter, so that it is a question now not so much of avoiding drafts in themselves as of drafts that are specifically dangerous because they come to us laden with city dust or the emanations of other people.

Mr. Roosevelt and the Tariff

When Mr. Roosevelt was asked, in Atlanta, last Saturday night, how he reconciled his speeches in the West with the tariff plank adopted by the Republicans of New York at Saratoga, he replied that he did not reconcile them with that part of the New York platform:

"I must refuse to be judged by what the platform said, but must be judged by what I myself said. I was elected temporary chairman, and I served as such with reasonable efficiency before the platform was adopted. There were a number of men who voted for me and who were with me on most of the points, but who disagreed with me on others; and so as temporary chairman I was careful to make my speech in clear language. If what the platform said differs from what I said, I must be judged by what I said."

What he said was nothing, either while he was making his opening address or at any other time. In the address he carefully avoided the recent revision of tariff duties He began that address with an enumeration of "a long list of laws embodying legislation most heartily to be commended as combining wisdom with progress," which had been "enacted by Congress and approved by President Taft during the last eighteen months." The revision of the tariff schedules was the first and the most notable legislative act in that period of eighteen months, but he did not mention it in his list. He did, however, include certain other parts of the same statute, as follows:

"The establishment of the maximum and minimum tariff provisions, and the exceedingly able negotiation of the Canadian and other treaties in accordance therewith; the inaugu-

ration of the policy of providing for a disinterested revision of tariff schedules thru a high-class commission of experts which will treat each schedule purely on its own merits, with a view both to protecting the consumer from excessive prices and to securing the American producer, and especially the American wage worker, what will represent the difference of cost in production here as compared with the cost of production in countries where labor is less liberally rewarded."

Not a word about that revision which the platform, which was soon to be laid before the convention, so warmly commended, asserting that it had "reduced the average rate of all duties 11 per cent." and "turned a national deficit into a surplus." Being "careful," as he says, to make his speech "in clear language," because some who had voted for him disagreed with him "on other points," he made no comment, complimentary or hostile, upon the memorable Payne-Aldrich tariff revision of 1909.

In an address at Brooklyn, last week, he explained that if he had had the power which some newspapers ascribed to him he would have "written the tariff plank differently." He appointed the committee that made the platform. If the tariff plank was not satisfactory to him it was his right, and even his duty, to say so on the floor of the convention. He neither raised objection nor suggested amendment.

Mr. Roosevelt is a man of courage. Therefore we cannot understand why he failed to express his opinions about this tariff plank. He carefully excluded the revision from his list of legislative acts "most heartily to be commended," and the plank was not what he thought it ought to be, but he said nothing.

That tariff revision is a great issue in this year's campaign. There are other issues, but this is the one which promises to be most effective of all in changing the votes of those near the party border line, whose action determines the result of an election in many Congressional districts. In two districts there have been elections. In one a Republican plurality of 14,200 was displaced by a Democratic plurality of 5,640. In the other a Democratic plurality of 5,440 followed a Republican plurality of 10,160. From neither district had a Democrat been sent to Congress in twenty years. In both the Republican nominations were unfortunate, but it is known that this tariff revision was a very prominent issue.

Mr. Roosevelt's opinions upon all kinds of questions are respected by a very great number of his countrymen. As a rule, they are frankly and forcibly expressed. In the case of this tariff revision there has been an exception. It seems to us that he ought to make known his opinions on this subject, in clear language, and we hope he will do this before the end of his tour thru the South and the West.

The Republic of Portugal

PORTUGAL resembles Pennsylvania in area and population. It has also resembled Pennsylvania somewhat in politics, but differs from it now in the manifestation of an irresistible determination to reform, and we hope that October 4, 1910, is the opening of a better era. Whatever may prove to be the faults of the new government it can hardly be more unstable, it can hardly be more corrupt, it can hardly be more extravagant, it can hardly be more oppressive than the old. Whatever may prove to be its faults the people of Portugal will at any rate know that they have only themselves to blame, and they cannot evade their responsibility by that convenient scapegoat, a king

On February 1, 1908, the world was shocked to hear that the King and Crown Prince of Portugal had been shot dead in broad daylight in the capital city; that this was not the act of a crazy man or of a few irresponsible fanatics, but that thirty or more men were stationed along the principal street, and when the royal carriages passed they fired upon them volley after volley, aiming to get them all, and if it had not been for Queen Amelie, who warded off a rifle with her bouquet, her younger son Manuel would have shared the fate of her husband and her firstborn. The world was still more shocked to hear later that none of the assassins had been punished, that the men who had instigated it remained secure in their positions and reputation, and that the people of Lisbon made a carnival game of the tragedy.

But the stripling Manuel proved to be

almost as much of an incubus as 300-pound Carlos. If we may believe gossip Manuel was doing as much as could be expected from one of his youth and inexperience to imitate his father in the way of fast living. Except for the recovery of part of the millions which Carlos had abstracted from the public treasury and for the overthrow of the despotism of the political boss, Franco, the country had gained nothing by the "removal." The government was sinking again into the hands of the "rotatives," the secret alliance, not unknown in America, between the leaders of ostensibly opposing political parties, who agree to alternate in office, share the spoil and keep the other rascals out. It made little difference which of the two ruling parties was in control. Under the Progressivistas the country made no progress and under the Regeneradores it was never regenerated. Ministries changed every few months, but misrule was not interrupted. Portugal was like a horse which quivers its skin to shake off the flies only to get a more hungry swarm in their place.

But one thing was changing. The republican sentiment became stronger and more outspoken and gained considerable representation in the Cortes. Young Manuel went the rounds of European courts offering his heart and crown to eligible princesses, only to be respectfully declined. There was doubt whether a princess who accepted them would long hold either.

The people of Portugal had learned a lesson by their crime, that the way to get rid of a king is not to kill him, but to let him escape unharmed and harmless. It is not a bad thing to have a pretender or two over the border. It has a sobering influence on party politics and promotes stability of government. A king in the bush is worth two in hand. The amateur detectives who caught Louis XVI at Varennes did not do as much service to their country as they thought. This time there was no such bungling. An automobile is a better vehicle for runaway royalty than a new berlin.

So vanishes the House of Braganza, rulers of Portugal since 1383. Greatest of the house was Manuel the Fortunate, first of that name. Manuel the Unfortunate, second and last of that name, now retires to private life at an English country seat.

At least, we hope so. It may be that the Powers, fearful of the spread of republicanism, will force a king upon Portugal, as they did upon Norway. England, however, has the deciding voice in the matter, on account of its close political and commercial relations, established by long history and confirmed by recent treaty, and England is not so much afraid of republicanism as other monarchies, perhaps because it has fewer republicans than other monarchies. We wish that the United States could be the first to extend to the new republic the right hand of fellowship. We recognized the republic of Panama after it had stood alone among the nations of the world for a period of ten days. Why should we delay longer in this case?

Justice Hughes

Governor Hughes is now Justice Hughes. He has been a model Governor, and we are convinced that he will make one of the worthiest Justices —we may probably say Chief Justices— that have as yet sat on the bench. As Governor he has been positive in his policy, has urged forcefully the measures he believed best for popular and political morality, but he has never used the cunning means of the mere politician to secure them. He has purchased no success by trading office for votes, but has simply appealed from the Legislature drunk to the people sober. "Truck and dicker" he would not understand, but he did understand right and wrong, and the people understood him. If *summum jus* is *summa lex,* absolute justice the foundation and purpose of law, then Justice Hughes is sure to be a peculiar ornament of the Supreme Court of the United States. The State of New York has lost much, but the country has gained more. Will the State find his like again?

Harrison of Pennsylvania

The past year or two has seen rapid changes in university administration. Of the fourteen great American universities described in THE INDEPENDENT last year five have since lost their

presidents by resignation—Eliot, of Harvard; Northrop, of Minnesota; Angell, of Michigan; Wilson, of Princeton, and now Harrison, of Pennsylvania, all men of unusual ability and long experience. Charles Custis Harrison has served the University of Pennsylvania for seventeen years as its provost and has been a member of its board of trustees for twice that time. During his administration and chiefly thru his personal efforts, and often at his own expense, the congeries of Philadelphian professional schools of uncertain status and stability has been transformed into a unified university of recognized standing at home and abroad. The campus, altho located in the heart of a great city, has been extended from forty to 116 acres, and upon it have been erected a group of twenty-eight dormitory houses as well as seventeen other buildings, among them some that in size and elegance are not to be matched by any other university in the country. It is a mistake to look upon Provost Harrison as a mere raiser of money and builder of buildings. The intangible results of his labors for the advancement of the university are quite as real and much more important, tho they are less generally recognized, for Provost Harrison, unlike some university presidents, has always been content to remain in the background.

Tennessee Politics

We have had numerous letters from Tennessee setting us right on the political mix-up in that State. Certain things are plain. One is that Governor Patterson's pardons of convicted criminals have been wholesale and sometimes reckless, and in the case of the murderers of Senator Carmack utterly inexcusable. We do not wonder that respectable white Democrats have refused to support him and have combined with the Republicans. On the other hand, he has pardoned a large number of negroes, who were believed not to have received the lenient treatment before the courts accorded to white people charged with like offenses. The negroes think that he has tried to be fair to them and incline to give him their votes, a fact which he probably had in mind. Governor Patterson favors the liquor men as against prohibition, which sets the churches against him, but gives him the favor of the low class of both whites and blacks. Even the better class of negroes who desire the suppression of the saloon naturally put their racial rights first, and many of them will prefer to vote with a bad man who will do them good than for a good man who will be bad to them. Governor Patterson's withdrawal will make no difference; and if a Democrat is elected it will be by a Republican negro vote, while a Republican success will be by a white Democratic vote.

Statistics of Disease

According to recent mortality statistics the number of deaths in the United States is annually about one and a half millions. This would indicate the continuous illness of about three millions. Of these medical authorities give us about 500,000 afflicted with tuberculosis. Of 2,295 children examined in New York City 29 per cent. were found to be suffering with pulmonary troubles. Illinois is said to be spending close upon two millions every year to educate children that will die of tuberculosis about the time of graduation. The National Tuberculosis Societies calculate that one twentieth now in school, nearly a million of children, will die of this disease before the age of manhood and womanhood. This terrible sacrifice is evidently not necessary. Professor Irving Fisher estimates that it can be reduced 75 per cent. The number of deaths from tuberculosis has already decreased nearly 15 per cent. in five years. The battle is a fierce one, but we can come off victorious with persistence. Cholera and smallpox, which used to decimate our population are now almost swept out of the United States. Yellow fever, which at one time was held to be unconquerable, is the least of our fears, even in Cuba. A death rate of 640 out of every 100,000 has fallen to one of 7 in 1901, and not a single death during the next three years. Malarial fever, with its transmitter the mosquito, is still a serious scourge, but no longer a terror. Professor Fisher shows that of ninety diseases, seven account for more than half of our losses of life, and he holds that

all of these are preventable. Tuberculosis and typhoid fever are at present our two chief dangers. A Bureau of Health is a rational demand of the people.

Bequests for Missions

A bequest by the will of Mr. Arthington to the London Missionary Society of $1,800,000, of which $200,000 goes in death duties, may be mentioned in connection with the one hundredth anniversary in Boston of the American Board, as both are Congregational societies. Mr. Arthington was a very wealthy and very peculiar man. He gave very large sums during his lifetime for foreign missions, but always with the proviso, as in this case, that none of it should go to develop existing missions, but all to open new fields. He believed that Christ would come and restore all things when the gospel had been preached to every creature, whether he accepted it or not. It is a premillennarian notion which depends on a too literal interpretation of Scripture, with a very high doctrine of inspiration, and it has inspired some very useful work. Such large legacies for mission work are not unknown in this country, and the American Board's Swett legacy and the American Missionary Association's Hand legacy were of a similar amount.

A Chinese Parliament

History is making in these days, in China no less than in Portugal. And every movement is for liberty and self-government, one treading fast on the heels of another. As Russia, imperial, autocratic Russia, has its beginning of a Duma, so China, ancient, imperial, autocratic China, has just entered on the astounding program of parliamentary government. A year ago there were inaugurated provincial assemblies, what Great Britain does not yet have, and last week the upper house of its projected Parliament was convened. One hundred of the members are chosen by the provincial assemblies, and the other hundred are appointed by the Throne. It is notable that of those thus appointed, ten are chosen as distinguished scholars, just as in Great Britain a few scientists have been promoted to the House of Lords, and as the New Jersey Democrats have nominated the President of Princeton University for Governor. But this upper house, so fully controlled, is a sort of trial-piece, and the full realization of constitutional government for China will hardly come, even when five years hence the popular branch of the Parliament is convened. The Chinese have been said to lack patriotism, but under the impulse of self-government a remarkable development of this virtue has appeared and the people are full of new enthusiasm, which may be misled into hostility to foreigners who have opprest them or even into a new Boxer rising.

Religion and Political Corruption

The Catholics of Fall River are credited with 86.5 per cent. of the population; San Francisco, 81.1 per cent.; New Orleans, 79.7 per cent.; New York, 76.9 per cent.; St. Louis, 69 per cent.; Boston, 68.7 per cent.; Chicago, 68.2 per cent., and Philadelphia, 51.8 per cent. A German Catholic paper, *The Wanderer,* says that it would appear from the corruption in some of these cities that only "a very small proportion were Catholics, and that these had crawled into a hole." On this subject *The Catholic Fortnightly Review* remarks:

> "The Socialists are now reforming Milwaukee. Why have not the Catholics long ago reformed Fall River, San Francisco, New Orleans, New York, Providence, St. Louis, Chicago and Philadelphia?"

And the *Catholic Citizen,* published in Milwaukee, thus replies:

> "Largely because the Catholic pulpit eschews politics, even where community morality is involved. But it transpires that when the evil becomes too rank, Catholics will leave the sacred precincts of the Democratic party and go even to the extent of voting the semi-heretical Socialist ticket—as many of them did in Milwaukee."

When a nation goes out, or the world goes out, it will be because the children cease; because men and women will not marry, or if they marry will not have children. The New Zealand Commissioner of Labor, Mr. Edward Tregear, with whose contributions to THE INDEPENDENT our readers are familiar, makes this fact the burden of a poetic warning,

based on the fact that in New Zealand the birth rate has fallen in thirty years from 41 to 27 per thousand; while the number of children in the Dunedin schools has fallen in twenty years from 4,148 to 2,282. Mr. Tregear thinks it is a white and not a yellow peril which is to be feared:

"Peril is here! is here! Here in the Childless Land
Life sits high in the Chair of Fools, twisting her ropes of sand;
Here the lisping of babies and cooing of mothers cease;
Here the Man and the Woman fail, and only the flocks increase.

Axes may bite in the forest, Science harness the streams,
Railway and dock be builded—all in a Land of Dreams!
Sunk in spiritual torpor ye flout these words of the wise:
'Only to music of children's songs shall the walls of a Nation rise.'"

A correspondent sends this interesting comment on current journalism suggested by an editorial comment in THE INDEPENDENT:

I highly appreciate the little sting at high-class yellowness, in the course of your remarks on the subject of the Gaynor letter.

I believe most seriously in the great field and function of the *weekly* with sane, honest and well-balanced ideals and views. Its power and influence are bound to increase beyond measure. It is most eminently needed. It can strike thru the local cant and partisanship and prejudice that pervades daily journalism everywhere, and *can afford to tell the truth*—at present a forbidden luxury to many an editor. It is not obliged to depend on political service for its existence.

I am very far from condemning all daily newspapers, with a wholesale, blanket indictment. But at times it does seem as if the percentage of journalistic decency in them was, on the whole, decreasing rather than increasing. Most of them might do better; and some of them couldn't well do worse!

There are signs that at the next attempt in the English Parliament to carry an education bill, the supporters of a purely secular system of public schools, such as we happily enjoy in this country, will show increased strength. A resolution asking for a national system of education under full popular control, free and secular, from the primary school to the university, was presented lately to the members of the trade unions, and was carried by a card vote of 827,000 to 81,000. Not a few of the Nonconformists have begun to urge the absolute freedom of the schools from religious control.

If in France, Spain and Portugal the people, all Catholics, hate the religious orders and expel them as soon as they get the chance, there must be some reason for it, apart from any supposed hatred for religion. They do not thus treat the parish priests. In Portugal passion has reached violence and plunder, but against none but the Jesuits and monks. It is not sufficient to denounce the mob, for this hatred needs explanation.

The first full-blooded Kaffir has been elected to the Cape Colony provincial Parliament. He is the Rev. W. Benson Rubusana, Ph. D. He is a fine, strongly built man, has been a pastor for twenty-six years, and there is a story that when he visited Johannesburg and took the sidewalk, where black men are not allowed to walk, the police so respected his strength that they did not interfere with him.

The cholera has made its appearance in New York harbor, and the medical authorities tell of it all, and no one is frightened. That is not the way with the cholera in Naples, nor was it the way with the plague in San Francisco. They tried to conceal what could not be concealed, and the alarm was naturally increased. There is absolutely no danger to be alarmed about.

Exports of illustrated post cards from Germany, according to statistics compiled in Berlin, have fallen from 500,000,000 annually in 1907 to 250,000,000 last year. This shows how rapidly the United States is capturing the post card industry from Germany.

Revolutions are becoming civilized and humanized. That in Portugal, like that in Constantinople, was marked by few deaths and no assassinations. The French revolution was of a different sort.

Insurance

Industrial Insurance

To a very large number of persons industrial insurance is merely a name. When its plan and scope and development comes to be fully understood, however, it is impossible to measure the true philanthropy it signifies or to overestimate the power for good it exercises among the very poor. Industrial insurance is a refuge for people of all classes and is an aid to all that is best in the progress of humanity. This kind of insurance calls for the employment of an army of men and women to spread its doctrines, and to collect the small weekly premiums that enter into it as a distinguishing feature. It appeals to and helps the mother, the father and the children of all ages. It provides a burial fund and because of it the Potter's Field is by no means the end of the life struggle. The weekly or monthly wage provides the premium in fractions that are possible to the very poor, and those low down in the social scale, thru its agency, are enabled in the hour of tribulation to maintain their position among their fellow workers, and it furnishes a safeguard at a time when it is most wanted. The whole trend of industrial insurance is toward the highest type of charity which is to provide a safe and certain way for the deserving to help themselves. Industrial insurance of necessity carries an uplift in its train. Independence and reliance are guaranteed by it to those who avail themselves of it and the companies who are devoting themselves to industrial insurance are deserving of all honor and all praise.

THE New York Legislature is to be asked to extend the time during which the insurance companies in this State must, under the Armstrong law, dispose of sundry stocks that still remain among their assets. This time expires on December 31, 1911. If the Legislature refuses to grant the desired extension it is probable that something like $100,000,000 of stock holdings will be forced on a market at present none too strong between now and the end of 1911. The effect on the market can easily be imagined and the policyholders will be obliged to stand the resulting loss. The Mutual Life Insurance Company, thru its president, Charles A. Peabody, has issued the following statement regarding the attitude of that company on this subject:

"Had the Mutual disposed of its stock holdings of 1906 at the best prices obtainable for large blocks since that time its loss would have been over $10,000,000. Even of active stocks we have been unable to sell more than a few hundred shares without driving prices below a fair level. I do not propose to make myself liable to incarceration for infraction of the law if I can help it, neither do I propose to bear the responsibility of incurring any such loss to the company. We are advised that the Armstrong law is unconstitutional as regards our stock holdings, but I intend to place the matter fairly before the Legislature to ascertain whether we are expected to accept unreasonable prices simply because a legislative order apprises the market that we will be compelled to sell certain holdings by a certain date. Many of these holdings are inactive, such as National Bank of Commerce stock. We do not feel called on to give away control of that bank, and to secure a fair price we must bide our time. To show that we have acted in good faith, we have disposed of some $25,000,000 of the specified holdings since enactment of the Armstrong law. No one has offered anything like a fair price at any risk of being refused. There are plenty of bargain hunters, who, knowing that such a block of stock must come into the market by a fixt date, will "bear" that particular stock that we may be compelled to part with it at a fraction of its value. As executive of the company I do not intend to play into such hands if I can avoid it. That is why we have two-thirds of our 1906 stock holdings still on hand, and that is why we shall go before the Legislature for an extension of time."

A NEW YORK girl recently fell out of a third story window which, under ordinary circumstances, would have spelled certain death. This particular girl, however, reached the ground uninjured, because in falling she bounced from clothesline to clothesline on her way down to earth.

Financial

The Bankers' Convention

At the closing session of the thirty-sixth annual convention of the American Bankers' Association, in Los Angeles, last week, F. O. Watts, president of the First National Bank of Nashville, Tenn., was elected president, and William Livingston, president of the Dime Savings Bank of Detroit, first vice-president. There are now 11,405 banking institutions in the association. Prominent among the subjects discussed in reports, papers and otherwise, were postal savings banks and the proposed establishment of a central bank. In his annual address the retiring president, Lewis E. Pierson (president of the Irving National Exchange Bank, New York), set forth the grounds upon which the association had opposed postal banks. A day or two later the president of the savings bank section, William R. Creer (secretary of the Cleveland, Ohio, Savings and Loan Company), in his annual address said that, altho the association had opposed the postal bank project as "wrong fundamentally, ill advised, unnecessary and un-American," the bill had now become a law and it was the duty of members of the association, as loyal and patriotic citizens, to see that the utmost amount of good should be secured by it.

Irving T. Bush, chairman of the currency committee of the Merchants' Association of New York, argued at length in favor of a modified form of central bank for the control of the currency, holding that provisions could be made to meet the objections which have been raised. R. G. Rhett, president of the People's National Bank, of Charleston, S. C., opposed a central bank as unnecessary, at variance with the genius of our institutions, and "a step toward centralization that no ingenuity could ever safeguard." He proposed another plan, the main feature of which was the issue of currency by banks upon the security of a gold reserve of 25 per cent. kept under Government control and supervision, with provision for additional emergency issues secured by assets specifically pledged with the sub-Treasury. Just before adjournment the convention was addressed by Senator Burton, of Ohio, a member of the Monetary Commission, who said that in any plan for the regulation of the currency the following principles should be observed:

"The same care should be observed for the cancellation or withdrawal of circulating notes when they are redundant as for their increase in times of scarcity or stress. In regulations for the issuance of currency the decision of the amount and continuance of its circulation should rest upon demands of trade. The basis should be assets upon which there can be promised realization. There should be the greatest possible divorce from arbitrary control or political influence. Circulating notes should possess absolute security, or at least the nearest possible approach to absolute security. In case of bills issued by banks, profits should not be expected from the exercise of the privilege, but rather from the added ability to provide for their customers and the advantages which accrue from their ability to meet any and all emergencies."

It is generally understood that Senator Aldrich, chairman of the Monetary Commission, regards the establishment of a central bank as the proper solution of our currency problem. While it is true that such a proposition should be considered on its merits, without regard to the acts or reputation of its chief advocate, it is also true that the Senator's support of the plan discredits it today with a large majority of the American people.

* * *

....September's output of pig iron was 2,054,275 tons, which may be compared with 2,106,847 in August, and 2,148,442 in July. In March 2,617,949 tons were produced.

....The annual report of the New York, New Haven & Hartford Railroad Company shows that the annual cost of the company's recent increase of wages is $1,757,306. Recent advances of passenger rates amount to $858,000, leaving about $900,000 to be supplied by an increase of freight rates if such an increase is allowed by the Interstate Commerce Commission.

The Independent

VOL. LXIX NEW YORK, THURSDAY, OCTOBER 20, 1910 No. 3229

Survey of the World

Mr. Roosevelt's Speeches

After leaving Atlanta, Mr. Roosevelt added a little to his statement about his attitude toward the tariff plank of the Saratoga platform, explaining that he and some who did not agree with him on all points sunk their differences in order that they might win on "the vital issues," which were that there should be no pardon for the dishonest public servant, that no boss or group of bosses should rule the party, and that the people should exercise their right to control their own affairs. In an address at Hot Springs, Ark., he exprest views about the reclamation of swamp land which were at variance with those of President Taft. At St. Paul, on September 6, the latter said:

"Suggestions have been made that the United States ought to aid in the drainage of swamp land belonging to the States or private owners. I deprecate the agitation in favor of such legislation. It is inviting the general Government to contribute from its Treasury toward enterprises that should be conducted either by private capital or at the instance of the State. In these days there is a disposition to look too much to the Federal Government for everything."

At Hot Springs, Mr. Roosevelt said "there were things about the open country that should be done by the Government; that is, by the representatives of all of us, working together." He continued:

"Arkansas is one of a group of States with an enormous area of swamp land. And until drained that land is worthless, and when drained it is a block of the most fertile land in the entire nation. The National Government must do its part in helping in the drainage, because the drainage is an interstate affair. Arkansas, Missouri, Tennessee, Louisiana and Mississippi are all concerned and ought all to work together, and the National Government should render all possible legitimate aid."

At St. Louis, Mr. Roosevelt was up for about four minutes in an aeroplane with Arch Hoxsey, circling the aviation field twice at an elevation of 100 feet. Speaking in the evening on the 11th he took for one of his subjects the tariff, saying:

"It seems to me that the situation is much clearer than some people would have us believe. The Republican party is united on the doctrine officially set forth in its national platform two years ago, that the tariff shall be such as to substantially equalize the cost of production here and abroad. As the cost of production is mainly labor cost, this means primarily that the duty should be great enough to continue to give our laboring men that higher standard of living which primarily distinguishes the American wageworker from the wageworker of other countries.

"Now, not only is this the doctrine of the Republican party, but I believe it is the doctrine of the overwhelming majority of the American people. I do not believe that any section of the American people at present seriously advocates free trade or a tariff for revenue only. I most emphatically do believe that if any such issue is raised, there will be an overwhelming decision in favor of the policy of such measure of protection as that above outlined.

"Now, the question is how to achieve the purpose thus explicitly declared. It seems to me, and I think more and more it seems to the people of this country, that the methods hitherto obtaining in making all tariffs for a great many years past are ineffective in correctly and justly applying the protective principle as outlined above. We wish to give proper protection to each given business, as a matter of right and justice, and not give improper protection as a matter of preference or favor by log rolling.

"Therefore we feel that there should be a tariff commission, composed of impartial experts amply equipped for obtaining not merely from the statements of interested parties, but by such investigation as will satisfy them that the facts are accurate, information that

will enable Congress in each given case to establish the measure of protection necessary to carry out the principle set forth. Moreover, these investigations should form a program, each successive report being treated on its merits, so that each schedule can be revised by itself in accordance with the facts developed by the commission of experts and without any heed being paid to any other consideration than the justice of that particular case. This will prevent log rolling, and it will prevent the far-reaching disturbance of business which necessarily comes when all the schedules are revised in lump."

Some Government body should also investigate conditions to see that the laborer gets his full share of the benefits of protection. By enacting such a policy into law, our industries could be protected, the workman would get the benefit of a tariff primarily made in his interest, the "favoritism and log rolling which under present conditions seem inevitable" would be eliminated, and the amount of protection would be what is actually necessary to cover the difference in production costs. The surest way to prevent an agreement would be "to indulge in useless recrimination about the past." The present tariff was made by exactly the same methods used in making its predecessor and that predecessor's Democratic predecessor. In New York, he said, the special interests and every man who believed in crooked business or crooked politics had gone into the ranks of those who opposed the Republican party. At Peoria, Ill., as the guest of the Knights of Columbus, having said that there was no other country "where Catholic and Protestant get on together as we do here, each treating the other on the basis of our common citizenship, and judging him not as to how he worships his Creator, but on his conduct toward his fellow men and on his own worth as a man," he spoke of a correspondence he once had:

"Of course in every church there are some good men who are narrow, and one of these good, narrow men, a Protestant clergyman, wrote me a letter of protest about my receiving Cardinal Satolli at the White House. I wrote him, saying that I had received the Cardinal just as, for instance, I had received bodies of German Lutherans and Welsh Methodists, and as I was expected to receive the Archbishop of Canterbury, and that I would hold myself to be a poor representative of the people and an unworthy President of the United States if I failed to treat with good will and friendliness all good men, no matter what their religious faith might be; and I then added that I could best explain my position by saying that I believed our country would last a very long time, and that if it did there would be many Presidents, and some of these would be Catholics and some Protestants, and that I, a Protestant, wished to act toward my Catholic fellow citizens exactly as I hoped that a Catholic President would act toward his Protestant fellow citizens. I think that exprest my views about as clearly as I could put them."

In Indiana, the ex-President made several speeches, his main purpose being to promote the re-election of Senator Beveridge. The latter, he said, was a man of courage, honesty and common sense, representing the struggle for decent government. To permit his defeat would be to put a premium on such jackpotting as had been exposed in the Illinois Legislature, and Indiana would not be able to explain his defeat except upon the ground that the State declined to keep in office a public servant who had refused to ally himself with the corrupt interests. The Senator had not split from his party; he had stood by the bulk of it and had done what the masses wished to see done. "And before the next Presidential election comes around, the platform will be fairly and squarely the platform on which he now stands." Returning to the State of New York, Mr. Roosevelt made several speeches in the southern tier of counties, confining his remarks, as a rule, to local issues. His own party, he asserted, had smashed its machine, but the recent Democratic convention, as admitted by leading Democratic newspapers, had been absolutely controlled by Charles F. Murphy. He denounced several metropolitan newspapers of the Independent Democratic type, saying that their course indicated an alliance of Wall Street with Tammany:

"There are in New York certain newspapers which, in superficial qualities and views, differ from one another, but which are at one whenever the interests of Wall Street are in real danger. Sometimes the interests of Wall Street happen to be identical with the general business interests of the whole country and with the general interests of the people as a whole, so that the welfare of Wall Street and the welfare of the country coincide, and then these papers support the general welfare. Where Wall Street is neutral these different papers follow their several bents. But in the present case the interests of those who desire to retain or to acquire special privileges do not coincide with the interests of the public, and

the papers in question have all without hesitation sunk their minor preferences and prejudices and have followed Wall Street into the camp of Tammany Hall. And why? Because Wall Street and Tammany Hall have struck hands. And what does this mean? It means that the politicians who want favors from big business, either for their own personal advancement or to keep their political control, have joined in whole-souled alliance with those so-called business men who, in their turn, wish to control politics."

The Wreck of the "Maine"

President Taft has approved the plans made by a board of engineers and accepted by General Bixby, Chief of Engineers in the Army, for raising the wreck of the battleship "Maine." In a letter expressing his approval he says:

"I believe Congress intended that this work should be done as promptly as possible, and also under such conditions that information as exact as possible should be secured in respect to the cause of the explosion, and that these considerations should have more weight in determining the plan of procedure than even those of economy. To retain complete control of the work in the hands of the army engineers will strengthen public confidence in the results shown."

The President desires that it shall be conclusively determined whether the ship was wrecked by external or by internal force. At his direction Spain has been invited to send a representative who shall be present during the progress of the engineers' work. The first step will be the construction of a coffer dam around the wreck. Then the water will be pumped out and a thoro examination can be made. There will be full publicity. It is expected that the wreck will be uncovered for inspection before February 15 next, the thirteenth anniversary of the explosion.

Legislative Corruption in New York

Upon complaint made by M. Linn Bruce, counsel for the committee which is inquiring concerning legislative corruption at Albany, Frank J. Gardner, a Republican member of the New York Senate from Brooklyn in 1903 and 1905, was arrested at Scranton, Pa., on the 13th. He had bought a ticket for Montreal. On the following day he was indicted, mainly upon the testimony of Congressman Otto G. Foelker, who was a State Senator in 1908, when, after a memorable contest, Governor Hughes's bills against gambling and betting at racetracks were passed by the narrow margin of one vote. Foelker says that Gardner sent for him and attempted to buy his vote, remarking that he would pay him $2,000 more than some other Senators were getting; also that when he declined to be corrupted, Gardner told him he was a fool. When the final vote was taken, on June 11, 1908, Foelker was ill in bed, recovering from an operation for appendicitis. He insisted upon going to the Senate Chamber, altho he was scarcely able to stand. Supported by a physician, he entered the chamber and cast his vote for the bills, thus breaking a tie and giving the bills a majority of one. For this he was warmly commended, and on account of his courageous act he was sent to Congress. It is understood that a part of the testimony before the grand jury was the story told by an Assistant District Attorney of Brooklyn about admissions made to him by Gardner, who is said to have asserted that the opponents of the bills used a corruption fund of $500,000; that this was placed in the hands of a man who now holds a prominent office, and that this man profited by failing to keep the corrupt agreements made with certain legislators. Gardner says he is unjustly accused.——In what is said to be the last of the criminal cases arising out of the Capitol frauds at Harrisburg, Pa., the defendant, Charles G. Wetter, a member of the firm that erected the building, withdrew his plea of not guilty, the understanding being that he should make restitution for an overcharge. Joseph M. Huston, the architect, is soon to be sentenced. A new trial was denied last week in his case. Of the four men who were indicted with him, two (ex-Treasurer Mathues and Contractor Sanderson) are dead, and two (ex-Auditor-General Snyder and ex-Superintendent Shumaker) are in the penitentiary. All of them were sentenced to be imprisoned for two years. Civil suits for the recovery of about $3,000,000 are still pending.

Coal Land Frauds in Alaska

Seven men, residents of Seattle or of British Columbia, were indicted on the 15th at Seattle for con-

spiracy to defraud the Government by an unlawful acquisition of coal lands in Alaska. These men were in two groups, one led by C. F. Munday and Algernon S. Strachey, and the other by Cornelius Christopher and George Simmons. The two parties were seeking to acquire by fraudulent entry about 24,000 acres of coal land, valued by the Government at $100,000,000. This land is in the Bering River coal field, in which is also the land covered by the Cunningham claims, which were the subject of much inquiry during the Ballinger-Pinchot investigation. One of the indicted men was formerly the private secretary of the late M. J. Heney, who built part of the Copper River Railroad for the Guggenheims. ——The District of Columbia Court of Appeals has confirmed the sentences of Frederick A. Hyde, a millionaire land speculator of San Francisco, and J. A. Schneider, his employee. They were found guilty, two years ago, of taking large tracts of Government land, in California and elsewhere, by fraud, and were sentenced to be imprisoned for two years.

Trust Cases

Owing to complaints received from many lumber merchants and builders, the Department of Justice has been making an investigation, by means of special agents, to ascertain whether there is a Lumber Trust. It is alleged that such a combination exists and that competition is suppressed and prices are fixt by it.—— The Supreme Court has ordered a further postponement of the rehearing of the Standard Oil and Tobacco Trust cases, making the date January 3. It is expected that the vacancies caused by the death of Chief Justice Fuller and the retirement of Justice Moody will be filled before the end of the year.——It is reported that official inquiry at New Orleans has shown that revenue frauds, in connection with the sampling of imported sugar, have been committed at that port in the interest of the Sugar Trust. ——The Supreme Court will soon consider the questions involved in the case relating to the indictment of John E. Parsons, President Thomas and six directors of the Sugar Trust, in whose interest the plea was made in a lower court that prosecution had been barred by the statute of limitations.

Countries South of Us

The President intends to sail for the Panama Isthmus on November 10, immediately after the election. He will remain there four or five days, collecting information to be used in proposing legislation. Among the subjects to be considered during his visit will be the proper location of fortifications, the rates to be charged for the passage of ships thru the Canal, the government of the Zone, and the application of skilled workmen for an increase of wages.—— Recent reports say that General Valladares, the autocratic Governor of Amapala, which is the chief Pacific port of Honduras, has surrendered to President Davila, submitted to removal from office and obeyed the order recalling him to the capital city. It is said that the arrival of an American gunboat in his harbor, with marines prepared to go ashore, caused his change of attitude.——The American owners of the street railway in Bogota, the capital of Colombia, have sold the property to the municipality, which has made a first payment of $425,000. Popular disapproval of the foreign ownership had been shown by riots, and the railway had been boycotted for several months. Therefore the company accepted an offer from the municipality. It was controlled by capitalists residing in New Jersey.

The French Railroad Strike

The great strike of the railroad employees, which, as had been long before announced, was intended to demonstrate the omnipotence of organized labor, resulted rather in a demonstration of the power of the Government, and especially of the determination of Premier Briand to maintain order. The pretext was the demand of the unions that $1 a day should be the minimum wage paid for any kind of labor on the railroads. In case this was not agreed to by the companies the threat was made that all the railroad traffic in France would be stopped, as well as the cabs, street cars and subways of Paris; that

the electric light and power would be cut off and the city starved into submission. On the night of October 10 the attempt was made to carry this plan into execution by calling out the men on the Northern and the Western Railroads. Trains were left at a standstill on the tracks between stations, causing much embarrassment and distress to passengers on their way to Atlantic ports or homeward bound to Paris. Then, too, the French capital is somewhat tardily following the example of other great cities in developing populous residence suburbs, and the commuters found themselves cut off from their homes or business. Paris was not starved, but its food habits were much upset. The morning milk was missing and all kinds of meat high in price, but as partial compensation perishable fruits and vegetables, especially grapes, tomatoes and beans, halted in Paris on their way to northern ports, were thrown upon the market to be sold for what they would bring. To check a famine the Government requisitioned all available tugs, boats and barges on the Seine for bringing in food supplies. One of the Seine *bateaux-mouches,* or "fly-boats," was chartered by the French Steamship Line to take passengers bound for New York down the river to Havre with their baggage, stopping overnight at Rouen. They started from Paris at four o'clock on Friday morning and reached Havre, where the "Lorraine" was waiting for them, at ten Saturday night. Other tourists waiting to get to this port or Cherbourg or Boulogne hired automobiles at prices ranging from $20 to $100 per person. One Chicago man paid as much as $600 for a machine to catch his boat at Cherbourg. Sabotage, or malicious destruction of property, added to the terrors of the strike. The removal of a rail on the Northern Railroad came near wrecking one of the outward bound trains, and an express on the Southwest Railroad dashed into the Austerlitz station in Paris at full speed because the tubes of the air brakes had been cut. Telegraph and telephone lines were generally interrupted thru the cutting of wires and tearing down of poles. The Government took a strong stand at once instead of allowing the strike to run its course as had formerly been its policy. Within a few hours troops were posted in the railroad stations and along the route to prevent violence. Premier Briand declared that the strike was purely "an insurrection founded upon crime," and warrants were promptly issued for the arrest of fifty-two of the strike leaders and agitators on the charge of rendering railroad traffic dangerous to life. Orders were issued calling to the colors for three weeks' military service the striking employees who were in the reserves, and they were obliged to report to headquarters within three days or be treated as deserters, and most of them complied. At the same time M. Briand opened negotiations with the Western and Northern Railroad officials and secured from them a concession of the $1 minimum, thus obtaining for the men their primary contention. The employees of the Eastern, the Central and the Paris, Lyons and Mediterranean Railroads, and of the Metropolitan Subway, voted to go out on sympathetic strikes, but did not carry out their intention. The electricians, who more than once have put out the lights of all Paris, were this time able to darken only one-third of it for one night. The Metropolitan Company voted a reward of $20,000 to its employees for remaining at work.

The Portuguese Republic

Portugal has been quiet during the week under the new *régime* except for manifestations of republican enthusiasm and anti-clerical animosity. The Government has succeeded in preventing any continuance of the disgraceful scenes which marked the outbreak of the revolution, the attacks by the mob on convents, Church property and ecclesiasts. The active prosecution of its own anti-clerical policy has furnished no pretext for popular violence. Any priests seen upon the street are arrested; if they are not native Portuguese they are expelled. A decree promulgated by the Provisional Government orders the expulsion of foreign monks of all orders. The Jesuits have been expelled and their property, which is of immense value, confiscated by the state. Portuguese who are members of religious orders other than the Jesuits will be permitted

PORTUGAL'S NEW CABINET.

The members of this group formed the directorate of the Republican Party which made the revolution by which King Manuel has been deposed and all but one of them are included in the new cabinet. Reading from left to right they are Dr. Antonio Luiz Gomes, Minister of Public Works; Dr. Bernardino Machado, Minister for Foreign Affairs; Dr. Celestino d'Almeida; Dr. Antonio Jose d'Almeida, Minister of the Interior, and Dr. Alfonso Costa, Minister of Justice. Dr. Costa is described as the brains of the revolutionary party. After the election of ten Republican deputies for Lisbon recently he made a public speech in which he gave the king "notice to quit" and a few days later in an interview he announced that the revolution was close at hand, but that it would be "a kindly affair." "We shall kill the least possible number of persons," he said.

to remain on condition of renouncing their orders and entering secular life. The Irish Dominican convent and monastery, which are under the protection of the British flag, have not been molested. The Dominican church was the only one in Lisbon where mass was celebrated last Sunday. Most of the Portuguese Jesuits will go to Brazil, some to England. Royalist names and emblems about the city have been removed wherever they appear. The Queen Amelie Theater has been renamed "The Republic." The honor of a civic funeral was given to Professor Bombarda, whose assassination by a royalist fanatic brought on the revolution, and to Rear-Admiral Reis, the revolutionist leader who committed suicide in the belief that his cause was lost. It was one of the curious incidents of the outbreak and indicative of the general confusion and emotional stress that a revolutionary admiral and a royalist general should have both taken their own lives the same day in the belief that their respective parties had lost in the conflict. The bodies of Reis and Bombarda, the first martyrs of the republic, had been lying in state during the week in the City Hall, draped in the new flag, and on Sunday were placed on gun-carriages and escorted to the cemetery by a procession requiring two hours to pass. Larger crowds of people and a more brilliant military display have not been seen in Lisbon. It was characteristic of the anti-clerical sentiment now prevailing in Portugal that no ecclesiastic emblems were seen in the procession and no religious services held. The officers of the army and navy who took part in the revolution have refused offers of promotion, affirming that they had only done their duty to the nation and desired no reward. To complete the republican organization of Portugal, the Provisional

Government has issued decrees abolishing the House of Peers, the Council of State and all titles of nobility, banishing the Braganza dynasty, and secularizing the schools and charitable institutions. King Manuel, the Queen-Mother Amelie and the Duke of Oporto have been conveyed on the British royal yacht "Victoria and Albert" from Gibraltar to England, where they will reside. The Queen Dowager, Maria Pia, was taken to Italy on board the Italian warship "Regina Elena."

The Effect on Spain

It was expected that the success of the revolution in Portugal would incite the Republicans of Spain to a similar rising. There is no question but what the Republican sentiment has been gaining strength in Spain for some years as it has manifested itself not only in elections and newspapers but also occasionally in such disorders as those of Barcelona. Premier Canalejas has, however, taken the wind out of the sails of the Republican movement by the adoption of an anti-clerical policy of his own which altho it does not go so far as the Republicans would like, is certainly as progressive as the sentiment of the country at large will at present support. At the same time he has announced the intention to put down any disorders with a strong hand. General Weyler, formerly of Cuba, has command of the Province of Catalonia, and it was recognized that he was both able and determined to maintain order. There is some reason to believe that a simultaneous rising of the Republicans in both Spain and Portugal was planned to take place on "Ferrer Day," October 13, but the revolution in Portugal broke out prematurely and that of Spain was nipped in the bud. The tomb of Francisco Ferrer, who was executed a year ago for complicity in the Barcelona riots and now is being extolled by radicals of all countries as a victim of monarchical and clerical tyranny, was decorated with flowers but no demonstration or assemblage was permitted, and the day passed without bloodshed in any part of Spain. The streets of Barcelona and other cities were thoroly patrolled by police and troops kept under orders in the barracks during the day, ready for any emergency. The expulsion of the religious orders from Portugal has increased the embarrassments of the Spanish Government, which has been trying to find a way to get rid of those it has formerly received from France. Some 5,000 monks and nuns driven out of Portugal have taken refuge in Spanish monasteries and convents. Premier Canalejas has announced that the Government will not tolerate this and that members of the religious orders who are not of Spanish nationality must leave the country as soon as possible.

The Finances of Holland

Queen Wilhelmina, in her address from the Throne on the opening of the Dutch Parliament, laid special stress upon the difficulties of the financial situation of the kingdom. Expenses have largely increased and must increase still more largely with the new legislation, and the Government is confronted with an increasing deficit. The ordinary expenditure of the kingdom is estimated at $85,000,000 for the coming year, and the revenue will not produce more than $80,000,000. The proposed legislation for state insurance of the working classes for sickness and old age will make still heavier drafts upon the treasury, whatever form it may take. Minister of Finance Kolkman proposes to cover the deficit by an increase of the income tax and also by the establishment of a protective tariff. The object of this measure is not merely to provide revenue, but to be used as a weapon of retaliation against Germany. Holland has heretofore, like England, been practically a free trade country, admitting many commodities free and imposing low duties upon others. The proposed law will greatly restrict the free list and the rates on dutiable goods will be very much increased. The classification of the tariff has been planned to throw the burden as much as possible upon luxuries. Raw materials for use in Dutch industries, such as coal, iron ore, leather, wool and cotton, will be free. Flour will be taxed, but not wheat. Vegetables and meat used by the masses will be free of duty, but imported table delicacies will be taxed at a high rate.

The President of the Portuguese Republic

Theophilo Braga, Poet, Scholar, Philosopher

BY HAYWARD KENISTON, A.M.

Lately Instructor in Romance Languages in Harvard University.

FOR the first time in eight centuries of national history, a Republican flag floats over Portugal, and the spirit which swept France in the eighteenth century has found another tardy expression in a sister nation of the Latin race. The first evidence of the power of democratic ideas had appeared as long ago as 1820 in the revolt against the British regency, when the discontent culminated in the Charter of 1826. By this charter provision was made for a General Assembly, consisting of two chambers, the *Camara dos Pares* and the *Camara dos Deputados*. Executive power was lodged in the King, but his power of veto was merely suspensive. Under this constitutional monarchy the nineteenth century was a stormy one for Portugal. When rival claimants for the throne ceased to rend her civic welfare, the warring elements of the varied political parties, each seeking its own aggrandizement, defeated the ends of administration and justice. With every position of public service, down to that of the humblest street cleaner, a Government appointment, in which the incumbent felt his duty discharged with the collection of his salary, "graft" was rife. A recent writer has remarked: "It is not saying too much to assert that Portugal's present troubles are due to a surfeit of politics rather than to a paucity of actual resources." By the end of the century, conditions had become almost

desperate; the national debt was heavy; credit impaired abroad and a general decline in industry apparent at home. The administrative dictatorship of Premier Franco, in 1907, made necessary by the obstructive policy of the dissenting parties in refusing to pass the budget, ended in the lamentable assassination of Carlos I and of the Crown Prince in February, 1908. Manuel's advisers forced the dismissal of Franco and an election was called. But unrest was still evident, and 1909 saw four successive ministries. Something was wrong somewhere; manifestly the constitution was not providing a satisfactory form of government.

These years of decline in material prosperity had, however, seen a remarkable revival of letters. Two types in particular had been cultivated with unusual success—poetry and history. At Coimbra, the university town, a new school of poets, reacting against the ultra-romanticists, had striven to restore poetry to a rational foundation. There, too, began the investigations of Portuguese history along the scientific and philosophical principles of Vico. But these men were not mere speculators and dreamers. The men of letters and the men of affairs have never represented distinct types in the Iberian peninsula, and the inevitable consequence of their doctrines was an active participation in the affairs of the state. Their acquaintance with the thought of France made them intolerant of institutions in any form. We are not surprised that they allied themselves with the republican element. Among a people as generally illiterate as the Portuguese their mental achievements were held in such esteem that their advancement in politics was assured. Little by little they have attempted to disseminate their philosophical theories of republicanism and of liberty, often misguided in their methods, it is true, but inspired with a high ideal of national unity and of individual freedom. It is fitting that Portugal should have chosen as her pilot across the trying sea of constitutional reform the man who, by his works and by his teaching, has been the most important factor in making possible a peaceful transition from the *ancien régime* to a new order.

Theophilo Braga is the son of a former artillery officer, who, on the termination of the conflict between Dom Miguel and Dom Pedro, in 1834, entered the teaching profession in his native town, Ponta Delgada, on the island of San Miguel, in the Azores. There Theophilo was born on February 24, 1843, the youngest of several children. His mother died when he was three years old and the stepmother who came into his home in the following year filled with bitterness the formative period of his life. His early training at the *Lyceu,* where his father was professor, was supplemented by his own reading in the printing shop where he worked in spare hours. At the age of sixteen he published a little collection of sentimental verse, called "Folhas Verdes" ("Green Leaves"). On the point of taking ship for America in the following year to escape his domestic unhappiness, he was persuaded by his father to go to Coimbra to enter the course in law. In April, 1861, he was on his way to the Continent—a moody youth with infinite mental curiosity and boundless confidence in himself.

The atmosphere of the university, which he afterward described as a "lazaretto cloistered from modern ideas," seemed to him then a paradise of freedom, and he plunged into the new world of study with enthusiasm. Altho forced to eke out his meager allowance by various activities, such as translating Chateaubriand, he found time even amid his legal studies to continue his poetry, and in 1864 surprised his comrades by the publication of a long epic poem, the "Visão dos Tempos" ("Vision of the Ages"). This poem, manifestly suggested by Hugo's "Légende des Siècles," in its three parts pictures the development of mankind thru the cycles of fatality, of struggle and of liberty; its various lyric and narrative episodes form an epic of humanity. Its success was immediate. Young Portugal acclaimed a new high priest in this islander with his far-reaching outlook. But meanwhile the law had not been neglected, and in 1868 he was admitted to the doctorate. For three years he lived an uncertain life, writing verse, publishing his collections of early Por-

tuguese popular song, trying in vain for an appointment at Porto and at Coimbra.

In 1872 he presented himself as a candidate for the chair of Modern Languages in the Curso Superior de Lettras, in Lisbon, and in public competition defeated Pinheiro Chagas, his chief rival for the appointment. With his activity as a teacher of Portuguese literature begins a vast history of that literature, which in its thirty-two volumes already published leaves hardly a phase of the development of the art of letters untouched. His interest has dwelt chiefly on those works and periods which seemed best to illustrate the unfolding of the national genius; his purpose has been to demonstrate the identity of a Portuguese Renaissance.

The necessity of filling a temporary vacancy in the chair of Universal History at the Curso a few years later led Senhor Braga to a new field of investigation, the results of which are embodied in his "Historia Universal." Even more important for his mental development was his study of philosophy, also begun in connection with a course in the Curso. In Auguste Comte he found an interpretation of the universe and of man well suited to his temperament and he soon became the leading representative of Positivism in Portugal, expounding his ideas in the "General Outlines of Positivistic Philosophy" and in a "System of Sociology." Incident to his wider grasp of human problems came a series of investigations in Portuguese ethnology and folk-lore. Braga now set before himself the task of realizing the threefold activity of the human spirit,—the poetic, the scientific, the philosophic. Surveying his work as a whole, he proceeded to balance its various parts. To his "Vision of the Ages" he added another volume; the mental activity of Portugal was treated in a "History of the University of Coimbra"; philosophy in its relation to politics was the theme of his "Positivistic Solutions of Portuguese Politics."

Not the least of the tenets of his religion is the need of action and he entered zealously into public life. As editor of *O Positivismo*, as Republican deputy and leader in the Cortes, as moving spirit of the tercentenary of Camoens, he was tireless in his efforts to spread his teachings, not merely as abstract doctrines—and here he differs from the rationalistic philosophers of the eighteenth century in France—but as a practical solution of the problems which confront his people.

Senhor Braga's activity has been incredible. In the forty years during which he has taught in Lisbon, he has written more than a hundred books, covering almost every phase of Portuguese life and thought; he has maintained relations with the principal thinkers of Europe; he has been a leading spirit of the republican movement of Portugal. In such a crowded career, it is not to be wondered that his productions are not impeccable; the casual reader finds them full of inaccuracies, of inconsistencies, of hasty generalizations from insufficient data. But he has performed a service which cannot be overestimated. To him must be assigned the chief credit for awakening Portugal to a consciousness of her national entity in history and in art, and for pointing out her intimate relations with France and the other countries of Europe. He has come to stand for the best that there is in the Portuguese genius.

Such is the man who has been named as the head of the Provisional government. And his associates are men cast in the same mold. Affonso da Costa, Minister of Justice, long a professor of law in the University, a lawyer of wide reputation, is regarded as one of the ablest speakers and keenest thinkers in his profession. Bernardino Machado and Antonio d'Almeida are literary men who have cast in their lot with the progressive movement of constitutional reform. These men are neither agitators nor demagogs, but intelligent thinkers, men men who are convinced that the existing conditions under the monarchy were impossible. Too much emphasis cannot be laid upon the philosophic nature of the revolution. Not the king, nor the dynasty is the object of their attack, but an outworn principle of hereditary right to govern, of the existence of a class of privilege. The movement which they head is not the protest of a downtrodden layer of society, demanding economic and industrial relief, but the inevitable

progress of the individual toward social equality with his fellows.

The task which lies before these leaders is not an easy one. Whether their theoretical plans will prove adapted to the peculiar needs of their position is a question. The possibilities of the Portuguese race are greater than ever; in Brazil and in Africa are wide opportunities for industrial development and for trade; at home are prospects of increased activity in mining and in manufactures. There is little doubt that the possibility of a Pan-Iberian alliance is remote. Theophilo Braga is a federalist, but he is a Portuguese federalist and he has spent the greater part of his life in indicating how the Portuguese nation has grown up in her own traditions and in her own characteristic expression. We may believe that he will seek now a way whereby she may work out her own salvation. That scenes of violence will attend the establishment of the new government may be expected; six men were killed and more than fifty wounded in the riots at the last general election in Lisbon. The spirit of mob rule will appear in any time of disturbance even in the most cool-headed countries. But that any measures of lawlessness or violation of personal rights or property will be tolerated or connived at by the authorities is out of the question. Theophilo Braga and his associates are men to appreciate the seriousness and responsibility of their high calling; we may look to them to restore to their fatherland the prestige she once enjoyed when Portuguese ships were pioneers on every sea.

New York City.

Origin of "Amateur Night"

BY ROBERT GRAU

Author of "Forty Years' Observation of Music and Drama."

THE "Amateur Night" was a feature of variety theaters long before the era of what is now called refined vaudeville; the Bowery was the scene of its original glory. Here, in the old London Theater and at Harry Miner's, twenty-odd years ago, were seen men and women who were serious in their efforts, but absolutely ludicrous were their portrayals.

This type of performance emanated from the appearances in the leading theaters of various "freaks," so called because they actually accentuated their shortcomings, and this resulted in a veritable burlesque, which was greatly contributed to by the audiences.

The first of these was the "Count Joannes," also known as George Jones, and once a real actor in the old Bowery Theater. Jones was, by training and instinct, an intelligent player; he was not the fool his audiences took him to be. He saw that if he would permit his hearers—Wall Street brokers and men about town—to have fun with him, he could prosper, and he thought better of that sort of career than the miserable existence which was his as a legitimate actor. So he just emphasized his incongruities. His make-up as Hamlet was so excruciatingly funny that the late E. A. Sothern, father of the present star of the same name, copied all of his characteristics and mannerisms, and made the greatest success of his later career in the title role of "The Crushed Tragedian." This play ran for a year at the Park Theater, at Twenty-second street and Broadway.

"Count Joannes," however, took every possible advantage of all this sport. He could pack a theater to its capacity at high prices, and he used to say that the public was paying him well for its fun.

Once when playing Romeo to the Juliet of a Miss "Pavonia" Fairbanks, the two provided so much amusement that a riot was imminent. Miss Fairbanks was a very handsome girl, but wholly free from anything that could suggest knowledge of the stage. In the balcony scene some one in the gallery cried out, "Oh, George!" another bel-

lowed, "Pavonia, do give George a kiss!" still another suggested that Juliet "take the Pavonia Ferry;" and finally the stage was strewn with cabbage heads. During all this racket not a word spoken on the stage could be heard. Jones, however, came to the center of the footlights. He picked up one of the cabbage heads, and, addressing the audience, said in a low, tragic voice: "Oh, cabbage head, gaze upon your brothers!" This brought on some real applause, and at the close of the act the leading members of the cast were called before the curtain, for it must be remembered that the best actors were often found in support of these travestical stars. One of these—a sterling actor named Robert Johnston—started to address the audience in resentment of the degrading spectacle in which he was forced to figure. Jones rushed up to him and cried out loudly: "How dare you address the audience where I am the star?"

The audience just howled at this, but Johnston's sonorous voice was heard above all the rest as he responded:

"Well, if you are the star, it is but fair that you should catch all the missiles."

Another "freak" star was James Owen O'Connor, and he was indeed a festive tragedian. He was wealthy, and as long as he lived was enabled to prosper; but he lacked the seriousness which made the vogue of the "Count" so prolific. O'Connor gradually reached the lower-class theaters. He never understood, like Jones, that he was regarded as a joke; and this fact prevented him from enjoying equal prosperity. O'Connor died rich, but he was a man of means before he became "a tragic star."

The Cherry Sisters were four girls from Iowa. They were just a quartet of incompetents, and were so indifferent as to their reception by the public that they were in demand for many years, at a salary far higher than would have been accorded them if they had possessed real ability. There was, though, something approaching cruelty in the spectacle which these poor females presented, night after night, in exhibiting their crudities to howling, insulting audiences. It is, nevertheless, to be regretted that a truthful statement of the facts necessitates the recording here of the almost unbelievable instance where these four girls were paid $1,000 a week at a time when hundreds of worthy and accepted public favorites, who would have been glad to receive one-tenth of this sum, were unable to receive consideration.

The present vogue of the "amateur night" is of vastly different character. The performers are actually paid, and not all are found wanting, though an effort is made to uncover "foolish Thespians." This has resulted in the better class of theaters eliminating the "amateur night" from their programs, but in their place have come thousands of lower-grade houses, and these devote one and often two nights a week to this species of entertainment.

Hundreds of worthy acts, too, have been first discovered at one of these functions. So true is that, that a tendency to change the character of the whole procedure is in evidence, and now instead of the "amateur night" we have, or rather are gradually to have, the "weekly try-out night," which is a function characterized by some dignity and none of the disgraceful incidents of the older affair.

The one man to make a business of providing the "turns" for the "amateur night" is Mortimer Kaphan. He has, for about two decades, been offering his services as the successor of Booth and Forrest, and, doubtless, the manner in which he was received has suggested to him the wisdom of entering this field on a wholesale scale. At any rate, he certainly has unearthed the "real thing" for the purveyor of this tomfoolery, and has supplied the talent for hundreds of the theaters where the receipts on "amateur night" are so large as to justify the managers to add to their weekly outlay a considerable sum to compensate Mr. Kaphan and his colleagues for their efforts.

The "weekly try-out," as now conducted under such dignified and earnest showmen as William Fox, Marcus Loew and William Gane, is gradually developing into a serious and interesting proposition, where the majority of the offerings are found to possess possibilities for perpetuity.

Mount Vernon, N. Y.

The First of Our First Families

BY E. P. POWELL

Author of "The Country Home," Etc.

SOME time ago I gave you two or three articles on our first families in the vegetable kingdom. I omitted the greatest of all, that is the apple family (Rosaceæ). Just where this family originated we do not know, but its widespread adaptability and its capacity for coöperating with human life is something wonderful. Not less wonderful is its botanic origin. If you will walk down this swale side, I shall show you different members of this family grouped in as pretty association as you could ask for. Under your feet you will notice a little creeping shrub, not conspicuous for beauty, but useful for holding slippery banks or to trail about rockeries. Not far away is a plant a good deal like it, but standing two or three feet high, and with stout branches that bear a small red flower. Both of these are potentillas. It is a very large family, many of the members supposed to have medicinal properties, and some of them popular shrubs for our lawns. Just south of these stands the orchard of eighty varieties of apples, and throwing shadows that reach the minor plants. In some way this potentilla family managed to evolve those apple trees.

While we are discussing the marvel we walk around by the rose garden, where we have over a hundred sorts, from all parts of the earth, with not a few that are products of the skill of our own florists. My rose bed is hardly less wonderful than the orchard, and both of them bear the names of the most distinguished men, who are proud to be honored by these greatest achievements in the vegetable world. Pleasantly talking, we stroll into the small fruit garden, where we lose ourselves sampling the newer sorts of plums and peaches and nectarines, all of them, together with the cherries, members of this same family. This is not all, for as we turn around the corner of a tall arbor vitæ hedge, we find ourselves in an enclosure filled with raspberries and blackberries, while on one side is a border containing forty sorts of strawberries. Every one of these fruits is related to those already named; but so noble is the apple in its position in the vegetable kingdom, that I have called the whole group the apple family.

The extinction of this family would not only modify civilization but go very far toward making human life impossible on the globe. Is there anything more beautiful in the world than an apple orchard when hanging full of fruit in autumn? I always dislike to pick the apples from a McIntosh Red or a Black Ben. It seems desecration. It is not surprising that the Japanese sing songs to the cherry tree. A rose bed will give us superb flowers, unmatchable for gold and crimson, but give me a round-headed, compact-growing little cherry tree in May. It becomes one mass of delicately tinted pink-white flowers. If a severe winter has managed to prevent the blossoming of the cherry trees spring is lonesome. It does not seem natural to go thru May without a profusion of flowers in the small fruit garden. These same cherry trees are equally glorious when hanging full of fruit. The exquisite form of the cherry, hanging down on a delicate stem, seems to be one of

Nature's ideals. Nor must we forget the wholesomeness that this family of plants attaches to our spring weather. If you wish to breathe health, and feel sure that every breath is giving you additional life, go out into an apple orchard when it is in full bloom, and exercise your lungs as freely as you will. Oxygen becomes ozone, and the air is purified of every taint. As for the fruits themselves, Nature has managed to string them all along thru the year. Probably we should like the strawberry nearly as well if it ripened in September, but I am not quite sure of that. Coming in June, it catches us just at the time when we want something juicy and rich and fresh. We are well tired of stored fruits and canned goods, and go from our cellars into the garden first of all to look for the strawberry.

Having taken its cue, which in each case must have been a very slight variation, owing to some change of environment, this family of plants followed out its lines of evolution wonderfully well. It seems impossible that from some humble potentilla origin, Nature should have taken one rest in a rose garden, another in an apple orchard, another in a thorny blackberry field, and then stooped low to express her pleasure over a bed of blushing strawberries.

It is difficult to trace with absolute certainty just the part which man has borne in the evolution of these rose fruits. Probably the peach has been cultivated as long or longer than any of the rest. It is supposed to be a native of China, where it was patiently cared for and made much of. In the very earliest historic times it became a Persian fruit, and in some indirect way the word peach is got out of the word Persian. From Persia the peach passed over into Europe, and was brought to America very early by the Spaniards. It has run wild all over the Southern States, and comes up freely, from the stones that are thrown away, as far north as Massachusetts. The pear seems to have preceded the apple somewhat in establishing relations with man, if we judge by its remains in the kitchen-middens of the lake-dwellers. Still the pear of that day was not very much like the Sheldons and Anjous of the present time. The cultivated pear comes from two distinct sources, from Asia and from Europe. It has taken nicely to American soil, and has served to awaken the enthusiasm of a host of our noblest horticulturists. The apple is also found in the refuse heaps of the lake-dwellers, completely charred but showing the cores and the grain of the flesh. While the tropical sections can boast their oranges, melons and custard fruits, the temperate zone insists that Nature has done more for her in giving her the apple. It is kingliest of all the rose family. It came over into this country very early, with the Puritans; and was also carried to Jamestown. It thrives in all our soils, but especially in the clays. The apple of even that date resembled what we would now call cider apples, altho there were two or three pippins and greenings good enough to be still in our orchards.

The strawberry also owes a great deal to man. When some of us were boys we knew no pleasure greater than that of going strawberrying. That meant that we took pails on our arms, or baskets, and went into the pastures, sometimes tramping down the meadow, to gather by a long day's searching a few quarts of luscious berries, few of them as large as the tip of your little finger. I shall never forget the first sight that I had of the Sharpless strawberry. It was in 1884, and was the first of the mammoth-sized berries that came from the skill of the cross-breeder. We had already grown the Wilson and the Hovey; and had secured from these a large number of delicious sorts, all of moderate size. We had given up strawberrying in the pastures. A delightful art had been lost, but another art had been invented or discovered. We had learned how to make new sorts of berries, and had multiplied them by two in size, twice over. The Sharpless came as a leap in natural development. That is the way that things go on in evolution. Man works hard for a while to get a little improvement; then Nature, with a laugh, tosses a huge berry or a great Northern Spy apple into his lap. This Sharpless strawberry was simply enormous, as things then were, but to-day we have the Mark Hanna and the William Belt to shame it in size and in quality.

I have sometimes thought that every one of our fruits had just one specific place, where it gave the most exquisite pleasure. A baked apple is a good thing, and an apple pie rightly made is hard to beat. I do not wonder that apple dumplings were condemned by some of the old Puritans, for they do sometimes lie heavy on the stomach—but a genuine dumpling is too good for any king. However, the right eating of the apple, when it gives the most perfect pleasure, is out of hand. I could name a half dozen apples that any dyspeptic could eat and be none the worse for it. Burroughs says that he does not think that a country boy lives anywhere who does not prefer to all other things a bowl of strawberries and milk. I differ with him. The proper place for the strawberry is floating on thick cream and gently dusted over with granulated sugar. Don't use that sugar that tastes like flour. As for blackberries I am sure that Nature made them for two distinct purposes. A blackberry pie beats all other pies, without competition—if rightly made; with just enough juice, and just enough flour, and just enough sugar to leave the berries immersed in pulp. Alas! how easy it is to mar perfection; but you can find a perfect pie in blackberry time only. There is one more use for the blackberry that admits of no qualification. It is when Ned, having brought in a quart of delicious Eldorados, tumbles them into a two-quart bowl of milk, and, with cold rolled wheat or brown bread, goes to an arbor or under the shelter of an apple tree to eat it. He wants no company; he has no time for talking. The black raspberry, when dead ripe, is quite as good as the blackberry to be eaten with bread and milk. I do not think the red raspberry is anywhere else as fine as when floating in cans, in its own carmine juice—the pride of the housekeeper, conscious of perfected household art.

The apple has probably entered into cooking more freely than any other one of the family. A glass of fresh cider made from apples, clean and perfect—three quarters pippins and one quarter Pound Sweets, makes a drink good enough for anybody. Ordinary cider is a very different thing—the expressed juice and dirt of a very filthy mess of waste and rotting apples. Our fathers loved apple butter, and I do not see why it is not a good thing nowadays. It would be far healthier for our city people of moderate means than the greasy compounds which they take to be butter from the cow. Peanut butter is the only fair rival for the fine old apple butter of Massachusetts and Pennsylvania. The Dutch colonists made it to perfection. I take from an old record, "apple-moise, apple-sticklin, apple-hoglin, apple-twelin." Piers Ploughman says that the poor lived largely on baked apples, but "it was food fit for the gods; and they also ate apples beaten up with ale."

The peach used to be held as the type of married love, and brides wore the pink blossoms. It was for a long while held to be a doubtful fruit for food, because of the presence of prussic acid. Gerarde says, "Peaches be cold and moist, and hath a juice and substance which doth easily putrifie; and yieldeth no nourishment, but rather bringeth hurt." The peach now shows no trace of anything detrimental to health, and enters into human diet as freely as any other fruit. Twenty-five years ago it classed among the luxuries. Nature, in making the peach tree, created the growth buds hardy, but for some reason known by herself she left the blossom buds a good deal more tender. The result is that our peach trees will grow several degrees farther north than fruit can be obtained. This is probably one of the problems Nature has left us to solve. We must get a peach hardy enough to give us fruit, without exception, all thru the Northern States. When this is done the peach will enter into our culinary department quite as freely as the apple. So enormously productive is this fruit that during the ripening season it is a remote section of the country that cannot get enough Crawfords and Elbertas for immediate consumption and for canning. Up in Minnesota they have a trick of tipping the tree down in winter, and covering it, loosening a part of the roots. A peach tree will easily grow and bear fruit in a large pot or box. If such a tree is shoved into a closed shed or cellar during the winter, it will be loaded with fruit even in a very cold climate.

Unfortunately, or possibly fortunately,

many of our choicest pears and grapes and strawberries and even apples are unable to pollenize themselves. The result is that a whole vineyard of Brighton grapes will stand fruitless; but if every other row be Worden's or Moore's, there is not a grape in existence that will bear a heavier crop of splendid bunches. One has to know about these things or he will make a desperate failure of his garden and orchard planting. It is desirable to open a little bee yard either in or close by the orchard, and invite our thorny friends to take hold with us. Nature can do some of the work with her wind, but the bees and other insects are allies of immense importance. There are hundreds of varieties of bees in America, and nearly all of them are more or less useful in the orchard. The honey bee adds quite a deal to his stores from decaying fruit, which he clears up. Raspberry honey, made from the fruit, is not as good as that made from the flowers, but it is of considerable importance. This nice correlation between insects and fruit and wind and weather and shelter is something man must put his wits to. It is not likely to be brought about by any other means. Ten hives of bees will give five hundred pounds of honey at a low estimate, and double the chances for a heavy crop of fruit.

It would surpass the power of the most optimistic to tell us what will be the apple, pear, peach, plum, cherry, and berries of the future. Old sorts are constantly crowded out by better; and even new classes added. Purple raspberries are produced by crossing or mixing the red and black, making a very large and luscious fruit, the seedling of which generally run home to the black. It is, however, a hopeful germ for something still finer. In our semi-tropical sections, Florida and California, fruit growers have gone back to the older and undeveloped stock, to start out a new line of evolution all thru this rosaceæ family. They get from China the sand pear, and from it have evolved the Le Conte and the Smith and the Magnolia, all of them well fitted for growing in sandy soil and hot climates; better than the Sheldons and Seckles and Bartletts and other sorts that have come out of the old line of pear evolution that has been going on for two or three thousand years. The Chinese peach has also been reintroduced, and the number of exceedingly fine seedlings and cross-breds includes the Honey, the Jewell, the Bidwell, the Angel, all very useful and delicious sorts, of very recent origin. These in turn are sending their pollen over into the Georgia orchards of Elbertas and Champions, and producing a still finer race. The end of it is not in sight. The story of the Southern apple is just as interesting Where until recently it was supposed that the apple would not thrive at all, we have already a good list growing side by side with the orange and loquat. It is a curious fact that the very apples which are hardiest in the North, those that are selected for Minnesota and Maine, prove to be the kinds most adapted to the Florida soil and climate.

I am just now gathering in load after load of Northern Spys, and Baldwins, and McIntosh Reds, and Golden Pippins. In this golden month of October the apple rules not only in the orchard but in the house. Its fragrance fills the winds, and rolls over the pastures. Apples are everywhere, in piles, in barrels, and rolling down the watercourses. The brooks are full of them—red and yellow and striped; and in the sheep pastures there is no longer need of clover. All the boys are munching apples, and at corners octogenarians peel apples and look happy. They let the long peelings reach from the apple down to the ground —careful not to break them. Toothless? Oh well; there are apples nowadays that do not need teeth; they melt down the enchanted way that goes very close to the heart—predigested bliss. I wish all creation could lie down on this hillside, under these tired apple trees, on these contented apple leaves; could look down over the Oriskany Valley, harvest-bewildered, while the October sun kissed them, and the south-born breeze whispered kind words in their ears. Go into the country, my friend; buy an acre, and plant an apple tree before you die. Nature developed us together, and we should never be divorced; we and the apple family.

CLINTON, N. Y.

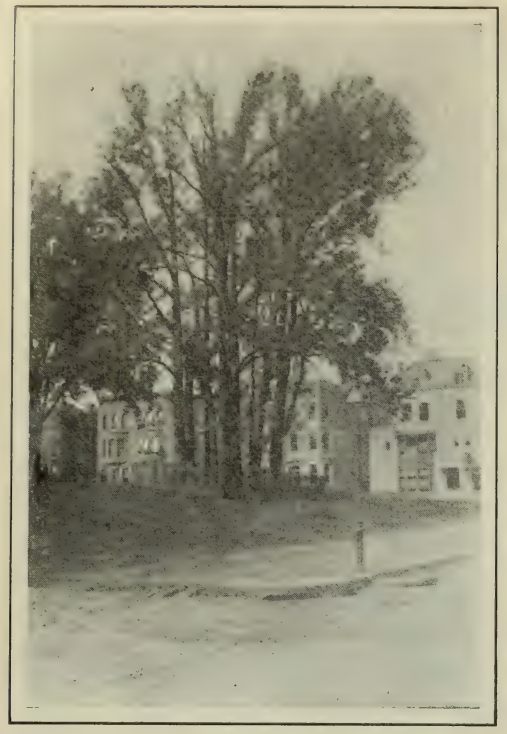
Celebrated and Historic Trees

BY GENERAL JAMES GRANT WILSON, LL.D.

[Our readers will remember the interesting article in our issue of August 9, 1906, by General Wilson entitled, "Some Celebrated and Historic Trees." The present article pursues the subject further. General Wilson has written much on American history, of which he is a recognized authority.—EDITOR.]

IN January, 1908, President Roosevelt accepted from a public-spirited citizen of Illinois and his wife 295 acres of primeval redwood forest in Marin County, California. The land lies on the southern slope of Mount Tamalpais, only some six miles from San Francisco. In his proclamation the President announced that the grove was to be known as the "Muir Woods National Monument," the name being bestowed in honor of John Muir, the noted naturalist. By this patriotic gift the forest of giant sequoias, which are older than the Pyramids, and were swaying in the Sierra winds when our Saviour walked the earth, will be preserved forever. A year later Roosevelt signed the bill for the creation of the Calaveras National Forest, thus completing the legislation which preserved for all time the most celebrated trees in the world. This act was the culmination of efforts extending over a decade to save for the endless ages California's most famous grove of sequoias.

THE CHARTER OAK, Hartford, Conn.



As mentioned in a previous article, the Big Trees (*Sequoia gigantea*) and the Redwood (*Sequoia sempervivans*) were properly named after the Cherokee chief who in the past century first revealed their existence to white men by guiding them into the Mariposa grove to behold trees 300 feet high and more than three thousand years old.

Indeed, by many it is believed that they are the greatest and grandest, as well as the oldest living things to which in all the ages of the world God has given life. Muir, the explorer of the Pacific Slope, says that he has seen sequoias 36 feet in diameter, exclusive of bark, and containing more than 4,000 annual wood rings, in which there was no trace of decay after all these many centuries of mountain weather. "I never saw," he adds, "one of these giant trees that was sick or showed the slightest sign of decay; they live on thru indefinite thousands of years, until burned, blown down, undermined, or shattered by some tremendous lightning stroke."

To those who cannot gaze upon these giants of the California coast, the most majestically graceful of trees, the writer is glad to mention that in the New York Museum of Natural History may be seen a section of a sequoia 60 feet in circumference. The face of the specimen as it now stands is about 16 feet in diameter, and its estimated weight is 30 tons. In the same spacious hall is to be seen the Jesup collection of sections of American trees, the largest and most complete in existence. They number 504, including a fine example of the redwood from Mount Tamalpais, where the visitor can view "the fairest scene in the most enchanting corner of the Western World."

A good sized church in Santa Rosa, Cal., enjoys the distinction of having been constructed entirely from a single sequoia. Altho the edifice includes a spire, a considerable amount of building material was left over, after the church was completed.

There is in the National Capitol a Hall of Fame, where each State is permitted to be presented by two of its most prominent men. To this interesting collection

HAMILTON GROUP OF THIRTEEN TREES.

of statues in bronze or marble will soon be added the stalwart figure of Sequoiah, or Sequoyah, the first of American Indians to be so honored. He was born in Georgia in 1770, but he invented the alphabet of eighty-five letters after the Cherokees were removed to the Indian Territory. It is still in use by his tribe. During a visit to Mexico the chief disappeared, his body never being recovered. Oklahoma, where Sequoiah spent a score of his last years teaching the Cherokees to use his alphabet, proposes that he shall be one of her representatives in the nation's Hall of Fame.

Except the sequoia, there is no American or European tree that outlives the yew. There are several still growing around English heathen places of mystic ceremonial and in resting places of the dead, that are older than the introduction of Christianity into Great Britain. The largest known is in the churchyard of Aldworth, in Berkshire. Evelyn described the celebrated tree, and another writer who saw it in 1841 asserted that it had grown half a yard in girth since 1760, where its size was given in the "Beauties of England." In the churchyard at Darley Dare is to be seen the oldest yew in the world. The rector of the parish, who believes it to be 3,000 years old, writes:

> "There can be little doubt that this grand old tree has given shelter to the early Britons when planning the construction of the dwellings that they erected not many yards to the west of its trunk; to the Romans who built up the funeral pyre for their slain comrades just clear of its branches; to Saxons, converted, perchance, to the true faith by the preaching of Bishop Diuma beneath its pleasant shade; to the Norman masons, chiseling their quaint sculptures to form the first stone house of prayer erected in its vicinity, and to the host of Christian worshipers, who, from that day to this, have been borne, under its hoary limbs, in women's arms to the baptismal font, and then on men's shoulders to their last sleeping place in the soil that gave it birth."

The noble yew tree, pride of Lorton Vale, and the "Fraternal Four of Borrowdale," celebrated by Wordsworth, were probably among the largest and oldest of their kind in England. Writing at Grasmere in 1803, the poet said:

> "There is a Yew-tree, pride of Lorton Vale,
> Which to this day stands single in the midst
> Of its own darkness, as it stood of yore;
> But not to furnish weapons for the bands
> Of Umfraville or Percy ere they marched
> To Scotland's heaths; or those that crossed the sea,
> And drew their sounding bows at Agincourt.
> Perhaps at earlier Crecy, or Poictiers."

Wordsworth believed the Lorton yew to be older than the Christian era, while Hutton, the venerable guide of the poet's period, assured visitors that the tree was growing before the time of the flood!

Four summers ago I saw an ancient, and perhaps the most interesting, yew tree in Scotland, casting its afternoon shadows over the graves of Sir Walter Scott and his son-in-law Lockhart. It was a favorite with the master of Abbotsford and was the spot selected by him as his last resting place among the ruins of the ancient Dryburgh Abbey. The yew, I was assured by my Scottish companion, was as old as the monastery, which takes us back to the days of Saxon Harold, and he told me that when Scott visited Christopher North at his Lake Windermere cottage of Elleray, he was taken to see the famous "Great Yew Tree," still standing in the Ullswater churchyard, as celebrated as Sir Walter Raleigh's favorite yew, which is yet growing on the es-

tate of Myrtle Grove, near Youghal in Ireland, where he once lived.

In Wordsworth's beautiful poem "Yew Trees" he introduces the adjective "unrejoicing," the meaning of which is not clear to the present writer: "Boughs, as if for purpose decked, with unrejoicing berries." Perhaps this may refer to the poison that lurks in their seeds, or of the sad association of the tree on which they grow. In poetry the yew is generally associated among the authors of the Elizabethan age with the English longbow. Drayton in two lines says:

All made of Spanish yew, their bows were wondrous strong:
They not an arrow drew, but was a cloth-yard long.

Our Christian forefathers regarded the yew as symbolic of happiness, planting and protecting them as stately ornaments of their burial places. A thousand years ago, and down to the days of "Bonnie Prince Charlie," the Scottish clansmen were gathered for battle by the fiery cross of yew. In his most popular poem Sir Walter writes:

A slender crosslet form'd with care,
A cubit's length in measure due,
The shaft and limbs were rods of yew.

Various reasons are assigned for the planting of yews in churchyards. It is said to have been a sacred tree among the early English, as the date palm was with the Arabs and the Athenians, the plane tree among the Lydians, the ash with the Scandinavians, and the banyan among the inhabitants of Ceylon. Some writers affirm that the yew being an evergreen, it was considered typical of the immortality of the soul, while others consider it a substitute for the sacred palm—in East Kent, England, yew is still called palm by the peasantry. John Evelyn maintains that branches of the yew being employed in processions, it was well to have the trees convenient to the church.

The cypress, twin mourner to the yew tree, is the symbol of tears. A marvelous specimen is associated with Montezuma and his conqueror Cortez at Chapultepec, proved recently by Mexican scientists, to be more than six thousand years old! In early times this huge cypress was an ob-

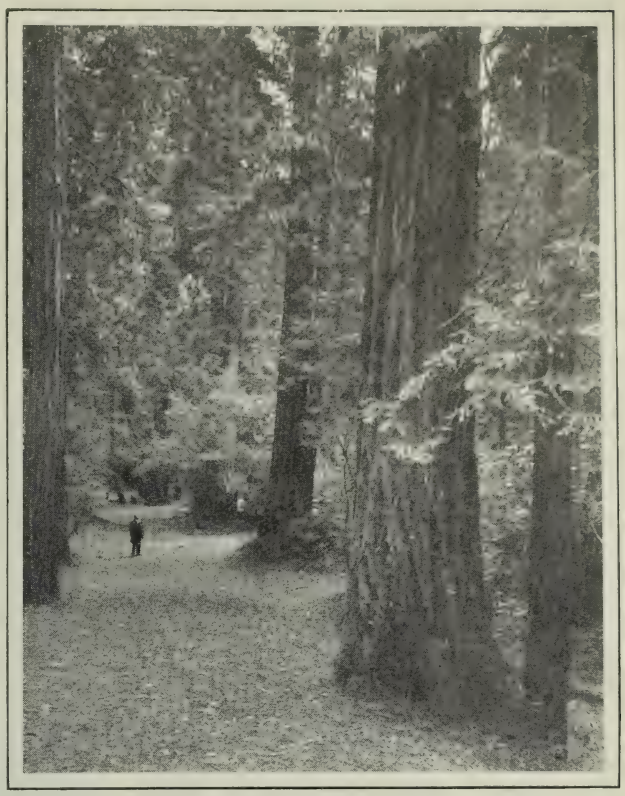
BRYANT'S THANATOPSIS ELM, NEAR WILLIAMSTOWN, MASS.

ject of the greatest veneration among the natives. The tree attracted the attention of General Scott during the Mexican war, and it was under that giant tree that Major Lee and Captain Grant first met, who seventeen years later met again at Appomattox to attend to an important matter of business. Under another interesting cypress the writer read a portion of Irving's "Conquest of Grenada." It is known as the "Sultana's Cypress" and stands in the Generalife Gardens of the city of Grenada. When Ferdinand and Isabella entered the city in 1492 the wife of Boabdil, last Moorish sultan of Spain, took refuge in the trunk of the enormous tree, around which have twined

dians as the *Ahuehuete,* and in Spanish is called *Sabino.*

A cedar tree was recently discovered in California whose age is believed by geologists to be twenty-five thousand years! It was found standing in an excellently preserved state in the heart of a mountain several hundred feet below the summit. The antiquity and importance of the tree from a paleozoic, and also from a geological, standpoint are obvious. About the same period a cedar was cut down on St. John's River, Washington, whose age was given as 2,184 years. During the same season another cedar was discovered not far distant which is still standing. Its age is unknown, but it is de-

THE THOMASVILLE LIVE OAK.



many other interesting associations during its life of six or more centuries, some of which I have heard related by Washington Irving. Still another cypress worthy of mention is the celebrated *Noche triste,* or "unhappy night" tree, in the village of Popotla, near an ancient church in the environs of the city of Mexico. Cortez is said to have sat under this tree lamenting his misfortune after the retreat of the Spaniards during the night of the evacuation. The tree is known by the In-

scribed as being more than fifty feet in circumference measured six feet from the ground, and its diameter about seventeen feet.

The cypress is believed to be the cedar wood of the Scriptures, and possibly the gopher-wood also. Specimens of cypress are known to be several thousand years old. Perhaps the finest examples of the cypress, attaining a hight of one hundred and fifty feet, are those to be seen at Monterey on the California coast. Philadelphia possesses an interest-

ing cypress, planted in the first botanical garden in this country by John Bartram, the father of American botanists. He brought it as a sapling from Florida about 1740. The tree attained a hight of 175 feet and is still standing, but it died a score of years ago.

The Cedars of Lebanon have been celebrated from early days, being frequently described in sacred and profane literature. The original groves mentioned in the Bible have become greatly reduced thru various causes, but there are still many thousands of these noble giants of the mountains, who are first cousins of our redwood trees of the Pacific Coast. The most important group is called by the Arabs "Cedars of the Lord." Among the four hundred is a circle of gigantic growth named by the natives "The Twelve Apostles," upon the strength of an ancient tradition that our Saviour and His disciples, having arrived at Kadisha and left their staves standing in the ground, these staves sprouted into cedar trees. There is a Maronite chapel in this grove of sacred trees, its patriarch claiming their ownership, and fortunately the superstition with which for centuries they have been surrounded has happily been their salvation.

MUIR WOODS NATIONAL MONUMENT.

Saadi, the Persian poet, in his "Gulistan or Rose Garden" says:

"They asked a wise man, why out of many famous trees which the Almighty had created, lofty and fruit-bearing, the cypress alone is called free, altho it beareth no fruit? He replied, 'Every tree hath its appointed fruit and season, with which it is at one time flourishing, and at another destitute and withering: to neither of which states the cypress is exposed, being always flourishing, as in the state of those who are free. Place not your heart on that which is transitory: for the River Tigris will continue to flow thru Baghdad after the Khalifs shall have ceased to reign. If you are able, imitate the date tree in liberality: but if you have not the means of munificence, be free like the cypress.'"

At Hebron, where Abraham lived, a thousand feet higher than Jerusalem, may be seen Abraham's oak carefully protected by a handsome iron railing. It is unquestionably the oldest of living oaks. Even if the battered veteran with a trunk ten feet in diameter is not, as it is claimed, the very tree that shadowed Abraham's tent, it is doubtless a son, or grandson, of the gigantic oak of Mamre. Here under the majestic tree the patriarch entertained the heavenly strangers. A friend who was there a few years ago writes:

"From the tower on the hill back of the old oak the view swept from the Mediterranean to the Dead Sea. I do not wonder that the angels came here, the shade of the oak, the balm of the pines, the water from the spring, the view across the valley, all making it almost a heavenly spot."

Rollo's oak near Rouen, the famous tree upon which the first Duke of Normandy is said to have hung his gold chain over night a thousand years ago, as a token of the good order to which he had

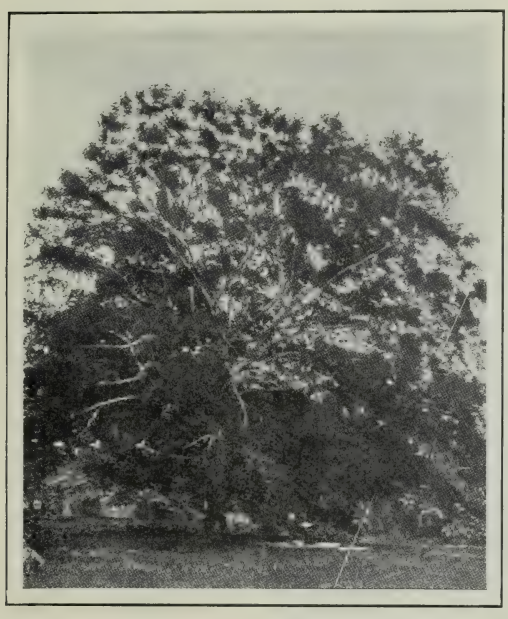
brought his province, seemed likely to collapse when I last saw it. Since then an arboricultural genius has supplied it with a solid new inside of masonry, and it is again flourishing with undiminished vigor. This Rollo, it may be stated, was the Scandinavian sea king who compelled the king of France to yield Normandy to him after he had devastated the north of France for many years. In the forest of Fontainebleau may be seen several giant oaks even older and larger than Rollo's. My attention was called to one of these, known as the Bayard oak, an interesting incident connecting the chevalier with the famous tree, which was related to me by my stag-hunting companion, the late Comte de Paris.

Among the many magnificent elms, oaks and sycamores which adorned the ancient hunting seat or lodge of Henry the Second of England at Woodstock was the majestic King's Oak, under which he was accustomed to spend many happy hours with his favorite, Fair Rosamond. It is still a noble tree, and with it is associated the memory of King Alfred, the Black Prince, Charles the Second and Chaucer. The extensive estate was given two centuries ago by the British Government to a successful English soldier and is now known as Blenheim. The two latest Duchesses of Marlborough were Americans.

After a life variously estimated at from eight to ten centuries, the Essex Broad Oak, the majestic monarch of Hainault Forest, perished a score of years ago. For many decades before it fell an annual fair was held beneath its broad branches, none of the booths being permitted to extend beyond the shadow the giant tree cast at noon. Its name has been perpetuated by planting a young oak, and the formation of a cricket club on its site was recently opened by the then Prince of Wales, now known as King George.

Until the present century the ancient Trysting Oak in Harthill Walk, Yorkshire, so frequently mentioned in "Ivanhoe," was standing. It was among the oldest oaks in England and is described by Scott as being venerable when siege was laid to the stronghold of Front de Bœuf. It was felled to the ground in order to preserve the trunk, and a young oak, grown from a "Queen Oak" acorn, planted by the Duchess of Leeds, now marks the spot where the Trysting Tree was growing a thousand years ago. Temple Newsam, another Yorkshire estate, which appears in "Ivanhoe" as Templestowe, the preceptory of the Knights Templar, also possesses a number of noble oaks.

At Hatfield House, the historic mansion of the Cecils, beautifully situated on the River Lea, many interesting relics are preserved, not the least of which is the royal cradle of Queen Elizabeth, an elaborately carved affair of oak. But more interesting to the writer was an ancient gnarled oak, which the late Lord Salisbury liked to point out to his visitors. Under that tree the Virgin Queen was seated when she was informed of the death of her elder sister, "Bloody Mary," and of her own accession to the throne.



MILTON'S MULBERRY TREE.

I have heard the scene described by Dean Stanley: "The Princess Elizabeth," he said, "was seated under the famous oak reading her Greek Testament, being at the time virtually a prisoner at Hatfield. So seated and so reading, her eyes were suddenly attracted to the London road, along which she perceived a horseman riding in haste. As the steed *ventre à terre* reached her side the rider sprang to the ground, and on his knee told her that the cruel reign of blood was over,

and saluted her as Queen of England." From that day to this it has been known as Elizabeth's Oak. As may well be believed, a garden party given at Hatfield House and at the almost equally famous Holland House, with its many magnificent oaks and elms, is always appreciated as a delightful and satisfactory close of the London season.

At Holwood, near Bromley, stands a venerable oak, with a huge, gnarled root projecting on one side into the shape of a rude settee. It was while seated upon

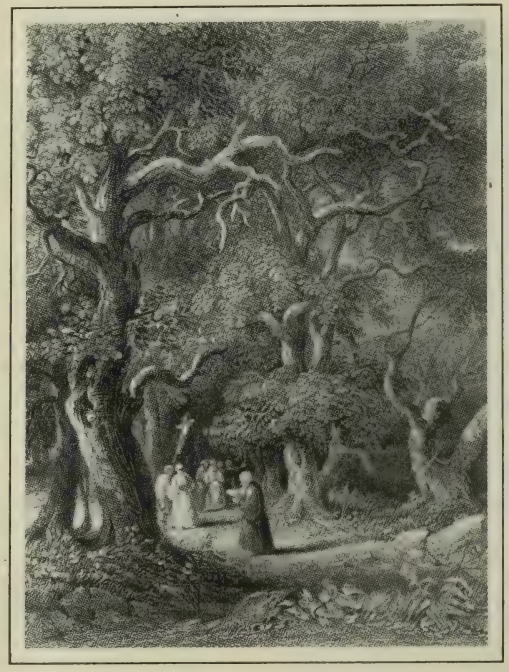
THE BEN-HUR BEECH TREE.

that root that William Pitt and William Wilberforce held together that memorable conversation, as a result of which the latter, on May 12, 1789, brought the question of the abolition of the slave trade before the English House of Commons in what Edmund Burke termed "a manner the most masterly, impressive and eloquent." The historic tree is called "Wilberforce's Oak" and is carefully guarded. Something having suggested to a young friend to speak of several famous English trees to President Lincoln, he said, "Colonel, if I ever cross the Atlantic, and I hope to do so, I shall certainly have a good long look at the Wilberforce Oak."

Writing of his favorite tree close to the Cross of Melrose, and scarcely less honored, Scott says in one of his matchless stories:

"This ancient oak perhaps had witnessed the worship of the Druids, ere the stately monastery to which it adjoined had raised its spires in honor of the Christian faith. Like the bentang of the African villages, or the Plaistow oak mentioned in White's 'Natural History of Selborne,' this tree was the rendezvous of the villagers, and regarded with peculiar veneration; a feeling common to most nations, and which perhaps may be traced to the remote period when the patriarch feasted the angels under the oak at Mamre."*

Except Macbeth's enormous Oak and Sycamore, only survivors of Birnam Wood, the Melrose giant is probably the oldest in Scotland.



The largest white oak in New Jersey and, so far as I am aware, in the United States, stands in Gloucester County, three miles north of Mickleton. Its dimensions are: Height, ninety-five feet; diameter of trunk several feet above the ground, eight feet; spread of branches, one hundred and eighteen feet. It is claimed that this tree is older than the settlement of our country. The handsomest oak on Manhattan Island may be seen near the north end of the Boulevard Lafayette, south of Dyckman Street, where the writer discovered it a few years ago. It is neither so large nor so old as the New Jersey giant, but very greatly surpasses it in beauty. Its proportions are perfect, and it is a matter of regret that the magnificent white oak does not stand in Central or Riverside Park.

Many American elms and oaks, already grown ancient, have been consecrated by the presence of illustrious persons, or by some auspicious event in our national history, such as the Charter Oak at Hartford, which preserved the written guarantee of the liberties of the Colony of Connecticut. I had the good fortune to see the historic tree about a year before it was prostrated by a violent gale of wind in August, 1856. It was said to be a thousand years old and had stood for one hundred and sixty-nine years after the charter was concealed in a small cavity by Captain Wadsworth. Another interesting tree in the same city is the Wadsworth Elm, under which Washington stood during his visit to Jonathan Wadsworth in the Revolutionary War.

*"The Monastery," by Sir Walter Scott, Bart.

Then there is the celebrated Washington Elm of Cambridge, where under the shadows of the grand and wide-spreading tree, the new Commander-in-Chief assumed control on July 3, 1775. After being held in veneration for 135 years, a Harvard scientist assures us in April, 1910, that the great Virginian is in no way connected with the elm and that Washington probably never saw it!

Perhaps the grandest elm in New England is to be seen in Berkshire County, Massachusetts. It is known as the Thanatopis Tree from the circumstance that William Cullen Bryant is believed to have been inspired to compose a part of his immortal poem seated under the beautiful elm when a student at Williams College a century ago. Others attach the same association to a stately tree in Flora's Glen. Both spots were favorite resorts with the young student. The elm was even then of gigantic size, and after two centuries' growth is still strong and healthy, as may be seen by the accompanying reproduction of a photograph recently taken for the illustration of this article.

OAKS AT ALNWICK CASTLE.

When the late King of England visited New York in October, 1860, he planted an elm and an English oak on the Central Park Mall. The latter died last year, altho every effort was made to save it. A souvenir of the tree is now before me in a paper knife, being one of several made for the present writer, who secured a piece of the oak for that purpose. The American elm is perhaps the finest of its age at present growing in the Park. Near it is a walnut planted in 1859 by Washington Irving. They stand near the West drive and south of the bronze group which was erected by Gordon W. Burnham. Bryant's favorite tree was a magnificent walnut some twenty-six feet in circumference and almost two centuries old, growing on his Roslyn country place called Cedermere, of which the venerable poet spoke to the writer on the last day of consciousness in June, 1878. Seated under the superb tree, which still "drops the heavy fruit," a few summers before his death the poet said: "This tree was planted by Adam Smith, and first made its appearance above ground in 1713. It has attained a girth of more than twenty-five feet and, as you see, an immense breadth of branches. It is the comfortable home of a small army of squirrels, and every year strews the ground around its gigantic stem with an abundance of walnuts." The tree is the subject of one of Mr. Bryant's poems:

"On my cornice linger the bright black grapes ungathered;
Children fill the groves with the echoes of their glee,
Gathering tawny chestnuts, and shouting when beside them,
Drops the heavy fruit of the tall black walnut tree."

In the second year of the past century Alexander Hamilton planted with his own hand, as his widow informed the writer when he was twenty, and she was ninety-six, thirteen liquidambers, at The Grange, his country seat near the center of Manhattan Island. They were to commemorate the thirteen original States of the Union he had so largely contributed to cement. I remember first seeing the beautiful group in 1860. They stood in Convent avenue near 143d street, and had been gradually declining for a score of years until December, 1908, when the only survivor died. In 1892

a public-spirited citizen purchased the ground on which they stood, with a view to their preservation, but alas! it was too late. In a note to me Mr. Orlando B. Potter wrote:

"I am hopeful that the city will set apart the whole square, of which my purchase is but a part, as Hamilton Park, as a just memorial of the greatest citizen whom New York has given to the country. I am also hopeful that Hamilton's dwelling, which is at present removed and connected with St. Luke's Church near by as its rectory, may be returned to the place where Hamilton built and occupied it."

Some other trees that have a place in American history and are inseparable from it, because they were so consecrated, may be briefly mentioned: The tall Pine tree* at Fort Edward, N. Y., under which the beautiful Jane McCrea was slain; Boston's famous Liberty Tree, a majestic elm; the Tulip tree on King's Mountain battlefield in South Carolina, on which ten Tories were hanged at one time; the magnificent Black Walnut near Haverstraw on the Hudson, near which Wayne mustered his little army at midnight preparatory to his successful capture of Stony Point; the fine Magnolia near Charleston, S. C., under which General Lincoln held a council of war previous to surrendering the city; the Pecan tree in Villere's plantation below New Orleans, where Sir Edward Pakenham, Wellington's brother-in-law, was killed and near which he was buried, and, lastly, the famous trees at Vicksburg and Appomattox adjoining which General Grant received the surrender of Pemberton in July, 1863, and Lee in April, 1865.

NEW YORK CITY.

*Of the pine tree Ruskin writes: "It is trained to need nothing and to endure everything. It is resolvedly whole, self-contained, desiring nothing but righteousness, content with restricted completion. Tall or short it will be straight. Small or large, it will be round. It may be permitted to these soft lowland trees that they should make themselves gay with show of blossom, and glad with pretty charities of fruitfulness. We builders with the sword have harder work to do for man, and must do it in close-set troops."

The Garden

BY KATHARINE TYNAN

My heart shall be Thy garden: yea,
All flowers and fruits: Come, walk therein,
Thy pleasant garden. Not, I pray
That where thy passion did begin.

No olive-garden dewed with blood,
Watered with tears where thou didst lie,
And knew thine hour was come; the rood
Waiting thee whereon thou shouldst die.

Nay, Lord, the garden, if thou wilt
Where thou didst rise on Eastern morn,
When all the world was purged of guilt,
Thy innocent world, new-saved, new-born.

Over the dream of blood and pain:
And thru the garden and the grove
In the great sunrise, Magdalen
Came weeping for her late-slain Love.

And yet, what grace beyond desert!
What joy beyond man's highest meed!
If in thine hour of utmost hurt
My garden should support thy head.

PARK ROAD, SOUTHBOROUGH, KENT, ENGLAND.

Democratic Insurgency in Tennessee

BY GEORGE A. GATES, D.D., LL.D.

President of Fisk University.

POLITICS in Tennessee are perhaps more interesting than they have been in any time for thirty years. There is a movement closely analogous to that which is called insurgency in the North. The interest is along quite different lines, entirely on State and not national issues. Tennessee has long been in the absolute control of the Democratic party. The devotion of most Southern men to and reverence for the name Democracy is a revelation to a Northern man. The depth of that devotion commands one's respect. But the Democratic machine in Tennessee has latterly been becoming more and more intolerable. That condition has recently been greatly intensified by the general opposition to Governor Patterson and what is repeatedly and emphatically named "Pattersonism." Pattersonism is defined to mean, in general, an unscrupulous autocracy. This has reached its climax in his universally condemned application of the pardoning power, which found its climax in the Cooper case. It will be recalled that Col. Duncan B. Cooper and his son Robin met and shot dead ex-Senator Carmack in open daylight on the street in Nashville. They were tried and condemned. The case was appealed, but the condemnation was sustained, under which Colonel Cooper was sentenced to twenty years' imprisonment. The Governor at once, on the same day, pardoned him, accompanying the pardon by words of sharp criticism of the court. It is perfectly understood that the Governor endeavored to influence the judges of the Court of Appeals prior to the decision. This was April 13, 1910. Soon after there was the judicial election. Tennessee elects its judges at a different time from any other election. There was a fierce campaign. Nominees known as the Patterson choice were put in the field. A remonstrant convention was held and other nominees were selected, and the cry was raised, "An untrammeled judiciary." There was a fierce campaign, into which the Governor flung himself personally with great energy. On Election Day, August 4, he and his forces were overwhelmed by a majority ranging for the different judges from 43,000 to 47,000. Then came the "regular" Democratic convention and Patterson was nominated for Governor. The racket broke loose afresh. A convention of Independents —that is, insurrectionary Democrats— was called for September 14, to make a counter nomination. Meantime the Republican party had held its nominating convention and named Capt. B. W. Hooper for Governor. There began to be talk among the insurgent Democrats of endorsing his nomination for Governor on the Democratic ticket. Three days before this convention Governor Patterson, in "an act of unprecedented patriotism," withdrew his name, handing back to the Democrats their nomination for Governor. Of course, everybody knows, Governor Patterson most of all, that he was already hopelessly beaten. The only possible good of the withdrawal of his name was that both factions of the Democratic party might be induced to unite on some other man.

But it was too late. The talk of the insurgent Democrats endorsing the Republican Hooper had gone too far. Senator "Bob" Taylor was brought on from Washington to try to bring together the two Democratic factions. He was in the city prepared to address the Independent convention. Overtures were drawn up by the "regulars" and sent formally to the officials of the convention. But so fierce had this Democratic insurgency become at that stage that Senator Taylor's best friends advised him not to go near the hall or attempt to speak. They told him he would surely be hissed from the platform, and he certainly would have been. The convention would not even hear the overtures from the "regulars." They said: "It is too late; it is a piece of impertinence for them to send

overtures to us at this late date. We have made other arrangements."

So that which would have seemed *a priori* impossible has come to pass. Southern Democrats that speak of the Democratic party with the same reverence with which they refer to their own mothers have actually, in Tennessee, in open convention, constituted of delegates from all the counties of Tennessee, formally and unanimously voted to endorse a Republican nominee for Governor. A great company of old Confederate soldiers marched thru the streets before the convention carrying both Confederate and Union flags and shouting for Hooper. The large platform in Ryman Auditorium was filled with those Confederate soldiers, and many more were in the general audience because of lack of room on the platform.

The "regulars" have now called another convention for October 6, to nominate a man in Patterson's place.

The writer of this article attended that Independent convention. The whole scene was a phenomenon. One must know something of Southern feeling to realize what it cost these men actually to bring themselves to take such political action. The impression upon a comparative stranger was that it was a great company (there were some 1,500 delegates) of three or four thousand men filled with deep earnestness, which was of high moral quality. There was little or none of the usual political convention. There was Southern ferocity of purpose. Those men knew why they had come together and what they proposed to do. They held to it with superb singleness of aim. The atmosphere was heavy with aroused spirit of righteous indignation. There was no quibbling about the issue. The Cooper case was handled with unsparing words. While there might have been some factor of striking back in the clear-cut utterances of the counsel for the State in the Cooper trial (Fitzhugh was temporary chairman and made the chief address, and McCarn, the Attorney-General, also spoke), nevertheless any honest onlooker must know that the issue was larger than even that. It is very encouraging to note that in more than one speech the fact came out that Tennesseeans have felt and do feel most keenly the lash of the universal condemnation of the Cooper fiasco by the public press. Let us take courage. Newspapers and magazines do have their effect when their voice can ring true and united. The issue was even more than the enforcement of law, tho that, too, cuts no small figure, for it is perfectly clear at this late day that Patterson and Pattersonism stand for the defiance of the State prohibition law. Governor Patterson is perfectly open in his defense of non-enforcement in the cities of Memphis, Nashville and Chattanooga. The only drunken men I saw that day, and I was present and about the streets nearly six hours, was a little bunch of four men standing near the door, each asserting that the other might cut his throat before he would vote for any —— —— Republican. They argued and asserted that noisily and long, until finally, each being able to stand because none of the quartet reeled in the same direction at the same time, they moved off with the words, "Let's go and get another drink."

The issue is all these combined: An "independent judiciary," "law enforcement," "respect for the decisions of high courts"; but above even all these was a spirit of general revolt against what has been known for years as the cheapest kind of low, mercenary, vicious politics. At last the issue is clear in Tennessee, at least in one respect. The totality of the low down elements and the solidarity of the vicious elements in the State of Tennessee are for Patterson and his crowd. There is no possible mistaking that. That is true of both white men and negroes. In addition to these bad elements, of course there is an enormous number of old-line Democrats who either do not see clearly or will not take pains to move themselves a hair's breadth from their life-time identification with the Democratic party. Of course, that is always the strength of stand-patism; it is the inertia of partyism.

Mr. Hooper is a very high type of man. Young, slight, almost feminine, not effeminate, in bearing and manner of speech, showing the quiet confidence of one who knows his foundations.

One could not be in attendance at such a convention composed of such men and listen to their discussion on a high moral plane, and feel the spirit and movement, without carrying away a new confidence in the common people. A high moral issue and such alone can break thru the solidest barriers of historic partisanship.

Whether in this particular issue there be victory or defeat is, from the point of view of this writing, of relatively minor importance; there is a movement in Tennessee which is allied to the swing of the stars in their courses. The cosmic force of righteousness is aroused, and in the end nothing can stand before it. Just as in California this very year a moral uprising has overthrown the quarter century long dominance of the Southern Pacific Railroad's State political bureau, so Tennessee, tho the issue is somewhat different, has the same promise of ultimate success. It is the infinite dignity of simple right against anything else whatsoever.

NASHVILLE, TENN.

A French Duel

BY A SECOND

[The gentleman who contributes the following strictly true narrative lives in Paris, but retains his American sense of humor.—EDITOR.]

SOME time ago, a Marquis, whose name and title are not to be found among the patents of French nobility, asked the writer to act as his second in a duel, to which he had been challenged. We consented. German student duels were familiar enough: but a real duel in France? The innocent occasion of this proposed fight was an American heiress, whose parents permit her to wander around Europe with a traveling companion. This latter woman is bright, educated, able to speak the languages in vogue, but not over-scrupulous. She is a leading figure among the *dramatis personæ*. Another female in it is an English woman, the widow of a French baron, rather advanced in years and of modest means. The baroness is a professional matchmaker. How these two women got to know one another does not concern us. We need only know that they presented our principal to the heiress. He was a good catch from the standpoint of the Marquisate as also of himself, for he is a handsome fellow. What terms he made with the two women he never told us, never even hinted at terms. He asked us, however, to ascertain the standing and financial status of the prospective bride's father. The pater is A No. 1 in every respect, with millions at his command.

Meanwhile the challenger appeared on the scene. He is a Russian and claims to be a general in the Czar's army. Doubtless he offered better terms to the matchmaker and the companion. At any rate the Marquis found himself out in the cold. Unhappily, however, for the Russian general, he had been engaged to a wealthy American widow, who is a strict Catholic and glories in the title of Countess, bestowed upon her by His Holiness and no doubt at a good price. The wedding day had been named. A few days before the widow missed from her rooms some valuable jewels, charged her intended husband as the thief and at once broke off the engagement. The story found its way into some gossipy American newspapers and soon reached the ears of the jilted Marquis. Too free of tongue, he repeated the gossip to the matchmaking Baroness and the young lady's companion. Their own profit was now in peril, so the Russian general soon heard of it and forthwith challenged his rival.

The seconds of the Russian were an old colonel of the Russian army, a thoroly honest man, who like ourself was a mere cat's paw, and a Russian baron, with whom we had once crossed the Atlantic. Aboard ship he appeared always in a spotless white uniform and

wearing top boots in which the traditional darkey bootblack might clearly see his double. He furnished a great deal of fun to his fellow passengers, specially to the girls and to the men in the smoking room. The fourth second, that is, the other of our principal, is also a marquis and bears the name of one of the illustrious families of the south of France, but wrongly spelt, unluckily for his claims to a title. The first step was a meeting of our principal and us two seconds. The point discussed was this: Should a gentleman fight a duel with another who was charged with theft and therefore not a gentleman? Of course, he should not; it would be *infra dig.* The meeting closed with a call on the baroness matchmaker. There an hour or so passed in gestures galore and much talking, wherein was said nothing. When parting the baroness begged us to prevent the duel at all hazards. This request we received in silence, for we were anxious to see what the affair would be like. Then the marquis received a letter from the widow with the Papal title, who rehearsed in it her opinion of his Russian generalship.

Following these preliminaries came the formal meeting of the four seconds. There seems to be a point of etiquet in dress and make-up. A frock or morning coat, tall hat, gloves, and with or without cane was the proper dress for these meetings and for the duel itself *de rigueur.* Not up in French fastidiousness we wore a straw hat and lounge coat, and so were a little off. The meeting lasted nearly two hours. The point that the Russsian general had lost caste and was no gentleman we insisted upon. "We," that is, our confrère, for we ourself kept silent, wondering at all the tomfoolery until the Russian baron produced the pedigree of the challenger. It was in English, typewritten, and several years old. It had been *viséd* by a Russian consul. This document was handed to us to be read aloud. His various titles, his many advancements from a lieutenancy to a generalship were rehearsed, but not a word about his commands and services. At the close we were asked what we thought about it. We replied that it was well written and read well, but in itself carried no proof that its statements were true. Thereupon the Russian colonel asked bluntly what was the real trouble. Then our confrère rehearsed the story of the stolen jewels and the broken engagement, which we as well as the old colonel heard for the first time. The conclusion was that the Russian seconds would write to their country for proofs that the challenger had no taint, but was a gentleman, whom another gentleman might deliberately shoot at in the Bois du Boulogne. More than a month passed and no word! Finally our principal wrote a letter to himself and another to the two Russian seconds which threw over the duel. These two letters our confrère copied, then he and I signed them and mailed them. Thus ended an affair of honor and with it the rather dubious honor of being a second.

PARIS, FRANCE.

The "Zoological Garden of Cranks"

BY L. J. ABBOTT

Author of "The History and Civics of Oklahoma."

DURING President Taft's Western tour in 1909 he took occasion, while giving the people of Arizona advice as to the manner of Constitution they should build, to term the Constitution of Oklahoma "a zoological garden of cranks." Just how a Constitution could be a zoological garden was not made clear, but the expression evidently exactly fitted the President's idea of Oklahoma's fundamental law, for a few months later, when in New Jersey, he again used the identical expression in referring to that instrument.

A few days ago I happened upon Mr. Taft's Oklahoma City speech of August 25, 1907, in which he, as Secretary of War, advised the rejection of Oklahoma's proposed Constitution, and set out in detail his objections to it.

Is it not of interest to note what he objected to in this Constitution, and what it is Arizona and New Mexico must avoid if they wish to meet Executive approval?

His first and most general criticism of the document was its detailed character. "I would reject the Constitution," said the worthy Secretary; "I would vote it down, for it is no Constitution at all. It is not a Constitution, . . . but a code of laws." In the same paragraph he censured the "elaborate detail" of the instrument.

In this connection it might be explained that it is difficult to determine just where constitutional enactments should end and statutes begin. In Oklahoma, by means of the initiative and referendum, the Constitution can be amended almost as easily as a statute can be passed. The chief difference is that the Legislature can repeal statutes, while constitutional provisions can only be set aside by direct vote of the people. There is another reason why the Oklahoma Constitution builders went into such elaborate detail. The personnel of the constitutional convention, so far as ability went, was infinitely above that of any State Legislature. These men had the capacity to enact certain very necessary fundamental legislation, and they did it. Then it was provided that by means of the initiative and referendum it could be very easily repealed if found objectionable. Is it not more than probable that the constitutional conventions of New Mexico and Arizona will far outrank any Legislature these commonwealths are apt to have in a score of years? Then if these men can put in force wholesome laws why should they not do so, in spite of the fact that in other States such laws are termed statutes rather than constitutional provisions?

Mr. Taft's second point of attack was the initiative and referendum. He averred that it was an untried and doubtful experiment. And he especially objected to the clause that extended the initiative and referendum to counties, municipalities and other governmental subdivisions of the State. But this provision seems to work fairly well. By means of it Oklahoma has more cities with the commission form of government than any other State in the Union; and recently Eldorado, a small town, "referendumed" pool halls out of its corporate limits when it was found they were debauching the youth of the mu-

nicipality and an obdurate town council refused to act.

Then the Secretary doubted the wisdom of the provision that required corporations, whether foreign or domestic, to submit to State laws and compulsory arbitration in order to obtain permission to carry on business in the State. The wisdom of this enactment would depend entirely upon the laws passed. During the three years the Constitution has been in force there has been considerable strife between certain large corporations and the corporation commission, but we doubt if any disinterested observer would say that the people have been injured by the laws the corporations have been compelled to obey. In the sense that it may have deterred some men from investing money in Oklahoma in order to exploit the State's natural resources possibly the Secretary was correct. But Oklahoma takes the position that if capital must do as it pleases to come to the State it had best stay away.

The fourth reason for rejecting the Constitution, according to Secretary Taft, was because it required a railroad to build into a county seat town if it came within four miles of it, provided a free right of way be furnished the road. This, the future President asserted, offered grave opportunities for peculation. Had he been as familiar with the methods of Western railroads as the members of the constitutional convention, and known of instance after instance where a road came into the immediate vicinity of a town and refused to enter it for the express purpose of compelling the townsmen to move onto a town site the company had platted, he probably would not have seen so much reason for attacking this provision.

The fifth objection had to do with that clause of the Constitution which stated that foreign corporations would lose their right to do business in the State if they took their cases to the Federal courts. Mr. Taft was of the opinion that it would scare capital away from the State. Probably this is a useless if not injurious stipulation; apparently it is of no effect. The Standard Oil Company and the large railroads go into the Federal courts apparently as often as it suits their convenience, and none of them have as yet been stopped from doing business here.

Mr. Taft's sixth objection attacked the provision which denied the courts the right to punish for contempt if said contempt was committed out of the presence of the court. This was the most serious fault that he found with the instrument. To it he devoted almost a third of a two hours' speech. Since Secretary Taft, when a Federal judge, had exercised his authority to punish for contempt not committed in his presence drastically, and more than once, it is not surprising that this provision, as he termed it, to "weaken the power of the courts," should meet his earnest opposition. "The jury," said he, "will ultimately come to decide, not whether the order was violated, but really to act as a court of appeal to decide whether the order ought to have been issued."

In the three years of the State's history this clause has never been tested. But we doubt if even a respectable minority could be found to advocate the removal of this animal from the State's "zoological garden."

The two last objections had to do with the number of counties and the claim that the instrument contained a Democratic gerrymander. Since then two new counties have been established, so instead of being too many counties, evidently the people who pay the taxes thought there were too few. President Roosevelt ordered a census to see if the State's legislative districts had been gerrymandered, and the Democrats were probably as much surprised as the Republicans to find that there was none.

Here is the President's bill of particulars against Oklahoma's fundamental law. The electors of the State, just a month after he had delivered this address advising them to vote the Constitution down, accepted it by 107,274 majority; a larger majority, in fact, than there were votes cast in accordance with the Secretary's wishes. This, some assert, was because of Oklahoma's anxiety for Statehood under any Constitution.

Since then Maine and Arkansas have adopted the initiative and referendum. At Denver ex-President Roosevelt advised organic laws for Arizona and New Mexico that can be easily amended. The nation has passed laws that permit much

more stringent regulation of public service corporations. Will these two new States have better Constitutions by following the advice of President Taft, as set forth in this indictment of the Oklahoma Constitution, or will New Mexico and Arizona more nearly measure up to present day progress by writing into their fundamental law most of the very provisions that have led the President to assail Oklahoma's charter as a "zoological garden of cranks"?

EDMOND, OKLA.

The Dancer

BY COLETTA RYAN

JUST a little dancer nodding like a blue bell.
Such a pretty prancer bound to be a new belle.
Like a flurry of soft snow
In and out you whirling go.
See the cloud about you trailing,
Now a mantle, now a veiling—
Now a whirl of nothing whirring
Here and there in circles stirring.
Light as air—a south wind sighing
Softly to low music, flying,
Fading, flashing, disappearing,
Swiftly, swiftly reappearing—
Quick as lightning—like a star
You have vanished. . . . There you are.

Again with music's magic step across the stage you fly.
And, oh, with rose and laurel wreath I praise you ardently.
Now your right foot fans the air,
While the other—Have a care
Balancing yourself. How well
In these graces you excel.
See how quietly you're swaying,
While the waltz is slowly playing.
Lost in hazy dreams you're proving
Such a sense of stillness moving.
Oh the visions that enfold you—
Dreaming, too, I would behold you.
Why this sudden change of things,
As you bolt behind the wings?
In astonishment you leave me.
Dainty dancer, do not grieve me.
Well I love your silver trappings,
Bright scarf waving, and toe tappings
Of your slippers as they soar
Over the deserted floor.
Now you rise to living music.
Rippling rivers of it fall
O'er you in the happy hall.
Rivers rushing, pausing, hushing,
Quickening, slowing, onward flowing.
Thru enchanted moods they spring
Just that you may have your fling.

You, with wingèd feet, can lead me
Back to gladness. Lightly read me
That first joy before the tree
Tempted man to misery.
Show the sunshine spreading o'er
Earth and ocean evermore.
Bear me to your dazzling hight,
Back to heaven, home and light.
Something in your spirit rises,
Smiling, full of sweet surprises—
Something rises o'er all grieving.
Playful one, your gay deceiving
I will pardon, blessing you,
Lovingly addressing you;
Flinging laurel o'er your head—
Roses at your feet. I'm led
Here and there with garlands plenty—
Are you thirty, are you twenty?
Little care I. All I feel
Is the truth I'd not conceal;
That a witch, with wings of grace,
Calls me from my sleeping place—
Wakens me to gold good cheer—
Wafts me upward, bending near,
Whirling, twirling, swaying lightly,
Archly smiling, young and spritely,
Turning, spurning, sporting, courting,
Now a buttercup—a willow
Drooping o'er earth's velvet pillow.
Now a sunrise, now a morn,
Noon and evening. Love, new born,
Pleasure, hope, caressing art,
Murmur to your wingèd heart,
While the fairies of the hill
Ofttimes, when you're very still,
Tell of some bewitching way
You can charm us, and yet stay
Far above old mother earth.
Gravely bowing o'er your mirth,
Nestling to yourself you fly
O'er the wizard's forest high,
Grazing hill tops, white with snow,
Cloud by cloud, you whirling go,
Leaving tragedy below—
Kissing your white hand to woe.
On you travel to the star,
Thrilling with the light you are.
O'er the midnight, o'er the dawn,
Now I have you—now you're gone.

Just a little dancer, nodding like a blue bell,
Such a pretty prancer, bound to be a new belle.
Oh, bewitched you are, my lass,
In and out you gaily pass.
See the cloud about you trailing,
Now a mantle, now a veiling,
Now a whirl of nothing whirring
Here and there in circles stirring,
Light as air—a south wind sighing
Softly to low music. Flying,
Fading, flashing, disappearing,
Swiftly, swiftly reappearing—
Quick as lightning in the sky—
Oh, you've vanished. . . . Sprite, good-by!

BOSTON, MASS.

Literature

The Memorial Edition of Meredith

SINCE we last noticed the progress of publication of the Memorial Edition of the works of George Meredith twelve new volumes have been issued* and the publishers approach the end of their notable undertaking. It is a noteworthy set of books from several points of view. In material appointments of letterpress, paper, illustrations and binding these volumes are handsome by reason of their simple dignity; and they are not too heavy or too bulky for comfortable reading—a boon none too commonly found in "standard sets" of American manufacture. In content they are yet more significant, for they preserve in definitive shape as their author himself desired to have them preserved the complete works of a master mind produced thruout a long lifetime devoted to ardent and vigorous intellectual quest and filled with many a far excursion and brave adventure in the realms of thought.

His own complete works constitute the best, indeed the only adequate, memorial to such a man, whose writings in prose and verse make up one of the noblest contributions of the nineteenth century to the glorious volume of English literature and whose message to his time and to posterity has contributed incalculably and will long continue to contribute to the world's advance in civilization. Because of that brilliant versatility which diversified so widely his many books, no less in their entertaining, stimulating and moving qualities than in the materials that went into their making, it really requires the whole collection of George Meredith's writings to disclose the steadfastness of his purpose, the single-mindedness of his impulse, the great central idea of his message. Primarily a philosophical novelist, a psychologist who embodied his psychology in poetic rather than in scientific form—"narrative," he says, "is nothing; it is the mere vehicle of philosophy; the interest is in the idea which action serves to illustrate"—his writings teem with new and original ideas. For he was never balked by his oft-repeated experience of finding that "ideas, new born and naked original ideas, are acceptable at no time to the humanity they visit to help to uplift it from the state of the beast." Yet amid this multitude of concepts concerning in its multiplicity of phases the development of the human soul, one regnant idea, presented in protean form, dominates his teaching and philosophy. "All right use of life and the one secret of life is to pave the ways for the firmer footing of those who succeed us." Service is the purpose of life. And freedom of the mind is the one great essential for efficient service. Only as the individual is free to think for himself and to live his own life, honestly and without fear, is he capable of the highest and best service to his fellows. This is the standard, not alone of the worth, but of the happiness of every human being, which the author sets up in all his work. In the final analysis the object of all human endeavor must be to "identify itself with the Divine purpose, to be more and more a conscious vehicle for the expression of that reason which is the will of God."

In *Vittoria,* which is a poet's account of the great movement for Italian independence, surpassing even the work of the historians of that movement, with its great portrait of Mazzini, the dominant idea is crystalized in the closing lines of the opera which Meredith puts into the mouth of his heroine in the great scene at La Scala and which embody the creed of Young Italy's chief:

"Our life is but a little holding, lent
To do a mighty labor: we are one
With heaven and the stars when it is spent
To serve God's aim: else die we with the sun."

*Vittoria, 2 vols.; The Adventures of Harry Richmond, 2 vols.; Beauchamp's Career, 2 vols.; The Egoist, 2 vols.; Tragic Comedians; Diana of the Crossways; One of Our Conquerors; Lord Ormont and His Aminata; being Volumes VII to XVIII of the Memorial Edition of the Works of George Meredith. New York: Charles Scribner's Sons. $2 a volume, sold only by subscription.

While seldom so concretely exprest in easily isolated passages in the other novels, this is the ringing, vivifying, inspiring theme of them all.

Missionary Problems and Policies

THE recent Missionary Congress at Edinburgh, by its representative character, its masterly handling of large questions, and the universal interest it aroused on the subject, indicates the growing importance — religious, social and political—that missionary enterprises have assumed. Whatever attitude he may have in regard to policies, the man interested in the world forces operative today cannot afford to be ignorant of the work and aims of this great movement, which has made so many and promises to make more international complications, to say nothing of its deep religious significance. Both the character and motives of missionary work have been more or less modified in recent years under the stress of internal theological change and thru a larger knowledge of the non-Christian peoples and their religions. Two books just published reveal in a striking way the scope, ideals and aims, as well as the problems and difficulties of the modern movement, particularly in its impact upon the Oriental civilizations.

Secretary Speer, in his Duff Lectures for 1910, has taken for his theme *Christianity and the Nations,*[1] and treated it in such a broad and statesmanlike way that his book, in spite of its somewhat heavy English style, must be regarded as the most lucid and masterly discussion of the subject that has yet appeared. The author contends that the ground of Christian missions lies in the very nature of things, in the facts of life, and in the genius of our religion, and Christian civilization can progress only as it is true to its own deeper impulses. To some it will appear that the writer limits too narrowly the aims of missionary effort, but we are inclined to think that his distinction between the scope of the Church's entire work and that of purely missionary projects must be maintained. He holds that, whatever temporary means may be employed, the final goal of missionary enterprise is not good schools, or hospitals, or social regeneration, all of which are good by-products or aids, but the real aim is the naturalization of Christianity among non-Christian races. "Let Christianity," he would say, "be firmly planted and rooted in the life of the people, and then the national, indigenous churches resulting will lay hold of the social, political and religious problems peculiar to those races, and so contribute their share to the world's progress." This missionary aim determines the favorable attitude of Secretary Speer toward the encouragement of national churches in missionary lands free from the ecclesiastical control and the consequent burden of the theological systems of the Western world. The author's defense of missionaries against the charge of being useless disturbers of international peace is altogether capable and convincing, altho he does not deny that political entanglements often arise thru the presence and labors of the missionaries, and he fully recognizes the fact that the final effect of Christianity on many existing and time-honored institutions cannot fail to be destructive. Such disturbances are but the growing pains of a larger life. On the other hand, Secretary Speer regards all true missionary propaganda as preparatory and effective steps toward sound and lasting unity and coöperation in both the religious and political world, and he maintains that for the present the unselfish preaching and living of the missionaries are greatly needed as an offset to the greed and injustice so often evident in commercial relations, lest these should appear to other races as the whole soul and substance of Western civilization. His book is somewhat overloaded with quotations drawn from varied and always reliable sources. In the chapter on the non-Christian religions there is an occasional note of conservative intolerance, but this could hardly be avoided by one who, like Mr. Speer, has become familiar with the worst as well as the best elements of

[1] CHRISTIANITY AND THE NATIONS. *By Robert E. Speer,* Secretary of the Board of Foreign Missions of the Presbyterian Church in the United States of America. New York: Fleming H. Revell Company. $2 net.

these religions and has experienced in his own efforts the obstacles they present to the introduction of Christianity.

For a sympathetic interpretation of the best there is in the great non-Christian religions one may turn with satisfaction to the short but valuable book by Canon Robinson, which he calls "an apology for Christian missions."[2] In sound and simple English he presents in an intelligible way the highest ideals of the other religions, and not only shows their likeness in many respects to Christianity, but also indicates the avenues whereby Christian teachers may most easily approach those who have been dominated more or less by those ideals. In interpreting Christianity's superior message the best in the old religions should be used, enlarged and purified, and thereby new elements or impulses may be added to Christianity itself. In seeking to justify modern missionary efforts, the author shows that every important objection that has been raised would have held as validly or even more so in the days of the Apostle Paul as at the present.

The writers of both these volumes are men eminently fitted by large culture, wide reading and extended experience to speak for the coming prospects and policies of the missionary movement. Their valuable contributions deserve careful reading by every one interested in missionary work, and many readers to whom such enterprises have made but slight appeal, and who have given little heed to their development, will be surprised at the broad outlook, the deep constructive policies, and the high ideals of attainment that characterize the missionary leadership and management of today. Canon Robinson has summed up the most comprehensive program possible in his clear but suggestive statement of the missionary aim: "The ultimate object," he says, "which the interpreter of the Christian faith to non-Christian races has in view is to enlarge the area and deepen the consciousness of man's communion with God, with man and with Nature."

[2]The Interpretation of the Character of Christ to Non-Christian Races. An Apology for Christian Missions. *By Charles H. Robinson, M.A.*, Hon. Canon of Ripon, Editorial Secretary of the S. P. G., etc. New York: Longmans, Green & Co. $1.40 net.

The Housing Problem

The congestion of population in modern cities presents a crying problem. Already New York is approaching the 5,000,000 mark, and statisticians figure to a nicety that this city will contain 30,000,000 inhabitants in another generation. The most novel plan for handling this great increase of population comes from Edgar Chambless in his book entitled *Roadtown*[1]—sketching an ideal city that chiefly resembles a fantasy of Jules Verne.

Far be it from The Independent's policy to discourage the idealistic plans of reformers. Only last May we published an article on "Roadtown:—A Multiple Home," in token of our sympathy. The author of the article was Milo Hastings, an intimate friend of Edgar Chambless. The article gave a general outline of the novel project and its possible advantages. Roadtown, in its complete state, will be a house a thousand miles long. Its denizens will number a million people. The latest inventions will add to their comfort. Their transportation system will be by monorail. All cleaning will be by the vacuum system. Heat and cold can be turned on at will; disinfecting gas, electric light and power can be secured by the touch of a button. The author contrasts New York City, where 3,000,000 people live without the use of a telephone, to Roadtown, where even the poorest laborer will enjoy, not that alone, but also his telegraphone and dictograph.

To show how the problems of our existence are solved by the Roadtown system, let us quote a chapter in its entirety:

Chapter vii.

The Servant Problem in Roadtown.

There will be no servant problem in Roadtown, as there will be no need for servants.

Had the author claimed a little less, we should, perhaps, be more convinced. A subject on which a book in itself could be written he treats in a paragraph. Mr. Chambless will educate the children of Roadtown by means of the dictograph, and save their eyes from the strain of our ordinary school methods. Beds will be made by machinery. There will be no

[1]Roadtown. *By Edgar Chambless.* New York: Roadtown Press. $1.25.

rats in Roadtown, no graft, no sweat-shops, no child labor, and the lowest death rate in the history of the world. If Roadtown is realized before the millennium, there will be no need whatsoever of the latter event.

The Cambridge History of English Literature. Edited by A. W. Ward, Litt. D., F. B. A., and A. R. Waller, M. A. New York: G. P. Putnam's Sons. $2.50 net.

As a work of reference we now know pretty well the value of *The Cambridge History of English Literature,* of which Volume IV has for its subtitle "Prose and Poetry, Sir Thomas North to Michael Drayton." And, since there is no need of indicating the general character of the work, and since we shall in the future have occasion to name it and to use it as a repository, it is our pleasant privilege, for the moment, to consider specially those portions which seem to us most pleasant reading. Chapter I is one such portion, for there Mr. Charles Whibley, of Jesus College, writes of the translators:

"North and his colleagues were inspired by a love of adventure. They resembled the pioneers of our empire also in a splendid lack of scruple. As the early travelers cheerfully seized upon the treasure of others, painfully acquired, and turned to their own profit the discoveries of Spanish and Portuguese, so the translators cared not by what intermediary they approached the Greek and Latin texts. . . . The result of this careless method is that the translations of Elizabeth's age (in prose, at any rate) are unsoiled by pedantry. They do not smell of the lamp. . . . They call up a vision of space and courage and open air."

Mr. Whibley's chapter is fairly represented by this passage. We find it not wanting in scholarship, as compared, for example, with that of Professor Cook on the "Authorized Version and Its Influence," but vastly lacking in dreariness. It does more than cite the names and quote the requisite passages; it evokes an image of the entire process by which Elizabethan England reached out and enriched her literature:

"North has contrived by a touch here and there to give a picturesqueness to the scene which neither the French nor the Greek warrants."

North's Plutarch is under discussion:

"For instance, 'They of the house spying him' introduces a new image. *Ceulx de la maison* is in Amyot's version, and corresponds to *οι κατα την οικιαν*. But the spying is North's own legitimate invention."

But the enthusiasts of the times this fourth volume of the *Cambridge History* tells of were zealous, not in the discovery and possession of literature alone, but also in the seeing and mapping of cape and bay,

"haven, creke or pere, ryver or confluence of ryvers, breches, washes, lakes, meres, fenny waters, mountaynes, valleys, mores, nethes, forestes, woodes, cyties, burges, castels, princypall manor places, monasteryes, and colleges."

Among the most entertaining chapters here are those upon the "Literature of the Sea" and "Seafaring and Travel," by Commander C. N. Robinson, R. N., and John Leyland. Southwell, Daniel, Campion, Drayton, Donne and Burton are among the writers treated at greater or less length in the present volume. The "Song Books and Miscellanies," the "Pulpit," the "Beginnings of English Philosophy," "Early Writings on Politics and Economics," "Character Writing and the Essay," "Writers on Country Pursuits," the "Book Trade" and the "Foundation of Libraries" all have their chapters, for the most part adequate. There is also the equipment of critical apparatus to which we have referred in noticing earlier volumes.

Autobiography of Allen Jay. Philadelphia: John C. Winston Co. $1.50.

The London *Times* has recently been printing letters to the editor, under the title "Links with the Past," from people who furnish instances of four or five lives spanning a couple of centuries or more. A remarkable instance of such links with the past is given by Allen Jay in the opening pages of his autobiography. "I was born," he writes, "the year before my great-great-grandfather, Paul Macy, died; and according to my mother had the honor of being held in his arms in my first year. It is now three hundred years since the birth of my distinguished ancestor, Thomas Macy, and the following four lives cover these three hundred years, with an overlapping of eighteen years: Thomas Macy, 1608-1682; his grandson, John Macy, 1675-1751; great-great-grandfather, Paul Macy, 1740-1832, and my-

self, Allen Jay,"—1831-1910. Allen Jay was a prominent member of the Society of Friends, and tho born with a hare lip and a cleft palate, and never free from a defect in speech which would have daunted any but the most courageous, he became one of its best beloved and most effective preachers. He traveled widely over the United States, in Great Britain and Ireland, and on the Continent, and his autobiography, written with a directness and simplicity worthy of his Quaker origin, is the most complete available history of the Friends in the United States. Particular interest attaches to his story of the Friends in North Carolina during and after the Civil War, and of their emigration to the Northwest when the ravages of war had made life in North Carolina almost impossible. While in the North the scruples of the Quakers were usually respected, in the South no excuse was accepted, and the Friends whose principles would not permit them to enlist fled from home and either made their way thru the lines to the North, or "bushwhacked" in caves and hollow trees. During the Civil War, Allen Jay was living in Indiana, whither he had gone from Ohio, his native State. His educational and pastoral work took him later to North Carolina, and for many years he was interested in the work of Earlham College. The writer here describes the efforts of Friends to advance education in the Southern States, efforts which culminated in the founding of that institution. While Allen Jay was visiting John Bright at Rochdale, his host received a letter from Whittier containing a pressing invitation to the United States.

"If thee will come," wrote Whittier, "we will give thee the greatest ovation that any Englishman ever had." "When he had read that," continues Allen Jay, "he turned to me and said, 'That is just the reason I don't go. I would rather go to America than any other place I know of, and a few years ago I told some of my friends that I had decided to make a visit to the United States. The newspapers reported this, and in a few days I got cablegrams from the leading hotels in New York, Philadelphia, Boston, Chicago and Washington, each telling me that I could have all the room I wanted when I reached their city. Then a cablegram came from the Pullman Car Company telling me there would be a train waiting for me with parlor and dining cars to take me wherever I wanted to go free of charge. Then came a message from the President of the United States saying that I must be the nation's guest and make my home at the Capital. I saw at once that they were going to make a hero of me and that they would kill me, so I had to give it up.'"

It seems a pity that Americans never had the opportunity of showing their gratitude to John Bright for his championship of the Northern cause; but it is well to have it on record that at the first hint of an opportunity there was no lack of readiness to seize it.

A Life for a Life. By Robert Herrick. New York: The Macmillan Company. $1.50.

Mr. Herrick should have studied the latest cut of fiction before he published *A Life for a Life.* No author who has as his chief asset up-to-dateness can afford to rest upon his tinsel laurels and write behind the times. The public has had a surfeit of hue-and-cry fiction. So long as it was new and enlightening it was dramatic and interesting. But not even Mr. Herrick's genius can drag it now from the tomb of monotony. This is the story of a country boy who comes to the city in search of success. The city, we are led to believe, is San Francisco, tho the author's presentation of people and scenes is so symbolic we hesitate to fix them within the bounds of a material locality. The boy comes under the influence of a man whom the author capitalizes with mystery and calls "The Anarch." This lurid character undertakes to point out to the newcomer the transgressions of success and wealth in their relation to society, but in spite of his warnings the hero proceeds to acquire both. Finally, however, the tutelage of the Anarch bears fruit and the young man surrenders wealth, position and love for what he considers to be the *summum bonum* of society. The climax of the story comes when the city is practically destroyed by earthquake and fire. The Anarch meets his death in a ghastly frenzy of rage at his father, one of the city's wealthy vultures, who is seeking to escape from the devastation. The young socialist meets his death endeavoring to save the life of a fallen woman.

Literary Notes

....Some time since Mr. W. Montgomery undertook the translation of Pfleiderer's "Urchristentum" for the Theological Translation Library, and the second volume now appears under the title *Primitive Christianity* (New York: G. P. Putnam's Sons). The subjects treated in this volume are the Synoptic Gospels and the Acts of the Apostles. The work has passed through several editions in Germany, where it is recognized as a high authority, and represents advanced critical opinion.

....Prof. Lewis B. Paton's *Jerusalem in Bible Times* finds acceptance as a clear, concise handbook of the results of archeological investigations on the site of ancient Jerusalem (Chicago: The University of Chicago Press. $1 net). The treatment is historical, not topographical. Each period is treated in a separate chapter, and the trustworthy information that has come to light from the monuments of the several periods is set forth with scholarly modesty. The work is well illustrated, and possesses value for all Bible students and tourists.

....Some months ago we noted the publication of several volumes of *A Documentary History of American Industrial Society,* the monumental work under the editorship of Professor Commons and other learned economists, prepared under the auspices of the American Bureau of Industrial Research, with the cooperation of the Carnegie Institution (Cleveland: Arthur H. Clark Co.). We now welcome volumes seven and eight of this history, which we reserve for exhaustive review upon its completion. The present volumes are given up to the Labor Movement, 1840-1860, "selected, collated and edited by John R. Commons, A. M."

....A good woman who once listened to a lecture by Doctor Briggs on the "Canon of Holy Scripture" without receiving very much intelligence on the subject remarked at its close that she did not know there was any cannons in Bible times. Professor Vedder has found a title which forbids any such misunderstanding in *Our New Testament: How Did We Get It?* (Philadelphia: The Griffith & Rowland Press). He discusses in a popular manner, yet with sufficient scholarship, the origin of a collection of sacred books in the Christian Church, and the gradual growth of the New Testament as we have it today. His position is moderately conservative.

....The coming spring, Messrs. G. P. Putnam's Sons are to bring out *The Letters of Elizabeth Cady Stanton; an Epistolary Autobiography.* The work will be edited by Theodore Stanton and Mrs. Stanton Blatch. The editors would be glad to receive copies or the originals of any of Mrs. Stanton's letters, which could be addressed to Mr. Theodore Stanton, Rue Raynouard, Paris. Besides Mrs. Stanton's own letters, extracts will be given from many letters to her, written by Garrison, Oliver Johnson, Lucy Stone, Susan B. Anthony, John Swinton, Lucretia Mott, Gerrit Smith, Charles Sumner, Robert Dale Owen and many other American reformers.

Pebbles

"WHEN are you going on your vacation?"

"I don't know. I've got to wait until the neighbors get through using my suit case."—Detroit *Free Press.*

MAUD—Tom had me talk into a phonograph, so he can hear my voice while I'm away.

Clara—How lovely! And he can stop the machine!—*Puck.*

THE editor was dying, says an exchange, but when the doctor bent over, placed his ear on his breast, and said: "Poor man! circulation almost gone!" the dying editor sat up and shouted: "You're a liar; we have the largest circulation in the country."—Atlanta *Constitution.*

A PATRONIZING young lord was seated opposite the late James McNeill Whistler at dinner one evening. During a lull in the conversation he adjusted his monocle and leaned forward toward the artist.

"Aw, y' know, Mr. Whistler, "he drawled, "I pahssed your house this mawning."

"Thank you," said Whistler, quietly. "Thank you very much."—*Everybody's Magazine.*

ADVERTISEMENTS, especially those of a personal nature, are not always characterized by a sense of proportion. One recently printed in the Manchester *Guardian* reads as follows:

"Willie, run to your distracted wife and frantic children. Do you want to hear of your old mother's suicide? You will if you do not let us know where you are. Anyway, send back your father's colored meerschaum."

"LOOK out, Hi," shouted the farmer's wife, as the big balloon soared over the farm, with the trailing anchor. "Them thar arynaughts will hook yeou up like a fish if yeou don't watch out."

"Gosh, Mandy!" gasped the old farmer, as he dropped his rake. Yeou don't think they'd try to do sech a thing purposely, do yeou?"

"Wouldn't trust them, Hi. That tall chap looking down here with the spyglass is one of them thar Indiana writer folks, and he's working on a book called 'The Uplifting of the Farmer.' Reckon yeou better keep yeour eye on that anchor."—*Chicago News.*

MICHIGAN, MY MICHIGAN.

Hay fever's home, I sing to thee,
Michigan, my Michigan.
Thy ragweed crop I hate to see,
Michigan, my Michigan.
From August fifteenth, when we start,
Until a hard frost bids us part,
My nose is red, my eyeballs smart,
Michigan, my Michigan.

With handkerchief flung to the breeze,
Michigan, ym Michigan,
Our password is an awful sneeze,
Michigan, my Michigan.
By pollen that's from ragweed blown
We speak in accents not our own,
And wheeze—and curse, in undertone,
Michigan, my Michigan.

R. M. K. in *The Little Stick* (Detroit).

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Evolution of Public Opinion

THERE has been no better time than this to watch the rise and the development of public opinion. The collective thinking of the American people is proceeding on a large scale and at an accelerating rate. In substance and in method it is exhibiting new features worth looking at.

The movement began when Mr. Roosevelt in the Presidential office said and did things that focussed the attention of the country upon measures which he was pleased to call his "policies." Only once before, during the Civil War, had so many persons been thinking at the same time upon the same topics. The dramatic intensity of that struggle created too great a volume of overwrought emotion to permit the collective thinking to grow to its full proportions, or to attain the utmost possible intellectual clarity.

The subjects upon which the people are thinking now awaken strong feeling, but it is nothing compared with the passions enkindled by war. On the whole it is real thinking that is now the dominant factor in the collective mental activity. In a literal sense the people are making up their minds. On a scale never before witnessed they are looking into economic, social, legal and political problems of the first magnitude. They are revising their inherited or thoughtlessly assumed opinions, and are creating for themselves a social philosophy which in the course of time they will frame into a platform and a policy.

On every hand the politicians are betraying an uneasy consciousness of what is going on. Old time leaders frankly admit that they do not lead, and that the multitude has gotten out of their hand. The newer leaders are obviously struggling desperately to keep ahead of the onsweeping current. They feel that it is lifting and bearing them along, and that only apparently are they in advance.

In no way is this interesting fact more conspicuously manifested than in Mr. Roosevelt's own intellectual gyrations, and public utterances. Insurgency has already gone beyond his propositions, and he is striking out wildly in a dozen directions at once, in an experimental attempt to gain and keep an obvious lead.

The substance of the new judgments is fairly clear, and it is becoming every day more definite. It is the conviction that the people of the United States must and can organize their collective power thru political arrangements and policies, not only for the control of legislation and administration in the familiar sense of the words, but also for some better ordering of the every day life of the multitude and a better achievement of the common welfare. It includes a strong sense of the worthlessness of hard and fast rules, and a realization that a mighty and still growing people must have freedom to act effectively under new and sometimes unforeseen conditions. It is distrustful of the value of strict constitutional limitations, and it is disposed to insist that constitutions, made for the people, must be alterable by the people.

So positive a body of progressive opinion must inevitably provoke reaction, and with the new radicalism we shall certainly see the rise of a new conservatism. Vested interests have always found their protection in a strict and technical legality, including a narrow and technical construction of constitutional limitations. It is plain that they are preparing to fight vigorously for the old order along the

lines of a sacred constitutionalism, local liberty and State rights.

All this is a happy and wholesome state of affairs. For too long the intellectual pools have been stagnant and slimy. Corruption breeds in such foul places. The new struggle between real principles and real issues will serve mightily to cleanse the political life of the nation, and to put new vigor into the blood.

Radicals and conservatives will be partly in the right and partly in the wrong. The radicals will go too far in their willingness to make ends justify means. The conservatives will go too far in their determination to exalt the means above the ends. The one thing that we can count upon with certainty and rejoice over without stint is the assurance, which is now complete, that we shall not have in America any such monstrosity as a one-man democracy of the Roman imperial, or the French, or the German imperial type. The people are awake. They are doing their own leading. They are thinking for themselves, and thinking collectively. We are beginning, at last, to have a public opinion.

Stealing from the Government

We do not refer to the land and timber thieves, franchise grabbers, fraudulent contractors and municipal boodlers, but to the army of American citizens now returning to their native land with the intent to cheat it of its rightful dues. We have been in political caucuses and legislative lobbies in various States and cities, but we have never found there such a stifling atmosphere of corruption as pervades the first class salon of a transatlantic steamer, such a cynical disregard for the laws of the land and unblushing display of the lack of moral principle. The steerage passengers, commonly alluded to as "the scum of Europe" by those who look down at them from the upper deck, seem like quite decent and law-loyal citizens in comparison. They at the most are only going to smuggle themselves in, and even then the country of their adoption may not be the loser by it.

Religion has its hypocrites, but they are few and high-minded compared with the hypocrites of patriotism. It is a pretty sight at the captain's dinner to see the passengers all rise when the band plays the national anthem and flourish the little American flags that decorate the ice cream, but it makes one sick to think what proportion of those who take part in this patriotic ritual have filed with the head steward a fraudulent declaration of what they owe the Government they are cheering. And the next morning how enthusiastically the ladies on the promenade deck wave their handkerchiefs at the great green goddess in the harbor, taking care, however, not to raise their arms too high lest something should give way internally and let slip Irish lace, Swiss embroideries or Paris gloves from the double lining.

This is almost the only department of criminality in which women rival or excel the men. The professional smugglers are mostly men or women in the employ of men, but the amateur smugglers are mostly women and our Government loses more thru the amateurs than the professionals. It may be that the women succumb to temptation the more readily because they have greater opportunities of concealment. Skirts, indeed, have shrunk, but as tho to compensate headgear has expanded and our custom house officers this fall have found rich treasure in their raids on mushroom hats. Why the sex which is generally law-abiding should be delinquent in this particular is a question that professors of criminal psychology have not yet been able to settle. Women who would send two cents to the conscience fund at Washington if they found that they had inadvertently used a second-hand stamp or who would hunt up the conductor on leaving the street car and get him into trouble with the inspector by handing him a nickel rather than deprive a hated corporation of its lawful tribute, will plan for months in advance how to rob the country they profess to love.

It has been argued in their behalf that women do not feel themselves amenable to the law, and indeed delight in evading it because they have no responsibility for the law since they had no hand in the making of it. This, however, would apply as well to all the laws, except those of four States, and does not account for

the common propensity to violate this particular one. We should like to believe that an ardent desire for the suffrage is as prevalent among the disfranchised sex as their propensity for smuggling, but we fear it is not so.

Another current apology for smuggling is free trade principles. It is urged that women thru their keen ethical intuition perceive at once the inherent viciousness of the tariff system and act accordingly, altho men, limited to the employment of the reasoning faculty, have not reached that conclusion. The progenitor of the race of free-traders, Adam Smith, suggests this excuse when he says of the smuggler of his day, hardly distinguishable from a pirate, that he "would have been in every respect an excellent citizen had not the laws of his country made that a crime which nature never meant to be so." It is, however, impossible to say what proportion of our statutes would be invalidated by the application of this principle, and it is at any rate not permissible to leave it to each individual to determine which of them are in accordance with nature's intention and therefore to be obeyed by him. We have a certain respect for cases of conscience like the Doukhobors, who go to Siberia rather than do military service, for the Nonconformists who let their household goods be sold at auction rather than pay for the support of the Church of England schools, and for the abolitionists of the last generation who harbored runaway negroes in spite of the Fugitive Slave Law, altho we realize that such disregard of the will of the majority is dangerous to the social organism. But the men and women who attempt to defraud the Government out of sums ranging from ten dollars to ten thousand, according to their several abilities, are not all fanatical free-traders. They do not seem to be acting in accordance with the dictates of their consciences, but against their consciences if they have any. Many of them are protectionists in principle altho free-traders in practice. Our vigilant customs inspectors have recently found ladies richly laden with undeclared goods which they had purchased in Europe with money made by their husbands in protected industries. The Sugar Trust, which owes all its power to the tariff, has robbed the Government of millions of dollars in duties by means of wires in the dock scales. If smuggling were confined to free-traders the United States Treasury would be better filled.

Since the United States levies no direct taxes this is the only opportunity the ordinary citizen has to cheat his country unless he sets up a moonshine still. So he is apt to take advantage of it. Besides there is the fascination of the game, the double delight of risk and reward, the pitting of brain against brain, the outwitting of experience by originality, which forms the theme of the most popular stories of the day, the dramas of mystery, crime and intrigue. The glee with which successful schemes to defraud the Government are narrated shows what an important incentive to smuggling this is. Tourists circles in Europe this summer have been enthusiastic in their applause of the lady who told how she had put her $20,000 pearls on the neck of her negro nursegirl when they landed. The custom house officials naturally supposed them to be false, so the shrewd lady got them in free and "without the telling of a single lie" as she triumphantly concluded, apparently unaware that there might be another clause in the Ten Commandments applicable to the case.

Political Afrites

An afrite, fearful, horrible, enormous, has burst out of a copper can, which D. Cady Eaton, Emeritus Professor of Art History at Yale University, has fished out of the political sea, and he has written up the phantom and addrest it to the Democratic party of Connecticut. This is the terror he has seen: "A new secession, not handicapped this time by slavery, may be the only way for the people to regain their liberties and terminate the rule of graft." The people, he says, are tired of centralization and imperialism and "the disruption of the Union into independent republics is conceivable, possible, and is to be feared if there be not great changes in Washington."

Indeed and indeed! "Secession," "disruption"—we are glad he no longer

teaches history in Yale University; not that any young student would believe him, but because it is not decorous to have an active professor laughed at. He had better juggle the afrite back into the copper can and screw the cover down tight and throw it into the sea.

Another seer of dolorous visions is Charles H. Young, who was a few years ago president of the Republican Club in this city, but who has seen the monstrous wings of the Rooseveltian roc darkening the land. He leaves the club in terror, not willing to be responsible for Mr. Roosevelt's election as President in 1912; for, says he, "if that man becomes President again, we'll never get him out of the White House"; for, says our visioned hunter of horrors, he is "the most dangerous man in the history of the republic, the greatest menace to liberty, the most alarming figure who has arisen in politics since Waterloo."

It is amazing and sadly amusing that such monstrous fantasies should distort the vision of men who in their sane days have looked with clear sight at the current of history. There is absolutely no afrite escaped from the can. No portentous roc has flown hither from the hunting fields of Africa. The visions are all internal, the product of disordered brains.

And yet we hear just this kind of talk in the shivering, trembling accents of self-excited men. To overturn this republic, to seize, like Cæsar, the throne, is as impossible as it would be to reverse the revolutions of the planets. To say such stuff is criminal, where it does not indicate a loss of one's wits. We have passed the day of Aaron Burr and Blennerhassett, and their scheme never could succeed.

The terror is of centralization and the loss of State rights. The talk about it is mostly fictitious and hardly deceives those that utter it. It is taken up by Democrats because they are out of office and must have a slogan; and they echo it from the cry of Republican corporate wealth that fears national restraint, but can manage State legislatures. Southern Democrats do not fear centralization when it comes to yellow fever. This is a different country, with its ninety millions and its interlaced, interstate communications, from what it was when the Constitution was adopted. If with new necessities new light breaks out of the Constitution, we need not fear so long as we have a Supreme Court to interpret an organic law. To affect dread of centralization is to distrust and dishonor the Supreme Court of the United States worse than any language ever uttered by Mr. Roosevelt; and this fact we commend to the attention of certain learned candidates for the Governorship of important States.

The Country School

THE problem of the country school is suggested by the article in a recent issue by President Brown, of the New York Central, and by other railroads that are promising to venture in the same line. For some time it has been understood that our rural school was not working to make better farmers of the farmers' boys. They have been taught for the distinct end of mental culture and mental accumulations of knowledge, entirely apart from the application of that knowledge to agriculture.

We are prepared now to assert that farming should be the aim and end of education in rural schools, and that something of this sort should be injected even into our city schools. We do not mean that the children should be taught solely the art of cultivating plants. Rural schools should be broadened and not narrowed. It will not broaden them to teach how to spray apple trees and how to grow beets, unless with this you give to the pupils a knowledge of language and mankind. We must put the tools together, that is the mind tools and the hand tools. God knew how to make a man when he put a hand on each side of him and a head on top. These factors must work together, and should be educated together. Agriculture is the one industry that has close relations with all the sciences. In broadening our rural schools therefore we must bring in botany, geology, entomology and landscape gardening. A first class training will add a graceful and easy use of the English tongue. This will involve a knowledge of English literature and English history.

It follows straightway that the modern education demands a new sort of schoolhouse for the country. It is by no means enough that we unite a half dozen districts, and put up an expensive building, on a street front—especially if this building is an imitation of a city schoolhouse; two or three stories high, without shop, laboratory, or garden. We have land enough everywhere among our farms, so that every room of the school building for instruction may be on the ground floor, with light let in joyously and abundantly. A second story may give a public hall. Fine art is well enough, but a finished landscape art out of doors is even more important. The young people under training should not leave the beautiful when they leave the building.

In other words, every country school building should be in the middle of half a dozen acres, laid out as garden, orchard and lawns. Half of the education of the children should be out of doors. Instead of the sign, Keep off the grass, every child should have his own plot, and be taught to apply in the soil the information which he acquires from his books and teachers. In this way you get a wholesome education that bears for our social welfare as well as for the individual welfare of the pupils. Each one of these is learning not only to take care of himself after graduation, but to add to productive results.

The rural school, of course, should be a town school; the old district schools were never intended for anything but makeshifts, during the pioneering era. They hung on altogether too long. The Anglo-Saxon unit is the town unit, and it is the best thing ever devised for either state or church or school. In this town or township the school should become the center of influence. In many of our towns rational economy would combine schoolhouse and church. When this combination comes about, the superintendent will become the most influential authority in community life. It will displace the saloon and the poolroom and all other gathering places. When our school forces are rightly directed it will bring the old and the young into a close co-operation with the school; not the schoolhouse, but the school farm as the center.

It follows also that we must have a new sort of teacher. The whole entourage has got to be made over. Our normal schools must send us persons trained to a delicate and intimate acquaintance with Nature. Inspired themselves, they will inspire the pupils to that sort of apprehension which makes of them the most practical people, and at the same time poets. They must come to us with sufficient knowledge of life and growth —in other words, of the evolution that is going on about them, to enable them to unlock the doors for the boys and the girls that are entrusted to them. In this way only can we secure that sort of rural education that fits our young people for progressive farm life. The key to the situation is right at this point, teachers trained for the sort of training that we need.

It follows once more that we must have a new sort of rural life; a new home and a new farm and a new agriculture. When we get the right sort of teaching and the right sort of inspiring, for these things ought always to go together, the study of Nature and farm work will be coincident. Instead of rural life being drudgery it will be full of enterprise, intellectual energy and interest. It will be a humanizing work. There is no other occupation that anywhere compares with agriculture, provided it be real culture. Our difficulty all along has not been so much with the old-fashioned farmer as with the fact that the young farmers, or those who ought to have been farmers, have been filled with aspirations for getting away from the land, and going into what is conceitedly termed "business." We hold that there is no business on earth more complex, more full of emprise than farming. It involves a full knowledge of creating, or producing, of economizing and of marketing. The man will surely fail at farming in these days who is not well up to the age.

The age is calling loudly and imperatively upon the farmer; we must have the production and the productive power of the United States rapidly increased, much more rapidly than they have been, in order to keep pace with increasing population, and to keep our export surplus up to a high mark. You may settle

the high price investigation as you please; you can lay the prices that so far overtop salaries and wages to any of half a dozen causes, or to all of them combined; it stands clear that when the productions of the country are sufficient to crowd the market, prices will find a rational level—that is, unless they are inflated by arrogant legislation. What we want is a better educated farmer, and the land brought up to its highest capacity. We have not come anywhere near this high land mark, and we never shall do it until the country school stands behind the movement.

Mr. Roosevelt's Tariff Views

REPLYING, in Atlanta, to inquiries about his attitude toward the recent revision of the tariff and the tariff plank of the New York Republican Convention's platform, Mr. Roosevelt said, on the 8th inst., that he must be judged, so far as that plank was concerned, only by what he had said in his speech from the chair. "In my speech as temporary chairman," he added, "I was careful to put my position as accurately as accurately used language could put it."

We showed last week that what he said in the convention about that revision of duties which is called the Payne-Aldrich tariff was nothing. He avoided the subject as carefully as accurately used language would permit. On two or three occasions, however, last week, after leaving Atlanta, he spoke on the tariff, but the reports of his speeches do not show that his opinion of the Payne-Aldrich revision was expressed with that clearness and emphasis which commonly characterize his public utterances. Indeed, we do not see that it was expressed at all, unless it may be found in his hearty commendation of Senator Beveridge, who voted against the tariff bill, and in his disapproval of the legislative method heretofore used in all revisions.

At St. Louis he said that the Republican party was united in support of the doctrine of protection, as set forth in the national platform; that he believed a great majority of the American people would vote for such protection in preference to free trade or a tariff for revenue only, and that the methods heretofore used in making tariffs were "ineffective in correctly and justly applying the protective principle" as it was defined in the platform. He thought there should be a Tariff Commission of amply equipped and impartial experts, to make investigations which would enable Congress to apply this principle correctly; that each schedule should be "revised by itself," with regard only to "the justice of that particular case," and that "some Government body" should be required "to see that the laborer gets his full share of the benefit." It may be that he would have this duty performed by a commission empowered to fix wages. If "such a policy" should be "enacted into law." we should, in his opinion, have an ideal situation. Our industries would be justly protected, the workingman would get his share, log rolling and favoritism would be eliminated, and the duties imposed would exactly represent the difference between the cost of production here and the cost of production abroad. We notice that in his remarks on this subject Mr. Roosevelt has not taken into account the full allowance of the national tariff plank, which adds to the difference in production costs "a reasonable profit to American industries." Congress and the Commission might be able to reach an agreement as to the percentage which should measure that profit.

Mr. Roosevelt most heartily commended Senator Beveridge (who voted against the tariff bill) as a legislator of courage, honesty and common sense, who had resolutely refused to ally himself with corrupt interests. He commended in a general way (specifically, however, in some instances) all of the Senator's legislative acts. It seems to us that he must have had in mind the Senator's tariff vote when he said that Mr. Beveridge had not "split from his party" but had "merely stood by the bulk of it"; that he had done what the mass of the people desired, and that before the next Presidential election the party's platform would be "fairly and squarely the platform on which the Senator now stands." The record of the Senator's course warrants no other inference. But if Mr. Roosevelt intended thus to denounce the Payne-Aldrich revision indirectly, why does he not also do it directly and em-

phatically? Is it because he recently declared that the new tariff is better than the old one? Is it because he feels committed to the support of the tariff plank of the New York Republican Convention, which he did not oppose, for which he voted, and which might have been written by Senator Aldrich himself?

Mr. Roosevelt said at St. Louis that the surest way to prevent an agreement for the enactment of his ideal revision policy would be "to indulge in useless recrimination about the past." This will not prevent a very large number of voters from expressing their indignation at the polls next month. We do not think the ex-President realizes how bitter and enduring is the resentment caused by that tariff revision, or how important the tariff issue is in this campaign. If he had been in this country during the closing weeks of the debate in Congress and in the following six months he would know more about it. His long absence should not be forgotten by many who respect and admire him but who find his tariff course unsatisfactory and disappointing. Unless all signs are misleading, the results of the coming Congressional and other elections will convince him that what is said to be his present estimate of the force and prominence of the tariff revision issue was not carefully and wisely made.

The Religious Conventions

The Protestant Episcopal Convention has a great deal of authority over a great many things, and the Congregational National Council has none at all; and yet we do not see but that the advice of the latter is obeyed about as well as the enactments of the former. Three years ago the Council advised its State and local bodies to regularize their names and in various ways to change their functions, and to a great extent they have done it, not because they had to, but because they chose to. Meanwhile the Episcopal Convention has refused, by the vote of the lay deputies, to drop the name "Protestant" from the Prayer-Book. The Convention has been considering amendments to the various rubrics, while the Council has provided a full order of services for Sunday worship, somewhat developed, even including processionals and recessionals, and has directed its committee to supply optional orders for other religious occasions, such as baptisms, marriages and funerals, but none for divorce as yet. Even Jewish rabbis cannot perform that religious function any longer in this country.

Of all the acts of the Episcopal Convention the most interesting to the people at large is not the new authority to consecrate suffragan bishops, but that which concerns fellowship with other denominations. On that matter two actions have been taken, one adverse and the other favorable. The bishops were asked to interpret the new Canon Nineteen, as to the admission of the clergy of other bodies into their pulpits. The reply was, substantially, that it did not mean that those not Episcopally ordained should be allowed to preach or to administer the sacrament in an Episcopal Church, altho liberty as to other forms of address is allowed. This is by no means a liberal interpretation or permission, and it leaves the Episcopal Church almost by itself in its exclusiveness. The other action provided for a commission to call a world-wide, pan-Christian congress to discuss the conditions of faith and order which concern to unity of all Christian bodies. It is the Edinburgh Missionary Conference which has created so much of a brotherly enthusiasm and a desire for more unity. It is a noble and Christian-like spirit; and yet we greatly regret that the Episcopal Church, thru its bishops and house of clerical and lay deputies, has not seen the opportunity near at hand to prove its desire for unity by joining officially with pretty much all our other Protestant churches, except the Southern Baptists, in fellowship in the Federal Council of the Evangelical Churches of the country. It looks quite too much as if they were unwilling to seem to recognize them as genuine churches; and until they do there can be no union, only perpetuated schism. At present so far as Presbyterians and Congregationalists and Methodists are concerned there is no such schism as that which separates Episcopalians and Southern Baptists.

But it is a fine feeling which drew Dr. Manning and *The Churchman* to call for this congress. Of course, the

Catholics will not come, and it will be left for the Protestant bodies. It will be very educative. As to any present conclusive result we are not confident. The efforts to unite Protestants on the basis of the Lambeth quadrilateral have utterly failed and will ever fail because other Protestants cannot allow that the church depends for its continuance and regularity on any such manual conditions as a succession of clergy maintained without interruption. The dominance of the spiritual element in the church will tend to a broader interpretation; but there can be no formal union so long as one body fails to recognize the validity, if not the regularity, of the orders of another. The congress, when called, will embrace wide divergences in doctrine and order, and it is only on the basis of their common service and discipleship of Christ that they can come together. And that must provide a basis that will admit the high church of Fond-du-lac, the latitude of Presbyterianism, and the Quakers who celebrate neither baptism, the Lord's Supper nor ordination of the clergy.

The Congregational Council has given no attention scarcely to union, except as it exprest gratification at the establishment of the Federal Council of Churches, and regretted the present failure, or delay, of the union with the United Brethren and the Methodist Protestants. Perhaps it is not too late yet to remedy the almost fatal blunder of three years ago. The time of the Council, apart from the centennial of the American Board and the annual meetings of the other benevolent societies, was taken up with less important questions of internal concern, and particularly whether, like other denominations, the Congregational societies should be under the control of the national body. The American Board for Foreign Missions, and all the other societies, such as that for home missions, the Bible and Tract and Sunday school societies, were at first union societies for all denominations, and so were self-perpetuating, quite free from ecclesiastical control. As the other denominations withdrew and left the societies to the Congregationalists any new societies were organized after the same manner of independence. Meanwhile Presbyterians, Methodists, Episcopalians, established their missionary societies under their own control, and that has worked well. There has been a demand for a change among Congregationalists; and, after long hearings and discussion it was voted that it was the desire of the Council that the members of the National Council should be voting members of all the societies and a part of their electorate. Many doubted. Some always fear a change; but we can see no reason why the Congregational National Council cannot as safely be trusted to elect the trustees of the missionary societies as can the Methodist General Conference or the Presbyterian General Assembly to elect the trustees or directors for theirs. Of course the administration must be carried on by these directors or trustees.

We have spoken only of major matters, or, rather, of matters that attracted particular attention. Really the great matters are those that deal not with internal economy but with enlargement and expansion. These are not wholly neglected. They have to do with evangelization or union. The great multitudes who attended the meetings of the American Board's centenary showed their sense of the importance of missionary work. About 1,500 delegates and visitors took the trip to Andover to set up a monument to the first young men who went as American missionaries; and to Bradford, where another monument was dedicated to mark the place where the American Board was organized and these first missionaries were ordained to its service. Of a hundred other missionary societies the American Board is the mother, and thru their representatives they presented their greetings. The evangelizing and civilizing work of these missionary organizations during the century is a major part of the later history of the world.

Columbus Day

Columbus Day is not yet generally recognized as a legal holiday, but a real holiday it is wherever a large part of the people desire it as their religious festival. For it has been created for Catholics, particularly immigrant Catholics and their children, the special Catholic holiday of the year, something like the Sunday school children's festival day in Brooklyn and some other cities, when

they march in procession and hear speeches. Christmas and Thanksgiving are religious or family holidays for all the people; Columbus Day belongs to our Catholic people.

The choice of the day is a happy one. Columbus was the first immigrant to America. He was an Italian; he was a Catholic. There have been efforts made, and some progress in them, to have him canonized as a saint in the Roman Catholic Church. The search for miracles thru his intercession, we believe, has not yet been successful, but with the new honor given to him, and the attention called to his religious spirit, it will be strange if a sufficient number of cures of the sick thru his mediation shall not be found to warrant his addition to the number of saints. He labored enough; he suffered enough; he had wonderful prophetic vision. Let him be the favorite saint of our Italian immigrants, of our Spanish citizens, and let our Irish Catholics honor him next to St. Patrick. We wonder that we have never yet had a legal St. Patrick's holiday here in New York. Why have our Irish rulers preferred the worship of their Indian Saint Tammany!

Last week was Columbus Day in the large cities which are now possessed by our Catholic immigrants and their descendants. President Taft stood with head uncovered for hours while the procession passed by. Archbishop O'Connell reviewed the procession and he preached the commemorative sermon. Fifty thousand people took part in the Boston procession, and the rivalry for the first prize in the "floats" went to an Italian society. They marched by nationalities. Italians, Irish, French, Spanish, Hungarians and all the rest. They marched in soldierly fashion; and very marked was the order of the men who had served their three years in a European army. It was a most inspiring sight, whether in Boston, or in dozens of other cities, where the Catholic population dominates, as it does in New York, and even, slightly, in Philadelphia.

While the constituents of the magnificent processions are of differing nationalities, the one thing that unifies them is their religion. They are all Catholic. The North of Ireland Orangemen take no part in it, nor the Scotch, nor the Lutherans of Germany. There is a Catholic organization known as the Knights of Columbus, and they have given a nucleus for the celebration of the day. So far as the Italians are concerned we do not suppose that the religious spirit controls their celebration, but they still call themselves Catholics, and they are naturally better Catholics in this country, where the Church is free from the State, than they were at home.

It is properly a matter of gratification and pride that this new Columbus Day is so enthusiastically celebrated. It goes for patriotism; it goes for religion. The great danger for our immigrants is that their children will lose with their religion that control of moral restraint which has kept their fathers decent. Nor is this a danger of Catholic immigrants alone; we see it in our Jewish population, and to a considerable extent in our own native Protestant population. So far as superstition has kept them in control, that is fast being lost. As fast as they can get out of parental rule young Jews in multitudes are forgetting to fast on Yom Kippur, while Sabbath is a forgotten day. There is growing up a race of hoodlums, "Apaches," utterly lawless, irreligious and immoral. Over them priest or preacher or rabbi has no influence. If they ever had the parochial school they hated it and despise it. They have utterly broken off from their old religion and have but a dim, but unpleasant, memory of it. Possibly the reaction will come with their children, who will have no bitter religious hostilities, only utter indifference; and who may be more accessible to the influences that will be brought by the Church. There is some hope there. We remember the irreligiousness of this country at the end of the eighteenth century and the wonderful reaction that followed.

So far as the Catholic Church is concerned, we believe it will yet recover its young people that have gone astray, or that they will join other religious bodies. The free spirit and the intelligence of the day into which our immigrants have entered quite overturn all that faith which rests on superstition. The protest of our youth against the religion of their parents is largely intellectual. They cannot believe what was taught them as truth, and when told that they must be-

lieve they rebel. In our own land the superstitions attached to the Catholic Church have been largely cleansed away. Intelligent priests do not teach them, and intelligent Catholics do not believe them. They are retained only as useful for the control of the more ignorant. Even abroad the process is going on, and we hear of several saints lately dropped from the martyrology. But these reforms go too slowly, and Lourdes and St. Ann still multiply their miracles, and the people kneel in earnest petition that the blood may be liquefied which will insure the mediation of the saint and avert the cholera.

This happens to be an unfortunate time for the Roman Church. It is a period of intellectual repression and of ecclesiastical tyranny. In Europe those who hate the Church are rejoicing in the blindness of the Vatican, which has blundered with extraordinary persistence. It has blundered politically, and no less in its restraint of intellectual freedom. It has set France and Spain and Portugal against it, while it has forbidden its students for the priesthood to see any light but its own, and it has set spies over its very teachers of theology in fear that they may question in their hearts. Of course, this is resented in high ecclesiastical circles. The tyranny of the Archbishop of Boston angers his priests. These things will not last. The days of Pius X will come to an end; and when the reaction comes it is impossible that under a new Leo there shall not be more liberty and less antagonism to the spirit which searches everywhere for truth, even the new truth as well as that a thousand years old and musty. We believe in Columbus Day.

A Party and Its Scoundrels

At the New York Republican convention Mr. Roosevelt very properly insisted upon a platform denunciation of corrupt legislators, and he has since, in Illinois, Missouri and elsewhere, sharply and justly attacked crooks and crookedness in politics, saying that a political party should strive especially to punish its own dishonest men. For some time past, the Republicans of New York have been exposing their own rascals. The Allds investigation has been followed by another, now in progress, which has disclosed the corruption of legislators who were not less prominent than Senator Allds, and last week a former State Senator was indicted for attempting to bribe, two years ago, that Senator, now a Congressman, whose vote saved Governor Hughes's racetrack betting bills from defeat. A party deserves commendation for trying to punish its own scoundrels, but the Republican party in New York will probably suffer at the polls on account of the results of these investigations. Many voters will say that the inquiries were not undertaken voluntarily, but were forced in various ways; that the corrupt legislators were maintained for years in leadership at the capital, and that they were identified with the party's dominant element, which is only beginning to lose its power. There is much truth in this. These voters, who have commonly stood with the party, are now very much inclined to vote with the opposing party, not because they like it, but because they think a change of rule, at least for a time, is needed for the public good. It is difficult to estimate the political effect of these graft disclosures, but it may be very considerable. Nevertheless, it is the duty of all good men in the party that suffers to pursue the work of investigation and exposure to the end, and to punish, if possible, every guilty man. Whenever it is clear that all the party leaders and "the organization" earnestly desire the exposure of the party's scoundrels, voters who are now wandering will return.

"The Hamiltonian" Bent of Mind

Mr. Bryan accuses Mr. Roosevelt of the Hamiltonian bent of mind. Hamilton was, he tells us, a believer in centralization. So he was, and he was also a believer in States' rights. He was one of the principal writers of *The Federalist,* whose purpose was to defend and secure the adoption of the Constitution, with its centralized power, as well as the decentralized rights of the States. Did Alexander Hamilton belong to the Federalist party? Equally did John Adams, and we might say, George Washington. The charge of Hamiltonianism, which Mr. Bryan brings against Mr. Roosevelt, is based on the fact that he wants corporations like railroads to

seek national incorporation. So he does, and for the reason that this will allow better supervision. No, says Mr. Bryan; not that, but in order that they may escape State control. We accept the reason given by Mr. Roosevelt as adequate. One national control is better than forty-six State controls, and more likely to be effective in restraining wrongs. It is State legislatures that have been most subservient to corporations. It will not be easy to frighten the people by talking to them of usurpations of power by the national Government. It is only what the people give that the central power at Washington, thru the will of Congress and the approval of the Supreme Court, will execute. Never was our Government more absolutely democratic, in State or nation, than it is today. We shall have no New Nationalism except as the people demand it; and this we may assert, that the people take more interest in the national interests, as against State interests, than they did in the old Hamiltonian and Jeffersonian days. And the people will rule, undisturbed by bugaboos.

Mr. Dix's Wall Paper

A political campaign sometimes brings to light curious and amusing exhibitions of inconsistency. In his letter of acceptance Mr. John A. Dix, whom the Democrats have nominated to be Governor of New York, said that "to do away with the high cost of living, the governing power must be in the hands of the Democratic party, so that we may have an honest and downward revision of the present iniquitous tariff, which has increased the duties upon all the necessaries of life." Mr. Dix is largely interested in the manufacture of paper pulp and wall paper. He is president of the Iroquois Pulp and Paper Company, and a director of the Standard Wall Paper Company. His intimate friend and business partner, W. A. Huppuch (who succeeded him two weeks ago as chairman of the Democratic State Committee), is vice-president of both of these corporations. Those who care to search the volumes which contain the reports of the tariff hearings before the Ways and Means Committee at Washington in 1908 will find there a letter addressed to the chairman by Mr. Dix's Standard Wall Paper Company and signed by Mr. Huppuch. The date was November 11, 1908. Many thought that the Republican majority of the committee, as well as the Republican party, was then in duty bound to recommend "an honest and downward revision." Did the Standard Wall Paper Company commend such a purpose and ask for a reduction of the duty on wall paper? Alas, no; it urged that the duty of 25 per cent. be increased to 35 per cent., at least, and exprest its preference for 45 per cent. Probably Mr. Dix and Mr. Huppuch would reduce the high cost of living by cutting down the rates upon goods which others produce, and by almost doubling the duties upon the products of their own mills.

Government Strike-Breaking

It has been common for labor agitators in all countries to excuse acts of violence and injury to commerce on the ground that a strike was really a state of war. The French Government has heard this so often that it has learned it by heart and is acting on it. Last week, when a hundred thousand railroad employees left their trains, shops and offices at midnight, and two hundred thousand more voted to join with them for the purpose of paralyzing the transportation service of the whole country, Premier Briand promptly put into effect a war measure. The Government has the right whenever it deems it necessary to take charge of the railroads and man them with troops. Orders were issued from the War Department to the striking *cheminots* of the reserves to report to their several regiments for military maneuvers within three days. Within three days the strike was over. The men, finding that they had either to run the trains for the railroad company for the wages it pays or run the trains for the Government at the wages it pays, chose the former alternative. The same drastic weapon has been employed with the same success in Italy. Where the State owns and runs the railroads, as is the case with some of the French and most of the Italian lines, the employees may be regarded

as Government officials and a strike as a mutiny. Disobedience to orders may then be regarded as a capital offense if the Government thought it proper or politic to go to the extremity of its power. The French Government established the principle in the case of the postal clerks and carriers that its employees had no right to belong to militant unions altho they could form benevolent and mutual benefit societies. The power of the Government in dealing with such crises as a general strike depends upon the universal military service by which practically all the able-bodied male population is in one degree or another liable to be called out at any time for service. In England the Government has no such power and we have wondered whether the strong effort now being made by the ruling classes for the establishment of the system of conscription may not have as one of its motives the desire to strengthen the hands of the Government in industrial disorders. The revolutionary labor leaders of France, realizing that the chief obstacle to their plans is the military power of the state, are trying hard to sap the loyalty of the army by anti-military propaganda, urging the soldiers to fire upon their officers instead of upon the people. This propaganda runs counter to the patriotic principles which have been bequeathed to the French people from their history and cultivated in the public schools, nevertheless it is apparently gaining ground and one cannot say what will come of it. In the meantime it is interesting to observe that the two men who are looked upon by the French people as the bulwarks of public order are M. Briand, Prime Minister, and M. Millerand, Minister of Public Works, both Socialists, whose elevation to power a few years ago was regarded as a menace to society. The *bourgeoisie* have learned that in *syndicalism* they have an enemy more ruthless, violent and powerful than political socialism and they are leaning to the latter as the kinder alternative. There is no reason to charge Premier Briand with apostasy to his principles because last week he raided the office of the Socialist paper, *Humanité*, of which he used to be an editor, and arrested the leading agitators of the strike on a criminal charge. He might reply as did his predecessor, Premier Clemenceau, when during the postal strike one of his former associates in anti-governmental movements called upon him to explain his change of attitude. "Very easily explained, my friend," he replied. "We are now on opposite sides of the barricade."

A University for the People

Dr. Henry M. Leipziger, the Supervisor of Lectures of New York City, has just issued his new year book, which will well repay the careful study of all interested in popular education. When an average of 959,982 adults attend every week free lectures provided by the city, as they did last season, some idea may be gained of the value of Dr. Leipziger's work. There are now over 600 lecturers giving these evening courses in 150 public schools and other buildings, and their topics range from Pericles to protoplasm, including all the realms of art, literature, science, sociology, travel, etc. The value of these lectures to the quiet, well-to-do class of people who attend them must be very great, for they come year after year and in ever greater numbers, while the neighborhood librarians say they inspire much serious supplementary reading thruout the year. The lectures have long since passed the "fads and frills" stage and are now an integral part of the city's great educational system. The fact that more than 100 American cities have followed New York's lead and established similar courses only shows how a good idea is bound to spread. We congratulate any public educational system which permits a Dr. Leipziger to inaugurate such "a university for the people."

Agricultural Novelties

Alfalfa has been the one chief agricultural wonder, the revelation of the age. It gives three crops to the year, even in the Northern States, reaches its roots down 30 feet and so becomes the best subsoiler that we have; it takes nitrogen directly from the air and feeds it to the soil, so that it never exhausts the soil, but fattens it; it serves admirably as a cover crop, to be plowed under in the spring to make humus; in fact, it is so far ahead

of any of our old forage plants as to be out of comparison. The variety that we have been growing in the States was, however, indigenous to a hot climate, and has not proved entirely satisfactory in the Northern States. The Department of Agriculture has spent three years searching the world over, and reports that it has now found a new variety, that it is believed will prove hardier, and more generally adaptable to the Northern States—possibly to the Southern States also. Professor Hansen, whose name is very familiar among fruit growers, was sent to search out the whole earth, if necessary, and he has done it. Last year, while wandering among the nomadic tribes of Siberia, living with them, and sharing their huts and food, he discovered in latitude 68 North what he wanted. He has been selecting seed from the latitudes 50 and 55 North, where the winters are very cold and the summers very dry, and sending it to Secretary Wilson. It is believed that this new alfalfa will be of immense value to our farmers, and will not fail to grow in any quarter of the United States. At the same time Professor Hansen has picked up a good many other very choice things, to be added to our gardens and orchards. Among the rest is a new blackberry of high quality; a new grape, of which he thinks very highly; a new hardy clover, and several hundred other plants to be tested. Here is an addition to the wealth of the United States, probably an annual addition to our assets, equal to the cost of army and navy. The appropriation for the Department of Agriculture is, we believe, only about thirteen millions for the current year. We could afford one hundred millions.

Forest Fires

A California lawyer, an advocate of States' rights and known chiefly for his activity on behalf of Western water power companies, has given out a letter to the press in which he criticises the Government's policy with regard to forest reserves. The extremely destructive forest fires of recent months have furnished the occasion for his tirade. He makes the point that before the advent of Government control on the forest reserves the unrestricted pasturing of sheep, horses and cattle tended to prevent the accumulation of inflammable material. He also credits the Indians with the practice of burning over their hunting grounds nearly every year, thus reducing the danger of great conflagrations. Now that "scientific forestry," by removing one safeguard and neglecting the other, has succeeded in converting a good part of the Western forests into smoke and ashes, he would have no more of it. Since the evident purpose of this attack is to create sentiment in favor of the States' rights representatives who were overwhelmingly outvoted at the recent Conservation Congress by the advocates of national control, it is worth while to consider the allegations made. Investigation into the origin of the recent forest fires has tended to show that nearly all of them started on privately owned lands where the above mentioned preventive measures could be exercised without interference from Federal authority. Nevertheless it was on such areas that most of the fires started, and they were usually beyond control by the time they reached the Government reserves. It would seem therefore that the facts really furnish an argument for the extension of Federal fire patrol on lands contiguous to the forest reserves and national parks. The charge that the forest service is not taking needed precautions by burning accumulating débris is made so frequently in the Western press that we are inclined to think the forestry bureau should investigate the matter. If it can be shown that the burning over of lands during favorable seasons of the year decreases the chances of forest fires, the practice should be adopted. But we should prefer to have it done by the forest service, and not by irresponsible sheepmasters and stockmen. In any case the number of forest rangers should be greatly increased. If the Government were to build one battleship less a year and apply the money instead to the prevention of forest fires, the benefit to the country would be inestimable.

That Switzerland is our superior in republicanism is shown not merely in the success of the referendum there, but strikingly this week in the fact that Switzerland was the first to give official

recognition to the republic of Portugal. How far behind other nations the United States is in this matter cannot be said until it does give such official recognition. It will be recalled that we suffered the monarchies of Europe to impose an undesired and superfluous king upon free Norway without giving any encouragement, official or popular, to the democratic sentiment prevailing there. Is this because we have become indifferent to the progress of self-government thruout the world, or is it because we have lost faith in our own institutions and so hesitate to commend them to other nations?

Things have moved along somewhat since twenty years ago and more Professor Park, of Andover Seminary, and Secretary Alden, of the American Board, were declaring that the teaching of a second probation would "cut the nerve of missions." Now in *The Sunday School Times* Robert E. Speer, secretary of the Presbyterian Board of Foreign Missions, answers the question, "Are the unevangelized heathen lost?" in a way that would have scandalized those stern theologians. He tells us that being "lost" is a present condition, and that unevangelized heathen are saved or lost according as they try to obey God as they know him, and that the motive for missions is quite other than the belief in future misery for those who have not heard of Christ.

While the recent executive order will put over 7,000 assistant postmasters of money order offices under the protection of the civil service law, it will not touch the second and third class postmasters for whose protection legislation is required. This the President will recommend to Congress. It will make an immense reform, and will give Congressmen much more time to attend to their legislative duties, while almost destroying the efficiency of the political machine. It will hardly pay to be a boss when one has no offices to distribute, and so no officials to control. The public service should be given to the country and not to a party.

In New York City there is a large number of persons and at least one organization that will read with sympathy these words, recently pronounced by a chief of State:

> "I cannot separate the cause of the schoolmistress from that of the schoolmaster. I am accustomed to speak my mind, and I repeat here what I said formerly to the Educational League, the salary of the schoolmistresses should be equal to that of the male teacher."

No, this is not a candidate for office addressing a hall-full of New York suffragists. It is President Fallières, speaking at Annecy on the occasion of opening a new school house.

It was time that there should be established a Bureau of Municipal Research to investigate the expenditures of the City of New York with a view to aid in possible economies. President Taft has done the same for the reduction of Federal expenditures. It is found that the Budget of this city has increased twice as fast during the last ten years as has the population. The population has increased 38.68 per cent., and the expenditures 79.69 per cent. Very properly the Comptroller proposes that there be no increase in the Budget for next year.

They do not escape accidents from motor cars and cycles in England any more than in this country. Last year 334 people were thus killed in England and 97 by street cars. But still vehicles drawn by horses are the more deadly, there being 500 deaths from such accidents. In London alone there were 4,831 accidents from motor cars and cycles, of which 145 were fatal.

The women's organizations, led by the Women's Prison Association, are joined in the disagreeable duty to protest against the provision of law which requires the physical examination of women from the street brought before the Night Court in this city, a provision for the protection of vicious men. They are right, for such a provision should not be one-sided.

It is well worth noting that the Republican platform of California favors the submission to the people of a woman suffrage amendment. Thus let the West close up and move resistlessly on the East.

Insurance

New President for the Boston Mutual

HERBERT O. EDGERTON, sometime vice-president of the Boston Mutual Life Insurance Company, was advanced to the presidency on September 21. Mr. Edgerton was born in Conway, Mass., March 24, 1862.

He prepared for college at the Academy at Brimfield, but the death of his father made it necessary for him to forego a college education. He entered the services of the Franklin County National Bank of Greenfield, where he remained for eight years. He resigned as cashier in 1895 to organize the Greenfield Life Association.

This was the beginning of his insurance career. Mr. Edgerton was very successful as a life underwriter from the very beginning. During the summer of 1895 he successfully placed over $500,000 of insurance, covering Franklin County very thoroly, and frequently traveled from 30 to 40 miles daily on his bicycle in pursuit of his life insurance business. Mr. Edgerton became secretary of the new company, which continued successfully until the law of 1899 was enacted, when the title of the company was changed to the Atlantic Mutual Life Insurance Company under the legal reserve requirements. In 1901 Mr. Edgerton secured the merging of the Atlantic Mutual with the Boston Mutual Life Insurance Company. Recognizing the desirability of further field experience he declined an offer of an executive position at the home office of the combined companies. He was subsequently appointed general agent for Western Massachusetts with headquarters at Springfield. After a service in this capacity of two and a half years he was elected secretary of the Boston Mutual Life Insurance Company. In May, 1909, the board of directors made him first vice-president and treasurer of the company, and on September 21, 1910, he was elected to the presidency as the successor of the late John W. Wheeler. Mr. Edgerton is a man of strong character and sterling worth. He is characterized by undaunted courage and inflexible determination, which together with his technical training in the field makes him an ideal executive. He has worked his way up from the agency ranks, displaying in the meantime conspicuous talents which made him the logical successor of his late chief. He is a thoro insurance man of affable temperament and engaging qualities, with a progressive personality, rendering him particularly well qualified to hold together the home office as well as the field forces. According to the company's last statement the Boston Mutual Life Insurance Company had total assets of $1,025,698, and a surplus of $25,138. The total amount paid to policyholders since organization and now reserved for their protection is $2,319,115.

THE Fire Warden of New Jersey has sued a farmer located near Burlington, N. J., for damages to the State's forests. The damages, as alleged, arose from a fire which originated in the burning of brush on the farmer's premises. He is charged with negligence in not safeguarding the property of the State. The action of the fire warden is a commendable step looking toward the conservation of our natural resources.

A PHILADELPHIA lady lacking a nickel when her house was on fire found herself unable to obtain telephone connection with the fire department. The result was a considerable loss over and above what might have been if the district fire engine company had been promptly notified. It would seem that the hard and fast rules of the telephone exchanges in all cities might well be modified to cover possible emergencies of this kind.

Financial

Great Crops of Corn and Oats

THE Government's crop report for October shows that corn won its race with frost and that for the first time our corn crop exceeds three billions of bushels. In September there was an improvement in condition, from 78.2 to 80.3. This adds about 100,000,000 bushels to the September estimate, and the indicated total is now 3,046,016,000. Last year's crop was 2,772,376,000, and until this year the record has been held by the 2,927,416,000 bushels harvested in 1906. The Government's estimate of the spring wheat crop, 233,475,000 bushels, is unexpectedly large, exceeding by 22,000,000 the unofficial estimate of one month ago. The entire wheat crop is, therefore, 691,769,000 bushels, or less by 45,500,000 bushels than last year's. The oats crop joins the corn crop in breaking the record. According to the official estimate, we have 1,096,396,000 bushels of new oats. Last year the yield for the first time passed the billion mark, but this year there are nearly 90,000,000 bushels more. The yield of rye, 32,088,000 bushels, is very nearly the same as last year's. Barley (158,138,000) shows a loss of 12,000,000. The aggregate yield of the five leading cereals is 5,024,407,000 bushels. This total exceeds the corresponding total for 1909 by 6 per cent., and has not been equaled in any past year.

A wheat shortage (now less than was expected) has tended to divert attention from the large yields of other kinds of grain. The corn crop is one of great importance. While the exports of this cereal in its original form are not large, considerable quantities of it go abroad "on the hoof" and at home also it enters into consumption in the form of meat. Record crops of corn and oats tend to affect favorably all of our industries.

....The railroads of this country paid $60,000,000 last year for wooden cross ties, or an average of a little less than 50 cents apiece.

....The Steel Corporation's unfilled orders on hand on September 30 were 3,158,106 tons. Only once before in the history of the company, on September 30, 1904, has the quantity been less. The decline has been continuous since the beginning of the year, when orders for 5,927,031 tons were reported.

....Electric power from Niagara Falls, provided for several municipalities in Ontario, was turned on at Berlin, in that Province, on October 11. The price ranges from $17.50 per horse power per annum at Hamilton, and $18.10 at Toronto, to $24 at Berlin and $29.50 at St. Mary's. Berlin owns all its public utilities and has more than seventy manufacturing plants.

....James Speyer, the well-known banker, who is connected with several of our prominent railroad systems and interested in financial institutions and undertakings abroad, returned last week from a four months' tour in Europe, where he visited the principal cities. People in Europe, he says, are favorably disposed toward American securities, but are in a waiting attitude. The majority of them are taking calmly and at their real value the statements made in a political campaign, and do not attach exaggerated importance to partisan predictions of hard times simply because this or that man or party may win. He adds the following:

"Government supervision of corporation management, if exercised by capable and honest men, free from political bias, will help, not hurt, the credit and sale of our securities abroad, and at home, for that matter. It seems to me that the financial condition of the country is much stronger than it was a year or six months ago. The balance of trade which had been so adverse is again turning in favor of the United States, and a good deal of liquidation has taken place on the Stock Exchange and otherwise. Until some of the questions creating uncertainty have been settled, we are not likely to have a revival of active speculation, and general trade and industry will probably also go slow. This would mean a continuation of easy monetary conditions, with an increased absorption of good securities at home. Europe, I think, will follow our lead in this respect, because confident observers over there know that the progress and prosperity of the United States, even if checked momentarily, is bound to increase."

The Independent

VOL. LXIX NEW YORK, THURSDAY, OCTOBER 27, 1910 No. 3230

Survey of the World

The Political Campaign

After the adjournment of the recent Democratic convention in Massachusetts, F. W. Mansfield having been nominated for Governor with the understanding that he would withdraw, the opinions of the delegates were sought by mail. For Eugene N. Foss 495 responded, and there were 484 for Charles S. Hamlin. The latter withdrew, and Mr. Mansfield made way for Mr. Foss, who is now the party's nominee. He was recently elected a member of Congress in the Fourteenth District of the State, turning a Republican plurality of 14,000 into a Democratic plurality of 5,600. In his letter of acceptance he says the leading issue is the tariff as related to the high cost of living. He demands an immediate reduction of rates on the necessaries of life, free raw materials and absolute reciprocity with Canada. ——The Republicans of Rhode Island in their convention renominated Governor Pothier and adopted a platform commending the recent revision of the tariff. They deny that it has raised the price of any of the necessaries of life, and they protest against further revision until the tariff board furnishes Congress "the data for intelligent action."——Mr. Roosevelt made several speeches in New York State last week. At Troy he said:

"You may remember that I was made temporary chairman of the Saratoga convention. That was hardly a king's job. There was more fun in it, however, than in the ordinary king's job. This king and dictator talk is the use of imaginary terms to frighten political children. I'll tell you of the real menace, greater than these political bugaboos. It is the boss in alliance with crooked judges and crooked business men. They are the ones you need to fear."

He attacked Mr. Dix, the Democratic nominee, because of the application of the latter's company and partner for an increase of duty on wall paper. He also asserted that Mr. Dix's company was one of thirty which united in making what was called the Wall Paper Trust, which was declared, in 1904, to be an unlawful organization by the Supreme Court in the Voight case. While Mr. Dix has said nothing about the request for a higher duty, he has published a reply concerning the Trust, saying he did not become a director of his company until 1907, and that his company has been an independent one. To the attacks of ex-Judge Alton B. Parker upon Mr. Stimson, the Republican candidate, Mr. Roosevelt replied that Mr. Parker was counsel for the Sugar Trust when Mr. Stimson procured its conviction for rebating and fraud. He accounted for the opposition of two prominent New York papers by saying that Stimson successfully prosecuted one of them for publishing immoral advertisements, and prosecuted the other in the Panama libel case. Speaking in a meeting at Ithaca, Prof. E. H. Woodruff, dean of the Cornell Law School, called Mr. Roosevelt an unmitigated liar on account of his assertions concerning the Harriman campaign contributions and the visit of Bellamy Storer to the Vatican. The New York *World* publishes what it says is a copy of entries in the books of a prominent banking house, showing that the late E. H. Harriman made a profit of $86,000 upon a speculative investment in Panama canal bonds at about the time when he made the campaign contributions which were the subject of correspondence that was given to the public. It is known that a considerable number of Republicans of local prominence in

the towns of New York State have decided to vote for Mr. Dix, the Democratic candidate, because they dislike or fear Mr. Roosevelt.——Speaking in Boston, on the 21st, in support of Senator Lodge, Mr. Roosevelt said the Senator had stood for progressive legislation and ought to be re-elected. He commended the Massachusetts platform's demand for a tariff commission and asserted that President Taft, by insisting upon the creation of a tariff board and by procuring a grant of the powers which the board exercises, had "indicated the way along which the Republican party is going to move."——In New Jersey, Dr. Woodrow Wilson, recently president of Princeton University, and now Democratic candidate for Governor, has been making a notable campaign, and his reception is said to indicate Democratic gains.——In Ohio, on the 22d, ex-Senator Foraker, in a long and elaborate political address, bitterly attacked Mr. Roosevelt, while supporting the administration of President Taft. Denouncing the ex-President's "new nationalism," he declared that it was "imperialism pure and simple," and "in spirit, at least, as treasonable as secession itself":

"It has one saving feature, however. There is about it all such a preposterous absurdity and such an insufferable egotism as to excite not only condemnation but ridicule. It has dispelled illusions that had become dangerous. The people now better understand the author and know better how to judge what he proposes. They are not likely to longer regard him as an improvement on George Washington and Abraham Lincoln. There is ground for hope now that what he proposes will no longer be accepted as a matter of course, but only if found to be safe and sound. This will be better for him and better for us. It will lessen his multitudinous duties and stop the work of driving into retirement, as a reactionary, every great leader who does not subscribe on sight to his fantastic vagaries."

There never had been a time, he continued, when there was less excuse for the hectoring and lecturing and threatening and menacing to which the people and their business methods had been subjected. Everybody knew that the standard of morals among business men was higher than ever before, "and yet we have been listening to harangues and slanders poured out by the wholesale, until patience has well nigh ceased to be a virtue."——Mr. Roosevelt has decided to make several speeches in Ohio.——A Washington paper quotes a statement said to have been made by an intimate friend of Mr. Roosevelt (so described as to indicate Collector Loeb), that the ex-President has no idea of seeking the nomination in 1912, but desires the renomination of President Taft.——Prof. W. E. B. Du Bois publishes an appeal to negro voters, urging them to remember Brownsville and vote against Roosevelt.

Graft Investigation in New York

Following the indictment and arrest of Frank J. Gardner, formerly a State Senator of New York, for attempting to bribe Senator Foelker in the interest of those opposing the bills which forbade gambling at racetracks, the committee which is making an investigation concerning legislative corruption took the testimony of Assistant District Attorney Elder, of Brooklyn. Gardner told him, he said, that a fund of $500,000, to be used in preventing the passage of the bills, was subscribed at a meeting in Delmonico's, and that among those present were James R. Keene, Harry Payne Whitney and Charles H. Hyde, now City Chamberlain in New York City, who represented his father-in-law, William Engeman, the president of the Brighton Beach Racing Association. Gardner also told him, Elder said, that James J. Gaffney, a business partner of Charles F. Murphy, the Tammany leader, was made custodian of $125,000 of the fund, with the understanding that it should be paid to four Senators; that Senator Foelker received $10,000, and would have had more afterward if plans to keep him out of the Senate chamber had not failed; that $5,000 was paid to the presiding officer, and sums ranging from $300 to $3,000 to several Albany correspondents of New York and Brooklyn papers. Senator Foelker (now a member of Congress), on whose affidavit Gardner was indicted, testified that Gardner sought unsuccessfully to bribe him; that Frederick Schroeder, a Quarantine Commissioner, offered him $45,000, and then $50,000, for his vote; that Flovd Adams, clerk of a court, attempted to

bribe him; that Sheriff Hobley, a prominent Republican, warned him that if he should vote for the bills he would not be renominated, and that the late Patrick H. McCarren, the Democratic leader in Brooklyn, promised that if he would vote against the bills he should be allowed to name his opponent for the next election in his district. Hobley told him, he said, that $225,000 had been paid to one Senator. Schroeder is now in Sing Sing Prison, having been sentenced for taking money from a financial institution of which he was an officer. The committee went to the prison and took his testimony. He admitted that he had talked with Foelker about the bills, showing him how his vote would affect his political future, but he denied that he had offered him any money. Gardner denies that he made the statements which Elder attributed to him. Keene and Gaffney deny that they had anything to do with a fund. The newspaper correspondents, several of whom were named, have denied, in testimony before the committee, and two or three have pointed to their dispatches, sent at the time, to show that their attitude toward the bills was not that of men who had been hired to oppose them.——Joseph M. Huston, the convicted architect of the Harrisburg capitol, has been sentenced to pay a fine of $500 and to be imprisoned for an indeterminate period of six months to two years. Charles G. Wetter, the indicted builder, has paid $14,518 in restitution and been discharged.——The Supreme Court at Washington has decided that Frank N. Hoffstot, millionaire banker and president of the Pressed Steel Car Company, who resisted extradition from New York, must go back to Pittsburg for trial on the charge that he bought the votes of Councilmen in favor of an ordinance making his bank a depository for public funds.——It has been shown, in the trial of former officers of the Illinois Central Railroad Company for defrauding the company in connection with repairs for freight cars, that William Renshaw, superintendent of machinery, with a salary of $7,000, deposited in bank $558,600 in four years; that Charles L. Ewing, salary $5,000, deposited $226,065, and that the deposits of F. B. Harriman, general manager, salary $10,000, amounted to $295,894.

With Balloons and Aeroplanes

Walter Wellman and his five associates, who started from Atlantic City on the morning of the 15th to cross the ocean in the airship "America," were rescued on the 18th by the steamship "Trent" at a point 250 miles northwest of Bermuda. They had traveled 1,010 miles and been in the air seventy-two hours. At first they followed the transatlantic steamship route, but the airship was racked and dragged down by its equilibrator and was so affected that at times it was necessary to reduce the quantity of gas, while at other times the engineers were compelled to throw away gasoline. It soon became impossible to make the proposed voyage, the airship was blown southward, and Mr. Wellman sought to reach Bermuda. After the "Trent" was sighted, the airship was brought near to her, the six men took to the water in the lifeboat which had been suspended under the airship and were soon on board the steamer. The "America" was abandoned. Mr. Wellman intends to try again with an airship having improvements suggested by his experience during this voyage.——Joseph Brucker, a journalist who formerly resided in Chicago, is fitting out an expedition for a westward voyage over the Atlantic in an airship now approaching completion. He intends to start in February from the Canary Islands.——On the 16th, the journey from France to England was made in a dirigible balloon for the first time. The new Clement-Bayard airship, carrying seven persons, started at 7.15 a. m. from La Motte Breuil, near Paris, and reached London at 1.30 p. m., landing at a garage which had been constructed for it. On the same day two aeroplanes, each carrying one passenger, flew from Paris to Brussels.——Ten balloons started from St. Louis on the 17th in a race for the International Cup. On the 23d all but one had been accounted for. Their records were as follows: "Dusseldorf II" (Germany), 1,100 miles; "Germania" (Germany), 1,040 miles; "Helvetia" (Switzerland), 850; "Isle de France" (France),

725; "Azurea" (Switzerland), 772; "Harburg II" (Germany), 750; "St. Louis IV" (United States), 550; "Condor" (France), 410; "Million Club" (United States), 315. Six of them crossed Lake Michigan and landed in the wilds of Ontario or Quebec. One came down in Lake Nipissing. Several of the pilots and aids suffered great hardships while making their way out of the wilderness. On the night of the 23d no word had come from the balloon "America II," which carried Allan R. Hawley and Augustus Post, of New York, and it was feared that they had lost their lives. Relief parties were sent out to search for them in the northern districts of Quebec and Ontario.

Severe Tropical Storm

A severe tropical storm, beginning on the 17th in the West Indies, caused great injury to property, with the loss of several lives, in Cuba and Florida. In Cuba it had been preceded, a few days earlier, by a similar but less destructive hurricane. The loss in Havana is about $1,000,000. In some parts of the city the water was several feet deep in the streets. The crops in Havana and Pinar del Rio provinces suffered greatly. In Pinar, the tobacco crop was destroyed and scarcely a house or a barn was left standing. Thousands of people are homeless and destitute. President Gomez gave notice that the expenditure of $1,000,000 for a Presidential palace would be deferred, and that the money would be used for the relief of the people. Nearly 100 lives were lost in Cuba. On the Isle of Pines, the fruit was blown from the trees, but no other loss is reported. At Key West the wind blew at the rate of eighty miles an hour. The loss there is about $300,000. At first it was said that the loss in Southern Florida would exceed $5,000,000, but it is much less. About 20 per cent. of the orange crop is gone. The storm passed northward to Savannah, and then went out to sea. Many steamships were hard pressed. The "Louisane," from Havre, went ashore fifty miles from Key West. No lives were lost. Many schooners were wrecked, and about twenty sailors were drowned. At the end of the week two steamships, the "Crown Prince," from Santos, and the "Bluefields," from Ceiba, both bound for New Orleans, were missing, and it was thought that they had been lost with all on board, sixty-four souls.——On the 19th there were heavy snow storms in Wyoming and Colorado, where the trains were tied up by drifts. On the following day two inches of snow fell in Texas.

The Insecurity of Turkey

Altho the Ottoman Empire is quiet except for the disorders resulting from the efforts of the Government to disarm the Bulgarians and Greeks in Macedonia and the Druses in Syria, yet there is a perceptible increase in the uneasiness felt all over Europe about the Balkan situation. From St. Petersburg on the one hand and Athens on the other come most startling rumors of the impending collapse of the Young Turk regime and of desperate attempts to save it by a war against Greece or Bulgaria. The announcement of a military alliance between Rumania and Turkey leaves no doubt as to the success of Turkey in such a war if the Powers abstain from interference. The alliance would hardly have been concluded without the approval of Germany and Austria, which appear to be working together in their Turkish policies. In fact, the alliance is regarded by the Continental press as Count Aehrenthal's reply to the supposed or proposed alliance of Greece and Bulgaria. Its effect has been to quiet the manifestations of anti-Turkish feeling in Crete and Greece and to give the Greek patriots a realizing sense of the probable consequences of their provocative tactics. The National Assembly, now in session in Athens engaged in a revision of the constitution, has finally refused to admit the three Cretan delegates and has ordered new elections for these seats. The Turkish loan still hangs fire. It was reported positively last week that the Grand Vizier had secured his $30,000,000 in Paris, and this report was promptly denied with equal positiveness. That French financiers are desirous of lending the money is obvious, and the only difficulty is a political one; that is, whether

the money would be spent in Germany and Austria for munitions of war, and whether France, in the effort to keep track and control of the money, would not be drawn into embarrassing complications. Since the Austro-Hungarian Minister of Foreign Affairs, Count Aehrenthal, is now the leading actor in Balkan affairs, his address to the joint delegations from the Austrian and Hungarian parliaments on October 13 was scrutinized with minutest care. It consists of the usual optimistic platitudes, and the only thing it makes decidedly apparent is that the Minister wants more money for army and navy and wants it badly. "The alliances with the Empire of Germany and the Kingdom of Italy," he says, thru the mouth of his sovereign, "have become, if that be possible, still firmer and more intimate," whatever that may mean. He calls attention to the fact that Austria, when it withdrew from active participation in Cretan affairs in 1898, did so with the reservation that the sovereign rights of Turkey in the island be maintained. His policy, the Foreign Minister concluded, was summed up in the words, "Peace and the maintenance of equilibrium." The opponents of Aehrenthal express regret that to maintain the political equilibrium he has thought it necessary to upset the financial equilibrium of both the monarchies. If success has cost so much, what would have been the penalty of failure, and is war any worse than peace at such a price.

The Portuguese Republic

The republics of Switzerland and Brazil were the first to recognize officially the republic of Portugal, but France, Great Britain and Spain have now proposed to the Powers a joint recognition as soon as the Government shall be constitutionally established. An assembly will probably be elected in January, and party organizations of radical and conservative republicans are being formed in preparation for the campaign. The Government granted four months' leave of absence with full pay to the soldiers who took part in the recent uprising, ostensibly as a reward for their patriotic services, probably more with the real desire to disperse the military power which, flushed with its success, is likely to exert too much pressure over the recently established civil authorities. The majority of the soldiers have refused to accept this offer and are clamoring for a higher reward. A decree issued by the Government banishes forever all members of the Braganza dynasty, including both the families of ex-King Manuel and of the pretender, Dom Miguel, all of whom are forbidden to enter Portuguese territory. The Papal Nuncio to Portugal, Mgr. Tonti, has been recalled to Rome, leaving the nunciature in charge of Mgr. Masella. The Bishop of Beja, who fled to Spain at the time of the outbreak of the revolution, has been summoned to court by the Portuguese Government on the charge of having abandoned his bishopric without authorization, and his salary has been suspended. A decree issued by the Provisional Government declares all the schools secularized and provides for the application of the penal code to all priests attacking the Government. The anti-clerical acts of the Provisional Government are nominally based upon earlier but obsolete legislation, in part reviving and enforcing laws promulgated over one hundred and fifty years before, as the following quotation from the text of the decree will show:

"Article 2.—The law of the absolute regime of August 28, 1757, and that of September 3, 1759, amplifying and explaining it, under which the Jesuits were obliged to quit Portugal and her dependencies immediately, remain in force as the law of the Republic. Article 3.—The decree of the representative monarchical regime of May 28, 1834, suppressing in Portugal and her dependencies all convents, monasteries, hospices and religious establishments of all orders of whatever denomination or rule remains in force. Article 8.—The property of the religious communities is to be sealed immediately and inventories are to be drawn up. That belonging to the Jesuits becomes the property of the state; that of the other communities will be disposed of later according to the relations eventually established between the state and the Church."

In Italy as well as in Spain the presence of large numbers of refugee monks and nuns is likely to cause a great deal of trouble. The Catholics are saddened and incensed at the hardships inflicted upon the religious by their peremptory expulsion from their cloisters, while the anti-

clericals resent this increase in a class which they already consider too numerous and oppressive. It will be interesting to see if any attempt will be made to carry into effect the dreams of a Pan-Iberian federation which President Braga and other leaders of the revolution are known to cherish. It is suggested that if Spain should throw off the monarchy, a federation of small republics could be formed upon the peninsula which would give to the different races composing the Spanish monarchy the autonomy they now desire and that Brazil and the other South American Republics could also be brought into the same union.

Foreign Notes

The first step in the establishment of a representative government that has been taken by China was the calling of an Imperial Senate which was formally opened by Prince Regent Chun on October 3. This body, being carefully selected by the Government and provincial officials, was supposed to be of a safe and conservative temperament. Its duties were merely advisory and its purpose was assumed to be to prepare the way and devise the means for the election of the National Parliament which is promised for 1915, tho possibly intended rather to postpone than facilitate the new regime. The Senate, however, is showing an unexpected degree of independence and has addressed a memorial to the Throne asking that the General Parliament be called before that date and that it be endowed with executive authority. Should the Regent and Grand Council fail to listen to these demands, an anti-dynastic revolution is likely to break out. ——Count Katsura, Japanese Premier and Minister of Finance, has delivered an address in which he announced that the necessity of maintaining peace will require an increase in naval expenditure amounting to $40,000,000, payable in six years. The Premier stated that in spite of the damage caused by the recent flood and the expenses involved in the annexation of Korea there will be no necessity of having recourse to a loan. Japanese industries and commerce are expanding and new enterprises started from January to September last represent a capital of $181,000,000.——A strike of railway men in Cairo, Egypt, resulted in serious rioting. The police succeeded in scattering the mob chiefly by the use of fire hose, but several persons were injured during the fighting.——Cherbourg has been given a fright by the threat of the North German Lloyd that this company would use Boulogne as a port of call in the place of Cherbourg, on account of the high harbor duties and the bad train service to Paris. Emphasis was given to this threat by the advertising for sale of the hotel and casino recently built at Cherbourg by the company. The Mayor and prominent citizens of Cherbourg went immediately to Paris to ask the Government for a reduction of pilotage duties and the establishment of a better train service. —— The strike on the French railroads was a complete failure owing to the vigorous action of the Government, and the officers of the union have formally declared it off. The Southern Railroad has announced the distribution of $250,000 among its employees who remained faithful to it and refuses to take back any of those who struck. The Government is putting forth energetic efforts to discover the makers of the bombs which have been found in various parts of Paris during the recent strike. The affair will now be carried into the political field, for the Chamber of Deputies opens on October 25 and Premier Briand has already twenty-eight interpellations on the action of the Government to answer. The Minister of Finance, M. Cochery, announced in advance that he will use all his efforts to push the income tax bill thru the Senate in its original form for the purpose of raising money for the increased demands of the Government on account of the new old-age pension bill for the laboring classes.——The King of Siam, Chulalongkorn I (Somdetch Phra Paramindr Maha), died on October 23, at Bangkok, at the age of fifty-seven. He was distinguished among Oriental sovereigns by his progressive ideas and the energetic efforts he made for the industrial prosperity and civilization of his people. His successor is Prince Chowfa Maha Vajiravudh.

Political Reform in the Party

BY WILLIAM H. TAFT

[This article, hitherto unpublished, tho written twenty-one years ago, is now timely when the questions with which it deals—the internal purification of a political party—is uppermost in men's minds. It is of especial interest, as showing the views of Mr. Taft at the age of thirty-two, when he was entering upon his public career. In 1878, the year Mr. Taft was graduated from Yale, he joined the Literary Club of Cincinnati, an organization founded by his father-in-law, John W. Herron, in 1849, and he kept his membership in it for at least eleven years. The club has always been one of unique influence and importance on account of the number of distinguished men who have been connected with it, among them being Alphonso Taft, the father of the President; President Hayes, Salmon P. Chase, Librarian Spofford and Governor Harmon. The President's brother, Charles, and his father-in-law, Mr. Herron, are still members. The following article was contributed by Mr. Taft to the "Budget" of May 25, 1889, and read before the club by C. B. Wilby, the editor of the evening, and is now to be found in Volume VI of the unpublished proceedings of the Club. Mr. Harry B. Mackoy, the present historian and librarian of the Literary Club, has furnished us with this copy, and Mr. Taft has kindly consented to its publication. Of course, the persons referred to in the incidents mentioned were given fictitious names in the paper —EDITOR.]

MY neighbor Hoyt and I are fortunate in having established a compromise with our wives by which they permit us to ignore their presence at the breakfast table and to devote our undivided attention to the newspaper on condition that with this exception we conduct ourselves as gentlemen toward them at the other two meals and for the rest of the day. This arrangement leaves to Hoyt and me the time we spend on the cars in reaching the city for conversation, the subject of which is invariably politics. We both have had a pretty thoro experience in local politics, and when an enthusiastic reformer or mugwump proposes a change, we feel as if we were rather superior persons in being able to say whether the proposal is within the possible bounds of practical politics or whether it belongs to that class of political reforms to which the Plumed Knight has given the name "lunar." We know all "the boys" in politics, and we are able with some degree of accuracy to say who are for sale in conventions and who are not.

We think we know the various rings, their motives and members. We are pretty orthodox party men, with no touch of mugwumpism. We never allow ourselves to doubt the wisdom of a government for the people, by the people, and we are always indignant when some of our mugwump friends, in their pessimistic moments, give way so far as to openly express a wish for some other form of government. When we hear results of popular government in cities denounced, we like in turn to denounce the inactivity of those who make up the better element whose selfish attention to business, as we say, prevents them from preserving the liberty and good government which it is their good fortune to enjoy. We often quote Plato and say it is "the fate of those who refuse to take part in the government to live under the government of the worst men." We take some part in politics, and therefore our condemnation is unstinted. We thus

"Compound for sins we are inclined to
By damning those we have no mind to."

We like to dwell on the marked improvement in our municipal affairs since the time of the "shakedown in the shadow of the church." And we point with pride to the guardians of our peace as men who do not now suggest criminality and lawbreaking except by contrast. We rejoice in our present satisfactory system of elections as contrasted with the bloody contests of fraud and force which at a very recent date disgraced our city. When we consider the reason why these two systems have worked so well, we are obliged to admit that it is to be found in the non-partisan features of the laws creating them. The men who are in the Police and Election boards are generally good men, but no one can be blind to the fact that were they in a board without the non-partisan features, their administration of affairs entrusted

to them would be tainted with the same weakness that characterizes all other municipal bodies. The efficiency of the public service under a partisan board is necessarily subordinated to political requirements. Men are put in and kept in office because they have controlled and are able to control votes in their ward delegation in the party convention. A man who gets and keeps an office by such service cannot help regarding the office in some degree as a *quid pro quo*. If he is not inspired with a sense of duty, the more he can get out of the office, and the less work he can do, the better is his bargain. Of course, in a great many, perhaps the majority of instances, this is not the view taken by party appointees, but the men who look upon their offices under the city and county government as property to be worked for all they will produce are only too numerous. That this should be the view taken by political "bums and strikers," who, not content with the reward of honest toil which they reap in conventions, force themselves into office as well, is not to be wondered at. The surprise would be if they took any other view.

But Hoyt and I have concluded that the men who look upon and treat public trusts as public troughs are by no means confined to those of the lower grade of political workers, whose snouts are easily recognized. Hoyt was the happy owner of some real estate adjacent to city property which it became necessary for the city to buy. The city officers charged with the duty of buying offered some $500 less than Hoyt was willing to take. Finally the committee who had the matter in charge concluded to come to Hoyt's figures and the chairman instructed to report recommending an acceptance of Hoyt's offer. One month and then another passed and no report was made. Hoyt was glad to realize on his property, altho the price was by no means high, and so was impatient for the matter to be closed, but he openly betrayed no anxiety. Finally the sluggish chairman appeared at Hoyt's store, and a conversation ensued which will be better told after the history of the chairman is given. He has not been many years in active politics. With property enough to live on comfortably, he has no business. Appointing powers have always considered themselves fortunate that he was available, and so he has become a sort of municipal "Pooh Bah," with many of its departments under his control. Somebody several years ago did suggest that he had acted in a matter of the public in a way not highly honorable, but this was regarded as the splenetic ebullition of a prejudiced and unreliable witness, and he continued to retain the good opinion of the public.

Well, as I was saying, "Pooh Bah," for so we may call him, presented himself to Hoyt and in rather a surly manner introduced the subject of the intended purchase. He said he supposed that Hoyt thought he was slow about reporting, and perhaps he was, but as he was not paid for doing this work, he did not know why he should be in a hurry. He had plenty of private matters which took his time; besides, he thought that the amount fixed by Hoyt was a very handsome price and more than the lot was worth. After a few more remarks about the heavy burden of public work which he was doing for which he was getting no pay, to which Hoyt made no reply, "Pooh Bah" withdrew and Hoyt saw him no more. A day or two after that, just as Hoyt was leaving his store for the railway depot to go home, he received a telephone message from a doctor with whom he was on friendly terms, asking him to come down to a quiet sample room for a talk. Hoyt is not a drinker, but a quiet nip with a friend behind colored glass doors, and in front of a magnificent mirror with a polished resting place for your elbows when there is no one to see or hear except an immaculately clean, white-aproned, imperturbable and gentlemanly barkeeper, has its attractions for him, and he went. This physician is himself not a tyro in politics. Indeed, he bears the name of "Tornado," as illustrative of his tremendous popularity, and in certain circles his reputation may be said, like Puck, to have girdled the globe. In recommending him to the President's consideration his letters would all of them refer to his high reputation in the community. "Tornado" explained to Hoyt that a friend had asked to be introduced to him; that on inquiry as to what

the purpose was, the friend had said that Hoyt wished to have a public committee report favorably the sale of his lot, and the friend thought that he could assist Hoyt and secure the report for the small sum of $250. "Tornado" said that he declined to bring about the introduction for such purpose until he had seen Hoyt. Hoyt said that he was not in that kind of business, and manifested surprise that "Tornado" should think he was. The only difference between him and the board was $500, and he did not feel highly complimented that "Tornado" should deem him likely to barter his standing as an honest citizen for the paltry sum of $250, even if he thought that every man had his price. "Why," said "Tornado," "you need not lose any standing. You need not see my friend; I'll be the middle man myself and handle the money." The friend, whose interest in Hoyt's success was so surprising at first and so easily explained now, was also a prominent citizen of high standing in the politico-business circles, *i. e.,* he was a gilt-edged business man among the politicians. He, too, had filled office without visible emolument, and was known as the bosom friend of "Pooh Bah," who, with the "Tornado," had been for some time joint trustees of a very important public charitable trust. Hoyt refused "Tornado's" kind offices, and, much disgusted, went to his store to think it over. He concluded that as he wanted the money for his land, he would simply accept the first offer of the board and give up $500 of his price. He so wrote to the board and the offer was accepted without again securing "Pooh Bah's" valuable services as a negotiator. Now, the evidence as to "Pooh Bah's" honest intentions, or otherwise, in the negotiation, is not of such a character as to be admissible in court. Much of it would certainly be refused on the ground of *res inter alios acta,* but the coincidences are such as would cause reflection in the case of any one who had not "Pooh Bah's" high reputation. As for "Tornado," he committed no overt act except that of solicitation, and perhaps if he were an attorney he might call what he did only professional services for Hoyt. As to the friend of "Tornado," perhaps he was only like Mrs. Gamp's Mrs. Harris, altho the coincidence of "Tornado" and "Pooh Bah's" having such a common friend in the flesh might have an undue weight against this common friend with persons not acquainted with the heaven-made rules of evidence as administered in courts of blind justice. Hoyt and I were considerably shaken up by this experience of his, and we, for a day or two, became pessimistic enough to get a seat in that street car said to contain all the mugwumps in Ohio. But we recovered in a short time, coming to the comforting conclusion that probably there might be startling revelations concerning men of high standing in any profession or business, and that one instance or a dozen would not lead us to wholesale generalizations or condemnations. However, the result of our general discussion of politics in the light of not a little local experience convinces us that the reform which beyond all others will banish the most pressing evils we now have is a system of local civil service the tenure of which shall be during good behavior, and the ground for entering which shall be anything, even muscular development, provided it is not political work. We do not think this reform is demanded so much because of the inefficiency of the partisan civil service, because, altho that might certainly be improved, it is not by any means as bad as the system tends to make it, but we think that all the subordinate executive offices ought to be taken out of politics for the sake of politics. When offices cannot be used as bribes with men who would scorn money, we shall have a purer political atmosphere. The only claim or property that a man will have in his office will be in his capacity to fill it for the public good. We shall not abolish corruption thereby, but we shall compel men to corrupt with their own and not with the money of the public.

And, Mr. Editor, Hoyt and I think this reform will surely come because the people want it. The political organizations know this and put it in their platforms, tho they are not in a hurry to enforce it. We think it will come thru our party, and we continue in the party, *believing* that we can do more to bring it about there than in the street car I have spoken of.

Henry L. Stimson

BY HENRY MOSKOWITZ, Ph.D.

[Dr. Moskowitz is Associate Leader in the Society of Ethical Culture and director of the Down Town Ethical Society. He has long been identified with progressive movements in politics and social reform on the East Side and was recently President of the East Side Civic Club, and last fall a member of the "Committee of 100" in the Mayoralty campaign.—EDITOR.]

WE arrived at Murray Bay, one of the well-known Canadian summer resorts, early last September — two weary travelers in quest of a political Galahad. We were sent into the wilds of Canada to look for a hunter of big game. When we reached the hotel where we expected to find him, we were informed that he was miles away in the primeval woods. There was nothing to do but to take a buggy for his camp, forty miles from civilization. We reached his camp after eight hours of driving. It was night when we arrived, and the stillness of the woods, the inky black of the calm lake surface, and the mist-crowned mountains rising abruptly from the shore, added to the solemnity of our mission. We entered a plain house. There were no distractions of civilization decorating the interior. It was a clean and spacious room. Its floors were littered with camp utensils, guns and wraps. We met a burly and hospitable French Canadian and inquired after the big game hunter. Henry L. Stimson soon appeared, to give us a hearty greeting. His backwoodsman attire, of a soft shirt, storm shoes and knickerbockers, served to set off in bold relief the lines of a student's face, with its high forehead and penetrating eyes. If a word can describe a first impression, *intrepid* will do. We soon received impressive evidence of this characteristic when we submitted the message from the Committee of One Hundred. We stated that the committee regarded him as the type of man who would give the City of New York an independent, fearless and efficient administration. We dwelt upon the importance of the issues in the campaign, and emphasized particularly the need of a man who could rescue the city from the clutch of the Traction Trust. He scrutinized carefully the platform of the Committee of One Hundred. He was particularly interested in the subway plank, which stood for municipal ownership and effective regulation of any subway lines to be built. His answer was candid:

HENRY L. STIMSON.

"My experience has been with State and Federal governments. I am intensely interested in Federal, State and legal problems. In connection with the subway problem I can only give you my attitude, not the result of study, as I have not made any special investigation into this question, save what an ordinary citizen of the cityought to make. I believe in effective governmental regulation, whether it be in the nation, State or city. This has been my attitude as a Federal official. It is one of the first articles of my political creed."

With refreshing frankness he acknowledged his lack of expert knowledge of municipal problems. We appealed to his sense of duty; there was the rub. He was grappling with the old problem of a conflict of duties. He struggled with the dilemma of either abandoning his specific job of house-

cleaning in the customs service and finishing the sugar fraud cases, or taking up the cudgels of municipal reform.

After a night of serious communion with himself he met us the next morning. His mind was then made up. He refused to enter the lists. His present work had his first allegiance. His sugar and customs cases were waiting, and he went back to them to finish a service for which the entire nation is now grateful. Tho we had failed to accomplish our purpose, we left him with admiration. This is the caliber of Henry L. Stimson.

The character of a man is most transparent on occasions when the public does not intrude. At the vicennial reunion of the Yale class of '88, when the thought of the office of Governor of New York was as remote as that of the Lord Mayor of London, this is what he said to his college mates in the sincere intimacy which the occasion awakened:

"It has always seemed to me in the law, from what I have seen of it, that wherever the public interest has come into conflict with private interests, private interest was more adequately represented than the public interest. Whenever a great public question has come up in which there has been a rich corporation on one side and only the people on the other, it has seemed to me that the former always had the ablest and most successful lawyer to defend it, and very often the side of the people seemed to go almost by default. I have found comparatively few successful lawyers in modern times putting their shoulder to the public wheel. . . . Of course, that is bound to have, in the end, a bad effect upon the solution of public questions. In this country, it is essential that the rights of property and the rights of the public, whenever they are threshed out in the law forum, shall be threshed out fairly and with an adequate representation of both sides. If one side is always a little stronger, in due time the law is likely to be warped from the exact position that it should be in. My private practice up to the last two years brought me constantly into contact with the side of the corporation, and the office I was in constantly represented the larger corporations of New York; and, therefore, when I was taken, as you might say, by the back of the neck and started out without anticipating it and without expecting it and turned loose with nothing but my oath of office to guide me, the first feeling was that I had gotten out of the dark places where I had been wandering all my life, and got out where I could see the stars and get my bearings once more. There has been during those two years a feeling that the work I was doing amounted to a little bit, or would amount to something if I would put my whole heart into it and do it thoroly. And it has made a tremendous difference and a tremendous change in my professional life. There has been an ethical side to it which has been of more interest to me, and I have felt that I could get a good deal closer to the problem of living than I ever did before, and felt that the work was a good deal more worth while. And one always feels better when he feels that he is working in a good cause."

This is a simple confession of faith and truly conveys the spirit in which the man has done his public work. It explains his achievements in the office of the United States District Attorney. The spoilsman and the patronage seeker found small comfort at his hands. This is what he says about the qualifications of the men who are to assist him and the influences which governed his choice:

"The first problem that confronted me was how to make the office of Federal attorney in New York City efficient. . . . And it was quite a problem to turn it into an office which would be competent to meet the able and successful lawyers who always represented the private interests opposed to it. I was given a perfectly free hand to do that and I took the appointing power at his word. That policy has been applied to the exclusion of every political influence and every private interest, except the simple question of getting the best man I could to put into the office."

If the tribute of those who work closest with a man is a genuine gauge of his worth, the enthusiasm and unstinted devotion to public service which Mr. Stimson calls forth in his associates speaks volumes for him.

In the difficult labors of his office Mr. Stimson has shown a rare executive ability. He could not have achieved so much were he not a legal general who had the power of appreciating the kind of ability required for the various labors involved in his difficult cases. This executive capacity is one of the qualifications for the important office to which he now aspires. He has always appreciated the value of teamwork. Jurors and grand jurors have frequently testified to his fair-mindedness. They were imprest by his generosity to his opponents. He was no sledge-hammer prosecutor. He relied upon the merits of his case and had faith in the responsiveness of the average man to truth.

There are many points of resemblance between the personalities of ex-Governor Hughes and Mr. Stimson. Like the ex-Governor, Mr. Stimson revels in hard mental work; both are gifted with

most effective power of concentration; both are naturally modest and shun publicity; both grow upon closer acquaintance; both are untheatrical and simple; both appeal to conscience and reason; both are friendly, but inexpert with the glad hand. Mr. Stimson is warmer in his manner than ex-Governor Hughes; he is perhaps more easily approachable, and there are few men who listen more appreciatively to suggestions from advisers. But when his mind is made up, he is unswerving.

Governor Hughes, by his brilliant administration, has established a tradition of good government in the State of New York which the best element in the Republican party feel obligated to continue. They naturally turned to his type of leadership for a successor. They looked for a man who made no profession of politics; who, like Hughes, made good not only in his own legitimate vocation, but in a record of conspicuous public service. They sought a man who had the compelling power of political ideas, who could step into the open and submit these ideas to the people; they wanted another people's advocate. Such a man they found in Henry L. Stimson.

The defeat of the Old Guard at Saratoga meant not alone a housecleaning in the party, but the supremacy of the progressive wing. Woodruff and Barnes represented a political method which had to be destroyed. It was imperative to find a progressive whose sterling qualities would win the confidence of sober men. Henry L. Stimson is too direct and simple a man to play an evasive game. His progressiveness is the result of thought and conviction. His speech of acceptance struck that note in clear and unmistakable terms:

"The giant growth of our commerce and our industries, the absorption of our free land, the gradual change of the American nation from a farming people to one living largely in cities with needs far more diversified than their fathers, have made and are making necessary a constant growth in our system of laws and in their administration. . . . We have faith in the ability of the people thru their government, State and national, successfully to confront these necessary changes and to exercise the powers which such changes involve. We do not in the least share the apprehensions of our opponents in this respect. Republics do not become corrupt and inefficient by gravely undertaking their growing duties. On the contrary, corruption follows in the train of inaction and inefficiency. Governments which fail to control and recognize evil, which allay themselves with a fatuous hope that the evil will correct itself, always find that the task grows daily more difficult thru the pressure of the private interests that are fostered by the evil."

Mr. Stimson is here dealing with a fundamental problem of present-day government—the need of political change to meet the rapid industrial changes which have taken place in recent years. He boldly faces the constitutional problems involved and accepts the challenge to interpret the fundamental law of the land in the light of our industrial growth.

The long list of progressive enactments associated with the administration of Governor Hughes meets with his hearty approval. They represent the policy of effective State regulation, which is "the surest safeguard against undue extension of Federal power," and "that vigorous fulfillment of State duties which can best conserve States rights."

The definition of a progressive is elusive. He can best be recognized by what he stands for. Mr. Stimson is wholeheartedly in favor of measures associated with those political and social movements of our day directed against special privileges and in favor of constructive democracy. He is for direct nominations, effective control of public utilities, an employers' liability law, an efficient enforcement of labor laws, continued governmental activity in the direction of labor legislation and all those definite measures included in a sound platform of State regulation. An attempt to curtail or prevent such regulation is reactionary. He is for progress. This, he says, is the issue. The record of his achievements in the past is sufficient to indicate the type of regulation which, if elected, he will advocate and enforce.

Mr. Stimson's achievements as a public prosecutor were solid and permanent. As a big game hunter in the law he was as successful as in the wilds. A mere recital of his prosecutions is an eloquent tribute to his fearlessness and ability.

He dealt a crushing blow to the practice of rebates and discrimination by his successful prosecution of the New York Central and other railroads. In his ad-

ministration of justice, he respected "neither the person of the rich nor the person of the poor." He forced James Gordon Bennett, of the New York *Herald,* to plead guilty in person for printing his notorious personal advertisements. Bennett paid over $30,000 in fines. He prosecuted Charles W. Morse, of ice fame. He dissolved the manila paper combine, and forced the Sugar Trust to refund over $2,000,000 to the Federal Government for custom frauds. The fact that these convictions were sustained by the appellate courts and that not a single one was reversed speaks volumes for the caliber of his ability as a lawyer.

In the face of such a record, no discriminating citizen needs any assurance as to his independence. If elected Governor of the State he will give a Stimson administration.

NEW YORK CITY.

What Is Happening in Portugal

BY KELLOGG DURLAND

[Mr. Durland, whose articles from Russia and elsewhere our readers will remember, has just returned from a six months' sojourn in Spain and Portugal, where he has been making a careful study of political, economic and social conditions of the two countries. In Portugal he personally met many representatives of the republican movement as well as the Old Regime.—EDITOR.]

THE fall of the Portuguese monarchy rests with the monarchists. Their long and fatuous policy of plunder and corruption, not the strength of the republican movement, has wrecked the dynasty and well nigh ruined Portugal. No fatherland has ever been so wantonly sucked by vampire sons who might and should have striven to revive a glorious past. Their's is the blame that the monarchy has passed away in a single night of rioting and bloodshed. Out of the wreckage of the kingdom have risen dreamers and visionaries, with pleasant prattle of ideals and hopes for the future, expressing to the world a determination to set the nation again in the track of order and progress.

Republicans? Of sorts. They have, indeed, inaugurated a republican form of government. This was the only alternative. The old order killed itself. To usher in the pretender would have been going from bad to worse, because the pretender is clerical, and clericalism, like the ancient monarchy, has run its full course in Portugal, and the clerical collapse came simultaneously with the monarchical downfall. In a nation where 80 per cent. of the population are illiterate, long held in intellectual darkness thru official neglect and clerical design, there can be at best a groping toward change. Hardly any definite notions of republicanism among the masses. Republican agitation there has been, but this has never shown any very definite evidences of fruition. In a Parliament of 155 delegates there were but 14 republican deputies. The republican movement has been confined to the industrial centers and the larger towns. The republican propaganda in the army and navy was, rather, general unrest and disaffection. It was negative, rather than creative.

As always in time of revolution, the *savants* came to the fore. Revolution always calls to the poets and the optimists; but among such are seldom found builders of empire.

Portugal so readily accepted the embrace of revolution because every last drop of stamina of her ancient *régime* was spent. She was rotten at the core with corruption, and all her sinews were atrophied. The monarchy fell because there was naught left to sustain it longer, and a sorrier wreck of a kingdom has seldom been the heritage of a new *régime.* Let it be clearly understood, then, that not to the republicans of Portugal is the glory, but of the Portuguese court and state the shame.

This summer when in Portugal I in-

quired into the conditions—political, social and economic—of the country and after study and scrutiny I marveled that so flimsy a shell of state had stood so long. Statesmen and students have long known the tottering condition of the reduced kingdom and realized that at best it was but a matter of brief time before the inevitable cataclysm. Hence the slight ripple that accompanied this monarchical fall thruout Europe.

During the past thirty months five ministries have succeeded one another. The record of each has been the same—a blank page, so far as any improvement in the amelioration of conditions is concerned. Years ago Portugal boarded the toboggan which has been hurtling toward the abyss with constantly increasing momentum. The late King Carlos tried to check the mad career of his state—and his life was claimed in forfeit. Manuel II, the unfortunate successor to King Carlos, a heedless boy in his teens, knew not where to turn, and that he was the tool of his unscrupulous court and self-seeking advisers calls forth our pity, not our blame.

Revolutions are not man-made; they are not, primarily, the result of agitation and propaganda. They are the culmination of physical conditions gone bad to the last point of human endurance. When a state becomes honeycombed with corruption, when her social fabric is deteriorated by immorality and dishonesty, her economic conditions enfeebled beyond all response to stimulation, then revolution becomes inevitable. Political revolution has, apparently, been accomplished in Portugal. This is the beginning. This is the simplest of the campaigns confronting the luckless land. To complete the work there must needs be a social and economic revolution that will require men strong of brain as well as of heart, and times that will test the fortitude of the bravest.

The deterioration of Portugal began so long ago that only those who know the country and the people have any conception of the magnitude of the task which is set this baby republic.

Portugal reached its highest point of greatness in the latter fifteenth century when she sent her bold navigators to far and unexplored parts of the world, daring men and strong who won for her renown and a place among the great nations of the day. During the sixteenth and seventeenth centuries the Government was continually falling into the hands of court cliques, and under the baneful influence of the Roman Church undermining the foundations of the kingdom and thus paving the way for the complete demoralization which has resulted in these last decades. The last century has seen various stopgap, makeshift experiments in constitutions and charters, but endless statutes cannot counteract personal dishonesty at home and colossal misgovernment in colonial possessions. In 1822 Portugal adopted a democratic Constitution, but only four years later Dom Pedro's Charter was accepted in amendment of the Constitution. In 1836 the Charter was abolished and the Constitution revived. Then followed attempts to overthrow the Constitution and in the late forties a military uprising succeeded in again substituting the Charter for the Constitution. Whether Constitution or Charter, Charter or Constitution, one basic result was always the same—the budget deficit was ever and always increased, and the leakage in national funds greater. Brazil, the last of Portugal's great foreign possessions, tore herself free from the homeland last century and from that time on Portugal has been going from bad to worse at home and abroad. The whole Portuguese people—of those eligible thru education or position to power and influence—seem to have sensed the coming of the deluge and have made hay while the sun continued to shine. The Government has been a sort of perpetual treasure trove regularly and systematically looted by those in power, and office holders have paid willing tribute to those out of power in order to longer have access to this universal mine. Every department and branch of government intrusted with improving or ameliorating the condition of the people has been neglected; the natural resources have been mortgaged to foreign capitalists for ready cash which has been squandered and stolen; the army has been neglected; the navy has deteriorated to little more than a phantom, and the remaining colonial possessions have been turned over to gamblers and adventurers who

perpetuate today the traditions of slave drivers and buccaneers.

The immediate renovation of Portugal at this late day will be a test measurable to the leopard's changing his spots and the Ethiopian his skin.

It's a wee kingdom, this Portugal. Portugal comprises in area about two-thirds the size of the State of New York, and with a population of approximately five and a half millions. It is an agricultural state with climate, soil, and rivers, making profitable agriculture possible under right conditions. It has two large cities with good harbors, Oporto and Lisbon. Portugal has natural advantages which measurably compensate for the out of the way corner of Europe in which it is situated. And yet, this country, set "where endeth land and where beginneth sea," is today a deplorable derelict among the nations thru the lack of character, capacity, honor and patriotism of its educated people—the men who have ruled and those who have ruled the rulers.

The national debt is today $800,000,000 and last year the revenue fell $27,000,000 behind the expenditures. The King was granted an annual allowance of $375,000, while 80 per cent. of the population are illiterate and uninformed as to even modern methods of agriculture, which in the natural course of things is the first essential to the perpetuity of a primarily agricultural people. The masses of the people have been submerged by their inability to rise above the terrible economic conditions which prolonged misgovernment have netted about them. Taxed to the last reis of possibility by plundering politicians, bled and preyed upon by an unscrupulous Church (which has here sunk to its lowest), the peasants have reached the end of human endurance. Lacking in intelligence of the outside world they have long been as dumb driven cattle, and so to them a new *régime* was naturally welcome. Any *régime*. Nothing could be worse than what they had suffered. Economic relief had come to be a necessity to their existence. In time of revolution all men become gods. There is that in the atmosphere which stimulates human effort to its greatest intensity and men, living and working on the over-strain become supermen. It was to be expected, therefore, that when the movement making for the monarchical overthrow once bade fair to succeed, certain idealistic pronouncements would be forthcoming. The spirit is glorious and in almost any other country would be received in reverence. In Portugal the long record of abuse of every conceivable character by the whole Government ring, from the ministry to the last railroad porter, reminds us that the Portuguese are a curious nation and in the past have proven so completely lacking in patriotism as to prejudice their cause for the future.

The manifesto to the people, proclaiming the republic, should be an inspiration to the nation to awake and buckle on its armor, if inspiration ever lies in words. It reads:

"People of Portugal."

"The people, the Army, and the Navy have proclaimed the Republic. The dynasty of the Braganzas, maleficent and wilful disturbers of the social peace, has been for ever proscribed from Portugal. This rare and notable event, the expression of the pride of an indomitable race and the redemption of a country the bravery of which has rendered it legendary, fills with joy and enthusiasm the hearts of patriots. This day puts an end finally to the slavery of this country and the beneficent aspiration of a regime of liberty rises luminous in its virgin essence.

"Citizens, the passing moment repays and recompenses us for all the struggles, all the pitiful conditions from which we have suffered. Let this moment be the beginning of an epoch of austere morality and of immaculate justice. Let us in glorious communion of principles make our sacrifices for our country the basis of our political program and let generosity toward the conquered be the basis of our moral program.

"Citizens, let one interest alone—the interest of the Fatherland—animate you, and let one desire—the desire to be great—unite us. The Republic trusts the people to maintain social order, to respect justice, and to devote themselves to the common cause of liberty. Consolidate with love and sacrifice the work which arises from the Portuguese Republic."

All the world extends earnest hope that Portgual will live up to the standards of this proclamation of liberty. But rhetoric and poetry, however beautiful, must be supported by actions on the part of those who have taken up the reins of office.

The weakness of the monarchy may be measured in some degree by the strength of the navy, which was said to be "wholly republican." Perhaps I should have reversed the statement by gauging the strength of the monarchy by the weak-

ness of the navy. At all events, the Portuguese Navy consists of the following ships: One armored vessel, the battleship "Vasco de Gama"; five unprotected cruisers, two gun vessels and thirty miscellaneous smaller craft. The one battleship has a displacement of 3,000 tons and her armament consists of two eight-inch guns and one six-inch gun. The navy roster counts about five thousand men. It will be seen that such a navy is hardly adequate for decorative purposes, let alone being of any practical utility. Yet with this outfit Portugal is endeavoring to administer her remaining colonial possessions, scattered here and there over far parts of the world—in Africa, in India and in China.

When the Portuguese Colonies in distant ends of the world learned of the passing of the House of Braganza there appear to have been few regrets and the republican flag was unfurled without a murmur of protest as soon as the inhabitants in these various provinces learned what it was. The Colonies, too, have contributed to the downfall, for abroad, even more than at home, have unbridled plundering and wicked maladministration been going on for many years.

The United States, according to many, should be one of the first of the Powers to extend recognition to this, the newest republic. The feeling between the United States and Portugal ought to be, and is, friendly to the point of cordiality. At the same time, the United States has here and now a wonderful opportunity to exercise a coercive (if necessary) influence for good. Plantation slavery is in force today in the cocoa islands of the Portuguese possessions, while in Angola slave-raiding and slave-trading are not only recognized, but actually carried on with actual, if not nominal official connivance. If, therefore, the United States were to make the recognition of the Republic of Portugal contingent upon the abolition of slavery in all of her colonial possessions these inhumanities, which are a reproach to civilization, would be wiped out. Portugal could hardly fail to comply with such a stipulation coming with such pre-eminent propriety at this time from the United States.

Besides Portugal, Belgium alone of Western nations has recently administered colonies abroad so completely in the interests of simon-pure greed. Belgium has now promised reforms in the Kongo districts and even Belgium has never had a Macao. Macao is the Mecca of all the dare-devil adventurers and riff-raff of the Far East. From Canton, from Hong Kong, from Shanghai, from Japan and even from India come the habitués of the gaming table to Macao and gladly pay their toll to Portugal for maintaining this lawless province of unparalleled, unbridled vice and licentiousness. Macao, moreover, is one of the great centers of the opium traffic, the headquarters of the most daring of nefarious smugglers in the world, all living and plying their illicit trades and playing their reckless, unscrupulous games under the eyes, if not under the protection, of the Portuguese officials.

A most thrilling chapter could be written on the colonies that Portugal still clings to for the contributions they make, nominally to her national revenue, but actually in larger measure to the private purses of her kingdom-wrecking politicians; Macao with its ancient history as a port, a powerful commercial clearing house with tremendous possibilities for the future, possibilities surpassing her brilliant past, now degenerated into one of the blackest spots known to the civilized world; the African colonies of Mozambique and Angola with their peonage camps, their enforced slavery and official traffic in human labor and in human flesh —tales to horrify the most callous, to move the most blasé. Yet these constitute but an incident in the situation as a whole, are but a contributing factor in the overthrow of the monarchy. So long as these things remained within the borders of Portuguese territory and were part and parcel of an existing *régime* the world at large had no opportunity to officially remonstrate. Now, however, is the real and the proper time for nations that are working for the world's progress and uplift to definitely demand in the courteous but firm terms of diplomacy the abolition of such wanton abuses of official control and power as menace civilization and disgrace humanity. It is a

fair test to place before the new republic which asserts its desire to inaugurate an epoch of "austere morality and immaculate justice."

The anomaly of the Portuguese situation lies in this: The monarchy fell thru its own inheritant weaknesses—internal corruption, incompetency, and dishonesty—not because of republican strength. After the same order King Carlos was assassinated not for the evil he had done, but in fear of the good he seemed on the point of doing. The murder of King Carlos and his eldest son, nearly three years ago, was no "anarchist" outrage; it was the work of a court camarilla—sycophants of the throne dependent upon the rottenness of the state for very existence.

Portugal may be coming into her own again. In the political revolution so neatly accomplished the other day she may have attained a start that will enable her to work out her social and economic revolutions to her own salvation. The men who have exiled the dynasty and already announced the separation of the church and state, expelling the monks and nuns, may be able to inaugurate and maintain a *régime* of actual regeneration. If so, a new era may be dawning for Portugal. On the other hand, if, in the course of reasonable time, the republic discloses the same tendencies as each succeeding ministry of whatever party in recent years has disclosed, then is it possible that certain of the world Powers will, with universal consent, take over the grossly misgoverned colonies, leaving Portugal yet poorer than now and in a still more hapless state.

Since Joao Franco, whom King Carlos made dictator, there has been not one strong man to take the helm of state. The shrewd men have been thieves; the well meaning have been insignificant weaklings. What chances the present Government may have of endurance no one can foretell. If it survives for any number of months it will be a miracle. But the fall of ministers is trivial in the progress of a nation provided the form of government is at last making for the common weal of the whole people.

The situation today indicates that an economic revolution has found its expression in a political revolution. Revolt was inevitable because the economic demands of the country were imperative and could no longer brook further postponement of adjustment. The old *régime* had literally eaten out its own heart. Now it is the task of the new order to renovate, completely reorganize and regenerate Portugal. This great task will be watched by the world with sympathetic if skeptical interest. My own feeling is that the country is in the midst of deeply troubled waters and that many ministries will rise and fall before the masses of the people can have obtained the education and enlightenment necessary to a successful, popular government. That this form of government is the only possible government whereby the Portuguese people can work out their own destiny goes without saying. The difficulty lies in the fact that this overthrow of the monarchy was so long deferred that all of the interests of the nation have become almost hopelessly involved and the personnel of the nation has, unfortunately, greatly deteriorated.

The situation in Spain, located, as that country is, between the two Republics of France and Portugal, naturally arouses attention at this time. Prophecies have been frequent in the press that Don Alfonso will shortly follow Dom Manoel into a foreign land and that yet another Latin republic will be added to the popular governments of Europe. After a recent sojourn of six months in Spain I can find no indication of such an eventuality coming to pass in the near future. Spain is as different from Portugal as the Spanish are different—and superior—to the Portuguese people. How great are these differences I shall endeavor to set forth in a subsequent article in considering the intensely interesting and important transformation that Spain is now undergoing.

New York City.

The Higher Life

BY COUNT LEO TOLSTOY

With an Introduction by Theodore Stanton.

Introduction.

MORE than a score of unpublished letters of Count Tolstoy have just been put in my hands. They are written to two of his closest friends. One of these, Dr. Makhovitzky, left his home in order to live in the immediate society of his master, whose private physician he finally became. The other correspondent is Dr. Skarvan, a young Austrian physician, who refused to perform his military service, on the ground that, being a Christian, he could not countenance the idea of armies whose purpose is the killing of men. For this he was relegated for twenty weeks to an insane asylum, condemned to four months' solitary confinement in a prison, drummed out of the army, deprived of his diploma and consequently prevented from practising his profession.

This case created considerable commotion in the public prints thruout Europe and was discussed at many meetings in Austria. The newspapers unfriendly to Dr. Skarvan industriously circulated the false report that he had repented of his act and had rejoined the army. In fact, this was but one of many untrue statements which were published concerning him, some of which reached the ears of Tolstoy and made him very anxious about the moral state of his beloved disciple.

The Drojine mentioned in the letter of September 11, 1895, was an ex-schoolmaster, who, like Dr. Skarvan, refused to serve; whereupon he was remanded to one of the disciplinary battalions of Voronej, Russia, where he died. A certain M. Popoff wrote a pamphlet about this tragedy, which was entitled "The Life and Death of Drojine," and to which Tolstoy contributed a preface.

The "Notes" mentioned several times in these letters were a journal kept by Skarvan while he was undergoing punishment, and which were printed at Christ Church, England, where M. Tchertkoff, Tolstoy's friend and literary representative has a private printing office, whence are issued the works of Tolstoy which the Russian censor will not permit to appear in the Czar's dominions.

The disease from which Dr. Skarvan was suffering and which is mentioned in the letter of March 27, 1898, is hemophtisy.

The refractory soldier mentioned in the letter of May 2, 1900, was a Hollander who had already been in prison a year at the moment when Tolstoy speaks of him.

Tho many topics are treated in this collection of letters as they come to me, I give below only those letters or parts of letters which refer directly or indirectly to Dr. Skarvan. In this way the article has greater unity and brings out more clearly certain dominant sides of Count Tolstoy's peculiar character and beliefs. Hatred of militarism is one of these, and this naturally comes out strongly in this correspondence. Also here is seen better than in his more formal published works the father confessor rôle which Tolstoy plays among his disciples. It becomes evident that Dr. Skarvan has not hesitated to divulge to him his most secret thoughts and acts, which reminds one of the similar relations which existed between Father Enfantin and the catechumens of the Saint Simonian sect, tho, of course, the Frenchman's morals—some of his critics say Enfantin had none—cannot be mentioned in the same breath with the lofty and pure life of the great Russian.

The first three letters which follow were addressed to Dr. Makhovitzky; all the others were written to Dr. Skarvan.

Theodore Stanton.

New York, September, 1910.

Tolstoy's Letters.

FEBRUARY 22, 1895.

Your letter came yesterday, and I am much interested in what you tell me about our friend Skarvan. When I hear of such an act, my feelings are very complex and are made up of fear, triumph, compassion and joy. Such actions spring from one of two courses. They are either the manifestation of Almighty God in man, and then it is a case of triumph, joy and unquestionable victory, even tho the individual in whom God shows himself is brought to the stake; or it is a human affair—love of glory, irritation, passion, and then I see in this only a source of suffering for the individual who is performing the act, which not only does not serve God, but really wounds him. Whether we have to do with a divine or a human action is revealed by the fact that, in the first case, the man is doing, not what he wants to do, but what he cannot help doing. I hope and believe that our dear Skarvan has acted in the way he has because he cannot act otherwise; and then it is a divine work upon which he enters. Then men may treat him as they like; he will not suffer therefrom, but will rejoice with us. Write me, I beg of you, all that you know about him. Can't we do something for him? Tell him all my affection for him.

* * *

SEPTEMBER 11, 1895.

What is our dear Skarvan doing? Do you see him, or his friends, or his mother? What is his state of mind? He must be supremely unhappy unless he is entirely devoted to a spiritual life. But he must find this course difficult, as he is young and strong, and, being a physician, paid attention during his youth only to the bodily side of our being. I know what the newspapers must be saying. At first one is pained when one hears the best of men calumniated, for you fear this may prevent the success of the work of God, as men would see the error of their way more readily if they believed thoroly in the purity and irreproachability of those who, like Skarvan, point out this error to them. But, on reflecting, you find consolation in the conviction that this idea that, for the accomplishment of the work of God, God's servitor must be praised by men, is all wrong, and that, on the contrary, it is bad rather than good repute which is necessary; for did not Christ die reviled and unknown?

I wish I could say these things to him. I trust that in bearing his sufferings he is not sustained by human support, by feelings of mundane glory; that he has discarded all such artificial help, and that he has taken his stand on the solid belief that life is a consciousness of the spirit of God.

What has he to do in prison? How is he treated? Does he read or work? I would urge him to arrange during his confinement, and in so far as this is possible, a regular and healthy course of every-day life, by alternating intellectual with physical labor. For the first, let him learn theoretically some language which he does not already know; for the second, let him acquire some trade. Can we, his friends, be of some aid to him in this direction? We should like to do so and would enjoy being useful to him. Write me if this is possible.

If you can do so, please send to Budapest my preface for the Drojine pamphlet, which I am going to translate and publish.

* * *

OCTOBER 25, 1895.

I am very happy to have such good news of Skarvan, who has just written me a letter which has caused me one of the greatest joys of my life. Nothing convinces one in so evident and unquestionable a manner that there is a God, and that the spirit which lives in me is a part of God, as the fact that this spirit, with all its particularities and its aspirations, shows itself in exactly the same fashion in a man who, for material reasons, is a total stranger to me. This was the line of thought suggested to me by the perusal of Skarvan's letter. I am going to write him today, but if I should not get round to it, please tell him for me how much I am attached to him.

* * *

MOSCOW, NOVEMBER 26, 1895.

It is now a long time, dear friend Skarvan, since I received your charming letter, and if I have not answered sooner,

it is because I have not been well since the letter came.

Your letter was particularly agreeable to me, for, from the various sentiments and ideas which it contained, I recognized in its author a spiritual brother. It gave me that joy which one feels, as you well say, when one meets on the way a new companion. Another cause of pleasure after reading your letter was found in this, that I ceased to be anxious about you. I no longer feared what I feared at first—that your spirit might grow weaker, either thru the sufferings of persecution, or, the present persecution ended, because you will have to continue the work of God. But now I am sure of you, for, from your letter I perceive that you have an immovable foundation on which to rest—faith in spiritual life, belief that the essence of existence is not in things material, recognized by our senses, but in what we call God and whom we find in our own being.

One often meets persons who, judged by their opinions, seem very near us. They regard as good or bad what we regard as such. But they are ignorant of any other life; in fact, they do not admit the possibility of any other life except that which they know thru their senses. So one's coming together with such persons is only accidental; we meet them simply because our ways happen to cross. But we do not walk hand in hand with them and we are apt to separate from them at any turn on the journey of life. But such a severance cannot occur between those who find the key to life in the spirit. The material things of this world may appear infinitely different to them, but consciousness of our souls and of God in all things is the same in them. You belong to this class, dear Skarvan, and this is why I am sure that even without the encouragement which persecution causes, you will continue to do the work of God.

Do not think that I mean by the phrase, "do God's work," some sort of external activity. By these words I understand interior moral activity, which sometimes cannot show itself at all and which is often even smothered by a desire to give it external form. And, tho this may be disagreeable to revolutionists and socialists it must be said that true Christian activity and others like yours, which produce good in this world, consist exclusively in negative acts—not doing what is contrary to God's wishes and one's own conscience.

Many persons do not understand that life itself, the movement of life, what Schopenhauer calls *Wille zum Leben,* is love. It is supposed that negative acts without positive acts may diminish the force of love and the fecundity of activity. But this would be like saying that the mill-race and the fall of the water on the wheel diminish the force of water and the utility of its motion. Ah! if but a thousandth part of the energy which men employ in doing foolish things and evil of all sorts under the cover of "working for the general good" were employed in not doing what is contrary to reason and conscience, how fertile in benefits would human activities become!

* * *

Moscow, December 16, 1895.

I am very blameworthy for having delayed so long in answering your letter and acknowledging your Notes, which have reached me safely. Old age and not so much my feebleness as the very complicated routine of city life are the cause of my having less and less free time. Do excuse me.

Our young friend, Soullerjedzky, who was a painter, is now confined in the insane ward of our military hospital for having refused, like you, to perform his military service, and—a remarkable fact—his treatment of the authorities and their treatment of him are almost the same here in Russia as in your case in Austria. He has kept notes during his incarceration, just as you have. I am going to ask my friends to give me a copy of them, which I will send to you. It is astonishing what unity there is of soul and mind in these two cases, notwithstanding the differences of situation and character.

I am deeply affected and pained at the news that you are not yet completely free and that again you must either do your military service or recommence this struggle against the authorities. I beg of you to pardon me if what I am going to say displeases you; but I must say it. Now, if you decide to serve, the respect

and friendship which myself and friends feel for you will not be diminished thereby. As for myself, personally, the simply humane side of my soul, which loves you as a brother, would be happy to learn that it will have to suffer no more, as would be the case if they began again to torment you. I know well that such considerations as these weigh very little with men who are called upon to decide in their own conscience a question like the one which you must solve. But I would remove from the scales these little weights which, at such moments, when the beam vibrates, might counterbalance —these human considerations and influences—the divine solution.

In the meantime, good-bye from your brother who is deeply attached to you.

* * *

April, 1896.

Your romance with the Countess is very touching, especially because the drama sprang from no acts of the chief persons concerned, but from the prevailing traits of masculine and particularly feminine character. Just as two melodies are made up from the same notes and differ from one another only thru the order of the notes and mainly from the position of the accent, just so the gamut of human sentiments produces the same sounds in man as in woman, and any differences arise from the position of the accents on these sounds. For example, tho religious feeling exists in women, it is far surpassed by the sexual feeling, which is poetic. In men, the contrary is true. Thence springs the whole tragedy of your present relations. But you were very happy. Do you regret not having done wrong? I trust not.

Now, a further word about your private life. Tho I perfectly well understand your situation and approve of your determination to live free, regardless of social conventions, I fear you will not be satisfied with such a course. I may be mistaken in this, but I do not think I am; and since I am much attached to you, much older than you, and have gone thru what it appears to me you are going thru, I should like to give you a piece of advice. If you are not engaged in some activity by which you can, or wish to, serve God, then it is all the more necessary for you to employ all your powers for interior service, for perfecting yourself, for the amelioration of one's I; then you procure an instrument which, tho it may not be used in this life, will be used in the life to come. This uncertain situation in which you find yourself is a moment of repose, which should be employed, as do the workmen when they sharpen their scythes and hoes, in preparing one's self for work, for the first call. Perhaps I am mistaken in supposing that you are in a position where this counsel is needed. It is possible that you are already doing this very thing. In that case, do pardon me.

* * *

November 1, 1896.

It is interesting and important to know how you explain the motives of your refusal to serve in the army. This now becomes necessary, so that you can act in a proper way if you are again called upon to take up a gun. It is true that Christ has said: "When they deliver you up, take no thought how or what ye shall speak, for it shall be given you in that same hour what ye shall speak." It is also true that man is very seldom himself. Today he floats above, tomorrow below, the surface. But there is that knowledge of one's self, that real conscience which, if it be in communication with God, will make itself known at the necessary moment. I believe you will implant in yourself this conscience when you explain clearly to yourself the cause of your act. For a true life, sincerity is necessary. I also hold that is the unique condition for the manifestation of love. The more sincere we are, the more we love. May God bless you.

* * *

March 27, 1898.

There is a terrible seduction about human glory. It is terrible because it transforms good sentiments into bad ones, without their appearing to be changed. In order to fight successfully against these sentiments, thought of death is precious. With this end in view, I at least am ever evoking this thought, which, by the way, is very easy on account of my advanced age. Nor will you find it hard and you must try this,

tho I must add that, notwithstanding your youth, you seem to me to have very little of this sin—love of human glory.

Since I heard of your illness I think of you oftener than ever and appreciate you still more than ever before. From what I know of it, that disease can let you live for a very long time to come, especially if you stay in a good climate; and tho it might, also, carry you off any day, you should find comfort in the fact that such is the common lot of man. Such a situation must render you more serious, sweeter, and fill you with greater love for those who surround you and for distant friends.

Please answer three questions. 1. Do you suffer much and in what way? 2. What is your mother doing? Does she know of your disease and how does she take it? What are your relations with her now? 3. What is your own spiritual state in general, especially in your best and most lucid moments?

Good-bye, dear friend. I have always felt, and now more than ever, a complete union with you, a union which gives me much joy and which nothing can sever.

* * *

March 9, 1899.

My first feeling on reading your last letter was one of regret—another man, seized by the instinct of reproduction, descended to the inferior degree of life. On analyzing your action, I find that you have done wrong, that you have conducted yourself in a debauched fashion, just like the average man. But what I approve in your course is your sincerity, which is always so dear to me. You have hid nothing from me, and without striving to justify yourself, you have told me everything.

After reading what you said in your first letter, I felt sorry for you for having descended to the inferior degree, and I considered that you were acting, or intended to act, quite right in delivering her and her family from torments, by marrying her. But I do not approve of your second letter. One cannot, especially in the things of this world, renounce the inferior degree of life and transport one's self suddenly into the superior sphere, leaving behind the duties of the inferior sphere. When you borrow money and promise to pay it back on a certain date, you cannot all at once flee to a region where there is no idea of mine and thine, and refuse to pay your honest debts. Likewise, after having awakened love for you, worse still, after having indulged in those relations which, if they do not end in marriage, will probably be a source of shame and repentance, you cannot of a sudden free yourself from these duties and consider yourself at liberty to serve God and man.

This is my opinion of your situation, and, however painful it is always to me to see a man descend to a lower degree and to begin a struggle against woman and all that the family stands for, instead of struggling with himself and his own lubricity—I would like to have you marry her and commence a regular family life.

* * *

May 2, 1900.

Your reply to the clergyman who blames you for having published a translation of the stories of Guy de Maupassant is not an important matter. Happy is he who discovers in himself only such sins as this one. But the other matter—your probable marriage—is quite another thing, a dilemma worthy attention.

At each step in this affair you are confronted with the question, not whether you are going to commit a good or a bad act—this it would not be hard to decide—but what is the best thing to do under the circumstances, or rather, what is the least bad? You must conclude whether it is better to pass over liquid mud or thick mud. That you have got to move in mud is inevitable, for you have been living in it for a long time. It is before you, behind you, everywhere. The only useful thing now is to convince yourself that, up to the present, you have been hopelessly floundering, and to determine that you will be more prudent in the future when you get on solid ground once more. We sent a telegram to Debruin. I, too, am deeply affected by these phenomena. They are symptomatic, and I think the powers that be are beginning to perceive this. But I am optimistic in this as in all matters, for I perceive not sometimes but always the dawn of the New Day, which is ever growing brighter. What a joy to live and die! Receive my fraternal embrace.

Moscow, December 28, 1900.

I have received your long and good letter. Everything in it is interesting, especially what you say about your family life. I am happy for you. I myself have not been well for the last two months. My mind seems weary. I can't write anything. At first this worried me, but finally I not only accepted the situation, even if it were to last until death, but I found in it a great advantage, for with intellectual inaction came much better moral work.

I have heard of three more cases of refusal to do military service. But, of course, this is but a drop in the sea. Yet how weary life would be if the importance of events were measured by their visible consequences.

My best regards to your wife.

* * *

March 15, 1907.

I am ever thinking of you with that true interest which requires no effort on my part; on the contrary, it springs from a leaning toward you. I am so happy to learn that your present existence is particularly spiritual, and so independent of all external influences, and, consequently happy.

You say in your letter that, in my conception of the world, it is divided into three degrees. I cannot—will you believe it?—recall where I made this division. Anyway, it is not original with me. I borrowed it from another and without good reason, for the third division, the social one, is very superficial. There are but two conceptions of the world, just as there are but two principles of life—limited and unlimited, material and moral, animal and divine.

My opinion—I give it to you privately—concerning some great poetic models (the "Divine Comedy" and "Paradise Lost") is this: I found them very hard reading and I forthwith forgot all I had read.

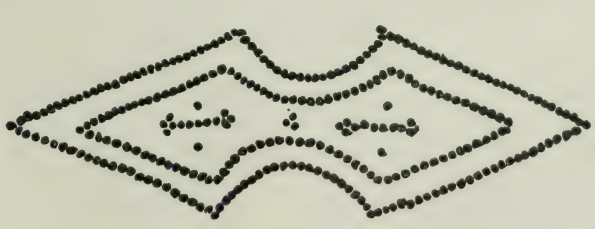
Love to you, your wife and children.

November 15, 1908.

Thanks for your letter, dear brother Skarvan. I always like to hear from you.

My opinion of politics is like your own. Political activity is both absurd and dirty business.

I am very much astonished and sorry to be told that in my "Cycle of Reading" there is nothing on chastity. I will try and remedy this in future editions, for I consider chastity an aspiration toward the grand, the most important condition of moral life and the surest index of the sincerity of this aspiration.



I am convinced that it is better for children not to go to school, tho this depends also on the mother and the children. I think the chief thing they should be taught is the law of God, the law of life, which is not taught in Russia at all, or rather, which is worse, is taught in a disfigured form. In every family, when children are to be taught their letters, you sit them down near you with a primer and they begin to spell *a b c*, etc. But I hold that first and above all, you should sit them down beside you and begin to show them that all the good in the world comes from love, all the evil from non-love, that God is love, etc.; and you should keep at them until they have grasped this as well as their *a b c*'s. This can be done and should be done, and only a loving parent can do it.

As regards the new movement now going on in the world, I watch it and believe in it, but do not attribute it to my influence even in the smallest degree.

I am glad to know that you feel well when things go well, but I would be still happier to learn that you also feel well when things do not go well. Disagreeable conditions do the soul good.

Much love to you, your wife and children, and may God help you, dear brother.

Yasnaya Polyana, Russia.

His Price

BY ALBERT SIDNEY GREGG

DAVE FISHER, Alderman from the Seventh Ward, gazed searchingly into the faces of his fellow conspirators as he asked significantly:

"Gentlemen, how shall we dispose of the Rev. Addison Bowler. He is becoming a nuisance, and it is time he was abated."

Huston, head of the City Traction Company, who sat on the opposite side of the table, gazed at Fisher questioningly for a moment, hitched about in his chair, laid his cigar down, cleared his throat, and spoke up as if he had been struck by a new thought:

"Do you really consider him dangerous, Fisher?"

"Dangerous! What makes you ask such a fool question?"

"Just to find out if you know anything. Bowler is no politician." Huston resumed his cigar and went on smoking serenely, as if he had finally disposed of the entire question.

"Say, you are a daisy——"

"If that's the case there are three of a kind here tonight——"

"Bowler may not know much about practical politics, but he knows how to shoot off his bazoo, and that will play havoc with our kind of politics."

"He is really dangerous, then?"

"Most decidedly."

"And you want to get him out of the way?"

"There you go again. What do you suppose I called this meeting for? Just to hear your chaff? Now get your thinking machinery to going. If Bowler isn't muzzled we will lose the city election, in which event you may lose your franchises, and that is no laughing matter. Now, what do you propose? You are a nice, respectable churchman, and you ought to know how to muzzle a preacher."

Huston winced. He did not relish the thrust of Fisher, but he did not dare resent it, for Fisher was a very useful man. Furthermore he knew that Fisher was right in his estimate of Bowler, for that gentleman had started a reform campaign which threatened to overturn the city government and cause all kinds of damage in business and political circles.

"Well, since you have put the job up to me, we might as well get down to business, for we have no time to waste," replied Huston. Then turning to Nixon, Commissioner of Public Works and lieutenant of Fisher, he asked, "What do the records show?"

Nixon shuffled over several packages of papers and pulled out an envelope which he held in his hand:

"I have his pedigree here in a nutshell."

"Do you think Bowler is dangerous?" asked Huston, addressing Nixon, as if unwilling to admit the power of the reformer.

"He is dangerous because he has been giving some very ugly facts to the public in his speeches. Just where he has been finding out so much is a puzzle."

"Have you discovered any weak spots in his record—anything that could be dragged out before an admiring city?"

"Not a thing."

"Do you think we could get him into a scrape with a woman?"

"Not a bit of it. He is not the kind to get caught in that old trap."

"Any old debts?"

"Everything all paid up, including grocer and butcher."

"Could we get his church to lift him?"

"Nothing doing there. His officials are standing with him to a man."

"That is unusual."

"I know it, but it is true in this case."

"Well, well, this paragon of virtue seems to be quite beyond our reach," exclaimed Fisher.

"Say," exclaimed Huston, with sudden animation, "I have an idea."

"Out with it. No secrets."

"There will be a secret this time, Fisher, for I will have to work out the plan all alone. How much money shall I spend to get Bowler out of the way? Is five hundred about right?"

"Any amount you want within reason,

only get rid of him, and do it quick," retorted Fisher, emphatically.

"Leave Bowler to me then. If I don't get him on the skids before tomorrow night I'll give up the game and go to work," replied Huston, decisively.

"Adjourned, subject to the call of the chairman," said Fisher, tersely, as he arose and reached for his hat and coat. The others did likewise, and within a few minutes they left the little back parlor of the Clarendon House and found their way down a back stairway to the barroom.

During the next forenoon Huston called on Daniel Carter, his attorney and confidential adviser in legal matters.

Carter led the way into his private office.

"Nice, cosy place here," commented Huston. "No listeners in the walls, eh?" and Huston glanced about to satisfy himself that they were quite alone.

"You might talk as loud as you please and you could not be understood in the next room."

"A very fine arrangement."

Carter pushed a box of cigars across the desk: "Help yourself."

"Ah, that hits me just right. You must have read my thoughts." Huston took one, bit off the end, scratched a match on his shoe sole and slowly lighted his cigar. Carter held his cigar unlighted, waiting expectantly for Huston to speak.

Deliberately blowing a cloud of smoke out into the room, leaning back in his chair and partly closing his eyes, Huston began talking business:

"Carter," he asked, "do you know anything about the Rev. Addison Bowler?"

"Yes, a little," replied Carter. "We are neighbors, and he has frequently consulted me in regard to legal matters."

"Oh, ho! so you are his legal adviser. That is interesting."

"Yes; I am in a way."

"May I ask on what points? Of course, that is a leading question, and you may answer it or not, just as you please."

"Mostly with reference to the laws that are being violated in the city."

"And I suppose you have advised him fully."

"Oh, yes. I have advised him as to the law——"

"But not as to the facts," added Huston.

"No; he did not seem to need my advice as to the facts."

"How has he been learning so much about city conditions."

"Nate Adams has been posting him."

"Has Adams turned reformer?"

"I think not. He has been furnishing ammunition to the reformers to get even with Fisher."

"Why, has Adams got a grudge against Fisher?"

"Didn't you know that when Adams got let out of his easy job in the city clerk's office he laid it up against Fisher. Now he is settling the score."

"That's a fine mess, isn't it?" commented Huston, musingly. "And Adams is next to a lot of interesting facts, isn't he? Do you know where Bowler has been getting other information?"

"He has a detective at work making investigations, and checking up the facts given him by Adams."

"Say, he's nobody's fool, is he?" exclaimed Huston, in a burst of appreciation.

"Fool! Not a bit of it. He seems to know a good deal about practical politics."

"I have never met Bowler," said Huston. "I believe I will go and see him. Ring him up and give me an introduction."

Carter called Bowler up on the 'phone.

"Nothing very urgent," said Carter, pleasantly. "Merely wanted to introduce you to Mr. Huston, vestryman at St. Mark's, and a prominent man in city affairs."

"Oh, yes," replied Bowler. "I have heard of him, but never had the pleasure of meeting him. I shall be delighted to have him call this forenoon."

Huston arose to go. Flinging away his half-smoked cigar he shook hands with Carter, took his hat and cane and departed, leaving Carter gazing after him in wonderment.

Huston was in a very good humor as he passed down the hall and entered the elevator. He smiled grimly and then chuckled to himself. Calling a carriage he was driven to his own office, where

he quickly entered his private room. Taking down the 'phone he called for Fisher:

"Say, Fisher," he exclaimed, "give Nate Adams some kind of a job and do it quick. He is telling tales out of school——"

"What—who—I——"

"That's all. See you later."

A rapid drive of twenty minutes, out beyond the busy business streets, brought Huston to the imposing Central Church, where Bowler had been thundering forth his denunciations against the wickedness of the city. At the back of the church stood the home of the preacher. Bowler was on the watch and met Huston at the door.

With his own hands he took the traction magnate's hat and cane and placed them in the rack in the hall.

"Come right up to my den, where I receive my most intimate friends. We can have a good chat there without fear of being disturbed."

Huston was at home in his back parlor meeting place at the Clarendon, the downtown business and law offices, and the high-toned barrooms, but he was not quite sure of his bearings in navigating a parsonage, but he managed to get upstairs without making any serious mistakes.

"You have a lovely home here, Mr. Bowler," commented Huston, as he sank into an easy chair. "You must enjoy your books and the duties of your church."

"I do, but I do not have very much time for study. As you probably know, my life is very active. I feel that the city needs a prophet, for it is very wicked. You little realize, Mr. Huston, how vice is ruining multitudes of the people."

"It is deplorable," admitted Huston with becoming gravity, "and I hope you will succeed."

"Men of affairs like you, Mr. Huston, could do so much. I wish you would join me in the present campaign. With your help I am sure we could elect a reform administration."

"Do you really think we could win?" asked Huston, for the moment allying himself with the reformers.

"I am confident we could. All we need is to get the people aroused, and that can be done by constantly telling the truth about city conditions."

"What do you really want to accomplish?"

"Oh, close the saloons on Sunday, stop gambling, break up wine rooms, and stop street walking."

"How about grafting?"

"Once we get power we can work reforms in all directions."

"I see you are making a great many speeches. You must be getting tired."

"I am at it night and day."

"Well, don't break down."

"My physician has warned me to slow up a bit, and I am trying to, but it is very hard when there is so much to be done."

"I am sorry I have not been able to attend any of your meetings, but my friends tell me that you are making a fine line of speeches, for which I wish to commend you."

Bowler was touched deeply. It was the first time a man of real prominence had spoken appreciatively of his efforts as a reform speaker. Watching the effects of his words keenly Huston continued:

"I can assure you that some of our leading citizens have been deeply impressed with your efforts to make a better city."

"That is very encouraging."

"You have been given more space in the newspapers than any other preacher in the city."

"Yes, such as it is," replied Bowler rather dryly, but with a slight increase of pride.

"Well, I suppose I must be getting down to business," said Huston, suddenly changing his manner. "I chanced to be present last night at a meeting at the Clarendon at which your work was fully discussed. It was suggested that something should be done by the people in recognition of your activities. I suppose you are not averse to receiving some token of appreciation from the business men. If you are willing to accept it I am sure the leading citiens would be delighted to honor you highly."

"It would please me very much."

"How would a banquet at the Clarendon strike you? If an invitation should come from the Business Men's Club to

speak at their annual banquet next Thursday night I hope you will accept it. Of course it would be the diplomatic thing for you to discuss city affairs in generalities. It would pay you to go easy, get into personal touch with the men, and then gradually enlist them in your cause. They are very suspicious of radicals, but if you can show that you have an element of conservatism in your make-up, you will be able to get the backing of men of large affairs who are in sympathy with you, but who do not care to be branded as cranks. You are a keen student of men, and I think you understand what I mean."

"Indeed I do, and I greatly value your suggestions. I have often wondered why some of the leading men in church affairs were reluctant about taking hold of reforms. They are not vicious. But they shrink from being classed as cranks. It is quite clear to me now. You may assure your friends that I would be delighted to attend the banquet, and to speak if they wish to put me on the program."

Huston arose to go. As he shook hands with Bowler at the door he exclaimed heartily:

"I'll be glad to keep you posted, and may help you enlist some very influential men. Just call me up any time. Good morning."

Huston was driven to the office of Colonel Scott, cashier of the Home National Bank, and president of the Business Men's Club.

The two men retired to a private room. Without removing his hat or taking a seat and gazing directly into the wondering eyes of Scott, Huston blurted out:

"The Rev. Addison Bowler is to be one of the speakers at our banquet next Thursday night."

"Are you crazy? Why he is a regular firebrand," exclaimed the banker, who was horrified at the idea of inviting a radical to speak.

"You should not call an aggressive preacher a firebrand. He goes on the program, and you will see that he gets an invitation before night."

"I don't quite understand your purpose," said the colonel, rubbing his hand across his forehead, as if deeply perplexed.

"Take my word for it, nobody will be hurt unless it is the reverend gentleman himself. It is part of a plan to kill his influence. Now do you see? If his men should get into office there might be some investigating, and the Home Bank might be called upon to explain some things about city deposits——"

"Oh, it is politics, is it?"

"Yes, politics, and a high-handed kind at that. Nothing like it before in this town. Don't forget the invitation."

In the afternoon Rev. Addison Bowler received the invitation to the banquet of the Business Men's Club, with a personal note from President Scott asking him to speak. He promptly accepted, and the papers next morning contained the announcement that "Dr. Bowler, the reform leader of the city," would be the guest of the ultra-conservative Business Men's Club at the annual banquet. More than one captain of industry looked up and then asked the next captain of industry what it all meant. Finally the word passed thru the business district that it was "some scheme of Fisher's," whereupon all the captains of industry winked at each other and planned to be present at the killing.

If Huston felt like a bull in a china shop when he entered the home of Bowler, it was evident that Bowler himself felt more so when he faced the assembled business brains and money of his city at the banquet. The chairman introduced him with a witty anecdote, and when Bowler arose he was loudly applauded. At first he was overawed, but in a moment he found his tongue and made a clever little speech on the influence of business men, which was quite harmless, as he studiously avoided making specific applications. Several members listened intently and sighed with satisfaction when they noted that the speaker did not seem to see any connection between vice and business. He took his seat amid a thunder of applause

Huston, who sat next to Fisher and who had been exchanging winks with that worthy and Nixon, quickly arose.

"Mr. President," he began, as chairs were shifted and faces turned in his direction, "I wish to express my appreciation of the very timely and appropriate speech of our distinguished guest

this evening, and I am sure you are all glad that he came——" He was interrupted by applause promptly started by Fisher and Nixon. "It has occurred to me," he continued, "that Dr. Bowler ought to be elected a member of this club, and if such a motion is in order I so move."

Nixon quickly seconded the motion, and Dr. Bowler was duly elected to membership in the Business Men's Club.

"Now, Mr. President," said Huston, again, "I move that Dr. Bowler be our guest of honor on our annual excursion to Florida. He could serve as spokesman on especial occasions, and I am sure would fitly represent both the business and religious interests of the city."

This also went thru without a dissenting vote after the applause had subsided.

Bowler arose and in a bewildered way exprest his thanks. Finally he asked, "When will you go on your Florida trip?"

The chairman arose to reply:

"We are going a few weeks earlier this year than last year, I think. Mr. Huston, you can tell us the exact date. Next Monday, isn't it?"

"Yes, the executive committee this afternoon decided to start next Monday. The Florida special will leave here Monday night and be gone for ten days or two weeks. It is rather short notice, I know, but I think we can get ready in time."

"All right, gentlemen," continued the chairman. "It is understood, then, that our special train for Florida leaves next Monday night and that Dr. Bowler is to be our guest."

After the banquet was over and the men were slowly leaving the dining hall, Bowler hurriedly sought out Huston. It was plain that he was in deep distress:

"Why, Mr. Huston, I can't afford to leave the city next Monday night and stay away for ten days or two weeks. All my work here will be lost. I—I—I——"

"Tut, tut," replied Huston, jovially. "Go and have a good time. You have been shown a very high honor. These men are your friends, and you cannot afford to despise their friendship, which you would be doing if you declined to be their guest on the Florida excursion. Only on very rare occasions have they invited anybody to be their guest. Everything will be all right here, and your friends will see that the right men are elected. Besides, this invitation gives you a fine opportunity to gain some greatly needed rest."

With misgivings in his heart and voice Bowler finally accepted Huston's view, and the papers next morning announced in big type that "Dr. Bowler, the distinguished pulpit orator," would be the guest of the Business Men's Club on its annual excursion to Florida. Before night Fisher and Huston, with the help of Nixon, had started the insinuation going that Bowler was not sincere or he would not have accepted favors from the Business Men's Club, because so many of its members were engaged in bad politics. The insinuation increased in size as it spread, and within two days it had developed a well-defined conviction that Bowler had been "paid his price."

Bowler went on the excursion. He was shown every honor, and returned in high favor with certain captains of industry who had been commissioned to look after his convenience and welfare.

His heart was heavy when he discovered that the reform crusade had lost its momentum during his absence. His old friends in the reform ranks greeted him coldly. He tried to hold a final rally, but the crowd was small and unresponsive. Some hissed him. "What is your price?" bawled a disappointed workingman. Bowler ignored the interruption, but the shaft went in.

That night Bowler sat down and had a conference with himself. Little by little he pieced events together. By midnight he had reached a conclusion. "I see it all now," he muttered, as a new light came into his eyes and lines of worldly shrewdness began to form about his mouth. "I see it all now, and never again, never again, will I accept favors and honors unless I know what is behind them."

The reformers lost the election, of course, and Fisher, Huston and Nixon met in the little back parlor at the Clarendon to divide the spoils.

"Good job," commented Fisher, with a chuckle, as they discussed Bowler.

"Say, Huston, give me the particulars of your deal with Bowler," said Nixon. "I wish to fix up my records."

"What do you want?"

"His price."

"He is priceless."

"Come now, stop your chaffing. How much did you spend to get him out of town on that Florida trip."

"Practically nothing. The club gave a deadhead ticket to the banquet, and I made the railway company carry him free. So you see, we are not out anything."

"Yes, but I must estimate him in some way. You didn't bribe, frighten or trap him. What's his price?"

"Glory and honor. Do you see? Men like Bowler who cannot be reached by grosser methods can be captured by an offer of glory and honor, if it is cleverly presented. He was a hard one to land, but we got him."

And Nixon entered in his black book of political secrets this significant line:

"Dr. Addison Bowler, price, glory and honor."

CLEVELAND, OHIO.

P. T. Barnum

(Born 1810)

BY JOEL BENTON

EMPEROR of Showmen! versed in magic arts,
Born to delight and capture human hearts;
Who can forget that World's Superbest Show
And those rare wonders that it made us know?

Purveyor of all the oddities of earth,
A dozen times that single ticket's worth,
Whose Lecture Drama and a spouting whale
Make but a part of the Museum's tale.

Not Greece or Rome, or any age we know,
Had for their people such a mammoth show;
You startled Europe with its monstrous size,
And those three rings which twisted neck and eyes.

The royal household of Britannia's isle
You drew, and captured their applause awhile;
You got even Gladstone with them in your box,
And lords and commons, too, in endless flocks.

To Queen Victoria, in her early reign,
You brought "Tom Thumb"—made thus a little vain:
But with the royal children, well you knew,
His fame would grow, and profit would ensue.

How many schemes at home, too long to tell,
You made to amuse, and always mastered well;
"Niagara Falls" you modeled, and in one space
Put the "What Is It's?" puzzling form and face.

On Ann and Broadway how your brass band dinned;
What matters it? You brought us Jenny Lind,
Whose sweetest voice, beyond all known before,
Was something marvelous—fitted to adore.

Her silver notes, her passionate, rare thrills,
Her touching pathos, her entrancing trills,
And, more than all, her beautiful fair soul,
Seemed only born for a pure saint's control.

In your home town, and here, your friendly hand
Did for the public what few understand;
Your bounty, too, reached hearts cast down and sad,
That thru your pity were lifted and made glad.

Foundations, statues and long miles of trees
You gave to Bridgeport, and, far more than these,
You saw the want that was to many dark,
And planned its Boulevard, and "Seaside Park."

In all the centuries of historic years
You had no rival—had no worthy peers,
As joy-purveyor of circuses and bread
Others just followed—you it was who led.

Yet more than all achieved, or to be sought,
Was this fair dream, deep in your vision wrought:
To give to Childhood many a smile and laugh;
And this shall make your crowning epitaph.

POUGHKEEPSIE, N. Y.

Some Stories of Army Mules

BY GENERAL JAMES GRANT WILSON

Author of "Sketches of Illustrious Soldiers," "The Presidents of the United States," Etc.

It is useless threshing a mule to make him a horse.—*Bengali Proverb.*

THE relation of the mule to civilization, says a recent writer, has never, we believe, been clearly defined, tho, as a matter of fact, he bears no small part of its burden. In the medieval civilization of Latin Europe, as we know, he was much more in evidence. Of course, he was beaten both early and often; for it seems to be an article in the creed of the true Latin that all mules must be belabored, with cause or without, on every possible occasion. If any one doubts that statement he will be at once convinced by making a trip thru Southern Europe. The medieval mule, gayly caparisoned, was often the conveyor of great personages, who, without him, might not have been able to achieve what they did toward the making of modern Europe, which proves that we owe a great deal to the mule. It is true he was beaten, as we have said, even the most pious churchmen indulging in that practice; but he was, so to speak, clothed in purple and fine linen, and as a figure, even tho only incidentally, in the great medieval show, he has been immortalized in song and story.

The historic glory of the Matanzas mule of the late Spanish war furnished an ample vindication of the warlike qualities of the race. Recently the foreign demand for the American mule has been so great that the Bureau of American Industry has interested itself in the beast. It does not seek to discourage exportation, and it advises farmers to enter more extensively into the raising of mules. From a small beginning less than a score of years ago, the exportation of mules is running, in several instances, to about 30,000 a year, the value of which is some $3,000,000. It has been found by the foreign nations that the animal is equally indispensable both in peace and war, and consequently the American mule is being installed not only in the military reservations of all Europe, but also in the countless avenues of industry. England purchased many thousands from us during the South African war, and one of them occasioned the most remarkable instance of red tape in the war history of the world. Every horse and mule in the British army is numbered and has a brief biography. The number is branded upon the animal's hind foot—the thousands on the near hind foot, and the units, tens and hundreds on the off hind foot. The London correspondent, writing in March, 1900, from besieged Kimberley, says:

"It is the red tape which makes the strain heavier than it would otherwise be. And there has been and is too much red tape. For example, after we had been for weeks shut up in Kimberley—not at the best the most cheerful place in the universe—our hearts became specially fixed on one portion of the British army—the relief column. By accident we learned that it had reached Modder River, after a sharp engagement at Belmont. Eagerly we awaited news from Lord Methuen. Men and women scanned the horizon nightly to see the first flash from his searchlight answering ours. All night long our three searchlights sent their long streams of fiery light past the rugged fastness of Scholtz's Nek and the rocky kopjes of Spytfontein to the two rivers, on whose banks our preservers were encamped. 'MD! MD! MD!' they called, but no answer came. Only the big stars could be seen, and the Southern Cross seemed to whisper 'Patience.' At last, one night far from the south came the welcome flash. 'KB! KB!' it said. High up in the conning tower sat Lieutenant-Colonel Kekewich and his staff officer, with picked men from the Signal Corps. Anxiously they deciphered the first message from their honored chief. It was this: 'Ascertain number on forefoot of mule omitted in Cape Town return.'"

The most celebrated mule mentioned in ancient history is Al-Borak, who was white, and is believed by many millions of Mahomet's followers among the living to have carried the prophet to heaven:

I mind me of but one 'mong all
  Thy kind, who e'er on Glory's track
Has made a record—only one,
  And that the white mule Al-Borak,
Who, so 'tis said, bore Mahomet
  To Allah's heaven upon his back.

Coming down to modern days, perhaps

the most distinguished mule, who was white, like Al-Borak, was Mexique, whose name has a place in the official records of the United States Government. The care and kind treatment extended to pensioned Mexique certainly disprove the old saying, "Treated worse than an army mule." He lived for over half a century, dying between retreat and reveillé, August 24, 1886. The only well-authenticated instance of a mule exceeding that age is the case of one who died during the past decade in County Tipperary, Ireland, at the age of fifty-two! For forty-five years he made two journeys a day with milk to the town of Tipperary, which is three miles from Mount Brien, where he was born, lived and died. An army comrade writes:

"Mexique was a large white mule in service at Mount Vernon Barracks, near Mobile, Alabama, when I was stationed there from 1881 to 1885. He was so venerable and stiff after being at work daily for over two score years that he was allowed the freedom of the post, but taking a turn now and then at light work to earn his salt. Receiving an order to sell all unserviceable animals, I immediately wrote to the War Department asking authority to keep Mexique, the officers to buy him on the day of sale and the United States to feed him thereafter."

This application, in the course of its progress thru official channels, reached General Sherman, then in command of the army, who forwarded it to Robert T. Lincoln, Secretary of War, with the following endorsement:

"I have seen that mule, and whether true or false, the soldiers believe he was left at Big Springs, where the Mount Vernon Barracks now are, at the time General Jackson's army camped there about 1819 or 1820. Tradition says he was once sorrel; but is now white with age. The Quartermaster's Department will be chargeable with ingratitude if that mule is sold or the maintenance of it is thrown on the charitable officers of the post. I advise he be kept in the Department, fed and maintained till death. I think the mule was at Fort Morgan, Mobile Point, when I was there in 1842."

When the document reached the Secretary of War, he made, on October 30, 1883, the following order: "Let this mule be well kept and cared for at the public expense as long as he lives." The order did not arrive at Mount Vernon Barracks until after Mexique had been sold to the highest bidder as "worthless condemned Government property," but he was bought in by Captain Kobbé and his brother officers of the post. The faithful animal, who had never missed a day's work, enjoyed his pension for almost three years.

Having sent an account of Mexique to a distinguished English friend, he wrote from Strathfieldsaye House, November 13, 1883:

"The story of the mule does great credit to Sherman and to your Government, and I should think the statement would most worthily put our Government to shame if sent to them. They would say in defense of themselves, that the people of England entrusted them with the management of their property that they might manage it as economically as possible without any regard to generosity. The story of Mexique reminds me of one of an Egyptian Pasha who had done excellent service. He was rewarded with a pension and he informed a friend of mine that the Government could so ill afford it that he knew that he should not receive it long. And sure enough, he was poisoned in six months!"

As General Sherman's name was mentioned in the second Duke of Wellington's letter it was sent to him, and in returning it he wrote from St. Louis:

"I was amused several weeks ago to receive from the Humane Society of London a letter inquiring particularly into the facts of the mule Mexique, which letter came to me under cover of a very polite note from Mr. Lowell, our Minister. I caused to be sent, through Mr. Lowell, the official correspondence and another letter of the commanding officer at Mount Vernon Barracks, with a photograph of the mule himself. So the Humanitarians of London are now fully informed.

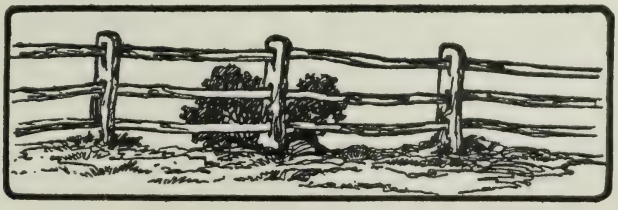
"I am as serene here in my retirement as any gentleman could be and have no yearning for the command of the army because it is so complicated with President, Secretary of War, and heads of staff bureaus, so that the nominal commander-in-chief cannot ascertain the nature and limit of his authority. I would much rather command an army in the field than be commanding the army with headquarters at Washington."

Another famous fighting mule was "Old Whitey," of the Twelfth Army Corps. No one knew when or where he was foaled, or by what Jack he was sired, but there was a tradition that Whitey was in the ammunition train at the battle of Buena Vista and the storming of Monterey, like Mexique. Also that he was later pressed into the Confederate service. This much, however, we do know, that he was a deserter from the Confederate army, for he had the brand of C. S. A. on one of his flanks in

letters broad and deep. The supposition always was with the Twelfth Corps men that the old fellow broke away from his Confederate corral and swam the Rappahannock for the purpose of fighting some of our mules, which were sending frequent challenges across the river in taunting hee-haws. Whitey was no sooner discoverd in our camp than the wagonmaster, not without exercising great strategy, took him in and set him to work. Like all old soldiers, he hated work, but how he did love scrub pine and all such cereals that grow in such profusion down in Old Virginia. When everything was quiet about camp, and the only sound to disturb the stillness of the night was the ah-there-stay-there of the lonely sentinel pacing his beat, Old Whitey would slip the noose from off his neck and go the rounds of the camp seeking for a good, lively "scrap." Like men who are seeking for trouble, Whitey generally found it also, and so violent would be the kicking and so loud the screams of the combatants that the camp would frequently become alarmed, and the officer of the day would turn out the guard, believing that the enemy was making a midnight sortie upon the camp. But one night Old Whitey came near meeting his match. There was a big, seventeen-hand dun mule, belonging to General Sickles's corps, called Dynamite. This mule was a double-back-action kicker, with cylinder attachment and noiseless motion. One night Whitey got loose and got into Sickles's camp and ran up against the big dun mule. For a few moments the big dun fellow didn't seem to be "in it," but, as they say in the prize ring, "he was game as a pebble," got his second wind and toed the scratch. Now the two mules stand on their hind legs and paw and bite and scream, and now again as quick as lightning they wheel and stand on their front legs and kick with 2,000-volt power, while a goodly portion of the army stands about cheering them on and betting on the result. Suddenly the dun mule presents his broadside to Old Whitey, when, quicker than thought, the old warrior lands his two feet just over the region of the dun mule's heart. The dun drops, gasps once or twice, and is dead. Old Whitey walks up and peers cautiously at his old antagonist, as if expecting that it is all a feint. Apparently surprised that his antagonist is done for, he elevates his head, works his huge ears and stumpy tail with increasing velocity, and lets out a hee-haw of triumph that will never be forgotten by those of us who have survived the same.

Old Whitey was among the stampeding mules that, on the eve of General Hooker's brilliant battle of Lookout Mountain, broke up a Confederate camp, the Southern soldiers fleeing for dear life under the impression that a body of Union cavalry was charging upon them. Unfortunately, the onset of Whitey and his long-eared companions on the Confederates was not supported, and so the famous fighting mule disappears from the pages of history.

Several decades ago, during an Indian campaign in the distant West, an army officer tried the experiment of mounting a rapid-firing gun on a big mule. One day, when there was no enemy in sight, and the column was marching slowly forward in fancied security, the mule's hind foot became entangled in the lanyard of the gun, and rapid firing was suddenly developed. The troops were very much astonished. So also was the mule. The beast, not knowing what to make of it, began turning round in his tracks to discover from whence came the noise. The spectacle presented by a friendly and well-disposed mule, revolving on a fixed center, discharging a rapid-firing gun in all directions with every movement of his hind leg, aroused conflicting emotions in the detachment, among which warlike enthusiasm could not be included. The command could have encountered with firmness an attack by the red men in the open field, but a revolving mule saddled with a rapid-firing gun, scattering death and wounds with every kick from his left hind foot, was too much even for well-seasoned American soldiers. After the second revolution a disorganized battalion of rank and file alike began shouting from behind trees and rocks, and out of the fastnesses into which they had all fled, "Stop that mule! Stop that mule!"



The following Civil War incident occurred at City Point, Va., a few months before Lee's surrender. When Grant

was strolling along the wharf one afternoon he saw a big, brutal-looking army teamster belaboring a mule with a billet of wood, and accompanying his blows with profanity. The General calmly said, "My man, stop beating that mule." Looking around at the undersized and unostentatious-appearing person in a plain army blouse, he answered, "Say, be you driving these heer cussed mules or be I?" and down came the cudgel again, the mule dodging and jumping the tongue of the wagon. "Well," said Grant "I think I have sufficient authority here to stop your cruelty to that animal," and turning to the captain in charge, he ordered him to have the teamster *"tied up" for twenty-four hours when he returned to camp,* and report the fact to headquarters when done. The news spread rapidly from camp to camp, and there was much less mule-mauling after that in the Army of the Potomac.

For the concluding anecdote of this article, which follows, describing Grant's management of a mule when he was Quartermaster of the Fourth Infantry during the Mexican War, I am indebted to General Longstreet, of the Confederate army, who witnessed the incident. He said substantially: "On one occasion Grant had to deal with a newly arrived drove of unmanageable mules. With a detail of many men and ropes he attempted to harness a troublesome mule, but failed. Then he tried another experiment with the obstinate animal. He ordered him taken to a large rock not far distant, and backed as close to the obstruction as possible without actually coming in contact with it. Three men were directed to hold the beast by the head, ears and neck, and on no account to permit him to advance from the rock. A fourth man was then ordered to clap the harness on quickly. As soon as the buckles began to fasten, the mule became restless and ugly. With a sudden spring forward he succeeded in getting some four feet away from the rock, and his heels cracked fiercely and savagely against the rock for a short time. It was a new and novel experience, also apparently a most painful one, for the battered hind feet were lifted again and again, but very gently, and only one at a time, while its head and ears flopped. That mule was cured, and the problem successfully solved. Grant and his men returned to camp that afternoon, having accomplished their mission—taken the kink out of a drove of as unmanageable mules as ever hauled salt pork and hard tack."

A new feature has recently been introduced in the United States Military Academy thru the efforts of Colonel Scott, the superintendent. A pack train of sixty-four of the finest army mules that Missouri could produce has been established there, and the corps of cadets are now instructed in the art of mastering and loading mules, it being deemed desirable that they should possess a practical knowledge of the business. The innovation is already a splendid success. When Lord Kitchener, England's greatest general now in the service, visited West Point several months ago, he was greatly imprest by seeing 14,000 pounds of ammunition and quartermaster's supplies packed on the mules and prepared to start, in fourteen minutes. The field-marshal pronounced it to be the most rapid and best executed transportation achievement that he had ever witnessed, also that it could not be duplicated by any European army, or, indeed, by any in the world.

New York City.

Literature

The Life of the Five Towns

Mr. Chesterton chose as the title for a recent volume of collected essays: "Tremendous Trifles"; the name would not inaptly describe the details of Mr. Bennett's novels. The smallest incident in them is tremendous to him, exactly as it is to a man in real life. The buying of a book is an event; the closing of a door a catastrophe; an old man's tear worth a chapter of explanation. *Clayhanger** is the first volume of a trilogy, which is to give the history of a man's life: first, as it looks to himself; second, as it looks to his future wife, and last, as it looks to them both after their marriage. It takes 698 pages to tell from his own standpoint the hero's story up to the time of his marriage. Yet we would not accuse the author of tediousness; he is never uninteresting. The brief history of Edwin Clayhanger's father is full of bitter pathos:

> "At the age of seven, his education being complete, he was summoned into the world. It is true he could neither write nor deal with the multiplication table; but there were always night schools which studious adults of seven and upward might attend if business permitted. The man Darius was taken to work by his mother. He was a 'mould runner.' As no man of seven could reach the upper shelves, a pair of steps was provided for Darius and up these he had to scamper. If the soft clay of a new-born plate was damaged Darius was knocked down."

His day was from half past five in the morning to eight o'clock at night! If the baby-man fell asleep over his work he was brutally beaten. Much of the elder Clayhanger's harshness and lack of sympathy for his only son grew out of the cruel brutalizing of those hard days, of which the son never knew. "All his infancy was his own fearful secret. His life, seen whole, had been a miracle. But Edwin never even faintly suspected it." To him his father seemed harsh, forbidding and tyrannical, and the clash of the two temperaments makes a tragedy of the son's young manhood. Yet he regarded his father as he did the weather, fatalistically. It was of no use to resent the actions of either.

The history of dull and endless days, in a country town and an uncongenial business, is told with an art not often equaled. No one can better depict outer monotony and inner drama than Arnold Bennett. He has grasped the secret that the life of each one is a momentous and moving spectacle to the soul that watches from within. A man's experience is his stained-glass window, dull to the passer-by but full of meaning and color to the eyes that catch its transmitted light. Here Mr. Bennett is strongest. He reminds the reader sometimes of Galsworthy, more often of Gissing, but neither of them has his uncanny gift of creeping inside the minds of his characters, and seeing outside events thru their luminous egoism. There is really no reason why *Clayhanger* might not be followed by equally interesting autobiographies from the standpoint of Edwin's father; of his sisters Clara and Maggie; of Auntie Hamps with her curls; of Big James, the foreman, with his glorious voice and incongruous apron; of any one of the score or so characters of the book. Each is to himself the exact center of the horizon and the concentric circles that overlie and interlap each other are only complex to the outside observer, each is quite simple and consistent to the eye at its focus, however little it may know of adjoining and interlacing rings. So Edwin sees clearly enough his own wishes, his own high value as a human being, the importance of events that affect him personally, altho he discerns but darkly that like incidents are momentous to those about him. Yet we hesitate to call him a selfish egoist, because in his mingled weakness and pride, his halting sincerities, his elations and abasements, his cruelty and his kindness, he is so very disconcertingly like the rest of us!

Mr. Bennett's recent work is significant of the triumph of realism, gradually working upward to the light out of the slough of Zolaism. He has the mastery

*Clayhanger. *By Arnold Bennett.* New York: E. P. Dutton & Co. $1.50.

of all his material. In the matter of diseases, for example: consumption and heart disease have always been the favorites of fiction and we can remember when "brain fever" was epidemic in novels, but has any previous author dared present a hero with catarrh and influenza? Little Cold-in-the-Head, according to Maeterlinck, is the only one of the diseases which the vigilance of the doctors now lets escape from the prisons of Night, so perhaps the novelists will be driven to take it up.

Mr. Bennett's method in this trilogy is that of Browning in "The Ring and the Book." Thru his short stories and "Old Wives' Tale" we have become acquainted with a considerable part of the population of "The Five Towns," and if he continues at the present rate of a fat volume a year we shall know them all. We want to. Mr. Bennett is working out a new theory of fiction: that the life of a community should in these democratic days take the place of the life of one individual, which was the theme of the epic and older novel. There is one disadvantage in this, that each volume appears fragmentary and incomplete. *Clayhanger* is one instalment of a serial story, leaving off at the most exciting point with a "To be continued in our next." But we are given no assurance when the next will appear. Unless the publishers have the complete manuscript of the series in hand we believe it is their duty to insure Mr. Bennett's life for the benefit of his readers.

Privilege and Democracy in America. By Frederic C. Howe. New York: Chas. Scribner's Sons. $1.50.

It is a painful, humiliating exposure of national shortsightedness and folly, lucidly arranged and fully documented, that Mr. Howe, a former member of Mayor Tom Johnson's kitchen cabinet, makes in this book. Dowered with a continent of incalculable richness, the democracy of the nineteenth century—youthful, yeasty, spendthrift, ignorant of the consequences to unborn generations, blindly expecting that the faster the exploitation the greater the general well-being—took special pains to get rid of its birthright and tossed to right and to left, with drunken recklessness, forests, prairies, minerals, franchises, bounties, privileges. Now the wild oats must be reaped. One-fourth of the total acreage of America, an area greater than Germany and Great Britain combined, is owned by fifty thousand persons. A space that maintains a hundred million souls in Europe is controlled in the land of the free by fewer people than occupy a good sized suburb of Boston or New York. Not content with lavish gifts under the law, freebooters have looted the national domain of treasures in a way to make Captain Kidd resemble a boy pickpocket. "Within the last fifteen years there has been stolen from the public domain not less than 150,000,000 acres," an area five times as great as New York State. Railways long enough to circle the globe eight times are under the control of half a dozen financial groups. The steel trust has gobbled up all the best ore deposits known, and has thus given value to its hundreds of millions of fictitious capitalization. Anthracite coal which sold for $3 a ton at the Eastern seaboard in the halcyon days of free competition has been raised to $6 since a roomful of manipulators has controlled the fields. Beneficiaries of the tariff exact a hundred dollars a year from every family of average size by appropriating franchises and unearned land values in cities. Truly the rape of a nation! For solace, let us remember that many have already come out of the frenzy in which democracy squandered its resources. A general increase of freight rates has been checked; the thieves are relinquishing rich stretches of coal lands; stand-patters are being unseated and conservation bills passed; the looting of Alaska has been thwarted; New York in a year has collected twenty millions of back franchise taxes.

Such remedies, however, Mr. Howe finds insufficient. Only land taxation, which would take the whole rental value, taxation applied impartially to mines, forests, farms and city lots, can work a cure, he says. This is the least convincing part of his argument. Like other disciples of Henry George, he predicts results out of proportion to his causes. For instance, if New York placed all taxes on land values to the exemption of improvements, while a building boom,

followed by a panic, might well result (as it did in Vienna when a partial exemption of new improvements was allowed), it is not clear that lands unreached by rapid transit lines would come into occupation nor that land speculators who found their annual carrying charges raised from 2 per cent. to 3 per cent. would immediately throw their holdings on to a demoralized market. Other remedies must also be applied.

History of the United States and its People. By Elroy McKendree Avery. Vol. VII. Cleveland: The Burrows Company. $6.25.

The chief merit of Avery's *History of the United States* is not brilliancy of style or novelty of view, but the generous use of illustrative material to accompany and illuminate the narrative. Dr. Avery, unlike most authors, has discovered that there are other and more direct and vivid ways of conveying ideas than by words. It was this discovery that made his science text-books so popular and in this extensive work he has availed himself of the opportunity to utilize portraits, maps, and fac-similes of newspapers and manuscript to a greater extent than any previous American historian. This gives to the reader a sense of reality, of contemporaneity, unattainable in any other way. Washington's Farewell Address, which seems to most of us like the Ten Commandments, sent down from Heaven engraved on stone, perfect and complete, is here presented in its original chaotic and tentative form, with long passages struck out, important phrases altered and interlinear sentences added, as poor a piece of copy as the printer gets nowadays. It does not detract from our real admiration of Washington to see him thus in the throes of composition, or read that the Republican papers referred to his retirement in the following language:

"Every heart, in unison with the freedom and happiness of the people, ought to beat high in exultation that the name of Washington ceases from this day to give currency to political iniquity and to legalize corruption. A new era is now opening upon us, an era which promises much to the people, for public measures must now stand upon their own merits, and nefarious projects can no longer be supported by a name. When a retrospect is taken of the Washington administration for eight years, it is the subject of the greatest astonishment that a single individual should have cankered the principles of republicanism in an enlightened people just emerged from the gulf of despotism, and should have carried his designs against the public liberty so far as to have put in jeopardy its very existence. Such, however, are the facts, and, with these staring us in the face, the day ought to be a JUBILEE in the United States."

The field of American history has been so industriously cultivated in detail by many investigators in recent years that the time has come when wider surveys may be undertaken. Consequently extensive general histories like the work under consideration are again appearing. Dr. Avery and his publishers have freely employed experts who have investigated many points that must be worked out by specialists, for human life is too short for any one man to verify by personal reference to the original authorities all the statements of a general history, but it is to be understood that this is not a co-operative history and the author is solely responsible for the text.

Fighting the Slave Hunters in Africa. By Alfred J. Swann. Philadelphia: J. B. Lippincott & Co. $3.50.

A Transformed Colony: Sierra Leone As It Was and As It Is. By T. J. Aldrige. Philadelphia: J. B. Lippincott & Co. $3.50.

The Brain of the Negro. By Burt G. Wilder. New York: National Negro Committee.

Eminent Negro Men and Women. By John Edward Bruce. Yonkers, N. Y.: Gazette Press.

The Negro in Literature and Art. By Benjamin Griffith Brawley, A. M., Professor of English in Atlanta Baptist College, Atlanta.

Interesting contrasts are suggested by the widely various material contained in these volumes—that range from rather bulky, generously illustrated repositories of facts whose importance today is historical, such as Mr. Swann's and Mr. Aldrige's studies, to accounts of latter-day progress. The scientific note is struck only by Professor Wilder, who offers a seemingly satisfactory refutation of those scientists who have made much ado about the negro brain's deficiency in weight, and faulty configuration. In the volume called *Eminent Negro Men and Women*, Mr. Bruce compiles a number

of sketches which he dedicates "to the negro youth of America, in the humble hope that they may emulate the virtues here set forth."

Master Minds at the Commonwealth's Heart. By Percy H. Epler. Worcester, Mass: F. S. Blanchard & Co. $2.

The "Commonwealth's Heart" of Mr. Epler's *Master Minds at the Commonwealth's Heart,* is Worcester County, Massachusetts; the birthplace of seven of the men and women, and the residence of three more, who have been more worth talking about than any other ten people that have been the staple of talk in the last hundred years: General Artemas Ward, first commander-in-chief of the American Revolution; Eli Whitney, inventor of the cotton gin; Elias Howe, inventor of the sewing machine; William Morton, the "conqueror of pain"; Dorothy L. Dix, "redemptress of the world's insane"; Clara Barton, founder of the American Red Cross; Luther Burbank, "discoverer of a new plant world"; and George Bancroft, John B. Gough, George F. Hoar, producers of all kinds of delight in the study, on the platform and in the Senate. "Small geniuses, perhaps, if you bound them by their starting point, the hill-crowned region of Worcester," says the author, "but mighty when you see them radiate the globe." Mr. Epler tells the story of each of these in the somewhat florid manner of the platform orator, but with close adhesion to facts of biography. With the dramatic style one need not quarrel. These men and women were the honest, modest, generally the homespun, workers of a period of great dramatic value in the history of our nation.

Poems. By H. Cordelia Ray. 16mo, pp. ix, 169. New York: The Grafton Press.

Miss Ray's attractive volume contains nearly as many short poems as there are pages, classified as "Fancies," "Meditations," "Sonnets," "Ballads," "Chansons d'Amour," "Quatrains," "The Seasons," and "Heroic Echoes," besides tributes to poets and champions of freedom. The attraction which draws her to the last class, Garrison, Phillips, Sumner, Douglass, etc., reminds us that we learned of her years ago as the representative of a family which must go back four or five generations before it can find its pure white, black, and red ancestors. Her father was active in the interests of the colored people a generation ago, and he and the daughter are proofs that deterioration does not follow mixture of blood. The verses are more than formally correct; they are marked with a fine spirit and good taste. Let this be an example from the "Chansons d'Amour":

> "I felt a throb within my heart,
> In which sad sorrow had no part;
> Within my soul a yearning grew,
> So sweet it thrilled me thru and thru.
> A flute's soft warble echoed nigh,
> As if an angel fluttered by;
> And on my lips there fell a kiss;—
> Speak! fairy Moon, interpret this."

History for Ready Reference from the Best Historians, Biographers and Specialists. By J. N. Larned. Vol. VII. 1901-1910. Springfield, Mass.: C. A. Nichols Co.

Last week there came a sudden call in the editorial office—all calls are sudden in the editorial office—for information on the recent history of Portugal, on what the Hay-Pauncefote treaty said about the fortification of the Panama Canal, on how woman suffrage works in Finland, and on the life of President Diaz. All this information we had literally within our reach without rising from the editor's easy chair, for it was all to be found in this volume. Larned's *History for Ready Reference* is not a continuous narrative, but a selection of quotations from official documents, historical papers and periodicals, arranged alphabetically, with cross references. Occasionally, on looking up some topic, we find ourselves referred to a forgotten article in THE INDEPENDENT.

Justice. A Tragedy in Four Acts. By John Galsworthy. New York: Charles Scribner's Sons. 60 cents.

A drama quite as powerful as Galsworthy's "Strife." That play, dealing with the labor problem, was widely read in America last year and seen at the New Theater in New York. This shows the injustice of the English divorce law and prison system, and is written with the realism, vividness and impartiality of which the author is a master.

Literary Notes

....A volume for serious students of the Old Testament is *The Book of Isaiah*, by G. H. Box, M. A. (Macmillan, $2.25). Mr. Box has revised the Hebrew text in accordance with the results of sound recent criticism and prepared a translation in the rhythmical forms of the original prophecies, adding brief critical notes and explanations.

....Readers of books on the New Testament have learned to expect an evangelical spirit, thoro scholarship and clearness and force of presentation in the treatises of Rev. James Stalker. For over thirty years he has been one of the best representatives of the progressive theologians of Scotland. His last book, on *The Ethics of Jesus* (Armstrong's, $1.75), exhibits the same qualities which distinguished his very successful *Life of Christ*.

....At the phenomenally low cost of thirty shillings the British Museum has published a magnificent facsimile in reduced form of the *Codex Alexandrinus*, containing 11 pages of introduction and 36 x 4 sheets of photographs. The size is 25 by 20.5 centimetres. It will be remembered that Baber, in 1812, published a facsimile print of the Psalms in a monster folio of 50 by 31 centimetres, and (1881-1883) E. Maude Thompson issued a photographic reproduction in the size of the original, but at the cost of about $150.

....The traveling library has come to stay; and that is one reason for welcoming the pamphlet compiled by Lutie Eugenia Stearns, and published by the Wisconsin Free Library Commission, at Madison, in its series of Information Circulars. This book of *Traveling Libraries in Wisconsin, with Directory of Stations* has, of course, more value for the State than for the whole country; and yet many of the facts presented here, and most of the generalizations, have a wider usefulness. Miss Stearns's pamphlet is adequately illustrated.

....Another library publication, the annual report of the St. Louis Public Library, shows that that institution now has 316,911 volumes, circulates about a million and a half volumes annually and counts almost ninety thousand active registered users. These statistics show a large increase, due in part to the opening of new branches. A gratifying development in the work of the children's room and the traveling library system is reported.

....The Harvard University library has come into possession of the magnificent Lefferts collection of the works of Alexander Pope, which consists of upward of 500 volumes of books and pamphlets. The collection includes volumes not in the British Museum library. Thus it has a complete series of editions of the *Rape of the Lock*, from the first of 1714 to the sixth of 1723, while the Museum catalog shows only the first, third, fourth and fifth. Harvard already had some 150 volumes besides those now anonymously presented. The donor is understood to be J. Pierpont Morgan, and the original collector was Marshall C. Lefferts, who hoped to write a bibliography of Pope.

Pebbles

GLOOMY PARTY.—"I bought a revolver from you yesterday. I wish you'd take it back. I've changed my mind."—*Fliegende Blaetter.*

HE.—I'm afraid you are cold. Shall I take off my coat and put it round you?

She.—You may put your coat round me, but why take it off?

I THOUGHT upon the stage my sketch,
"The Buttonhole," I'd try,
But when I did I found, alas,
It was the hook and I.

—T. E. M.

JANITOR.—"Who was dat whistlin' down de tube?"

Helper.—"Woman on de third floor front wants some steam."

Janitor.—"Hit de third pipe a couple o' times wit de hammer."—*Judge.*

STRANGER.—"What do you value your white cow at?"

Farmer Furrow.—"She ain't worth over $10. Taxing cows this year?"

Stranger.—"I am not the assessor. I am an official of the Quick Time Railroad. Your cow was killed this morning. Here's the $10. Good day."

"REAL beauty is indeed rare," he remarked, glancing disapprovingly at the crowd that poured past along the board walk. "Tho I know thousands of women, there are but two I consider beautiful."

"Who is she?" the girl at his side asked, with quick interest, and perhaps a tiny flash of jealousy.—*Ideas.*

IN the dining room of a hotel at Nice, on a huge placard posted over the mantelpiece, you can read the following:

"Our English visitors are kindly requested to address the waiters and servants in English, as their French is not generally understood."—*Tit-Bits.*

WHEN Professor Wendell, of Harvard, entered upon his Sabbatical year he remained in Cambridge some weeks after his leave of absence began and persisted in taking part in the departmental meeting. The head of the department protested.

'Sir," he said, "you are officially absent. You are non est."

"Oh, very well," replied Professor Wendell, "a non est man is the noblest work of God."—*Success Magazine.*

A YOUNG man returned to the country village where he was born, after having successfully worked his way up to a desirable government office.

"I suppose the people here, Thomas, have heard of the honor that has been conferred on me?" he inquired of one of his old friends.

"Yes, they have," was the gratifying reply.

'And what," said the man of fame, eagerly, "what do they say about it, Thomas?"

"They don't say anything," replied Thomas; "they just laugh."—*St. Louis Globe-Democrat.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Julia Ward Howe

SHE had reached the last decade of her century. She was familiar with the elder circle of famous men and women who taught us literature and philanthropy before the Civil War, for at that date she had reached middle age and was already an author of note and a philanthropist. Those who call themselves old now in their childhood saw a new poet arise in her first volume, "Passion Flowers"; and with her distinguished husband in those days, divided from ours by the line of steel and fire, together they edited a journal devoted to the freedom of the slave. The name of Dr. Samuel G. Howe calls us back to the heroic and poetic days of Marco Bozzaris, when he was associated with Byron in the liberation of Greece. Dr. Howe returned from that conquest of freedom to take up, with his no less distinguished wife, other efforts of philanthropy for those opprest by slavery and for the education of those deprest by loss of sight. In his institution for the blind, where Laura Bridgman, blind and deaf and dumb, was taught to read and speak, Mrs. Howe taught with her husband, and many were the books of prose and verse which she gave to the press.

Mrs. Howe's father believed that daughters should have as good an education as sons, and he provided for her the best private teachers thru the full college course. She had the advantage of travel, and could talk freely in their own tongues with distinguished visitors from Europe. She was a most versatile woman, shining in society, leader of a literary *salon* that met at her home, founder of the New England Woman's Club, which defended all good and unpopular reforms, including woman's suffrage. She was also a preacher in the

MRS. HOWE,
As she looked forty years ago.

Unitarian Church, and was dominated by a strong religious spirit. Such lines as

> "Take the dead Christ to my chamber,
> The Christ that I bought in Rome,"

are well remembered. Tho a Unitarian, she was touched by the Catholic service and feeling, and her nephew, Marion Crawford, was a Catholic.

Not Crawford alone was an author, but her children have inherited the ability of their parents. Mrs. Anagnos, who died twenty-four years ago, was a poet of note and promise; and every one knows Mrs. Richards, author of "Mrs. Tree's Will" and many other volumes;

while a son is a distinguished professor of metallurgy in Columbia University.

THE INDEPENDENT has been proud to number Mrs. Howe among its contributors of verse, and the portrait which we give is taken from our office album, devoted in previous years to our own writers. She is not, as some might imagine, the author of one poem, but of many poems, and many books of wisdom in prose. Yet the "Battle Hymn of the Republic" is her enduring monument. It is a great and worthy poem, with the flame of fire, the thunder of guns, the shout of freedom, and the appeal to God. "That terrible battle hymn," Kipling called it. May we also add that it possesses a peculiar and very striking measure. It does not have the effect of the continuous beat of the pure iambic, but rather that of the heavy accent followed by three light syllables, instead of one. It begins:

"Mine eyes have seen the glory of the coming of the Lord
He is trampling out the vintage where the grapes of wrath are stored"

And it continues:

"I have seen Him in the watchfires of a hundred circling camps;
They have builded Him an altar in the evening dews and damps";

and so the rushing, smiting, swift measure runs strangely thru the whole hymn of triumph. It is a wonderful production, her chief right to immortality.

Few men or women have lived so loved, almost worshiped in her extreme age. The world is much richer for her life, and we of the second and third generation are poorer for her death.

The "Galilean Vagabond"

IN France religion does not count for much. It is hardly worth referring to except incidentally, by way of an illustrative allusion, as when in a public address the other day a member of the French Cabinet happened to refer to Jesus as "that Galilean vagabond." In this country such language would be held not merely indecorous, but close to blasphemy. It is not noticed in France.

To the mind of the French statesman, to be a respectable man Jesus should have remained shut up to a carpenter's trade in Nazareth. He should have contented himself to hew boards, dowel benches and tables, put roofs on houses, and thus be a decent and useful member of society, adding to its physical comfort and wealth. That would have been something tangible, valuable, measurable in shekels. Instead of that he threw away the chances of a profitable life, gave up his home and trade, and became a wanderer, a vagabond, a leader of a company of strolling tramps, with no visible means of support, dependent on charity, less securely housed than the foxes and the birds of the air. So the French Cabinet Minister can see in it no reputable life. He was the "Galilean vagabond."

Yet, somehow, the boards have rotted to dust, the benches are burned, the tables are perished, houses and roofs are sunk in decay, the little wealth his brothers made in Joseph's shop with saw and hammer is all gone, vanished; but the wandering Galilean vagabondage is the world's dearest story, its most precious wealth, its richest memory, its chiefest treasure of both inspiration and art. He trudged from town to town with His retinue of curious or eager enthusiasts, talking about nothing more substantial than God and heaven and common goodness and such empty vanities; and yet, strange to say, the proudest structures of France are those that were built to honor this vagrant wanderer over the roads of Galilee. The people thought His word or touch would heal their sick—there have been such—but He took no fee, got no riches, still fed on the bread and water of charity, and talked, talked, talked of the Father in heaven—was there a Father in heaven?—and told stories of poor prodigals that wanted the Father; and He consorted with common people and said imprudent things about rich men—and they killed Him, and that was the end of Him.

Not the end of Him! What mean the cathedrals of France? What the worship of the Madonna and Child? What the civilization that we call Christian? What is Christendom but the concurrent voice of all that is great and good—yes, and rich and powerful—yes, that is humble and simple and poor—conspiring, resounding to crown the vagabond of Galilee as Lord and Master? And resolved

they are, by what name called, priest or preacher, Jesuit or missionary, that the Name that is above every name shall rule the round earth.

It is not material things, not the carpenter's art, nor the goldsmithing art, not the bookman's art nor the statesman's art that has made the world great. Worth and wealth are equally things of the spirit, and the vagrant sandaled steps that traversed the byways of Galilee trod out a golden track thru the golden grain, and along a dolorous road, past a cross-crowned mount, until the byway became a highway, and spread wide over the centuries and broad over the lands; and the stragglers that trailed after the vagabond of Galilee is become a multitudinous and bannered host that acclaim Him Son of Man and Son of God! And why? Because all value is of the spirit, not of metal, or marble, or gems. Precious above price were the vagrancies and utterances of Galilee. They it is that give glory and worth to the magnificent civilization whose epithet is that of Christ.

Elihu Root

When it was intimated the other day that Mr. Taft was considering Senator Root for one of the vacancies on the Supreme Court bench, a general protest was raised thruout the land. Was this shrewd corporation attorney to be allowed to sit in the greatest national tribunal of the world and hold the scales of justice between "the interests" and the people?

We have good reason to think that Mr. Taft will not make Mr. Root a Justice of the Supreme Court, on the ground of the latter's age. The country can rest in quiet on that score. Still, the incident raises the question of Mr. Root's record as a public servant, and on this we should like to say a word.

It is an indisputable fact that Elihu Root in public office has served the country conspicuously, ably and unselfishly. He left one of the most lucrative law practices in the United States for a salary of $8,000 or $10,000 a year. He made an admirable Secretary of War. He was as great a Secretary of State as the country has ever produced. His constructive work for international organization and peace has been unequaled in the annals of the State Department. The Arbitral Court of Justice which Secretary Knox says will shortly be established was conceived by him and carried thru the Second Hague Conference by his instructions to the American delegation. He more than any one else created the Central American Court of Justice, the most perfect international tribunal in existence. The twenty-three arbitration treaties he negotiated with our sister nations have broken all records, while his treaty and declaration of intentions with Japan constitute together the farthest step yet taken by two great world Powers toward universal peace. And now he has just returned with fresh laurels from The Hague, where he was chief counsel for the United States at the Newfoundland Fisheries dispute. Altho he spent months in preparing the brief for his country, and took eight days to make the final argument before the tribunal, he will not get a cent of pay from the United States for these services, which every one admits had great influence on the final award.

If Mr. Root in private life served his clients with all of his great ability, he has been no less faithful to his country when in its employ. That the interests of his private clients were not always identical with the interests of the public no doubt is true. But since he has entered public life his record in the Cabinet and in the Senate has been distinguished by ability of the highest order and absolute fidelity to the public interest. There is no ground for this hostility to Mr. Root as a public servant.

Mr. Roosevelt's Motives and Purpose

In his speech at Boston, last Friday night, Mr. Roosevelt said that President Taft had initiated the tariff policy which his party and the country would eventually adopt. By insisting upon the creation of a tariff board or commission and by procuring for this board the powers it now exercises, the President had "indicated the way along which the Republican party is going to move." He nei-

ther commended nor denounced the Payne-Aldrich revision, but he sought to give the President all possible credit for the commission plan. The stand-patters at first opposed this plan, and then, under pressure, reluctantly gave it their approval. The principle of it has been heartily supported by insurgents.

Mr. Roosevelt's attitude toward the recent tariff revision tends to disclose his present purpose with respect to the Presidential nomination in 1912. As we have shown heretofore, he has carefully avoided an expression of opinion concerning that revision. He has commended the maximum and minimum provisions, and the removal of the duties on Philippine products. There is no quarrel in the party about these parts of the tariff law. He has repeatedly emphasized the value of the tariff board. When he was speaking for Senator Beveridge he seized upon the Senator's bill for a tariff commission as a most inviting topic. Why has he avoided the revision of the duties? We are beginning to think that, while he does not like the revision, he is silent about it because a clear expression of disapproval would make him hostile to the President. If he should denounce that revision to which the President attached his signature, and which the President has repeatedly defended, would not his action indicate a purpose to prevent the President's renomination and to seek the place for himself?

Mr. Roosevelt's course with respect to the tariff is consistent with the theory that he is not plotting to displace Mr. Taft, but is striving to save him and his party from the consequences of a great blunder, to avert political punishment, if possible, by continually directing attention to that anchor to the windward, the tariff board. He may not be successful, but we are inclined to think he is doing the best he can. As week follows week we see no evidence that he is not faithful to the President whom he selected.

But we cannot foresee what course he will take after the elections that are now near at hand. There are indications that the Republicans will lose their majority in the House, and that Mr. Stimson will not be elected in New York; also that in several other States prominent and worthy Democratic candidates will take the highest local offices. How would such reverses affect the Republican party and the fortunes of its elected leader? It seems to us that they would not promote the renomination of Mr. Taft. If he should lose popular support, to whom would the masses of the party turn?

The election of Mr. Stimson would help Mr. Roosevelt, in a certain sense, it is true; but it would also help President Taft. On the other hand, the defeat of Mr. Stimson would not remove the ex-President from the field of politics. The Republican masses—those, at least, west of the Alleghanies—would say that Mr. Roosevelt and his candidate had been knifed by the corrupt State bosses and by the corporation influence of Wall Street. Would that tend to eliminate Mr. Roosevelt?

It may be that the bitter opposition of certain financial and corporation interests in and about New York to Mr. Roosevelt in this campaign has not been manifested shrewdly. While it is true that the ex-President initiated in a practical way the movement for Federal restriction and supervision of interstate corporations, it is also true that his party, under Mr. Taft, not only has gone beyond the original limits of his policy but is now clearly committed to a further advance, and that this advance involves inquiries and restrictions which are especially obnoxious to some of the corporations affected. Why, then, is the shadow of Roosevelt a deadly menace, and the substance of Taft so greatly to be preferred?

We begin to suspect that what the alarmed interests really desire, and what they hope to see, is a divided Congress, in order that the Republican program may not be carried out, and that there may be no further restrictive legislation for at least two years. Upon any other theory it is difficult to explain their course. But we cannot see that they will gain anything eventually by the election of a Democratic House this year. We are not saying, of course, that the Democratic party is opposed to such restrictions as we have had in mind. But it is not probable that a Democratic House and a Republican Senate would agree about them.

Even if Republican defeat in November should cause an uprising for Mr. Roosevelt, we think he would still be loyal to Mr. Taft, altho conditions and circumstances might convince him that he ought to yield to a popular demand. We do not believe he has been plotting, or is now plotting, to discredit and supplant the President. He is in the thick of the fight and is having the time of his life. Every minute of this campaign is to him full of joy, the joy of combat. When the fight is over, he will do a bit of thinking. Not till then, if our view about his motives and methods is the correct one, will he decide what his course shall be, and even then he will not be torn up with anxiety about his personal advancement in politics.

Salvation Social

At a dinner of the Men's League at the Broadway Tabernacle the other night Dr. Walter B. Laidlaw, of the Federation of Churches, offered an interpretation of Christian opportunity and drew a picture of social as distinguished from individual salvation which would have been pronounced dangerously heretical a generation or two ago, but which would hardly be called in question today as a truthful description of up-to-date religious thinking and church activity. As such it is eminently worth thinking about.

Its central notion is the conception of Christianity as a religion which grew out of the social conditions presented by a dense population highly organized and enjoying the refinements of a high civilization; a religion, therefore, possessing the quality of modernity, and adapted to the needs of the modern world. Protestant theology, which took over a big inheritance of monastic ideas, has hitherto emphasized the individual and the problem of personal salvation. Dr. Laidlaw's suggestion that this emphasis on the part of the early theologians was an effect of rusticity, or something approaching it, in the days when civilization was being painfully re-evolved among rude peoples trying to save something from the wreck of Greco-Roman institutions, is not altogether fanciful, and his contention that Galilee at the beginning of the Christian era was as densely populated as Rhode Island today seems to be well backed by the results of archeological research. The gospel teachings were addressed to "the multitude," and it was a multitude if anything more restive under governmental repression and capitalistic exploitation than the industrial masses today.

These facts, too long forgotten, afford a measure of justification, perhaps, for the extreme literalness with which Dr. Laidlaw and a host of active-minded preachers of the younger generation, apply some of the precepts and the parables to the problems of the present time. If it is the will of the Father in Heaven that not the least of the little ones should perish, let the churches bestir themselves in behalf of child labor legislation, clean milk, proper educational opportunities, playgrounds and wholesome influences. Let the vision of the New Jerusalem be "made good" in the gigantic cities of Europe and America, thru honest municipal government, proper dwelling arrangements, without overcrowding, scientific and efficient sanitation, clean streets, beautiful parks, majestic architecture and all the institutions of intelligence and art. Let men learn to respect one another, to engage in friendly co-operation, and bring to an end the horrors of war and exploitation.

The idea is an inspiring one, and beyond a doubt it has so far appealed to a new generation of Christian workers that the activity of Protestant churches, in the United States at least, is being revolutionized. Indeed, no phase of social evolution at the present hour is more interesting and significant than the transformation of the ecclesiastical life.

Even in a city so conditioned by topography and enormous land values as New York there is no excuse for the congestion of population at present tolerated. Our building laws, like too many other laws, have been framed with an eye to the sacredness of property rather than to the sacredness of human life. We can imagine no indictment of such legislation more terrible than Dr. Laidlaw's matter-of-fact remark that a population of more than 250,000 000 human beings could be housed in New York City under the present building code. The continuing

growth of urban populations, already enormous, is one of the certainties of the immediate future. All our science and all our humanitarianism will be needed to maintain decent standards of civilization among their heterogeneous multitudes. The re-interpretation of Christianity as a gospel of social salvation has begun none too soon.

The Rockefeller Institute

A NEW era may be said to have begun in American medicine with the opening on Monday, October 17, of the hospital connected with the Rockefeller Institute of Medical Research at Sixty-sixth street and East River in this city. That event was made the occasion for the presentation of nearly four million dollars by the founder, which raises his total benefactions of the institution to over eight millions. Of this large sum nearly six millions and a half represents the income bearing endowment of the Institute. This immense sum and the property with its buildings were handed over on the day of the opening of the hospital to the Board of Trustees, constituted as follows: "John D. Rockefeller, Jr., Frederick P. Gates, William H. Welch, M. D., Starr J. Murphy, and Simon Flexner, M. D." With the coming into existence of this Board of Trustees the Institute is established as an independent foundation in perpetuity. In the statement given out by the administration it was declared:

"The function of the Board of Trustees is to hold and care for the property of the Institute, including the investment of its endowment fund, and to hold the entire income at the disposal and under the full control of the board of scientific directors, which is constituted as follows: Dr. William H. Welch, of Baltimore, president; Dr. F. Mitchell Prudeen, of New York; Dr. L. Emmet Holt, of New York, secretary and treasurer; Dr. Christian A. Herter, of New York; Dr. Simon Flexner, of New York, director of laboratories; Dr. Herman M. Briggs, of New York, and Dr. Theobald Smith, of Boston."

Under such able direction this immense sum of money and the valuable property which goes with it should prove the source of great benefit to the community. The benefaction has been planned judiciously, watched with care, added to as the results showed themselves well worthy of further encouragement and aid, and finally culminates in this magnificent gift announced at the opening of the hospital. About ten years ago Mr. John D. Rockefeller gave $200,000 to be distributed in the form of grants to support medical research in different parts of the country. So much of promise was in the work thus begun that in 1902 $1,000,000 was given for the building of a laboratory building and for a fund to supply the needs of the laboratory for some years. It was not the idea to limit the annual expenses to the interest accruing from this foundation, but to spend as much of the principal as seemed necessary for the purposes of the investigations taken up. It was not long before the Rockefeller Institute attracted the attention, not only of the medical profession of this country, but of the world, by the work that it accomplished. The need for a hospital in connection with the laboratory work was felt, and after five years Mr. Rockefeller offered to build and endow that. For that purpose he provided funds valued at more than two million and a half. Last week he completed his benefaction, as we have told.

From the very beginning of its work the Rockefeller Institute has aided in investigations that have been of great significance, not only for scientific medicine, but also for medical practice. Some of the early volumes of reprints giving the results of work accomplished by grants from the Institute funds are before us as we write. They are particularly interesting in their references to various foods and especially milk. There are articles on the bacteria of milk, the formation of the film on heated milk, the results of different kinds of pure and impure milk in infant feeding in tenement houses and institutions of New York City, and the effect of different temperatures in determining the species of bacteria which grow in milk. Then there are a number of articles on human and bovine tuberculosis. The health of children has been particularly the subject of study because it means so much for the race, and there is a series of articles on the intestinal diseases of children that have been of distinct help in that reduction of the summer death rate of children which is the most interesting phase of mortality statistics in recent years.

Among the men whose names are associated with work under these grants are some of the best known medical investigators in this country and in Europe.

The particular work of the Institute itself has been of great help. In 1904 a special volume of bacteriological and clinical studies of the diarrheas and diseases of infancy was issued by the Institute and helped notably to the development of our knowledge of these affections. The Institute succeeded in securing the hearty co-operation of many of the important hospitals and dispensaries of Boston, New York, Philadelphia and Baltimore in this series of studies, and for the first time there came that cordial co-ordination of effort under varying conditions which means so much in lessening the risks of self-deception in the difficult problems of observation that occur in medical questions. The co-ordination of the bacteriological and pathological reports with the clinical observations was particularly valuable. The conclusions from the studies in bacteriology and pathology were written by Dr. Flexner and those from the clinical observation by Dr. L. Emmet Holt. Such co-operation aroused a new feeling of solidarity in the medical profession of America, and was welcome by many as the beginning of a new era of medical development.

During the last five years the Rockefeller Institute has attracted particular attention by its studies with regard to cerebrospinal meningitis. An epidemic of this disease which caused very serious ravages in the child population of many of our American cities began some six years ago and recurred at intervals in various places, always with a very high death rate. Very little was known about the disease, the avenue of entrance of its microbe, or the possibility of prevention or of helping nature in its cure. The studies of the Rockefeller Institute have done much in this matter to solve most of the problems. Finally there came the announcement of a curative serum which unfortunately was not ready for use until near the close of the American epidemic, but has been used with noteworthy success in many cases, in Great Britain and especially in France. If there were nothing else to record as the result of the work of the Institute than these successful studies of a particularly fatal disease of children, the death rate from which, as the result of the work done here, is to be reduced much more than one half, that would be ample return for all that Mr. Rockefeller has done. When it is recalled, however, that this is only the beginning and that now the organization of the various investigating departments of the Institute will greatly facilitate the work, it can be understood how much of promise there is not only for medicine here in America, but for the advance of medical science and the practical application of important principles of therapeutics to disease all over the world.

The hospital, which was opened last week, is to take but a limited number of varieties of disease in order to concentrate investigation on every phase of them. At the beginning only patients suffering from infantile paralysis (acute epidemic anterior poliomyelitis), pneumonia and heart disease are to be received. An epidemic of infantile paralysis has been at work during the last four years in this country. It has claimed nearly 20,000 victims. The disease is fatal in one-third of the cases and leaves crippled for life one half of the victims spared. At the present time pneumonia is the "captain of the men of death," responsible for more deaths than any other single disease. In recent years heart disease has been increasing in fatality and there is evident need for careful investigation as to its causes and the possibility of prevention. Once the heart becomes seriously affected, cure in the sense of restoration to normal health seems almost out of the question. Infantile paralysis has already been the subject of considerable study on the part of the investigators at the Rockefeller Institute, and definite progress in the increase of knowledge of the disease has been made.

It is evident then that this gift has accomplished great good and its promise is most brilliant. The method of giving by providing sufficient funds for investigators until they showed their power to accomplish results and then adding to and developing the original gift has been eminently successful. Thoro business methods have proved an encouragement and not a hindrance to the workers.

Smugglers Flying to Cover

We suppose that from time immemorial smuggling has been practised about as generally as the chance would allow, and people have insisted on regarding it as a venial offense to cheat the Government. We have a bad enough condition now, but there has been a decided improvement in public morals since highway robbery and buccaneering and slave-stealing were thought no more disreputable than smuggling or dodging taxes is now. It appears that we may be indebted to the Secretary of the Treasury, and particularly to Collector Loeb, for a new stiffening of the public conscience on smuggling. The public attention was sharply called to this offense against patriotism by the indictment of the Sugar Trust thieves, and later the exposure of women smugglers, and later still of the Duveen art dealers. And now a large number of other importers are confessing their sins and offering to pay up their thefts if they can only be left otherwise in peace. Let it not be thought that it is the prickings of conscience that have disturbed them, but the fear of discovery and punishment. Yet even fear of the law is no small deterrent; and those who thus confess come to see that it is wrong and disgraceful to rob the nation. We look for a clearer sense of the obligation to obey the law of the land, which means better civic righteousness.

The Hall of Fame

The Hall of Fame is a good advertisement for the New York University, and it really interests the country and supplies a decoration for the University's grounds, more like the famous colonnades of Palmyra than anything else in the country. By the recent choice of one hundred electors, eleven new names have been added to the list, Harriet Beecher Stowe, Oliver Wendell Holmes, Edgar Allan Poe, Roger Williams, James Fenimore Cooper, Phillips Brooks, William Cullen Bryant, Frances E. Willard, Andrew Jackson, George Bancroft and John L. Motley. The list includes not one man of science, not a lawyer, no physician except Holmes, but seven men and women known as authors. There is one clergyman and one philanthropist, Miss Willard, while Roger Williams and Andrew Jackson are the men who have made history. While Mrs. Stowe heads the list, the one name that raises a question is that of Poe. We do not doubt that he was justly chosen, for his fame is permanent, whether in poetry or prose. The one objection against him has been his character. Those who knew him best had least respect for him as a man. Some years ago THE INDEPENDENT published articles of intimate knowledge about him from Thomas Dunn English; and we recall that when Horace Greeley was asked for an autograph of Poe's he replied that he would willingly give autographs to any one who would pay the notes to which Poe's name was signed.

The Ethical Society

On Sunday and Monday the Ethical Society of this city, founded by Dr. Felix Adler, dedicated its fine new meeting-house—for it is not a church nor a temple—and entered upon a new stage of development. Dr. Adler is son of the leading Jewish rabbi of this city and was called to succeed his father; but his radicalism was too strong for the Reform congregation, and he withdrew to establish an ethical culture society, which has formed branches in a number of cities in this country and in England. It claims no vestige of religion—for religion means God—but simply human ethics. Being devoted to ethics, the ethics is pronounced and admirable. It fights materialistic selfishness and asks for justice. Dr. Adler and his followers have been a potent force for all that is good in civic affairs, often an example to the Jewish and Christian organizations from which its ethics were learned. The seven pillars of the house of truth and life which it erects are truth, purity, justice, love, hope, valor and fortitude. To be sure, these are the same virtues which have been maintained by the Jewish rabbis, the Episcopalians, the Congregationalists and the Disciples in their great meetings of the last week; the difference is that where they say, "The pure in heart shall see God," Ethical Culture says, "The pure in heart shall see." Dr. Adler recognizes all that is good in the teachings of Moses and Jesus, and all eclecticism, but he looks for something better. He said in his address:

"The Mount of Sinai and the mount where Jesus preached His great sermon are looked upon as hights unsurpassable. But our symbol is a foothill, beyond which we can dimly see ranges upon ranges of moral light and excellence rising ever higher toward the moral ideal that is yet to be described."

Yet what there is to be reached in the higher ranges that shall soar above the love dominant in the teaching of Jesus we fail to imagine. We accept Dr. Adler as a great and useful ethical teacher, very useful for those who have outgrown the garment of religion and are in danger of going naked. Just now we note an admirable work of his as president of a very noble and important world's conference to meet in London next July, for the discussion of the brotherhood of humanity in all its races and religions. Such apostles of all goodness as he are not far from the Kingdom of Heaven; are nearer to it than many who cry "Lord, Lord," but whom the Lord never knew.

Divorce

The Episcopal House of Bishops voted to forbid the remarriage of any divorced person whatever, even of the innocent party; but the House of Deputies refused to agree, and thus, as often, proved itself the wiser of the two houses. It is dangerous to be made a bishop. One must have peculiar grace to endure it without spoiling. On this matter of divorce there is an immense amount of nonsense talked. Marriage is an institution created for the benefit of man; not man for the sake of marriage. Some think that marriage is an institution of the Church; it goes far back of the Church and is established by society, for the benefit of society, and so is under the control of society and not primarily of the Church. Historically, when the state of society required it, polygamy was general and proper; a better condition brought in monogamy. The State properly gives the laws of marriage, because the State, not the Church, represents society. Society has always recognized divorce and ought to do so. The question is as to the proper occasions for dissolving the marriage bond. By the general consent of the most civilized nations or States there are other occasions for divorce than infidelity; and if the Church claims to deny the legitimacy of legal divorce it is an impertinence and may be even a provocative of immorality. A rule such as that which the bishops would have imposed forbidding an innocent party to remarry is worse than unbiblical; it is immoral and conducive to immorality. Even for the guilty party it is safer for society that he should be held by such restraints as marriage can provide than that he be left an utter menace to society.

Unction of the Sick

It is well that the Episcopal General Convention did not adopt a service for unction of the sick. While no one urged it as a sacrament, corresponding with the Catholic extreme unction, that could not help being in mind. It was argued simply on the authority of the passage in James which says that the anointing with oil, with the prayer of faith, will heal the sick, which is quite a different thing from the sacrament. It was the Emmanuel movement that was in mind, and which has much vogue with Episcopalians. But the Emmanuel movement, part medical, part religious, is not sufficiently accepted to be put in the Prayer Book. And, when it comes to biblical authority, unction has no such claim as has feet-washing. The latter is distinctly commanded, and is still binding on those that take words literally and pay no attention to the conditions of society, which vary with habits and culture. Feet-washing has considerable authority from its occasional practice in the oldest and largest Churches, and in a number of Protestant denominations, while unction for healing would be pretty nearly a novelty, notwithstanding the biblical precept.

Mr. Morgan's Latest Gift

For a congress to discuss the differences and agreements among Christians Mr. J. Pierpont Morgan has given a hundred thousand dollars, and a committee of Episcopal bishops and clergy will call it. Under the present Pope the Catholics cannot join it, for such conferences are now forbidden them; but we do not see why the various branches of Protestant Christianity the world over should not take part. As to creeds, it is not needed, for Schaff's three volumes of "Creeds of Christendom" contain all the creeds of any account up to its date of

publication, and the few others of any account can be easily found in print. But it is hoped that the coming together of the various Christian bodies will, like the Edinburgh mission conference, teach unity rather than diversity. Yet this is not sure. Those who gather to represent their own belief will not so much be missionaries, we fear, but theological experts who will make much of their special peculiarities of faith, such as adult baptism, divine decrees and episcopal succession. It will require grace to keep from emphasizing differences more than agreements. We remember that next to the Munich cathedral there is a saddler's shop, over which, hard against the cathedral walls, one reads in big letters, "Christian Rumpus."

Wisdom from Mohonk

What used to be simply the Indian Conference at Lake Mohonk, but is now a conference for the benefit of our insular possessions as well, made its pronouncement emphatically last week for the abandonment of the reservations in New York State. It is thoroly bad that while we are as rapidly as possible breaking up the reservations in the West we should be maintaining them as a permanent institution in the East. While the main attention was given to the condition of things in the Philippines and Porto Rico and Hawaii, the best wisdom of the conference, in its conclusion, was what we have always urged, namely the treatment of these people under our charge with Christian decency, with the view to develop the islanders rather than the islands. It is white arrogance that creates dissatisfaction rather than injustice. Contemptuous language in rude and coarse address will neutralize the effect of the most honest administration of law and the highest development of industry and wealth. Those brown people are men, not brutes, not "niggers," and we are glad that the Mohonk Conference spoke clearly of the wrong.

The Silver Lining in Portugal

Why is it that in France and Spain and Portugal the people, nearly all Catholics, yet so bitterly assail the Church? Seldom do we have the essential reason so frankly confessed as by *America*, the very able Jesuit journal of this city. It asks the question, particularly for Portugal, and thus answers it:

"The Church, in the minds of the people, seemed to be an integral part of the Government which was oppressing them. As a matter of fact, the Church is not united to the state in Portugal; she is chained to it. She cannot make an appointment, or formulate a policy in the remotest and most beggarly of the colonies, except as state department. It is no wonder, therefore, when a maddened and misguided populace, which has been wrought upon by designing politicians and secret societies, rises up to destroy a state which represents so much of what is hateful that it should first wreak vengeance on the weakest part of it, viz: the Church, and upon its most helpless and unprotected representatives, the monks and nuns, from whom they fear neither powder nor shot in defense or retaliation—the ridiculous press to the contrary, notwithstanding. Of course, the Church will suffer frightfully in this dreadful cataclysm, but she will rid herself of the slavery in which successive concordats have bound her, and will thank God for her deliverance, even at such a cost."

This explanation will hardly please the Vatican. It clings to its concordats. It values the support it gets from the state. But *America* is right. Its editors know how much better off the Church is when it depends solely on the loyalty of its people, for they live in a country where there is complete separation of Church and State. Already in France the Church is rejoicing in its liberty and gaining strength, while the hostility is passing away. But the doctrine here preached by *America* is very nearly one of the "errors" of the Syllabus.

Perhaps the most important arbitration agreement yet made is that announced of the agreement to submit to The Hague the claims of Russia against Turkey in the failure of the latter power to pay the indemnities imposed after the Russo-Turkish war of over thirty years ago. Turkey has not been able to pay and there have been long arrears of interest, and Russia has made certain concessions, and there is a difference between the two Powers as to what amount is now due. Russia has been glad to have Turkey in debt, because it has been convenient to press the claim whenever Turkey was in danger of taking any course not pleasing to her strong neighbor. If Russia now foregoes this advantage it will be a great step toward universal peace.

Insurance

Governmental Fire Tests of Building Materials

THE fire tests of building material, under an appropriation of $100,000, which have been made, and which are to be made, at Washington, D. C., under the direction of the United States Geological Survey, are well calculated to accomplish much good. The term "fire proof" has been so loosely applied for so long as to lose much of its proper significance, and the investigations now in progress at the Geological Survey laboratories will go far in restoring a proper meaning to the term "fire proof." The question to be determined is what non-inflammable building material will best resist the effects of fire from the inflammable contents of the buildings into which such building material enters. The great conflagration at Chelsea, Mass., brought forward the importance of this question not only to fire underwriters but likewise to merchants, house owners, lessees of buildings subject to the conflagration hazards and to the members of the community generally. The existence of sky-scrapers has long ago become a condition and not a theory. They are building every day and more are in contemplation tomorrow, the next day and the day after that. Iron and steel do not always melt. They will not melt unless the fire produces heat enough to melt them, but these materials are liable to warp by means of a more moderate heat to such an extent as to throw out the stone work with which they are associated. Again, the stone work used may also fall away from the effects of fervent heat, as certain sandstones, marbles and granites have often done in the past. Reports of certain of the tests already made have been published by the Interior Department, and make interesting reading. No tests of trap, or of any of the igneous rocks, or of rocks formed by great heat under great pressure have yet been made, but such tests as have already been made show the superiority of artificial stone and particularly of old bricks as fire resistants to all kinds of natural building stone. The experiments will go on. They ought to go on and we shall hear more of them in the future. Perhaps a way of producing a building material that shall be fire proof in point of fact as well as fiction will be found. The importance of this matter in relation to the general public will be better appreciated perhaps when it is stated that the fire losses in the United States, including not only property destroyed, but maintenance of fire departments, payments of insurance premiums, so-called curative agencies and other incidentals, amounted to over $500,000,000 in 1906, or over 80 per cent. of the value of the total new building construction. This is equivalent to an annual tax of over $6 per capita. By comparison in six of the larger European countries the fire losses averaged only 33 cents per capita, and this in spite of the fact that the appliances and facilities for fighting fires in the United States are greatly superior to those in European countries. This discrepancy in the fire losses is due to the more extended use in other countries of building materials which are more or less fire proof.

THE Equitable Life Assurance Society of the United States is getting on in years when its Pittsburg agency is able to celebrate its thirtieth anniversary. This celebration will take the form of a convention extending over two days, Monday and Tuesday, October 31 and November 1. The occasion is an important one not alone to the celebrating agency but to the Equitable and life underwriting the world over. The president of the parent society will participate in the convention and there will be many notable features. In connection with the celebration the Pittsburg agency is issuing a series of blotters in which the many changes that have taken place during the thirty years of its establishment are set forth in a most interesting fashion.

Financial

Postal Savings Banks

THE new system of postal savings banks will be tested at first in forty-eight cities, one in each State and Territory. These cities, as follows, were designated on the 22d by the board of trustees, which is composed of Postmaster-General Hitchcock, Secretary MacVeagh and Attorney-General Wickersham:

Bessemer, Ala.; Globe, Ariz.; Stuttgart, Ark.; Oroville, Cal.; Leadville, Col.; Ansonia, Conn.; Dover, Del.; Key West, Fla.; Brunswick, Ga.; Cœur d'Alene, Idaho; Pekin, Ill.; Princeton, Ind.; Decorah, Ia.; Pittsburg, Kan.; Middlesboro, Ky.; New Iberia, La.; Rumford, Me.; Frostburg, Md.; Norwood, Mass.; Houghton, Mich.; Bemidji, Minn.; Gulfport, Miss.; Carthage, Mo.; Anaconda, Mont.; Nebraska City, Neb.; Carson City, Nev.; Berlin, N. H.; Rutherford, N. J.; Raton, N. M.; Cohoes, N. Y.; Salisbury, N. C.; Wahpeton, N. D.; Ashtabula, Ohio; Guymon, Okla.; Klamath Falls, Ore.; Dubois, Pa.; Bristol, R. I.; Newberry, S. C.; Deadwood, S. D.; Johnson City, Tenn.; Port Arthur, Tex.; Provost, Utah; Montpelier, Vt.; Clifton Forge, Va.; Olympia, Wash.; Grafton, W. Va.; Manitowoc, Wis.; Laramie, Wyo.

As the appropriation for the first year is only $100,000, which must cover the expenses of equipment, including the engraving and printing of forms, certificates and bonds, as well as the cost of clerical assistance, it is not practicable at present to establish the banks in the post offices of the large cities. Communities were selected in which the conditions exceptionally favored the development of a postal savings business, a majority of the cities being industrial centers, while some of them are not adequately provided with other savings institutions. The system will be tested in the forty-eight offices for at least one month before other cities are added to the list, but it is expected that the number will be largely increased before the end of the current fiscal year.

A Railroad Out of Politics

THE election of Charles S. Mellen (president of the New York, New Haven & Hartford Railroad Company) to be president of the associated or absorbed Boston & Maine Railroad Company has been followed by an interesting announcement as to the latter company's policy. For years past the exertion of the Boston & Maine's influence in the politics of New Hampshire has been an issue in the State's campaigns. It has even been the theme of novels which have had wide circulation. In an address before a club in Concord on the 20th Mr. Mellen said:

"I am advised that the people of New Hampshire complain that the company has been too active in the political affairs of this State, and I wish to assure you it will hereafter do nothing which is not in accord with the soundest principles which should govern public service corporations. To be specific, we shall not interfere in any way with the election of members of the Legislature or of other public officers. We shall not give or offer to any public officer, directly or indirectly, any consideration which will tend to influence him in his performance of his public duties. We shall do away with the lobby in the sense in which that term is commonly used. We must, however, employ the ablest talent we can secure to present to the Legislature our views upon pending legislation affecting our company. At the end of the next legislative session there will be no complaint about the pernicious activity of any lobby employed in our interest."

To his great regret, he continued, he found that the company was defendant in two lawsuits brought by the State. The first related to certain freight rates, alleged to have been imposed illegally. He had written to the Governor, saying that the company intended to obey the laws; that it was difficult to ascertain just what the laws required; that the company would not oppose the suit, and that he would be glad if questions as to which the company's counsel and the Attorney-General did not agree should be promptly submitted to the Supreme Court. The second suit related to the appeal from the assessment of taxes. Desiring to avoid controversy and to begin his administration with a clean slate, he was ready to sit down with the State's officers and settle this suit, paying all that the company ought to pay, upon the same basis of valuation used for other property. He exprest the opinion, however, that in making the assessment a desire to punish had had more influence than a desire to be just.

The Independent

VOL. LXIX NEW YORK, THURSDAY, NOVEMBER 3, 1910 No. 3231

Survey of the World

Senator Root on the Roosevelt Issue

Owing to the activity and prominence of Mr. Roosevelt, both in the Republican nominating convention and in the campaign, the political contest in the State of New York has excited much interest thruout the country. It is known that a considerable number of New York Republicans have decided that they will vote for the Democratic candidate for Governor because they dislike Mr. Roosevelt or think he is planning to displace President Taft. To such Republicans Senator Elihu Root addressed a large part of a speech which he made in New York City on the 28th ult. At the beginning, he said:

"A good many Republicans at this time seem disposed to ignore all the grave and substantial issues which are before the people of this State and to vote at the coming election upon no issue whatever, but simply as an expression of feeling against Mr. Roosevelt, whose course regarding national affairs they disapprove for one reason or another and whom they desire to punish by defeating the party to which they belong, in which they believe, and which they have long loyally supported, because he holds a distinguished and potent place in the councils and activities of the party.

"It should be observed that the declaration of this intention cuts both ways. Wherever a man declares he will vote against the Republican ticket because he does not like Roosevelt, there will be others who will vote for the ticket because they do like Roosevelt, and because they feel that with his tremendous force and courage and ability he has done a noble and much-needed work for honesty, purity, equality and freedom in the political life of our country. My guess would be that if the issue in this State were whether Mr. Roosevelt has reflected credit and honor on the Republican party, on our State and on our country, or the contrary, there would be a very large majority in the affirmative. I am not, however, going to discuss that question or to discuss him, for there is no such issue before the people of this State. The false assumption that there is such an issue tends to take away from the cause of honest and effective and progressively improving government in this State many of the supporters to which that cause is entitled, and among them some of my old and valued friends.

"It is said that we must consider now the nomination for the Presidency in 1912. Well, Mr. Taft is President of the United States—a Republican President, a strong, wise, considerate and fearless man. He has the qualities which make a man grow in the estimation of thoughtful people, and, lying back of all the clamor and excitement of our political life, the American people are a thoughtful people. He has grown and is growing and will continue to grow in public esteem. If he continues to make as good a President as he is making now, he will be the natural and inevitable candidate of his party in 1912 unless one thing shall happen—that the people of the United States shall repudiate the Administration of Mr. Taft by such a crushing and overwhelming defeat of his party that it will be apparent that Mr. Taft cannot be re-elected.

"The Democratic party cannot bring about such a result, but Republicans can by their adverse votes. After election, people don't scrutinize the multitude of reasons which may have contributed to the result. They see only the general result, and if it should happen that the Administration can't hold its own party together the national convention would be quite likely to look for a Moses to lead them out of the wilderness, and they might go to Mr. Roosevelt or they might go to one of the far more radical leaders who are now looming up on the political horizon in the North and Middle West."

Mr. Roosevelt, he continued, well knew that all his strenuous efforts in behalf of Republican candidates were services in aid of the Taft Administration and tended toward the renomination of Mr. Taft in 1912. It had been said that we should consider "certain declarations Mr. Roosevelt has made—an attack on the courts and something called New Nationalism":

"There is a very old American saying that when a litigant does not like a decision it is

his privilege to go down to the tavern and swear at the court. Everybody grumbles about decisions that he does not like, and Mr. Roosevelt appears to have done so out loud and in public according to his temperament and habits. But I have never known the grumbling at decisions of the courts by people who don't like them do any harm, and the idea that Mr. Roosevelt contemplates an attack upon our judicial system or that that system is in danger from him or from any one else is purely fanciful and devised for campaign purposes only. As for myself, I regard the power of the judicial branch of our Government, both in the State and in the nation, to sit in judgment upon the constitutionality of legislative and executive acts, as the chief contribution of America to the art of free self-government. It is the chief guarantee that our liberty shall be enjoyed without violating justice, and that justice shall be administered without destroying liberty."

So far as he could see anything new in the so-called New Nationalism, it was that there should be a renewed and active sense of loyalty and duty to the old doctrines and the old ideals of American democracy; that the nation, to the full limit of power vested in it by the Constitution for the general welfare, and every State, to the full limit of its powers of local self-government under the Constitution, should wake up to the duties pressing upon them, for intelligent government keeping pace in its effectiveness with the changing conditions and requirements of our time. He was heartily in favor of that. Turning to the Saratoga convention, he asserted that the issue there had been a revolt against the tyranny of party machines. Mr. Roosevelt had been on the right side of it and had furnished the element of leadership to the side he was with. It was Governor Hughes's fight and President Taft's fight, and the fight of all who love good government. We should be grateful to Mr. Roosevelt for what he did, and the voters ought to reap the fruits of the victory he had helped them to win. The remainder of his speech was in the main devoted to State issues and candidates. He gave a history of Mr. Stimson's successful prosecution of the Sugar Trust, the railroads and Morse, the banker, commending the ability of the man who "could maintain himself against the greatest lawyers, even including my friend Judge Parker, as counsel for the Sugar Trust." Congress had "made a pretty good tariff":

"There were things in it that I did not like, and there were failures in it to do things which I thought ought to be done, but considering all the difficulties under which it was made, it was a surprisingly good law and a great improvement on the law it superseded."

He pointed out that the company of Mr. Dix, the Democratic candidate for Governor, had asked for an increase of the duty on its product, but that Mr. Dix was now denouncing the Republicans for not reducing tariff rates. In conclusion he said:

"Some of you are thinking, because of a temporary side wind of personal feeling and prejudice, of deserting the cause for which we have been fighting together for many years and giving aid and comfort to all that you most abhor in politics. I beg of you not to do it. You would gratify a momentary feeling, but you would do a harm to your country and to your State and you would regret it hereafter."

❧

Trust and Railroad Questions

The Department of Justice will begin, at Pittsburg, this week, to take testimony in the Government's suit against what is called the Bathtub Trust, a combination of sixteen manufacturing concerns controlling a very large part of the output of sanitary enameled iron ware. It is reported that the combination has increased prices since the suit was brought.——In the Government's suit against the Imperial Glass Company the trial will begin on November 14. Some expect that the combination will be dissolved before that date, as several of the directors are in favor of liquidation.——About fifty attorneys engaged in railroad work held a convention in New York last week, the chief topic for discussion being the new railroad law of June last, and the question whether the railroad companies should test the constitutionality of parts of it by resorting to the courts. At the end of the three days' conference it was asserted in the press that the attorneys had decided to make the test, and that the work had been intrusted to a committee of seven. Afterward it was said by one of the attorneys, whose name was not published, that no final decision had been reached, but that a committee of seven was to investigate and report to another meeting.——Further testimony was taken last week, in Chicago, relating to the

proposed increase of railroad freight rates. The final hearings will begin on November 21, in Chicago, and the arguments are to be made on December 14. At the hearings in Chicago there has been much testimony about rebates paid prior to 1906. W. P. Trickett, manager of the Minneapolis Traffic Association, said he knew of rebates paid by the Chicago Great Western, and that he had acted for that company in one instance. He refused to give the names of the officers who paid or those of the shippers who received. The traffic manager of a Kansas City dry goods house said that prior to 1906 about 90 per cent. of the goods received from the East by his house and other similar concerns were carried at from 30 to 40 cents less than the regular $1.47 rate. Profits had been reduced since the companies began to exact the full rates. H. G. Wilson, transportation commissioner of the Kansas City Commercial Club, asserted that, prior to 1906, the rebates on goods brought from the Atlantic seaboard to Missouri River points were about 40 per cent. of the regular tariffs.

Smuggling at New York

Following the indictment of the members of the well-known Duveen art firm, in New York, many importers guilty of undervaluation have sought to gain immunity from prosecution by offering considerable sums to the Treasury Department. The five Duveens, three of whom reside in London, were indicted for defrauding the Government by undervaluing art objects which they have imported and sold to collectors. For example, the indictment charges that they represented $1,107 to be the value of two Japanese vases which they afterward sold for $28,075. They are also defendants in a civil suit in which the Government seeks forfeitures exceeding $1,000,000. It is asserted that wealthy art collectors, among them Henry C. Frick, George J. Gould and J. Pierpont Morgan, will be required to testify concerning their purchases from the Duveens. Reports from Washington say that the applications of importers for immunity have been accompanied by the confessions of four importers, and that the Government may recover $1,000,000 from these men alone. Answering inquiries, the Treasury Department says that there will be prosecutions wherever the evidence warrants them; that there will be no quiet settlements for cash, nor any compromises except when the Department of Justice believes them to be for the interest of the public; and that many cases may call only for civil suits, owing to the lack of the evidence required for conviction in a criminal prosecution.——In the Federal Court, at New York, Philip N. Aronson, of Philadelphia, a retired manufacturer, has been fined $1,500 for failing to declare jewelry which was concealed by his wife upon their arrival at New York, on September 25, from Europe. He had pleaded guilty.——Mrs. McKenna, of Chicago, pleaded guilty to the charge that she had attempted to smuggle seven Parisian gowns, valued at $1,600. She was fined $1,000.——Mrs. W. G. Jerrems, of Chicago, who arrived from Europe on the 27th, was required to pay $1,800 for undervaluation of imported jewelry and clothing.

Labor Controversies

A strike of drivers and helpers employed by express companies in New York has been accompanied by great disorder. Beginning with the employees of the United States Company, the strike, after two or three days, involved the men of the Adams, Wells-Fargo and American companies. At the end of last week about 6,000 men were out. They demand a shorter workday and an increase of wages. The companies have been able to move only a few wagons. Strikebreakers have been violently attacked and the police, as a rule, have failed to protect them. There have been riots in Jersey City and in Madison and Fifth avenues, New York. Many persons have been injured. An attempt was made to burn a house in New York, where pursued strikebreakers had sought shelter.——At their annual institute meeting, last week, the 1,200 teachers of Luzerne County, Pa., unanimously voted to join the American Federation of Labor. It was explained that they were seeking in this way to obtain higher wages and to promote beneficial legislation. Reference was made to the results of similar action taken by the

teachers in Chicago.——Business in Tampa, Fla., is seriously affected by the strike of 12,000 cigarmakers. This strike began four months ago. Recognition of the union and the "closed shop" were demanded. All the cigar factories are idle.——In Chicago, 25,000 garment makers and tailors are on strike, and an increase of the number is expected.——Lawyers employed by the owners of the Los Angeles *Times* say they know who caused the explosion that destroyed the *Times* building and killed twenty-one employees. It was asserted in Los Angeles on the 26th that the three guilty men were on a Pacific Mail steamship, going south, and that they would be arrested on the 27th at Acapulco. Three men who arrived at that port on a power schooner were arrested on the 29th, but it is said in Los Angeles that these are not the men who are wanted.

Bribery Cases

At the close of the trial, in Springfield, Ill., on the 29th, of State Senator Pemberton and Representative Clark, the jury disagreed, standing eight for conviction and four for acquittal. The defendants had been prosecuted for taking bribes in connection with a contract for furniture in the Capitol, and the evidence came to light during the investigation concerning bribery affecting the election of Senator Lorimer. They will be tried again.——A grand jury at Chicago has obtained evidence relating to the bribing of a juror, Grant McCutcheon, who served at the second trial of Lee O'Neil Brown, indicted for bribing members of the Legislature to vote for Lorimer. McCutcheon testified that $100 was paid to him in the office of Brown's counsel. An unsuccessful attempt to keep McCutcheon out of the grand jury room was made by means of a writ of habeas corpus.——James A. Hamilton, chief of the fire department in Lawrence, Mass., has been convicted of bribing an alderman, by the payment of $100, to vote for his appointment to the office which he holds, and has been sentenced to be imprisoned for two and one-half years. The Mayor of Lawrence, Mr. White, is now serving a term in jail for attempted bribery.

Countries South of Us

A revolutionary outbreak in Uruguay has interrupted railway traffic. It is said to have been caused by the Government's promotion of the candidacy of Jose Batale y Ordonez for the Presidency. Dispatches from Buenos Ayres assert that he is extremely unpopular and is regarded as an opponent of progress. Dr. Bachini, Minister of Foreign Affairs, was requested to resign because he was in sympathy with the revolutionary movement. It is said that he will now seek the Presidency. On the 29th, an insurgent force of 3,000, representing the Nationalist political party, was advancing from the Brazilian frontier in the direction of the capital.——The Venezuelan Government announced, on the 26th, that there were four cases of plague in Caracas, and on the following day that additional cases had been found. Churches, schools and theaters were closed, and public meetings were prohibited. No one is permitted to leave the city without first submitting to preventive inoculation.——Preparations have been completed in Pittsburg for the construction of the gates of the Panama Canal locks. There will be forty-six gates, each having two wings. Each of the ninety-two wings will be 65 by 77 feet and will weigh 600 tons.——While on a tour of inspection in New Orleans last week, Secretary Meyer said that he saw no reason for maintaining a naval base there. "If there is to be any fighting," he added, "it will not be in the Gulf of Mexico, but near the entrance of the Panama Canal. Of course we do not anticipate a conflict, but if it should come, the Canal will be the place that will need to be fortified."——In the case of the claim of the Orinoco Steamship Company, the Court of Arbitration at The Hague has made a decision, awarding $46,867, with 3 per cent. since 1903, and $7,000 costs. This was the amount named in the first dispatches. A later cablegram to the State Department said the total was $92,672. The original decision of Dr. Charles Barge (the umpire or arbitrator who awarded $28,700 to the company in 1904) was annulled on four points. The claim was for a little more than $1,400,000, and the claimant is a New Jersey corporation whose grant

in Venezuela was canceled or repudiated by President Castro. Our Government declined to accept the Barge award, and the present Government of Venezuela consented to a submission of the case to the Hague Court.

Feats of the Airmen

During the international aviation tournament at Belmont Park, near New York, last week, several American records were broken. On the 25th, J. Armstrong Drexel rose to the hight of 7,185 feet. On the following day Ralph Johnstone flew up 7,303 feet into a snowstorm. This was a new American record, but it was set aside on the 27th, when Johnstone soared to the hight of 8,471 feet in a gale which blew him 55 miles from the park. The international cup and prize of $5,000 for speed was won by Claude Grahame-White, of England, who, following the race course of a little more than 3 miles, flew 62 1/10 miles at the rate of 61¼ miles an hour. On the 30th there was a contest for a prize of $10,000, to be given to the aviator making the fastest trip from the park to and around the Statue of Liberty in New York harbor, and back again. The winner was John B. Moisant, representing the United States, who competed with Grahame-White (England) and Count Jacques de Lesseps (France). Moisant's own machine was broken in the morning by a collision. Just before the race in the afternoon his brother bought Alfred Le Blanc's machine for $10,000, and the prize was won with it. The distance is about 36 miles, and Moisant covered it in about 34½ minutes, or 42½ seconds less than the time made by Grahame-White. Count de Lesseps's time was a little less than 42 minutes. The racers passed over Brooklyn, where they were watched from the housetops. ——The balloon "America II," which was missing for several days after the St. Louis races, came to earth on the 19th in the Canadian wilderness northeast of Lake St. John and about 60 miles from Chicoutimi, in the province of Quebec. Alan R. Hawley and Augustus Post, who were in it, suffered much hardship before they reached a settlement. The prize was awarded to them. In a sus-

JOHN B. MOISANT, OF CHICAGO, WINNING THE $10,000 PRIZE.

tained flight their balloon had covered 1,350 miles.

Briand's Defense

The first thing in order upon the reassembling of the French Chamber of Deputies was of course the interpellation of the Government for its suppression of the great railroad strike by calling to the colors the striking employees. The Socialists accused the Government with using the military resources of the country in the service of capital. In reply Premier Briand stated that he had to deal with a revolutionary movement for the overthrow of government by violence and that he could prove this by the confessions of the ringleaders he had arrested. The strike was unwarranted and unauthorized even by the officials of the unions, and interrupted the pending negotiations for the remedy of conditions. The Premier promised that the Ministry would present to the Chamber a plan for preventing such outbreaks in the future and at the same time safeguarding the legitimate rights of the employees. The session was broken up by the disorder of the Socialists, who, catching sight of Prefect Lepine, the head of the Paris police force, in the gallery, shouted, "Down with Lepine!" until he withdrew from the hall. At a later session the attack upon the Government was renewed, chiefly by M. Jaurès, who denied that the national defense was so endangered as to justify the mobilization of the reserves. It was a military *coup d'état*. He claimed that the Ministers were not agreed among themselves, but that M. Viviani, Minister of Labor, had proffered his resignation on October 6 as a protest against this reactionary policy. Both M. Briand and M. Viviani denied this, but a reference by the latter to the time "when my liberty of action shall be restored to me" is interpreted as implying his resignation. It had been rumored that Viviani was plotting with Jaurès and ex-Premier Combes to overthrow the Briand Ministry. The Premier, again taking the tribune, reasserted the right and duty of the Government to take the action it did, saying

"The Government under such conditions was bound to take the necessary measures to safeguard public security and the national defense. It has not hesitated to do what the law authorized it to do. In thus doing it was conscious of having torn the railwaymen from a tyranny which was odious to them.

"We said there exists for the country a superior right namely, protecting its existence and independence. Well, I say emphatically if the laws had not given the Government the means of keeping the country master of its railways and national defense it would not have hesitated to have had resource to illegality."

It was evident that Briand had lost his temper under the gibes of Jaurès, for he is ordinarily distinguished for his moderate and conciliatory language. At any rate, his rash words cost him many supporters in the Chamber and gave the Socialists the chance they wanted. They raised such an uproar as to drown his further remarks, slamming the lids of their desks and shouting "Resign!" and "Down with the dictator!" "Cæsar!" and many unprintable epithets. Some shook their fists in his face and tried to charge the tribune. The ushers formed about M. Briand and protected him from personal violence for half an hour; then, closely surrounded by a group of his friends, he was safely conducted out of the chamber. In the following session he explained that his words had been misunderstood, as the uproar of the Socialists prevented him from completing his remarks. He had meant merely to emphasize the gravity of the national peril and the necessity of strong measures. But the acts of the Government had been strictly legal. He had no idea of suggesting any form of dictatorship. Such disturbances had formerly been put down with bloodshed, but this time the country has been calm in a crisis which might have brought rioting and revolution. "Look at my hands," the Premier cried; "there is not a blood stain on them." At the conclusion of his defense M. Briand announced that the Government would accept nothing less than a vindication and indorsement from the Chamber. This was given, altho about a hundred radicals voted with the Socialists on some ballots. The motion of the Socialist leader, M. Guesde, that M. Briand be indicted, was lost by 503 to 75, none but the orthodox party, the United Socialist, voting for it. The resolution approving the acts of the Government passed by a good majority.

and that declaring that the Chamber was confident that the Government would safeguard within law and order the legitimate interests of the railway men and the liberties of the republic, and that the Chamber should pass to the order of the day, was adopted 329 to 183. The resolution that "the Chamber stigmatizes sabotage, violence and anti-patriotism" was carried with only one vote in the negative.

French Labor Questions

In the strike of the employees of the postal, telegraph and telephone service last year the Government took the position that such civil servants had no right to form a militant union and resort to strikes to advance their interests. The question was brought into the courts, which decided in favor of the Government, and on appeal the decision was this week confirmed by the Superior Court. The union of the post office employees is therefore declared an illegal body. Whatever may be the fate of Briand there is no doubt that the country at large is prepared to favor a strong government which will give the country industrial peace or at least order. The violent tactics of the General Federation of Labor have inflicted a great injury to French commerce. It has been repeatedly demonstrated that a few labor leaders have the power to put a stop to business and bring a city near to starvation, at their own will, and even, it appears, for a whim of the moment. It is estimated that the railroad strike cost the country about $55,000,000, tho it lasted less than a week. The loss to the railroads was $2,100,000 in passenger fares and $3,500,000 in freight, and the loss to the employees $2,500,000 in wages. Besides this all parts of France suffered as well as foreign dealers. The reports of the Halles show that the Paris markets received only half the usual food supply during the week. A more serious feature of the affair is the systematic attempts made to destroy property and to prevent the running of trains by tearing up rails, clogging brakes, displacing signals, destroying bridges and cutting telegraph lines. The "cheminots" even followed the advice of M. Hervé and called to their aid "citoyen Browning." Large numbers of Browning revolvers were imported and used in shooting at the passing trains. It is regarded by some literary men, among them Anatole France, as an unpardonable act of governmental tyranny that M. Hervé, the anti-militarist, who is now in prison for eulogizing an Apache for killing policemen, should not be allowed to write editorials for *The Social War* from his prison cell during the strike. *Humanité,* edited by M. Jaurès, published an article denouncing Briand as a dictator like Franco in Portugal and threatened him with the fate of King Carlos. The strike committee in relinquishing to the railroad unions its emergency powers expresses its thanks to the General Confederation of Labor for its support and assures it of future reciprocity. The Confederation at its recent convention at Toulouse adopted a plan for carrying its anti-patriotic propaganda into the barracks. The Confederation will send to the local unions the names of the union men who are stationed in their vicinity so the young recruits may be affiliated with the local during the term of service wherever they may be. The Confederation declared against the old age pension law now pending in the Senate as a trick to dupe the workingman. Objection is made to the high age limit, sixty-five years, to any requirement of contributions from the wages of the workingman and to the passbook which is issued by the Government to each workingman for the record of his work and wages. This record is denounced as an attempt at official espionage, curtailing the freedom of the individual.

Flood and Mud in Italy

The shores of the Bay of Naples and the Gulf of Salerno and the adjacent islands of Ischia and Procida were devastated by a terrible storm and flood on October 23. The reports of the cause and extent of the disaster are still very confused and vague, but it appears that streams of mud flowed down the sides of Vesuvius on the mainland and of Eporneo, an extinct volcano on the island of Ischia. Houses and churches were carried away and the streets of towns buried under many feet of mud. Some 200 persons are said to

have lost their lives. The town of Casamicciola is destroyed and its hot springs buried. Cetara, on the Gulf of Salerno, suffered almost as much. The beautiful roads along the coast to the south of Naples are broken by landslides. A tidal wave damaged shipping and the buildings close to the sea. The hurricane, accompanied by heavy rain, ruined homes, orchards and vineyards. The damage is estimated at $10,000,000. There were few foreign residents in the vicinity, owing to the cholera scare. The King of Italy promptly visited Ischia and walked over the scene of the disaster.

The Portuguese Republic

Senhor Joao Franco, Premier of Portugal under King Carlos, whose dictatorial regime hastened the revolution, has been arrested by one of the new republican judges. He is charged with abuse of power on the ground of having issued seventy illegal and arbitrary decrees, and of having paid half a million of the King's debts from the Crown funds. Senhor Franco was released on $200,000 bail. The Provisional Government disavows responsibility for the arrest and declares it the act of the judiciary.——So far the new Government has succeeded in maintaining a fair degree of order, but the situation is not altogether free from danger. The Lisbon roughs who received arms from the arsenal for the purpose of aiding the revolution refused to give them up, and mobs bent on pillage have been with difficulty repulsed from the convents and monasteries by the troops stationed to guard them. It is reported also that a military conspiracy against the republic has been discovered, and thirty-two officers have been arrested. A truckmen's strike in Lisbon is another source of disorder and danger. Eight thousand drivers of freight and express wagons are out, and the Government has had to employ troops for the conveyance of food supplies.——The Provisional Government is continuing its work of starting a new regime by a rapid series of novel political and social measures. To do away with the practice of dueling, courts of honor are to be established. The Minister of Justice has drafted a very radical divorce law, providing for separation on mutual consent. Religious instruction is abolished in the common schools, and to take its place plans are being made for the inculcation of individual and civic morality. The faculty of theology at the University of Coimbra is to be abolished. The opening of the term at the University of Coimbra was marred by the riotous acts of a group of eighteen students, who invaded the lecture hall, shooting off revolvers and breaking the furniture and tearing to pieces the portraits of the royal family. The disorder, however, was not so great as three years ago, when the students struck in a body because a candidate for the doctorate was refused the degree on account of the republican sentiments exprest in his thesis. The riotous students have been arrested and the university temporarily closed. The Government has appointed a new rector for the University of Coimbra, Manuel Arriago, a republican lawyer of radical views. The religious oath has been abolished for university and Government officials. In its place will be used the words, "I declare upon my honor."——The publication of fuller details on the incidents of the revolution make still more evident the care and foresight of the republican conspirators. For example, during the fight, which lasted two nights and a day, the extemporized revolutionary force was regularly supplied with rations and ammunition, and relieved at intervals by reinforcements; while the royalist forces received no rations and their cartridge boxes were not refilled. Senhor Teixeira de Souza, who was at the head of the Government at the time of the outbreak, denies emphatically that there was any intention of soliciting foreign support for the monarchy and declares that under no circumstances would such an interference with internal affairs have been invited or promoted. On the day before the rising President-elect Fonseca, of Brazil, was given a banquet at the royal palace. A republican deputy who rode in his automobile turned to the crowd assembled around the steps of the palace after Fonseca had entered and said: "You see how easy it is for a republican president to enter the royal palace. Just remember that."

Spain in the Ascendant

BY KELLOGG DURLAND

[Mr. Kellogg Durland, whose article on Portugal was published last week, has had extraordinary opportunities for getting close to the fountain heads of information in Spain, where he has recently spent half a year. One day early in his stay in Madrid the King very considerately suggested that as a hotel was a most uncomfortable place to work in, Mr. Durland might make use of the Royal library in the Palace. Few Americans have come to know so many representative Spanish people, from Don Alfonso and numerous members of the Court and Government to leaders of the republican and socialist parties.—EDITOR.]

SPAIN now draws the eyes of the world. The tide of revolution which has just swept over Portugal, carrying the House of Braganza forever from the throne, has dashed against the Spanish borders. False prophets have said: "Mark how soon the Spanish monarchy will also fall." Six months in Spain have given me reasons for my unbelief. Spain today is in the ascendant. The Spanish Throne is more secure than in many years, and the country more progressive, more prosperous than in three centuries.

Paul Bourget once remarked that you cannot compare four pounds of butter and four o'clock. Spain's geographical juxtaposition to Portugal is the only close relation between the two countries. In history and tradition, in language, in temperament, and especially in present political conditions, they are entirely remote. Portugal has been going from bad to worse for many decades. Spain was long at a standstill, but during the last ten years she has been advancing proportionately faster than any country of Europe. Her trade has increased enormously; her internal affairs have been undergoing regeneration; she has reared statesmen capable and competent; above all, she has produced a King who is at once a passionate patriot, a fearless leader, a genius at statesmanship and, above all, a man. In short, all the essentials to the progress and advancement of a State and security of the throne that Portugal lacked, Spain possesses. The awakening of Spain is a revelation. The place she will occupy ten years hence, if her present promises are fulfilled, will astound the world.

One indication of the different condition of the average Portuguese peasant and the Spanish is found in our own immigration records. During last year more than one million immigrants entered the United States from all countries. The average amount of money brought in by each immigrant was $22. The average amount possessed by the Portuguese immigrant was $15, or $7 less than the average, while the Spanish immigrants (of whom there were but 5,837 as compared to tiny little Portugal's 7,657) averaged $48 apiece, or more than double the average standard! This same ratio will be found to be paralleled, when not exceeded, in almost every comparison between the two countries.

King Alfonso XIII is the dynamic spirit behind the Spanish people today, and the sooner the world at large forms a right estimate of this remarkable young man the earlier will an understanding of Spain's true position be reached. During the course of a conversation with His Majesty one day this summer, we spoke of the Spanish-American War and its results so far as each country was concerned. I intimated that there were men in America inclined to the belief that Spain had won that war—in the light of the enormous expense the late island possessions of Spain had been to the United States. The King's dark, lustrous eyes twinkled merrily and understandingly, and after a moment he replied: "However that may be, a new era dawned for Spain as soon as we had recovered from the shock of the war and its defeat."

The Iberian Peninsula has long been regarded as a doubtful, not to say dangerous, proposition from a financial standpoint. Spain and Portugal have been judged more or less alike. No greater mistake was ever made. Portugal has been in the hands of aristocratic buccaneers, pirates, in broadcloth, but

KING ALFONSO XIII

And the Prince of Asturias, 2½ years old when photograph was taken.

none the less rascals of a most despicable character. Portugal's ship of state under the late monarchy was looted and scuttled by the very class who constituted the monarchy and the state. Spain has her grafters, her political corruption and official incompetency characteristic of a country where the standard of education is low, and where the pace of progress has until very lately been slow. But these do not constitute all Spain. On the other hand, she has statesmen of the first rank, a diplomat corps including men of the biggest caliber, and a parliament counting among its personnel men of earnest purpose, large ideas, and patriotic determination. Whatever the future may hold for Spain the ignominy of Portugal will not fall to her.

In a previous article I endeavored to show that the movement in Portugal which resulted in the establishment of a new form of government and in the exile of King Manuel II and all his house, was the result of internal decay and not the outcome of republican propaganda. In Spain there is propaganda—intelligent propaganda. The propagandists, however, whether Republican or Socialist, do not possess a monopoly of the intelligent ideas making for the reform and regeneration of the country. The great millstone around the neck of the nation has long been the Roman Catholic Church, especially as represented by the religious orders. Happily the monarchical party has begun to recognize this and the present government, in instituting a crusade against the monastic orders, has adopted one of the most popular planks of the Republicans. This is one of the important factors in the situation today and this crusade carried to successful fulfilment will prove one of the surest guarantees for the perpetuity of the present regime. The present Spanish Parliament exhibits to the world the extraordinary situation of a monarchical government supported in the most important parts of its policy by Republicans and Socialists.

The Church situation is far and away the most important question in Spain. Despite the drag of the Church, despite her efforts against progress, her detrimental and stultifying influence on education, her enormous drain on the national revenue and her uneconomic and ridiculous exemption from rightful taxation, Spain still has forged ahead with amazing strides. Before considering in brief detail what Spain has actually accomplished since the close of the war with America let us conclude the question of the clerical orders.

Released from the yoke of the Church Spain will bound upward like a balloon cut free from captivity. That King Alfonso is in sympathy with this emancipation movement is clear indication of the breadth, independence and fearlessness of him who is still styled "His Most Catholic Majesty."

The Church has ruled in Spain like a veritable autocracy since the time of Isabella and Torquemada. The Church has dominated all education and fed upon the all too insufficient revenues and resources of the nation. The baneful influence of the Church has nowhere in Europe been more pronounced. Monasteries and convents have been established by the hundred—all claiming exemption from taxation, and endowments from the Government. Industrious religious orders have seriously encroached upon markets of the country, and the domineering influence of the Church over the education of the children has long been a piece of high-handed impertinence, while her jealous guardianship of her religious monopoly has been an amazing example of stupid bigotry. Until three or four months ago no non-Catholic body was permitted to have its own building or any outward sign indicating its existence. Even the chapel of the British Embassy in Madrid had to be in an ordinary room and it was forbidden that any sign be placed at the entrance of the building to point the way to English-speaking visitors in the capital.

The lack of professional ethics (to put it on its most materialistic basis) is found in the frequent betrayal of the confessional by priests. The fight which the Spanish Government has begun is directed against the clerical orders, but the influence of the Church may be gathered from the fact that, according to common rumor the confessional is used to elicit information from ignorant peasants to be used to the advantage of others with whom the priests are in league, or against the peasants themselves. For example,

Mr. Rafael Shaw cites the case of one Juan Cabuto, who was hung, thru the priest to whom he confessed going straightway to the authorities and repeating what the man had said. The man was guilty, of course, but it wasn't the duty of his father confessor to lead him to execution.

The steps that Spain must take to get rid of this incubus are the recognition of other religions on an equal basis with Roman Catholicism; the taking of the schools completely out of the hands of the clericals and universally exercising this fundamental national prerogative—the education of the young; the expulsion of the religious orders, and ultimately the absolute separation of the Church from the State. This is a monumental program to carry out pacifically. Yet I venture to believe that Don Alfonso will do it successfully and as speedily as prudent. It might all be done immediately by the present Government and royal decree, but the clerical party is strong enough to make great trouble. The army, undoubtedly, would support the King almost unanimously, in this as in any undertaking, but the power of the Church lies in its domination of the women. A too precipitate break would result in disrupting homes all over the kingdom—a catastrophe that King Alfonso is far too wise to court.

Statistics are difficult to verify, but there are not less than 70,000 clericals in Spain who are parasites upon the nation. These must go and the Church must cease meddling with the State, confining its attention to purely spiritual affairs.

This warfare on the Church, therefore, is not against religion, but in the interest of religion in the broadest sense. It is against discrimination in favor of one sect. It is not a step toward atheism, but toward a more charitable Christianity. As a policy it is rational, economic and right. In Portugal the Church contributed largely to the downfall of the monarchy. Spain having already begun to eliminate this possible factor, will be in no jeopardy from this source.

In Portugal the army went over to the revolution at once. Only a few regiments even pretended loyalty for twenty-four hours. In Spain, King Alfonso is the hero and the idol of the whole Spanish army. From earliest boyhood Don Alfonso has had a veritable passion for his army. He is a born soldier as he is a born leader of men. He devotes a very large part of his time to upbuilding and strengthening the army and increasing its *esprit de corps*. Two forenoons of every week he devotes to military audiences. He never tires of reviewing troops, often leaving the palace in Madrid at 6 o'clock in the morning to visit some outlying garrison. I recall once seeing the King overtake a body of infantry in the street called Arenal in Madrid. As soon as the royal automobile came up even with the rear rank the order was given to the troops to halt, then swing round so as to face the sovereign in salute as he went past. The King immediately rose in the car, and his piercing, intelligent eyes seemed to dart an individual glance at each soldier along the entire line. Not once did His Majesty turn from the troops, although a hurrahing crowd blocked the pavement on the other side of the street. Here is another factor in the fall of Portugal which has not the remotest possibility in Spain. The army will remain loyal to its sovereign chief in any exigency. Ask any soldier of the Mellila campaign, who enjoyed the cool sun-helmets that the King provided from his private purse; go to the homes of those who received aid from the war fund of the Queen; speak the name of the King to any officer of the Spanish army and see him square his shoulders.

Plans for the rehabilitation of the navy are now maturing and if the present advancement continues Spain, within ten years, will have the beginnings of a modern navy compatible with her position as a power.

With the loss of Cuba and the Philippines Spain lost what were at the time her greatest markets. This did not demoralize or discourage her, however, for she set about acquiring new and greater markets. Her seaports give her splendid commercial advantages. But where to find markets not already possessed by other nations? Why, in South America, among the rapidly developing Spanish

speaking countries, where infinite trade possibilities lay awaiting cultivation. Spain went quietly but earnestly to work to build up an exchange trade with the Argentine Republic, Paraguay, Uruguay, Brazil, Chili, Peru, and also Mexico. During the last two years, under the wise counsel of King Alfonso these States have been courted diplomatically and socially and all to the incalculable stimulus of trade.

The Infanta Isabella, the tactful and universally popular aunt of the King, represented Spain at the Argentine festivities at Buenos Ayres last summer, and I was in Madrid when the President-elect of the Argentine Republic came to Spain to express thanks for the interest Spain had taken in making the anniversary a notable and memorable event in the history of the South American republic.

Spanish bonds have doubled in value in the last ten years. Some idea can be gained of the extent of the trade with Latin America from the consular reports, which show that Spain now sends about $12,000,000 worth of textiles, minerals and wines annually to the Argentine, while only five years ago

CHILDREN OF THE KING AND QUEEN OF SPAIN.
Their Royal Highnesses Don Jaime (aged two) and Prince of Asturias (aged three).
Photograph by Kellogg Durland in the garden of the palace at Madrid.

(1905) the amount was only $6,000,000. The doubling of the trade in five years is splendid progress. In Uruguay almost a proportionate increase has been witnessed since 1905, when $9,000,000 worth of exports went from Spain, and it is probable that in the near future Spain will be annually sending $20,000,000 worth of stuffs to Uruguay alone. Spain's trade with Mexico has been particularly happy because the credit system is practically non-existent. Out of $7,000,000 worth of goods shipped to Mexico in one year 90 per cent. was paid for in cash.

To the United States Spain annually sends approximately $8,000,000 worth of minerals, cork, olives, malaga grapes, etc., and in return purchases from us nearly $30,000,000 worth of goods. Raw cotton is the chief import from the United States, but modern machinery forms a big item.

Great Britain is Spain's best customer, now sending about $60,000,000 each year to the Iberian kingdom. This is the result of long years of trade steadily nursed and built up, and consequently it is less significant than the trade with South America, which has received such extraordinary stimulus, not in ten, but in five years. Let it be remembered that Spain is a country which went from petroleum to electricity, her tardy awakening being offset by skipping the gas stage of progress thru which the rest of the world long toiled.

Scrutiny of Spanish trade reports give no intimation of commercial decay. Rather most convincing proof of substantial prosperity.

Once more, there is no parallel between Spain and Portugal. In Portugal commerce and trade have been at low ebb ever since fickle fashion ceased to thirst for port and Madeira wines, which were Portugal's staple exports. After the decline of the trade in these two wines nothing else ever took their place.

In short, Spain shows none of the symptoms that Portugal long displayed, and there is no apparent reason why

The King.

KING ALFONSO IS AN ARDENT POLO PLAYER.

Spain, at this time or in the very near future, should desire to, or could benefit by, changing the form of government. In fact, a change of government from the monarchy to a republic would in no material or inherent way alter the situation. King Alfonso is the most wide-awake, alert, progressive man in Spain, and he is controlled by a tremendous ambition to bring Spain into line with the most modern of nations. He is kept well informed as to what all parties are doing in his country, what they want and why. He is as quick to accept a plank from the platform of the republicans or socialists as from the liberals or conservatives. Don Alfonso is a radical by nature. It is by virtue of his personality and what he has already accomplished that he is the most popular man in Spain. Republicans to whom I have put the question: "If a republic were declared in Spain who would be the first national leader, the first president?" The answer has been: "Probably Don Alfonso. He is the most popular man in the country." Few people in America, or in Europe for that matter, have had opportunity to know what King Alfonso has done and is doing. Fewer still have any conception of his unusual personality. A tall, athletic young man of narrow but muscular physique, with a smooth olive skin, dartling black-brown eyes and a kaleidoscopic expression—now grave, now mischievous, now kindly, now blithe—Don Alfonso is one to command attention, interest and respect. He sits a horse superbly. He excels in everything he undertakes. He is the surest shot in Spain; the most skillful as well as the most reckless motorist; a capital yachtsman; an efficient, dependable polo player. He has infinite pluck and daring. The world is familiar with his courage. When an attempt was made on the life of President Loubet as he was driving with King Alfonso through the streets of Paris, when the smoke had cleared the young King was seen standing in the carriage with his hand on the shoulder of the aged President reassuring him. When an attempt was made on his own life and that of the Queen on their wedding day in the Calle Mayor in Madrid, Don Alfonso escorted his horrified bride out of their damaged state coach into another

HIS EXCELLENCY THE MARQUIS OF VILLALOBAR,

Chamberlain to His Majesty the King of Spain and present Spanish Minister to Portugal. There is no abler diplomat in Europe. According to recent newspaper dispatches the Marquis of Villalobar was the only man in Lisbon who appeared at the Palace to bid farewell to King Manuel II as he was fleeing into exile; and the first diplomatic representative of any government to pay his respects to the newly established Republic of Portugal was His Excellency the Spanish Minister—"in full uniform." The Marquis of Villalobar is well known in the United States, having been here several times in an official capacity, and for the year preceding last February he was Spanish Minister at Washington.

carriage, and the very next morning with the would-be assassin still at large he threw himself and his bride on the honor of the populace of the capital and drove unescorted in an automobile thru the principal thorofares of the city. When Barcelona was in revolt and all the court pleaded with the King not to visit the disturbed city he declined to heed warnings or prayers and again trusted to the honor of the people. Times unrecorded his life has been attempted until he has come to accept a calmly fatalistic philosophy. "If they set out to get me," he says, "they will get me any way. So in the meantime, why bother my head about it?"

During my sojourn in Spain I saw

much of the King and I can say without hesitation that he is the most deeply earnest, the most intensely sincere man I ever met.

One day I mentioned the Ferrer incident to His Majesty. His face clouded and a pained expression passed over it. "The world never understood that matter," he said. "I could not have acted otherwise than I did. I *had* to act legally and I did what was legal and what was right." As a matter of fact the world never has really understood the Ferrer episode. In the first place, I can vouch for the fact that no one in Spain was troubled about the Ferrer sentence at the time it was passed and executed. It was only after certain political parties in France, Italy, England and America took up the matter on the strength of misrepresented facts that corresponding political parties in Spain availed themselves of the opportunity to make capital out of the execution. The right or wrong of Ferrer's teachings are not my consideration here. That Ferrer was legally tried, honestly convicted, and the sentence properly and constitutionally carried out is, I think, beyond dispute. When a soldier enlists for a campaign and happens to fall in battle his friends don't go about protesting. Ferrer was a soldier of an army. Since the marriage of the King of Spain it has been proven beyond question that Ferrer was the prime instigator of the attempt on the lives of the sovereigns, which narrowly missed them, and did result in the death of twenty odd innocent persons and several horses. This proof was gathered after the suicide of the man who actually threw the bomb, and in accordance with the desire of the King nothing was done about it. Then, in Barcelona, when Ferrer became implicated, was fairly tried and convicted, the King saw no reason for staying a perfectly legal sentence. And I have never been able to understand the outcry in America and Europe against his execution. He fell fairly in his fight, and, from the standpoint of his supporters—honorably. There is absolutely no ground for protest or recrimination. To my thinking, it is unmanly, cowardly, "yellow," to whimper when the fortunes of war happen to claim a victim.

It is not possible for me to go to even moderate length in discussing the personality and capacity of King Alfonso XIII, nor may I even speak of his three charming children, two bright, sturdy boys and a wee girl, all of whom I have played with and seen very often, nor can I here go into the tremendously full routine of the King's day—his early rising, his forenoon councils and audiences, his perusal of the forty-six leading newspapers of Europe *every day*, his devotion to every department of state affairs and his enormous capacity for strenuous activity. He speaks English as fluently and as idiomatically as he speaks Spanish and French. He is eager to meet men and women of every walk of life and to listen to their views and their ideas. He is fond of travel abroad. Hence his broad ideas in regard to religious toleration, and hence his ready adoption of the best in the policies of all parties in his own country.

Difficulties lie ahead for Spain, especially in regard to the settlement of the Church question. But even this great matter need not throw the country into civil war, and will not if the King's counsels are followed, and moderation practised with firmness toward the one and only end.

In discussing the Spanish-American War with me the King added: "But it is all past now. We have turned over a new white page and I know that there is no people for whom the Spanish people have a higher or more friendly regard—and I hope our friendship is reciprocated."

In conclusion: His Majesty once told me of his deep interest in America, and he even confided his hope to one day visit the United States. That such a visit would result in abundant profit and satisfaction I know—not only to Don Alfonso and to Spain, but also to the American people, for whom it would be a rare privilege to see, to meet and to know this man, whom I believe is in truth a "Man of Destiny."

New York City.

Julia Ward Howe

October 17, 1910

BY EMILY HUNTINGTON MILLER

"Mine Eyes Have Seen the Glory of the Coming of the Lord."

O SEER! whose soul illumined, in the nation's night of wo,
Saw, thru the murky storm-cloud, the morning's golden glow,
And 'mid the crash of battle heard the silver trumpet blow,
Hail and farewell tonight!

Yet still thy grand reveille sounds on many a bloodless plain,
Where men forget their bitter strife to join the nobler strain,
And prophets and apostles swell the jubilant refrain,
"Our God is marching on!"

And still upon the mountains bleak, and in the desert heat,
Where cohorts of the King make straight the highways for His feet,
Their hearts take up the watchword, and with all His host repeat,
"Our God is marching on!"

O seer! with soul illumined now by heaven's transcendent light,
We send thee from the camp-fires here our greeting call tonight;
The watchword of the army that must conquer in his might,
"Our God is marching on!"

ST. PAUL, MINN.

Men, Women and Movements in Westminster

BY JUSTIN McCARTHY

THE British public might be described just now as absorbed in one topic or divided between two topics, or distracted by two topics rolled into one. My American readers will not I think have much difficulty in making out the meaning of my words when I tell them that the two topics are the great republican revolution suddenly accomplished in Portugal, and the speech of the Conservative leader, Mr. Arthur T. Balfour, on his recent return to political activity after a long interval, long even for him, of absence from any intrusion into the life of the political world. Why these two events so utterly disproportionate in their national importance come to be brought into sudden connection is owing to the effect which the doings in Lisbon had in withdrawing even British attention from the condition of Tory public opinion in Britain.

The whole Tory press had of late been doing all it could possibly do to enforce the return of Mr. Balfour to active political life. Every day the organs of the Conservative party were bewailing the fact that their parliamentary leader would not lead and that they were left to the guidance of leaders who, however they may have been appreciated and respected, had certainly never been called upon to lead. At length it was suddenly announced that Mr. Balfour was to withdraw for a few days from his favorite pastime, the pursuit of his especial devo-

KING MANUEL OF PORTUGAL.

tion, the game of golf, and that he was about to address a great audience in Edinburgh on political affairs. Every true-hearted and yet not rebellious British Tory gave vent to a gasp of relief when he heard that his long-required leader was at last coming out again to lead. But when the momentous Wednesday came about it proved that its coming was to be made of moment to the world not by the speech of Mr. Balfour, but by the outbreak in Portugal of a sudden and successful republican revolution. The result was that the attention of newspaper readers in these islands was wholly absorbed on Thursday by the long details of the great movement in Lisbon which overthrew the monarchical government and proclaimed Portugal a republic. The multitude of discontented Tories who had been declaiming against their nominal leader found it impossible to get a hearing for the exposition of their troubles during the excitement caused by the sudden overthrow of a monarchy which had long been friendly to Britain and the proclamation of a republic. Meanwhile I could not help allowing my attention to wander from the Portuguese revolution with which I felt much sympathy and from the increased perplexity of the Tory party to speculate as to what Mr. Balfour himself was thinking of at such a moment of divided and distracted interests. Then I reminded myself that I had always regarded

MISS BRADDON.

Mr. Balfour as much more of a philosopher than of a politician. I had had many opportunities of meeting and conferring with him in the House of Commons while he was a member of the once famous Fourth party, and while more lately he came to be the leader of Opposition and to hold successively various offices in the Government and among others that of Prime Minister. During all these interesting interviews I had been first surprised and then delighted to observe with what a calm, philosophic temperament he seemed to study the various questions of political interest brought under his notice. This peculiarity in him

seemed to me to explain and to justify the title and the purpose of his first published work, "A Defense of Philosophic Doubt." I have never had an opportunity of meeting with a statesman of position as distinguished as that of Mr. Balfour who seemed to admit so much philosophic doubt into his mind concerning the infallibility of his party's professed and proclaimed political principles as did the man whose speech of last week was so much marred in its effect by the overthrow of the monarchy and the proclamation of a republic in Portugal.

We shall all now be looking out with some anxiety to see whether anything like a movement of rebellion against the leadership of Mr. Balfour is destined to manifest itself in the Conservative army. We do not yet know whether anything has come or is to be expected from the conference between the Liberal and Conservative authorities which is understood to have been taking place. The interval of truce will soon be over and then, if the conference has not in the meantime been shown to have accomplished anything satisfactory, we shall be on the direct way toward a renewal of hostilities to be illustrated by a general election. The question at issue, as I am sure my American readers quite clearly understand, is that which has been growing more and more difficult of reconciliation during all recent years, the question represented by the rival and the now seemingly irreconcileable claims of the House of Lords and the House of Commons. If the Lords should be defeated in the struggle there will then have to be a reconstruction of that chamber on some principles reconcileable with modern civilization and there will be perhaps some expansion also of the powers allotted to the House of Commons, and then we may look for the opening of a new chapter in the history of Great Britain and Ireland. For my own country I shall only say that I look upon Home Rule for Ireland as an event absolutely certain in the opening chapter of that new and coming volume of history. We have then some troublous days in the coming months, and by the word we I mean all those of whatever class who take any interest in the movement of politieal affairs thruout Great Britain and Ireland. Such a crisis has not been seen, or to put it more correctly has not been threatened, in these countries for many years back, and it will need all Mr. Balfour's philosophic temperament to meet it with equanimity.

DUKE OF CONNAUGHT.

The death of my friend, Mr. William Leatham Bright, has cast a gloom far beyond the limits of the holiday region in which he passed out of life during the closing days of September. William Bright was the son of the great English orator, statesman and philanthropist whose name is held and ever will be held dear in the memories of millions in the United States. John Bright was on the whole the greatest English orator of his time, surpassing even Gladstone himself as an orator, altho not perhaps in readiness, in resource and in variety as a debater. William Bright had probably none of his father's great political gifts and qualities, and he was in any case kept down for years and years by utterly broken health. I knew him well when we were both in the House of Commons,

when much more lately we both came to find the same place of health-seeking holiday in Folkestone, which shares with Dover the distinction of being the chief entrance to England from the sea. I was thus in very close companionship with William Bright before his death and it was a subject, the coming of that death, on which he freely and frankly invited conversation. On one memorable day he told my daughter and me that he must then take final leave of us, for he felt sure he could not live to see us again, and soon after we heard that his doctors admonished him that his life was only to be counted by hours. On the day following that his life came to an end.

William Bright was a devoted advocate of the Irish National cause, the cause of Home Rule, and even when his father, who had ever been a devoted and even an impassioned advocate of justice to Ireland, in all other ways had declined to follow Gladstone on the path of Home Rule, his son William stood fast by the Irish cause and passed into a different division lobby from that which his father entered. I was glad to hear from him that his father thoroly understood the sincerity of his purpose and found no fault whatever with him for having acted on his conscientious conviction even when it led him into a secession from the policy of his father.

My American readers will have learned long before this reaches them that my friend and theirs, T. P. O'Connor, has started a monthly magazine. It is called *T. P.'s Magazine,* edited by T. P. O'Connor, and it opens with a capital photographic likeness of "T. P." The first number contains 128 pages, double-columned, and very clearly printed in good-sized type and enriched by numerous photographic engravings. The subjects are as various as could be expected, or I might even say as could be desired, and deal with art, letters and doings of the world, politics, fashions, the ways of men, the ways of women, philosophy, and most of the subjects are dealt with by a writer whose previous experience gives him some authority on the topic he has selected. The number includes some very attractive short stories, and the writers in the magazine generally might be described as representing the literature of many countries outside the range of Great Britain and even of Europe. Perhaps it may be said that "T. P." has this time shot his arrow rather high in the air, but we must remember that he is a well-practised archer and is not likely to have overshot his mark. Certainly I do not think that the magazine literature of London can show us many publications which could claim a superiority over *T. P.'s Magazine* in the names and qualifications of its contributors or in the fresh, original capacity and attractive style of some whose names had not hitherto made themselves known to our reading public. I think that I may therefore welcome with confidence on the part of that public the old friends and the new acquaintances, and to hope that the new acquaintances may become old friends.

Miss Braddon, as Mrs. Maxwell, the famous novelist, is generally designated when we talk or write of her as a novelist, has just been celebrating her seventy-third birthday and has begun working at her sixty-seventh novel. I need hardly tell my readers that the celebrated novelist, Mrs. Maxwell, is the widow of the popular publisher whose popularity was in great measure due to the success as a novel-writer of his wife, of whose genius for such work he was the first to make full discovery. I may say that I have known Mrs. Maxwell personally during the whole of her career as a novelist, and I may add as an anecdote, which I think has never been published before, that she suggested to me as an appropriate title for one of my early novels "My Enemy's Daughter," a suggestion which I welcomed and promptly adopted. The novel, however, was not published by Mr. Maxwell's house, but by that of Messrs. Tinsley, London, but I am pleased to remember that this most conspicuous authoress had in this sense something to do with its production.

An event which may be confidently expected to have a memorable place in our modern history was witnessed in London yesterday. This was the departure of the Duke of Connaught, accompanied by the Duchess of Connaught and Princess Patricia, their daughter, from the Waterloo Station, London, in order to reach Portsmouth and travel thence by steamer for South Africa. The Duke of Con-

naught is the uncle of the present King George of England, and he goes to South Africa in order to open there, in the name of the Sovereign and the people of these countries, the Union Parliament of South Africa. The British Government is well inspired indeed in thus directing the attention of the whole world to the opening of that South African Union Parliament, which is the result of the long struggle between rival yet subjugated nationalities in that South African region. For a long time these South African races were in rivalry, which frequently broke into war, and they thus came into separate struggles with that greater power which had begun to settle down in South Africa with the intention of establishing a dominion there. Now the history of that protracted struggle ends in the acknowledged supremacy of the English invaders, and at the same time in the recognition by these invaders of the right which the conquered nationalities possess to have some share in the government of that part of the region which they occupy and on which they have already made their impress. The conquered tribes acknowledge the right of the victor because the conqueror has admitted them to a full and acknowledged and a legalized share of the whole dominion. We cannot help being reminded of the manner in which the Dominion of Canada was at one time the scene of incessant struggles between the rival claims of those whom I may describe as the English and the French Canadians, and how, by the genius of Lord Durham, the crisis which had long seemed impending was averted for ever by a course of legislation which opened to the French and English alike a share in the rule of the Canadian Dominion and thus made Canada herself a recognized partner, a constitutional colleague in the administration of the British Empire.

LONDON, ENGLAND.

Woman

BY FRANK CRANE

[This is a new view of an old theme. As usual we give Mrs. Harris the last word in the succeeding article.—EDITOR.]

THERE is a good deal of clamor for woman's rights. But the trouble is that she is shamefully neglecting to use the rights she already has.

There is a good old custom of complimenting woman on the noble and beautiful influence she exerts. As a matter of fact, she is a tremendous moral coward and needs to be told so.

Woman is to blame for almost all the evils that afflict society. It is time to stop paying her pretty compliments and to give her a good allopathic dose of truth.

Of course, they will resent it—some of them—for there are heady, termagant women as well as egotistical men, who cannot suffer the "faithful wounding words of a friend." But then there are also wise and sincere women, who are glad to get an honest criticism; and it is for their sakes I write.

There are three ways of treating a woman.

First, there is the Byronic way, which is to set her on a pedestal and address her as queen, faultless, made only to be worshiped and served. She is told that her mission in life is to "sit on a cushion and sew a fine seam, and she shall have strawberries, sugar and cream." She is to do nothing with her lily-white hands but to have them manicured. She is to clothe her fair body in the silks and furs we buy, hang round her neck the pearls we give her, and ride in our automobile. All of which sentiment is well meant enough, on our part, while the fit is on and the fever unslaked, but all of which is also untrue, unreal, hollow, dangerous, and consequently can be turned in a minute into contempt and loathing should the man's vanity and egotism, from which it springs, receive a jolt.

A woman is a fool to want such adoration, for it puts her on an utterly impossible throne, an elevation from which she is certain some day to tumble. This mad deification is a quite usual prelude to divorce.

Second, there is the Oriental way, which consists in regarding woman as a beautiful animal created for man's pleasure, "a little better than his horse." She is considered frail, to be guarded, never exposed to temptation. She is to be kept in subjection, either locked up in a harem, as among the Turks, or browbeat back to her knitting and her children, as among the English. She is distinctly an inferior person, not to be reckoned with in the serious business of life. In the East those who hold to this creed regard her as created for man's amusement; in the West, as destined to bear children, run the house and see that the socks are darned. She is never to be talked to about your business affairs. You are Lord and Master, with a big L and a big M.

Some women like this sort of thing, to be bossed, babied and bullied, to look up with fawn-like eyes to a broad-shouldered master, to speak of him admiringly as a Real Man, also pronounced with a capital R and M.

Now, there is a third way for a man to deal with a woman. It is to treat her, not as a deity and not as an inferior, but as an equal. Just as good as you, and no better than you ought to be. Just as bad as you, and no worse than you may be. Not to be looked up to, nor down on, but to be looked at level in the eye.

Women of Class 1 a man adores. Women of Class 2 a man craves. Women of Class 3 a man likes. Take your choice.

Woman is man's equal, no more, no less. But while she is only equal, she has a certain peculiar advantage or leverage with the world which a man has not. Putting forth a moral force equal to man's, she can effect twice as much with it. She sits on the long end of the teeter-board.

And having this superiority she cannot evade the blame for using it cowardly and selfishly.

To explain. The world's curse is money madness. And why, pray, does the man sap every ounce of his strength to get money, if not for her to shine with? He is straining every nerve to "get on," so that she may have her servants and ride in her motor. He does not go to church, he has no time to read informing books, he is kept ignorant of art and music, he is deliberately plucking his own soul clean of every adorning grace and turning himself into a money-making machine, that only plays golf enough to keep itself from breaking down.

There is nothing more appalling to me than the ignorant, sap-headed, stupid, doltish thing the American Business Success is making of himself. Go to his clubs and listen to the talk: When it is not the tiresome iteration of his business deals it is sport—horse, dog, boat, prize-fight or theater. If you want to mingle among people who care for civics or religion, art, travel, literature, or any of the building sciences, you have to go to the woman's clubs.

To an intelligent person the average man is an unmitigated bore.

Our wretched capitalistic era is not so horrible in its failures that people the slums, and gaze red-eyed from the third gallery down into the boxes, as it is in its male successes, who sit in the boxes.

Women could stop this in a year, if they wished. Let them quit playing at precedence, out-lying, out-dressing, out-spending one another; let them turn their hearts unto life and its real values: let them show their husbands that the fine house is a burden and the luxuries heaped in them are smothering; let them leave dazzling robes and silver plate and jewels and perfumes and endless diversion to the harlots whose nature it is to crave these baubles; let them do this, and the men will unconsciously form themselves after their pattern.

The bad woman never does much harm; it is the good woman who is deadly. For it is the wish of the good woman always that leads man. There are thousands of good women, nice girls, young brides, who spend every morning puttering about the apartment, and every afternoon chattering over tea at Mrs. Vere de Wilson's or playing bridge at Mrs. Maurice Calwalloper's, or attending a matinee, and who look forward to just

such a life, rising ever in social circles, playing bridge at more and more exclusive houses, idling away their days in more and more exclusive inanity, and thus they are molding their husbands into business dolts.

Let women quit delighting in what money brings, and then, and not till then, will men turn from money-madness.

Ruskin says that if every good woman would refuse to wear anything but mourning so long as there is a war anywhere in the world, war would cease.

Joe Cannon would never keep his grip on power, no insurgent would ever insurge, military gentlemen would never swagger in gold lace, the school-grind would not dig and the school-loafer would not shirk, the clerk would not fix his necktie, the parson would not grow eloquent in his sermon, the musician would not perform, and the clown in the circus would refuse to do his stunt, if somewhere there were not a woman's eyes and a woman's smile.

O woman, we want your praise, your approval. We want it, deep in our hearts, more than we want anything else in this world.

It is you who have the apples of Freia, which keep the world young. Without your favor the world grows gray and hateful.

For you we will lie, steal, rob, burn, murder, betray. For you we will pray, control ourselves, love, be good and kind and clean and useful.

For you we will be great. For you we will shrivel and degrade ourselves.

For you we will go to heaven. For you we will go singing to hell.

We only keep our cities dirty, ill-governed and unwholesome, because you would rather we would keep on making money for you and "minding our own business," than that we should "meddle in politics."

We have hideous dives, loathsome alcohol shops, houses full of white slaves, because you'd rather we wouldn't bother with such things; because we see that your heart is happy and your face smiling as you tend your babies or ride to the banquet or the dance, and you are not at all disturbed by the human hells that infest your city nor the strangling cries of them. If you would weep and pine so long as such things are, such things would not long be.

We are poor things, after all, we men. We can only climb to decency, let alone to God, helped by your eyes.

Have you heard the lines of Coventry Patmore?

"O wasteful woman, she who may
On her sweet self set her own price,
Knowing he cannot choose but pay,
How she has cheapened paradise!
How sold for naught her priceless gift,
How spoiled the bread and spilled the wine,
Which, spent with due respective thrift,
Had made brutes men, and men divine!"

CHICAGO, ILL.

The Crab Apple Adam

BY MRS. L. H. HARRIS

SOME say that Genesis is folk lore, a mere fable of creation. However that may be, the fact remains that it surpasses any scriptures ever written for portraying the genius a man has (as distinguished from a woman's) for exchanging his own moral responsibility for a harp and crown. Every now and then, while women are inching along like poor inchworms in the confused disorder of things that they did not make, some Adam in the procession loses his patience, or his temper, or his place in the line, jumps behind the fig bush and begins to snivel before the Lord about the women being to blame for everything. The women, you understand, who cook and wash and iron and nurse and pray and do all the drudgery of the world for half price; who cannot vote, or make a law, or do anything for themselves without man's permission—"women are to blame for almost all the evils that afflict society." And every one of them is a "tremendous moral coward."

At least we may be thankful for the

adjective "tremendous." It is not becoming, but it offers us importance. And it is a fact that we are "moral cowards." Love makes us that. If we were as little capable of love as men are, we could be braver. If we tried as hard to do right as we try to please men, we would be less cowardly, and we might even kick Adam out from behind his fig tree into the open, so that the rest of us might share the Lord's view of his curious kind of courage.

Now, here are the facts in the case: God created man, and ever since man has been trying his hand at creating women to please his fancy rather than to meet his needs. And the women have been permitting the sacrilege. Naturally, men are not satisfied with the performance. They could not be. They have made a mess of it. They have created a little foolish pigeon-toed angel-feeling thing with extravagant habits, poor health and an uncertain disposition. I say, in so far as they have had their way with women, this has been one of the best results they have achieved.

And here is Adam, yelling again about how little he is to blame and how much we are to blame for "almost" everything that is blamable.

"There are three ways of treating women," he says. The first is the "Byronic way"—that is to say, the method he uses to render her vain and extravagant. He gives her things, covers her with pearls and flowers, takes her riding in his auto—by way of showing off the iridescent tail feathers of his own conceit. What he means by these attentions is not that,

"You are adorable and worthy of all this, angel of my soul!" But this:

"Look at me, woman! I am able to buy pearls and bouquets for you. I can afford an auto. This is my purchase price which I offer you for yourself. Is it a bargain? Will you take me for your lover, husband, for the lion at your next dinner party? In short, will you pay?"

And she says,

"Yes!"

She will say "yes," the simplehearted creature, if he will only give her a glass of pink lemonade and a buggy ride behind a mule! She is so pleased, complimented, so humbly, sweetly glad that he thinks so much of her! And she will try, oh! so hard to be what he wants her to be!

And she does try, altho he usually leaves off the pearls and the auto rides later. This is where the cheating ends that he began with the Byronic flourish. If she holds him to the pearls and myrrh and frankincense, there is the rub. He complains of her extravagance. She is ruining society—not he who taught her extravagance.

"A woman is a fool to want such (Byronic) adoration." Of course she is a fool. But how sweet of her to be such a fool, just the kind he said he adored. Besides, there is such a lot of fooling in nature, anyway. You might say a blossom that blooms is a fool because it must fade. But look what comes after—the fruit. Women bloom like that if you invite them. And they fade like that whether you invite them or not.

Also, they are more philosophical than you would think. When the man's Byronic fit is over, most of them reflect, that it is no use to get a divorce because they cannot remain fools forever, because they must "tumble off the pedestal." And really only a few do. The great majority of women take the rats out of their hair and give up tight clothes and go on sweetly sacrificial to the end, long after they discover that their pedestal is only their husband's footstool, and long, long after he withdraws the extravagance of pearls and furs and autos. We must not become obsessed with that sickly excrescence of society, the men and women who go on wasting things and virtues upon one another.

The second, or "oriental," way of treating women does not differ from the Byronic way except in this: The method is different, the meaning is the same. In each case the men purchase the women. Byron simpers and flatters and bargains with the lady herself. The oriental bargains with her father. And Byron is inclined to discard her if he can, while the oriental is more conscientious about keeping up the display of pearls and furs. In either case it is a matter of self-respect, not respect for the woman. It is a symptom of eternal masculine paresis that he will think well of himself whether he deserves it or not.

The third way of treating women is as if they were equals of men.

One limitation of what is called the sane, evoluted, well-trained minds of some persons in the North and East has always seemed to me the most egregious form of human blindness in this world. I refer to their logicalness. Their reasoning would be admirable but for the charming deviousness of nature itself. But never in a thousand years could you convince such a one of his foolishness. He is static intellectually. His thinking is all in his head and goes round and round. You just could not launch it upon one of those divine tangents upon which the truth is so often supported without driving him insane. Now, there is no such thing as "equality" between men and women. One is made for one purpose, the other for another purpose. A man is no more like a woman than a chicken is like a bird. And the more you try to make a chicken resemble a bird, the less it will have the bulk and desirable qualities of a chicken. And the more you try to make the bird a chicken, the less it will be a bird, which would be rather a pity than a gain. The one is not superior to the other. They are, and ought to remain, everlastingly different.

In this ideal relation of the equal woman, our present speaking Adam says he wants her just as good and no better, "just as bad as you (meaning man) and no worse." What a scandal! And how utterly false to the real feelings of his sex. If a man is "bad" at all, he is more than ever frantically anxious that his wife, that his women kind, shall not be "as bad," but that they shall be better. Women all know how such men tyrannize over them to secure this offset to their own indigence in virtue.

As to the "level" in life between men and women, it does not, cannot, and never will exist. For which mountainous psychological topography we cannot be too thankful. Men are "lifted up" in some ways that women are not, and here is where they draw all women to them, which is a high and delightful sensation. Also, women are "lifted up" in other ways, and experience a pleasure in drawing all men to them, which is an exceeding airy and sweet form of moral aviation to men.

The thing is arranged properly, thank God! and not all the logic of all the beetle-browed thinkers in the country can discourage it. Because, bless you, lovers know nothing about logic, and care less. And it is upon the faithfulness of lovers that the salvation of the world depends on, not upon this "equality" notion between sexes. So long as men and women do not need to take a university course to learn how to fall in love and court each other, we are safe, and the logic of our crab apple Adam is just so much vacuum-headed dust.

But let Adam go on with his sermon. He is getting a trifle illogical, and harder to please.

"The world's curse is money madness," he says. There is a certain school of physicians called "eclectics," I believe, who skip the diagnosis, and just treat any symptom sufficiently obvious for them to see. For example, if you have gallstone colic, they give you a toddy and wonder why in the world you still groan and keep your knees under your chin. They are simple-minded souls, these doctors, but for utter, blasting simplicity commend me to your social economist who wants to tell you exactly what is the matter with the world. "Money madness" is not the world's curse any more than licentiousness is. It is merely one symptom of the general cussedness, and this grows out of the fact that none of us, not even the saints, are willing actually to accept Jesus as the "way" of life. We are not equal to the journey. We want salvation by giving charity or by laying corner-stones or by buying luxury. We are sickly because we are made in the image of God and we want to practise the lineaments of the devil—even when we do not believe in God or devil.

But coming back to our little symptom of the general disease, the "money madness"; who developed it first? Who is responsible for the first breaking out, the original nickel pimple? I'll wager the first dollar earned in this world was earned by a woman, and that she got only half of it. I'll wager that the first dollar ever coined was coined by a man and that it was made of pewter and that he never did anything else much to earn it. There is no truer scripture than this: "Man is an ingenious little devil." But

he has his enormous simplicities, nevertheless. One of them is illustrated by our crab apple Adam in the discourse from which I am quoting in a manner much too complimentary. He fusses because the inventor of a dollar has to work desperately now, without rest or reading or art cultivation to keep his women kind in enough dollars to pay for finery, servants, etc. He is becoming a "money-making machine." And serves him right! Instead of inventing the dollar with which to enervate the tastes and character of his women, he should have invented a virtue.

And he is sorry for the stupidity, commercialism and ignorance displayed by men in their conversation. He is envious of the high talk of women about "civics, religion, art, travel and literature." This is how it is: The women improve their leisure. They are goods and chattels who think better and live better than their owners. If men had the same advantages and disadvantages, they might probably spend their time drinking and carousing, instead of embroidering and reading the "best sellers."

And "women could stop this in a year if they wished." It is not clear to me which "this" is referred to here, but if it is "money madness," they could not stop it in a thousand years. Man has a regular hunting, snuffling, clawing, dog-nosed disposition about getting money. It is really the perversion of his old savage instinct to hunt and prey and slay, only now it is much stronger. You might as well say it was the cave woman who drove him forth originally to pass his time killing things, as to say women work him to death now getting money for them. I know men who are rich that are too stingy to give their wives decent clothes, and yet they are still working themselves to death for more money. I have seen women whose husbands had splendid incomes sell eggs and make tatting for "pin money." There is a certain lymphatic, decimated class of them who are extravagant and who do ruin their husbands, but to consider them typical of the relation of women to men as a whole is absurd. Far and wide they are the helpmates, often the bond servants of their husbands and fathers.

"The bad woman never does much harm." He means to men, and he is right, but the harm she does to other women is incalculable, and of no concern to him because he does not suffer it. How Adamesque! "It is the good women who are deadly." Now what are those poor dear deadly good women to say to such thanklessness as that? Really, it doesn't pay to be a good woman except in the good woman's sad sweet conscience. She bears her man child, wears herself out waiting on him and his father, and often in the most menial ways. She sacrifices that he may receive a university training, only to have him arrive at the conclusion so far as she is concerned that "it is the good women who are deadly."

It is of no use to exclaim, "O woman, we want your praise, your approval," this, that and the other, including all that you are or will be, after such a blasphemy. The truth is, men do not know what they want in women, and when they get it they do not know how to take care of it. The first man had a woman given him. And ever since he has been telling tales on her, spoiling her, blaming her with everything, including "almost all the evils that afflict society." Here is the point: If "woman is the cause of almost all the evils that afflict society," man is the cause of woman. He is the cause of her wearing tight, unhealthy clothes—he admires a "trim figure." He is the cause of her powdering and rouging. He demands a "peach bloom" complexion of her even when nature has denied it to her. She wears finer clothes than she can afford because he likes to see her sleek and sweetly elegant. She gambles some, and tells pretty stories to please him, because he likes her to be "nervy" and because he'd rather hear her tell a pleasant little falsehood than the truth, when the truth is apt to nick him in a tender place. But admitting all this, her manifold responsibility for all the evils, is she not also responsible for most of the virtues to be found in society? A woman is naturally cleaner than a man in every way. She is more sanitary morally and physically. She would rather be decent than indecent. She has a taste for white clothes and chastity. These evil, extravagant tastes that have been imposed upon her

by the egotistic vanity of man have injured her character immeasurably in some circles, but if he marries her and gives her a living chance to practise niceness, goodness and maternal loveliness, all her inclinations go in that direction, unless, of course, she has been perverted by him, or some other "him" beforehand.

And coming down to the bottom of the matter, if women are the cause of almost all the evils that afflict society, if men are so incompetent that they cannot hold out against her demands and her selfishness, if she really is stronger than he is, why not give her the opportunity to correct some of these evils? I refer delicately, modestly, to the ballot, also to the management of railroads, trusts, all manner of corporations including municipal governments, even other governments. Apparently she cannot be worse than she is; possibly if she had a wider sphere of responsibility, she would calm down a trifle and give man a chance to knock off work and catch his breath.

Give her the ballot and "chance it," give her a share in the "business" and see if it does not make her less extravagant. Do give her something real and tangible, not just furs and pearls and compliments and abuse! At present we are in such relations to men that we must be cowardly. We have to please him, curry favor with him, but give us equal rights and if we do not develop courage and some tenacious "equality" like a house afire, then this author knows nothing about the nature of her own sex. I do not say that it would be good for us, mind you, but I say we can do it.

NASHVILLE, TENN.

Perpetual Politics Versus Prosperity

BY S. MAYS BALL

SOUTHERNER, NON-PROFESSIONAL.

EARLY in 1861 Lieut. James B. McPherson, U. S. A., said to Lieut. E. P. Alexander, U. S. A.:

"This war is not going to be the ninety days affair that papers and politicians are predicting. Both sides are in deadly earnest and it is going to be fought out to the bitter end. God only knows what may happen to you individually, but for your cause, there can be but one result. *It must be lost.*

"Your whole population is only about eight million, while the North has twenty millions. Of your eight millions, three millions are slaves who may become an element of danger. You have no army, no navy, no treasury and practically none of the manufactures and machine shops necessary for the support of armies and for war on a large scale. You are but scattered agricultural communities and you will be cut off from the rest of the world by blockade. Your cause must end in defeat and the individual risks to you must be great. . . ."

"We can whip 'em with popguns, boys," one noble Southern patriot thundered on the stump from one end of his State to the other. When called on four years afterward to explain during a speech begging for another office, of course, just why that popgun arrangement had failed to work out satisfactorily, retorted, "Because the blank fools on the other side wouldn't fight that way."

We Southerners allowed just such leaders as that one to rush us into four years of bloody war, and have been electing such politicians as that one to high office in the South ever since Lee's surrender.

The politicians of the South were somewhat in the background during the Civil War, not much, alas, see history, but when General Lee surrendered to General Grant at Appomattox they again took charge of Dixie, together with all that therein is, and for forty-five years have had complete control.

And that's what's the matter with the South *today*, as it was *yesterday*. Of course, as a Section—capital "S" always, if you please—*we* do not believe that there is anything the matter with *us;* that is, when outsiders criticize us. On the contrary, *we* insist that it depends always entirely upon the viewpoint, the

prejudice against us, the inability to understand Our Problems, just how much we are criticized.

Around about election times, which in our section of the country arrive—alack a day!—with practically every change of the moon, we are told from the political stump on the hustings that "it took four Yankees to whip one Confed." But it is not explained to us just why it is, handicapped as the Northern and Western States are agriculturally, that we cannot dig more or even as much out of God's good ground as the present-day Yankees.

Does any one believe for a moment that if Pennsylvania, New York, Ohio, Illinois, Indiana, Michigan and seven of the other Northern States of the Union had in the hollows of *their* hands the tightest, the most complete and only *real* monopoly possible on earth, namely, the annual production of the cotton crop, as has the South, that the farmers would long remain in the near-poverty-stricken condition many growers are?

The States of Alabama and Tennessee for twenty-five years have been known to contain, around Birmingham, etc., as rich, if not richer adjacent, piled-up-right-together deposits of iron, coal and limestone than any in the United States. Why, then, did the recent protection of a bank in Wall Street and the consequent release of deposited collateral, namely, the controlling interest in the capital stock of the Tennessee Coal, Iron and Railroad Company, absolutely force the United States Steel Corporation to take over this stock and thereby incidentally to discover the vast undeveloped mineral riches of the South, to the extent that the Steel Corporation is now spending $13,000,000 in development? And wonder of wonders, when this legitimate merger was permitted by the Federal Government, Southern Senators in Congress attempted, did their feeble, spread-eagle, home-consumption best to estop the negotiations, to stop the economic progress of Dixie—on "high constitutional points!!!"

We may go thru the list of the South's developed and vast undeveloped riches, the question would always be the same—*Why?*

One reason, of course, is, that we of the South have been kept back for years by the very men—namely, our teachers, editors, preachers and political leaders—who should have pushed us forward. Poured into us daily, hourly, so to speak, such mental tidbits as: "Heaven itself, when we shall all reach the golden shore, will have few surprises for *us,* because it can offer few felicities that we have not already enjoyed," we became, and many of us, who are yet half a century behind the times in industrial progress, remain, a self-satisfied set of people, to our section's undoing.

Of course, the days of '61-'65 *were* awful. But forty-five years have passed since then. For a long time after the devastation of war and the degradation of reconstruction we had ample excuse for our economic shortcomings. But we have now done all that could be fairly expected of us with that excuse. It is time that we either found another excuse or produced the goods.

Forty-five years ago there was not any Far West or Pacific Coast as we know either today. The Pacific Coast and Middle West have for leaders of all kinds Southern men who have exhibited pointedly what can be accomplished by us. They got out of the environment and atmosphere of politics. There are no richer lands on the Pacific Coast than Georgia, Alabama, Mississippi or any of the Southern States can show. But how the people in the West do work! Nobody works but father on the Southern farm. Of course, father has all the negroes he can feed and pay, and should equal even then his handicapped-by-Nature competitors. But he doesn't do it. *Why?*

Here is the humble opinion of one Southerner who has recently made a trip thru five of the States in Dixie—Alabama, Georgia, Mississippi, North Carolina and South Carolina.

We have entirely too much politics in the South. The bane of the South is continuous-performance politics. Until our farmers, business men and so forth can resist the temptation to drop all work to follow the flag of some loud-mouthed, professional, peanut politician, whose name is legion in Dixie, we will remain where we are now in many lines industrially and otherwise, fifty years behind the other sections of the United

States. One political campaign follows immediately after another. Politics in other sections of the Union doubtless is also a trade, but with us it is an art, a profession in which every one is interested to the exclusion of everything else —business, farming, anything.

For quite forty years the South has been browbeaten, bedraggled at home, held back economically and regarded as in disrepute by the rest of the United States; not permitted politically to divide on economic questions thru the operations within its borders of designing politicians of the dominant peanut type. These dominant peanut politicians had held for forty years in the hollows of their hands—to pass on later to favorites —the government of the South, its future, the progress or lack of it, and the development of Dixie, thru one simple bit of political propaganda, buncombe, to wit: Fear of negro domination, social equality.

For forty years this designing politician, the one who could from his noble chest give forth the loudest mouthings on the stump regarding negro domination, usually received the Democratic party nomination, which meant and means yet an election to the office sought. The South has men in office now, obstructionists, blocks to progress and investment, from Congress down to justice of the peace or constable, whose only evident right of presentation to the suffrage was their "fear of negro domination." It always worked, depending solely upon the greatest amount of wind power in the race as to the successful contestant. Just how or particularly *why* the South was ever permitted to remove campaigns based on fear of the negro's domination from political bargainings by writing into the organic laws of the Southern States "negro disfranchisement" has been to many thinkers, even voters, outside the bustle of the hustings, a never-ceasing source of wonder, a great mystery. To be sure, by use of the white primary, established and employed thruout the South, there never has been, since the South drove the carpetbaggers and scalawags from its soil, any danger *whatsoever* from negro domination or even of negro office holding. Yet "white supremacy" had ever been a telling tocsin with which to bring out the great country vote, controlling as it does State politics. Even in the State of Mississippi, where there are two-thirds more negroes than white persons; even before negro disfranchisement, the negro stood no show to dominate anything or anybody, not even himself. But in that State, as in each of the other Southern States, the negro has, not knowing anything about it, not even casting a vote for years and years, kept us all stirred up, held back industrial development, and elected to high office the cheapest sort of men simply from the flouted fear of him held up before the people.

For quite a while we who are not professional Southerners wondered just why the negro was legally disfranchised. For we knew that this much used "danger" of the negro's appearance at the polls; that for years and years this "fear," this question of social equality—with a basis to it, just as much basis to it as a visit tomorrow of a man from the planet Mars—had kept "me, us and our friends" in political office for generations; simply one shift of the machine after another. But we did not wonder very long; on the contrary. For we now have "prohibition" as our "burning issue." We must, simply must, you know, have an *issue* in the South. Well, we have it all right enough. Prohibition is as good or better possibly for the purpose intended than even negro domination, and that's saying a great deal.

"No wave of public sentiment has ever washed up into place and power so many cheap politicians, and at the same time there has been the most extraordinary exhibition of public confidence.

"Every man who proclaimed himself a Prohibitionist, no matter what his past affiliations or practices may have been, has suddenly become a public idol.

"The most conscientious and scrupulous of citizens without a moment's hesitation have followed to the polls men without conscience and scruple solely because they made speeches denouncing distilleries and saloons."—(William E. Curtis in the Chicago *Record-Herald*.)

It would not be so bad really if we only followed to the polls. But *we* quit work, turn the farms over to the negroes to go to "speakings" during every campaign of the Southern political continuous performance. It's politics, politics, all

the time. It is a rare editorial in our Southern press that deals not with local politics. Of course, we have a great many editors of talent; to mention only three, Clark Howell, of the Atlanta *Constitution;* E. W. Barrett, of the Birmingham *Age-Herald,* and Frederick Sullens, of the Jackson (Miss.) *Daily News,* who attempt vainly to turn us from politics for a breathing spell. But they are vastly outnumbered by the Southern editors who feed us daily on "views with alarm" this, or "we point with pride" to that on God's footstool, our beloved Southland, God bless her! "The only country left in the world where men are contented without money, believe in God, read Scott's novels, bake sweet potatoes properly and vote the Democratic ticket."

And, while we remain contented without money, continue to vote the Democratic ticket every other day as it were, and so on—the fact remains that in our beloved Southland rich, wonderful agricultural lands were sold at a higher price *before* the Civil War than at the present time!

Contented or not without money, we are without a doubt the most self-satisfied race of people on earth. And our exaggerated self-satisfaction only tends naturally to add to our ever-present supersensitiveness. We carry chips on our shoulders all the time. The Marine Hospital Service, U. S. A., in charge of public health, says that about two million of our Southern people are suffering from a disease of the "hookworm," and that by the expenditure of 50 to 75 cents each person those now ill persons could be entirely healed and made self-supporting citizens, assistants in the upbuilding of the South's progress.

"Very well," says Mr. John D. Rockefeller, "I have wintered in the South. The people received me with open hospitality. I like the Southern people. I appreciate their problems, of which they possess no more than any other section of the United States. But I like the South! Here is a million dollars; kill the hookworm!" or words to that effect.

Were we Southerners glad to know that the hookworm would be eradicated, that two million useful citizens would soon be where only human clods were before? Some of us were delighted. But not all of us, *good gracious, no!* Good wood pulp was editorially destroyed to denounce the Oil King—"Trying to make beggars of us, sir?"

One bishop of the Methodist Episcopal Church, South, simply would not wait until he could locate a convenient pulpit from which to cast back into Mr. Rockefeller's teeth his bags of gold, but must rush into print with a "piece" attacking the man who, whatever his other failings may or may not be, only exprest a wish and did offer to help us!

Thousands of sick, thousands of illiterates, waiting to be benefited by anybody's money! But no—we are amply able to—but do not always—care for our own people. We are a proud race, sir, even if many of us are full of worms and thousands do not know the English alphabet. We are not beggars, sir!

And so it goes, which, if it were not so pathetic, would be so perfectly ridiculous.

Then, too, as heretofore stated, it must be remembered always that we are a Section. We insist upon our practical elimination from any participation in real national events, progress or riches, just as if we were on foreign soil. The politicians we send to Washington—not all, of course—accentuate the South's aloofness from other sections of the Union. One of our Southern Congressmen seemed to find it necessary recently to shoot a negro on a street car to proclaim *his* standing, which he did all right enough, for home consumption, of course. Our representatives in Congress, as a general rule, deal in the weighty discussion of "high points" in constitutional questions—while the North, East and West go sailing by us at the rate of a mail train. One would suppose really now, that if the Republican party in control of Congress should propose something that would benefit the entire country, the South included, as much as our Democratic representatives tell us the Republicans would dislike that—that our Southern Congressmen could be relied upon to work in the interest of that movement. But not at all! They would fight the movement. "Go on record, sir; make it an *issue,* sir, against the damnable Republican party, sir"—to help Bryan when he runs again and again.

Clark Howell, of Atlanta, and other leading Southern editors, simply had to force our Southern Senators to vote for President Roosevelt's Panama revolution scheme. High points again! And this was accomplished solely by thundering at them every day editorially the fact that if there was *any* section of the Union to be benefited by the Panama Canal, surely it was the South. And that if the Southern Senators didn't know what every schoolboy in the United States knew, then we would have to get other Senators. In a word, the editors had to say in effect to the Southern Senators: "For God's sake, for this one time at least, remember who sent you to Washington. It wasn't Lincoln, Neb., so quit making *issues*. Vote for what will benefit the section that placed you where you are. Or come home, so that we can elect some one who *will* remember his constituents' interests."

All that was quite a revelation to some of the Southern Senators. But very little permanent good was accomplished—see the daily press! Nor have later editorial remarks resulted in much good to the South in the attempted enlightenment of Congressmen who use their highly paid for time to introduce in Congress resolutions for the repeal of the Fourteenth and Fifteenth amendments to the Constitution, inquiring as to the cost to the Federal Government to locate John Jacob Astor when supposedly lost in the Gulf of Mexico—idiotic performances like those, for home consumption, you see.

In the writer's own State, Georgia, there is raging at this time—July, 1910—a very wearing, disgusting exhibition of the game of peanut politics. The Legislature of Georgia, unfortunately for the State, meets annually in a fifty days' session. Every year the business interests of the commonwealth never know whether to be amused at or fearful of the Voice of the People in legislative halls assembled. Just now, in Georgia, Hoke Smith and Joe Brown both wish to be Governor. Two years ago Smith was Governor and Brown turned him out. This year Smith, resentful possibly, wants Brown's job; therefore everything stops—legislation, the economic progress of the State, and so on, while half the Legislature, controlled by the Brown and Smith interests respectively, wrangle and fight and fuss. No legislation which might assist Brown or Smith, or incidentally the State of Georgia, receives any attention. Meanwhile the State expects nothing now of this Legislature other than tax bills on dogs and farming implements, etc.; resolutions to inquire of Washington why a negro internal revenue collector at Atlanta is kept in office; appropriation of $100,000 to build a monument to women and soldiers of the Confederacy on the State Capitol grounds, when the State's schoolteachers haven't been paid for months on account of lack of funds; mileage and per diem, of course. Then home, thank goodness, says Georgia.

With child-labor laws ineffective where there are any, illiteracy, poverty, oh, so many causes the Daughters of the Confederacy could and continually do take up actively, each Southern State recently authorized the expenditure of thousands of dollars, under the power of the Daughters' will, with which to build monuments to their glory, which is great already, and needs no brass, no stone, in the South, that it may endure.

When we Southerners are not voting, listening to political speeches or reading red-hot editorials on paramount issues of the day, we hold conventions. It is possible to "hold a convention," political or otherwise, anywhere in the South, by simply blowing a horn or beating a drum, so to speak. After these much beloved, highly appreciated, always well attended conventions on this or that subject—it doesn't make any difference what the subject is—home we go to immediately forget all about it until the next meeting. Or when we read editorials or listen to sermons or orations describing always what we in the South *were*, not what we should or could be *today*, something on the style of the following quotation, which is not taken from a spread-eagle Fourth of July oration. It was offered a few years ago as a serious contribution to current discussion in a prominent Eastern magazine, by a one time Chief Justice of the State of Mississippi:

"Illimitable wealth and boundless content were present everywhere. Her civilization was, in all that makes the real blessings of

civilization, the purest and loftiest, time has ever yet known.

"Her people stood apart among the nations of the world.

"Their bosoms were the home of the most exalted honor.

"Whatever was mean or low or sordid fled scorned from her borders.

"Majestic truth, imperial conscience, Olympian power toned by the very courtesy of the gods lifted its noble men and glorious women far, far up above the levels of other civilizations.

"Content, happy, prosperous, moved always to splendid action by the highest ideals, if some god descending from superior worlds in quest of the race most akin to his own, had swept with his vision the land of the South in '60, he would have claimed us as his offspring and here made his home."

Now, seriously, is there any wonder, sir, that we are a self-satisfied, supersensitive, proud race, sir, after digesting literary meals of that sort daily for forty-five years?

The South produces now one annual crop, cotton, which this year will be worth about a billion dollars. Or *twice* as much as the output of all the gold mines of the world for the same year. In the South there are 62,000 square miles of bituminous coal, as against 17,000 square miles in all Great Britain, Germany, France and Austria combined. Over 40 per cent. of all the standing timber in the United States is in the South. The South grows economically corn, wheat, oats, tobacco—over 80 per cent. of the latter United States crop produced by the South last year. We mine petroleum, phosphate, iron, coal, limestone and innumerable minerals. Of the 10,341,276 foreign-born citizens in the United States in 1900 the South only had 539,337!

There appeared last year a book, "The Southerner, the Autobiography of Nicholas Worth" (Doubleday, Page & Co.), which describes completely the South as it was, and is, and can be if it will. It is a volume of a decade, especially for the Southerner. Nicholas Worth had a creed, misunderstood, of course, misinterpreted by all his Southern brothers. That's a habit of ours, namely, misunderstanding, getting the chip knocked off our shoulder, when any one wishes to show *us* anything. Carrying truth and benefit to us all, Worth's creed should be engraved in the hearts of all our Southern people. It is:

"I believe in this land—our land—whose infinite variety of beauty and riches we do not yet know. Wake up, old Land!

"I believe in these people—our people—whose development may be illimitable. Wake up, my People!

"I believe in the continuous improvement of human society, in the immortality of our democracy, in the righteousness of the masses. Wake up, old Commonwealth!"

ATLANTA, GA.

Good Clothes

BY EMMA CARLETON

THE styles are too much with us; late and soon,
Gazing and choosing we lay waste our powers;
Shop windows show us little that is ours—
For we have frittered taste away—a useless boon;
Freak hats that tower upward to the moon—
High heels that tilt us forward at all hours—
Queer frocks that flash us past, like crazy flowers—
In these—in all things—we are out of tune.

It wears us out. Great Pan, I'd rather be
A dowdy peasant, weeding in the corn—
A Dryad, draped in mosses from a tree—
A gypsy, garbed in gaudy rags forlorn—
A mermaid, flaunting fishnet in the sea—
Than hark Dame Fashion blow her foolish horn!

NEW ALBANY, IND.

The Reformation Monument at Geneva

BY ALBERT BUSHNELL HART

Professor of American History in Harvard University.

IN a few months the Protestant world will begin to celebrate a series of four hundredth anniversaries of the great events in the history of that mighty religious, intellectual and political movement which is conveniently combined under the one word Reformation. Wittenburg will soon restate the ninety-five theses; Worms will hold an historical Diet, with a representation of Calvin's school of the University of Geneva.

As the home of the greatest Protestant theologian; as a school for ministers and statesmen thru whom Calvin's teachings were spread abroad thru the world; as the seat of a university which survived the French Revolution, and escaped the ingenious scheme of Thomas Jefferson in 1794 to remove the whole

THE GENEVA MONUMENT.

Charles V and of the indomitable monk, Luther; Zurich and Edinburgh will, in due time, recall to men's minds Zwingli and John Knox. Of all these sanctuaries of Protestant Christendom none has so hallowed and preserved the memories of the era of storm and stress as Geneva. Last year it celebrated the four hundredth anniversary of the birth of its great citizen and untitled prince, John Calvin; and at the same time the three hundredth and fiftieth anniversary of faculty to America; as a little city state, still carried on chiefly by Protestants and in the Protestant spirit, Geneva may fairly be looked upon as the metropolitan city of the world-wide Protestant Church. It seems impossible to conceive of a Protestant Church of France, of Scotland, of England, or even of the United States, in which there should have been no Calvin; and if by the famous escalade of 1602 the city had been taken and sacked, and that Protest-

ant lighthouse had been extinguished, the Christian world would have lost its boldest champion.

Because of the wide reach and extent of the religious and political principles formulated by John Calvin, and exemplified in the government of which he was the chief; and because also of the native intelligence, spirit and devotion of the Genevese, that little city has been judged a fit place for an international memorial of Protestantism. The city of Calvin was a city of refuge for many French, English, Scotch and German clergy, whose influence has spread incredibly wide; there are 4,000,000 Protestant Calvinists in Hungary; there is a body of Calvinists in South Africa; and the immortal Institutes were the daily food of the Puritan clergy of New England. Recent researches have shown how from Geneva the influence of Calvin spread thru unsuspected channels, and inspired theologians and political writers. For it is a great mistake to look upon Calvin simply as the author of a system of theology; he built up a government which not only lasted thru his life, but two centuries beyond it; and, so far from standing for a theocratic government, Calvin was one of the few men of his time to recognize that, for the freedom of the Church itself, it must accept civil government in civil matters.

It is not the purpose of the Genevese, however, to put Calvin forward as the only leader of Protestantism. An inter-

THE GROUP OF REFORMERS—FAREL, CALVIN, BEZA AND KNOX.

national committee was formed some years ago to invite subscriptions and prepare plans for a "Monument to the Reformation at Geneva"; in June, 1909, a commission of experts accepted the noble design shown in the illustration—a design almost unique in modern sculpture. It suggests the street of sculptures outside the gate of Athens, or at the Roman tombs at Aliscamps. Against the massive wall, which is on the lines of the ramparts of the city from which Calvin often looked out, is placed a group of four figures: Calvin and Farel, Beza and John Knox—friends, pupils and enthusiastic apostles of Calvin.

The scheme, however, does not stop with these men, who are fitly commemorated in the city where they lived. It includes a group of statues representing great Calvinist leaders of other countries, Coligny, William the Silent, the Great Elector, Oliver Cromwell, and Bocksay the Transylvanian. For the American branch has been sought a man who may fairly be considered an exemplar of the highest Puritan spirit of that same time, and is also known thruout the Christian world. John Winthrop was suggested as the typical head of a Puritan commonwealth; Roger Williams was selected instead, because, tho not a theologian in Calvin's sense, he was the man who laid down the foundation principle of the American Church—freedom to worship God according to the dictates of our own conscience, and toleration of our neighbor who worships God according to the dictates of his conscience. Roger Williams, the beginning of whose life nearly overlaps the end of Calvin's, was, like that great leader, a creative statesman; and in the long run, Calvin's principle of free will was bound to escape from its shackles, and to lead to the corresponding principle of free worship and toleration of which Roger Williams is one of the greatest leaders.

The Genevese have furnished the motive force for this great Protestant monument; they have selected a superb design which expresses the many-sidedness of Protestantism. Tho not a rich city, the Genevese have given liberally to the enterprise, which they expect to bring within the limits of about 500,000 francs. They look for appreciation and aid from America.

The monument and the preparations for it show the vitality of Protestantism, which has so affected the Catholic Church that if that mighty power four centuries ago had been what it is now, there would never have been a revolutionary Reformation. Protestantism has ramified thruout the world; it has produced a brilliant line of religious teachers, scholars and statesmen; it has educated the young, trained the elders in self government, and given to mankind a heritage of sacrifice and of achievement worthy a splendid monument such as is planned for Geneva.

CAMBRIDGE, MASS.

The Straight Edge After Eleven Years

BY WILBUR F. COPELAND.

FOUNDER OF THE STRAIGHT EDGE.

NINETEEN years ago I read Bellamy's "Looking Backward," Gronlund's "Co-operative Commonwealth" and Tolstoy's "How I Came to Believe." Being the son of a Methodist preacher and a combination of Holland Dutch, French Huguenot, Quaker and Pilgrim stock, all done into a Western Reserve Yankee fresh from an Ohio college where they had "revivals" every year, I had undertaken, with the coöperation of several other young men and women, to conduct a "mission" in the unsavory section of New York City south of Washington square.

In the course of these mission meetings, one Saturday night, twenty-two men knelt at the mourner's bench in response to an invitation to "lead a new life."

Most of them were young men, in fairly good health, with no reasonable

prospects of going to heaven for thirty or forty years. In the meantime they had to eat and sleep, have their clothes washed and their shoes mended, with new clothes and new shoes occasionally; and, if perchance any of them wanted to get married and have a home, as I expected to do soon, the "new life" wouldn't amount to much if it didn't afford that opportunity.

How should these men and others like them make connection with the world of industry, whereby they could have the common necessities of life, with a few of the comforts and luxuries?

I had certainly struck a big pile of cobblestones that had been rejected by the social builders. Could it be that these were to be cemented together by religious enthusiasm such as I had experienced, and become the chief cornerstone of the new order I had been reading about in Bellamy and Gronlund?

During my college days at Ohio Wesleyan, I had been for three years private secretary to President Charles H. Payne. A trustee of the university and a frequent visitor to the home of President Payne was Rutherford B. Hayes, a quiet but delightfully interesting old gentleman, who had a hobby of "industrial education," born of his experience as President of the United States during the labor war of 1877 and during the critical "reconstruction" period in the South. I readily absorbed the idea which Mr. Hayes sought to have incorporated in a department of the university. To connect self-supporting industry with education was no new or untried theory with me. I had been conducting such a department on my own hook. Accordingly he found me a more appreciative listener to theories of industrial democracy, which he readily admitted were fifty years ahead of the times, than were those who were absorbed in the problem of increasing the "endowment," that mysterious process whereby an income which nobody had to work for paid salaries and made everybody in sight happy.

So when, a little later, I found myself in New York and face to face with the problem of the homeless and friendless and useless man, I recognized that my life work was cut out for me.

After several years of looking over the ground and trying to get benevolently disposed people interested in an industrial rescue mission, my wife and I decided to make our home a center for the study of social and industrial problems—"a school of methods" we called it—and we invited anybody who wanted to join with us in this branch of study to do so. With the help of persons who accepted this invitation, notably the late Ernest Howard Crosby, the publication of *The Straight Edge* was begun, "to formulate plans for the establishment of useful, self-supporting coöperative industries."

"Straight Edge" was an industrial paraphrase for Golden Rule. The name stuck and gradually displaced the original name.

Several hundred persons answered an advertisement which I put in the New York *Herald,* as follows:

> WANTED.—Men and women who take the teachings of Jesus Christ seriously, and would like to work in a coöperative enterprise founded on the Golden Rule. State age, occupation and marriage relations.

Most of the applicants "merely wanted to see what it was like," or were satisfied with holding meetings and talking about the "present system" and the "new order." A considerable number, however, actually needed employment and were ready to associate themselves with any proposition which afforded food and shelter, even tho the problem of clothing, beyond what they had on, had to be left with Providence.

I had nothing to offer but a chance to help print, fold and mail *The Straight Edge* and a chance to help Mrs. Copeland with her domestic problems, which included the care of three children, ranging from three years old down to the baby just born. A young army surgeon whom I had met at the Mills Hotel, just back from the war in Cuba, had helped usher the baby into the world and had sent for his wife in Tennessee to join us and help nurse Mrs. Copeland. The doctor sold some war relics and bought furniture to help fit up the rooms we had taken. An elderly man, a civil engineer and inventor, whose own home had been broken up, took a hand with the children, washed dishes and made himself generally useful for the first year. A young fellow from a Western farm

stranded in New York "kicked" the printing press. A socialist printer set type and helped gather in a few dollars for job printing. A young woman whose husband had deserted her and who needed a place to stay until she could get alimony, cooked and ironed and did housework. The men washed. For folding and addressing and light routine there was no lack of helpers. Every few days Somebody else stepped in to fill the gap or to make a new place for himself or herself. Among those who answered the advertisement already quoted was David C. Barton, who recognized in the Straight Edge an opportunity to express the inspiration he had received at Dwight L. Moody's school at Mount Hermon. Barton wasn't a quitter, but has been on the job over eleven years now.

Gradually we saw ways of enlarging our "industries." A man who had been cook in a recently busted coöperative colony in Georgia came along and wanted to help us. Mrs. Copeland showed him how to bake her kind of bread, and friends who got a taste of it wanted us to supply them. Our culinary arrangements became cumbersome with so many to feed, so we started a restaurant. I gave up all outside work and the salary which had been making up deficiencies so that I might be free to put in my whole time on the Straight Edge.

Several young women were attracted to the Straight Edge, and their democratic association with young men in working clothes and mutually interested in a worthy purpose broke up several bad matches, made several good ones and resulted in several happy marriages. (No unhappy ones so far.)

This glimpse of the early Straight Edge will serve to show that the idea had vitality. We had demonstrated the first important fact, namely, that there are plenty of unattached people willing to work even under forbidding conditions and to take a chance on compensation, if only they have a place to work, a few things to work with, assurances of a square deal, and somebody to plan and supervise and sound a keynote of inspiration and enthusiasm.

. . . . . .

During the last eight years, knowing pretty definitely what we want to do, and believing that it is only a question of time and patience to secure the coöperation of those who can provide capital for the extension of our work, the "Straight Edge Industrial Settlement" has taken permanent corporate form. Nearly 500 persons—twenty at a time on an average—have earned their living in the industries. Many who got discouraged and quit have come back, some of them again and again. Several hundred friends in various parts of the world have learned about our work, have been attracted by it, and have "committed overt acts of love and good will," causing themselves to be enrolled in the Straight Edge Fellowship. These have furnished capital to the extent of several thousand dollars, which hasn't been used up, but is still on hand in the form of a growing industrial plant. We now have a "hacienda" at Alpine, Bergen County, N. J., where the children of workers keep healthy and rosy and learn how to do useful work as part of their education, and where we are building concrete houses and workshops, from which we ship products for sale at our city stores and depots. We expect soon to be making daily trips by automobile between our New York headquarters at 111 Manhattan street and our country place eleven miles away.

The experience of these eleven years of hand-to-hand struggle with social and industrial conditions in New York has deepened my conviction of the practicability of organizing the waste labor of the world into useful, self-supporting coöperative industries.

The problem is threefold:

1. To find the men and women who need work.

They do not travel in droves. They are unobtrusive. They are not beggars and mendicants, drunken loafers and prostitutes. These are quite another class, who have learned the shady art of getting a living too easily and whom the work test readily eliminates, altho it is easy to spend a great deal of time and money "investigating" them to little or no purpose. The people who need work must be *found*. They are well worth the trouble. And finding them is not a difficult task, if they are treated as honorable, self-respecting citizens, and not as "cases" or "inmates."

2. To secure the necessary working outfit.

People who need work as a rule have no capital and no friends who are in position to furnish capital. Yet a place to work and things to work with require a substantial sum. From my experience I should say that an average capital of $500 per worker for a minimum-sized group of twenty is necessary to start people to working on such a basis that they can earn their living, pay back their capital and gradually increase their facilities. The average capital thruout the industries of this country is $2,065 per worker employed. The United States census of manufactures for 1905 showed that 533,769 establishments, employing 6,718,618 persons, with a total capital of $13,872,035,371—an average of $2,065 per worker employed—produced $16,866,706,985 worth of goods at a cost of $9,497,619,351 for materials, $3,623,589,623 for wages and salaries, and $1,651,603,535 for miscellaneous expenses, leaving a margin of interest and profit amounting to $2,093,893,976, which is $312 a year or $6 a week per worker employed. Many educational and philanthropic institutions have an outfit worth $1,000 to $5,000 for each beneficiary accommodated at a time.

3. To provide supervision.

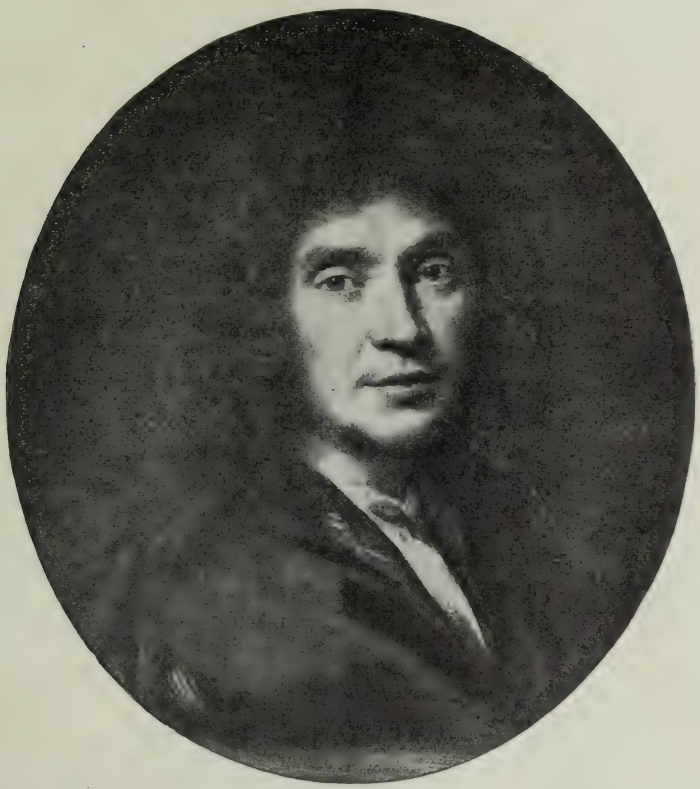
This is the crux of the proposition, and it is usually approached from the wrong direction. In ordinary business "brains" are hired at prices quite out of proportion to the prices paid for "labor." Many people believe that this must be so. But brains that can be hired are wholly unfit for the task of organizing coöperative industry. This demands a higher type of brains, namely, the kind that are not purchasable at any price; the kind that conceive of their talents and abilities as a sacred trust, to be administered for the benefit of humanity. This quality of brains, in combination with ability to plan sanely, grasp details, execute, and stay on the job, has had little encouragement to venture into modern business independently, and yet it is not so rare as the cynical imagine. No home, no club, no church, no institution can hold together without it. Even in business, where the pay envelope is supposed to be the omnipotent bond of association, there has to be somebody who doesn't run away with the cash or hypothecate the plant on every possible opportunity. My observation is that this quality of brains develops where it is needed and expected.

The problem of supervision involves the form of holding property, the method of distributing earnings, responsibility for the uniformity of products, the assignment of work, the purchase of materials, the payment of bills, and many other details of business organization which depend on this same quality of not-for-sale brains.

I am often asked why the Straight Edge has not got on faster and made homes and industrial opportunities for more people, and why those who spend money lavishly for every conceivable purpose have not provided capital for the equipment of our industries.

This does seem strange at first glance. Dowie has built Zion City, flourished like a green bay tree, and collapsed. Sinclair's Helicon Home Colony has been organized with a flourish of trumpets and plenty of capital, and has gone up in smoke. Thousands of other enterprises for human betterment have sprung up, made more show that the Straight Edge ever made, and vanished. The Straight Edge has kept pegging away, gradually perfecting a working plan, increasing its equipment, working up to the limit of its facilities, making its workers more comfortable, getting its feet on the ground, getting its products on the market, making the pleasant acquaintance of hundreds of friends, not boring them for money, but keeping its plan before them and inviting such coöperation as they are prompted to give. It has aimed first of all to embody universal principles that will make it permanent, and it has refused to sacrifice those principles for a temporary advantage. People who "have money to spend for every conceivable purpose" do not readily understand industrial democracy. Their training gives them a contempt for it, indeed, which has to be overcome by some result which they can understand.

That takes time and patience.



New York City.

Literature

Molière

"Every one of us is necessarily, even if unconsciously, either a Platonist or an Aristotelian, an idealist or a realist," says Prof. Brander Matthews in *Molière: His Life and Works*,* and he adds:

"It is true that an idealist, with a firm hold on things as they are, is separated by no wide gulf from a realist who has a deep appreciation of the mysteries of existence; and yet the gulf is ever too broad to be bridged."

MOLIERE.
From a photograph by Braun, Clément & Co of the painting by Mignard, in the Musée de Chantilly. (Scribner's.)

It is well for the Platonist who loves Molière to bear this in mind while reading Professor Matthews's pages, he being essentially—even if unconsciously—an Aristotelian. His hold upon facts, as well as his love for them, is too firm to permit him to attempt the bridging of the gulf he speaks of; a mystery that cannot be resolved into fact having no charm for his Aristotelian heart. "Molière," he says, "beyond all question, was a realist"; and beyond all question his latest biographer is a realist too. There is a fitness in this that challenges criticism; yet Molière's appreciation of the mysteries of existence enabled him more nearly, perhaps, than any Aristotelian in the realm of literature to reach the Platonic shore; whereas, to Professor Matthews, that shore lies leagues away, his purpose being as he states, "to set forth the facts of Molière's life, stripped of all the legends which compass it about."

Altho this is a practical age, with the Aristotelians in the majority, there are

*Moliere: His Life and Works. *By Brander Matthews, Professor of Dramatic Literature in Columbia University.* With Portraits. New York: Charles Scribner's Sons. $3.

still in this work-a-day world of ours many to whom facts are not all satisfying. To these the charm of the story of a great man's life lies mainly in the pleasant telling of those very legends Professor Matthews eschews, as well as in unconventional excursions into biographical byways. Such readers seek for intimacy rather than analysis, the synthesis of a great man's character from the elements of both his life and environment—ay, even tho the biographer's imagination be called into play in the attempted solution of some mystery—finding a more sympathetic response in their hearts than the succinct presentation of indisputable facts. These must seek elsewhere than in Professor Matthews's work for their Molière; for, scholarly and just as this is, it is devoid of colorful and gossipy touches, as well as of the legends that compass the dramatist's life about.

The Platonist who loves Molière will dislike being hurried by Professor Matthews down the main street of fact without so much as a glimpse into the romantic bypaths he longs to explore. He may admit that "Elomire Hypochondre" and the "Fameuse Comédienne," the notorious libels directed against Molière and his widow, are "abusive pamphlets wholly beneath credence," yet he will resent the dismissal of Madeleine Béjart as "an actress with whom Molière was to be closely associated for more than a score of years," or merely as "a woman of shrewd common sense" who "failed to manage her own life satisfactorily." When examined beneath a cold microscope of fact, Madeleine Béjart may appear thus insignificant; yet the Platonist will prefer to believe with Gustave Larroumet that

> "Even if love be omitted from Madeleine's relations with Molière, a big and beautiful part remains for her to play beside the great man—the part of friendship and advice, of a vigilant protection that was almost maternal."

Luckily for the equanimity of Professor Matthews's Platonic readers, his purpose, "to set forth the facts of Molière's life, stripped of all the legends which compass it about," is but one of the three tasks he has set himself; the others being "to trace his development as a dramatist," and "to show his intimate relation to the time in which he stands." Luckily, too, the space devoted to biography is slight, by far the major portion of this admirable work being devoted to the latter purposes. Indeed, one is tempted to ask why the two or three biographical chapters were inserted at all, so completely homogeneous do the critical chapters appear without them. Instead of shattering charming idols, Professor Matthews might just as well have plunged into the critical depths of his work after merely stating that:

> "Molière was born in Paris; his family was well-to-do; he saw the opening glories of the reign of Louis XIV; his health was never good; he made money and spent it freely, living largely and having an open hand; he had a gift for friendship and he was fortunate in his friends; he was unhappily married; he died when he was only fifty-one and when he may not have revealed his full power."

This is Professor Matthews's own summing up of the fundamental facts of Molière's life, and they are about all the facts an Aristotelian biographer need bother about. Having marshaled them, he might readily have begun the real task he has set himself, for, having stripped Molière of the pleasing legends in which he has been clothed for centuries, he has been forced to spin for him a matter-of-fact suit of modern cheviot out of quite as many "ifs" and "maybes" as a Platonist would have used in weaving a more romantic garment of brocade and lace to cover the naked facts of his life.

Howsoever hurt a Platonist's feelings may be at finding Molière, the idol, shattered and the pieces stuck together to represent what Professor Matthews deems a true semblance of Molière, the man, even the most ardent idealist can utter only words of praise regarding the critical portions of this book, analytical tho they are. The ancients dubbed Aristotle "the father of those who know." His modern disciple is assuredly the father of those who know about Molière—at least in the Anglo-Saxon world. It is forty years, by his own confession, since he began to hope that he might one day be able to write a life of Molière. During those forty years, he has thought Molière, talked Molière, and taught Molière so assiduously that it would be an impertinence even to suggest that there is anything about Molière he does not know.

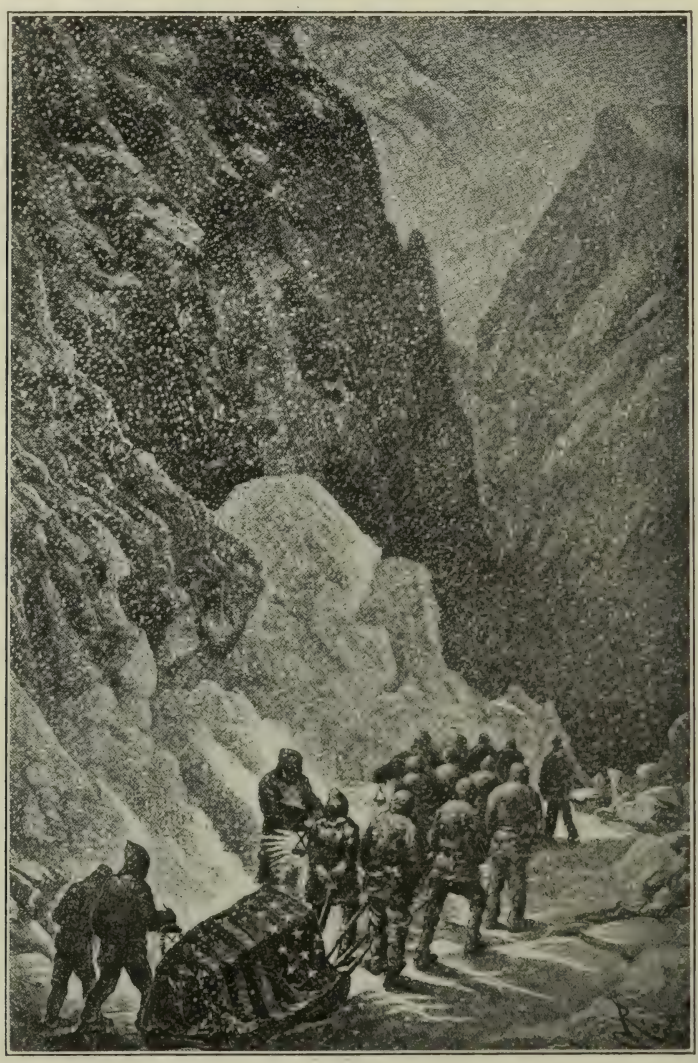
His Aristotelian point of view is, after

all, a temperamental matter in no way dimming the Platonist's admiration for the erudition with which he illuminates the pages setting forth Molière's development as a dramatist. To these there is naught to say but "Amen"; yet the treatment is esoteric. The analysis of the plays is so correct, their merits so wisely set forth, the steps by which Molière rose from a mere writer of farce to be the world's master of comedy, presented in so masterly a way, that the man who knows his Molière cannot close the covers of this book without feeling that Molière the dramatist has been revealed to him more justly and sanely than ever before; yet there is danger that the man who does not know his Molière will find himself hopelessly at sea in these brilliant pages, so scholarly are they, so replete with suggestions demanding a knowledge both of Molière and his times for their understanding. Indeed, the general reader may find himself surfeited with caviar; for, altho it is a book every Moliériste must read and re-read, while blessing Professor Matthews for having written it, those who wish to make the acquaintance of the master of comedy would better seek their introduction elsewhere, *Molière: His Life and Works* being essentially a book of value for those who have met him, not once, but many times.

HOBART CHATFIELD CHATFIELD-TAYLOR.
Author of "Molière: a Biography," 1906.

The North Pole

THERE is but one North Pole and Peary is, fortunately, the only discoverer of it. Consequently the publishers of his narrative[1] are quite justified in applying to it the term "unique," which publishers in general are apt to use about any book that in their opinion is a trifle out of the ordinary. The work has been given a form suited to its importance; four hundred pages of generous size, a folded map of all the Arctic explorations, eight



[1] THE NORTH POLE. Its Discovery in 1909. *By Robery E. Peary.* New York: Frederick A. Stokes Company. $5.

ESKIMOS AT THEIR SUMMER HOME.
From Whitney's "Hunting with the Eskimos." (Century Co.)

full-page plates in colors and 110 illustrations from photographs. The more important of these are reproduced without any retouching and the appendices contain facsimiles of the original observations as recorded in the notebooks of Marvin, Bartlett and Peary. The American reader who a few months ago was clamoring for "the proofs" has now an opportunity to figure over the sextant readings to his heart's content. He can also learn what an "artificial horizon" is.

After having thus verified the returns and satisfied himself that his patriotism has a right to rejoice he can give himself up with a clear conscience to the pleasure of reading the narrative. There is

FUNERAL OF CAPTAIN HALL.
From Wright's "Great White North." (Macmillan.)

no place upon the earth's surface that has so little intrinsic interest as the poles; no spot so devoid of historic, legendary, ethnological, botanical, zoological, geological value. There is no form of travel that has less variety and novelty than sledging across Arctic ice. Yet no books of exploration are more popular, none are drawn so often from the public libraries by old and young. Since they

are written by men who make no claim for literary art, it must be that their interest lies in sheer heroic endeavor, in struggle for its own sake. The race for the Pole was like a game, an exciting contest with a fictitious aim, for the mathematical point where the meridians meet has no more significance than a goal post. The early explorers of the Arctic region set out to find a northwest passage, a discovery which would enrich them and their country. But as the years went by the futility of this quest became demonstrated and the Arctic region became so well known that it could have no further surprises for us, the northward impulse became more and more idealized and abstract and was freed from any reward except the fame of accomplishing a difficult task.

Commander Peary's story is therefore to be read as a tale of chivalry, the quest of the geographical sangraal, in which foes more dangerous than giants and dragons were encountered and conquered. The most prosiac details of the monotonous day, therefore, become attractive, and reading of the crisis moments, as when the "Roosevelt" bit her way thru the ice and the beginning of "the final spurt," gives one a thrill as tho he were sharing in the adventure instead of sitting at ease in his study chair and exploring by proxy.

The spirit of adventure equally finds expression in the narrative of a sportsman who went North about the same time on the "Erik," Mr. Harry Whitney.[2] He wanted muskox and other things of the kind and failing to find them at first he suddenly decided to stop over night with the Eskimo and come back on the next steamer, that is to say on the "Roosevelt" a year later. Not intending to spend the night there he did not have his winter clothing along, but he did not allow a little thing like that to deter him. The ladies of Etah soon supplied him with made-to-order suits and then he started out on his hunting trip with only Eskimo for companions. The general reader knows more about the Eskimo than many other people who are more numerous and have played a larger part in the world's history. Not much of novelty then is to be expected, but the most interesting descriptive passages. Mr. Whitney's book, as also of Commander Peary's, are those that relate how this strange race has adapted itself, to its almost impossible environment. What Arctic conditions meant without the resources of civilization Mr. Whitney discovered when his fuel and food gave out and his shack of packing boxes could not protect him against the storm.

The history of quest of the Pole can now, for the first time, be written since it completed. *The Great White North*[3] includes in one solid volume of five hundred pages five hundred years of Northern exploration from Cabot to Peary, a noble roll, Bering, Hudson, Ross, Parry, Franklin, Kane, Long, Greeley, Nansen, Abruzzi and many others. Their narratives have been brought together from various books and periodicals and briefly retold with sufficient skill while the introduction of direct quotations, wherever possible, brings the reader into closer contact with the originals.

Whirligigs. By O. Henry. New York: Doubleday, Page & Co. $1.20.

It is no small thing for a nation to lose one of its best short story writers. Perhaps not since the death of Frank Norris has America suffered so in this regard. The present volume shows what excellent work O. Henry did in his later years, and what might have been expected from his genius had he lived yet longer. It is hard to select the best among so many good stories, but to our mind "Calloway's Code" and "The Ransom of Red Chief" are the funniest and most original. The plot of the latter deals with the fate of two kidnappers who "caught a Tartar" in the shape of an unusually active and imaginative small boy. Nothing will ever tempt us to tell the plot of the former story, as, among other things, it contains a slight upon the dignity of the editorial office. "The Marry Month of May" and "Georgia's Ruling" deserve special notice on our part and that of the reader, while "The Roads We Take" is a characteristic example of the author's style,

[2] Hunting with the Eskimo. *By Harry Whitney.* New York: The Century Company. $3.50.

[3] The Great White North. The Story of Polar Exploration. *By Helen S. Wright.* New York: The Macmillan Company. $2.50.

the scorpion style, we might call it, for the scorpion is a funny-looking creature with a sting in the tail that curls over the back of it and strikes most unexpectedly.

Husband, and The Forbidden Guests. Two plays. By JOHN CORBIN. Boston: Houghton Mifflin Co. $1.25.

The American drama is getting to be in earnest. Mr. Corbin publishes two plays attacking our national sin of race suicide, vigorously scoring the ladies who sacrifice motherhood to bridge or art. And publication does not mean in this case, as it does sometimes, that the plays are sent out to find readers because they have failed to find hearers, for *Husband* is to be produced in the New Theater of New York this year, where it deserves to succeed, for it is as dramatic as it is readable. The theme is handled in a sincere and inoffensive manner. The only fault we have to find with Mr. Corbin is that he cannot resist the temptation of introducing his clever remarks and epigrammatic definitions in the midst of the most tragic scenes, but this weakness he shares with playwrights of more renown.

Catholic Religion. A Statement of Christian Teaching and History. By the Rev. Charles Alfred Martin, Member of the Cleveland Apostolate. 16mo., pp. xiv-459. Cleveland, Ohio: Apostolate Publishing Co. $1.

The relation of the present volume to the "Apostolate" would seem to indicate that it is meant to attract Protestants to the Catholic Church; but this can hardly be the case; it must be meant to strengthen the faith of Catholics. It is not a polemic and not a plea, but an "edifying" book, full of comfort and satisfaction to those who already possess and love the faith. There are in it a multitude of statements and judgments and omissions as to which a historical student would find occasion for criticism, and even, as it appears, the picture of lads and lasses of fourteen kneeling for their first communion is antiquated, for the Pope has lowered the age to seven years. As an example of euphemism one might observe that it is stated that his divorce of Catherine of Aragon from Henry VIII "cost Cranmer his life" when Queen Mary came to the throne. The book is admirably adapted to serve its purpose, but we cannot praise it as a superior example of the bookmaker's craft.

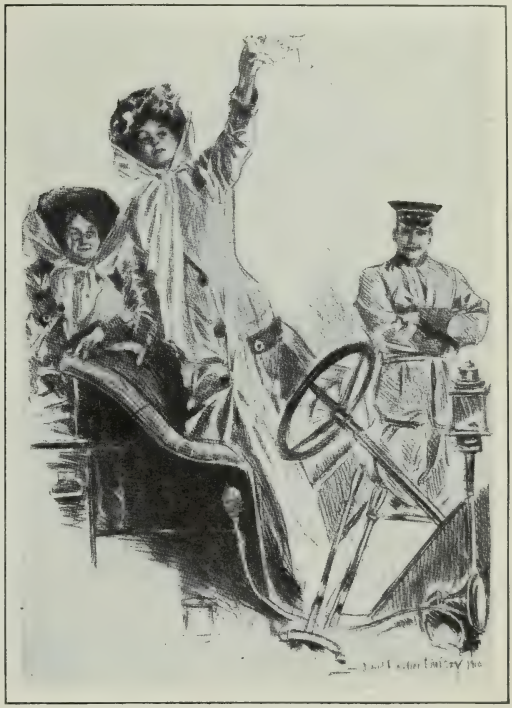
Franciscan Days of Vigil. A Narrative of Personal Views and Developments. By Richard de Barry ("Brother Angelo"). New York: Longmans, Green & Co. $1.50.

This record of the experiences thru which the author passed from his novitiate in the Franciscan order to his reception into the Anglican Church has a literary and psychological interest as well as theological. It is written in an admirably simple style and reveals clearly and sincerely his struggles to accommodate an ever-widening faith and experience of life within the ever-narrowing limits of ecclesiastical restrictions. It is curious to note that it was his revulsion against the race hatred as manifested by the Catholics of France against the Jews in the Dreyfus case which led to his revolt against the Church rather than his inability to construct a passable *modus vivendi* on questions of dogma.

Geographical Essays. By William M. Davis. New York: Ginn & Co. $2.75.

Geographical Essays, by William M. Davis, is made up of selections from his extensive writings of the past twenty years, presented in a form adapted to the use of advanced students and teachers. The essays are grouped in two divisions: First, those dealing chiefly with the teaching of geography, addressed primarily to the teacher; and second, those dealing with physical geography and physiography, which constitute the larger part of the book. The essays on the geographical cycle are written in a pleasant style adapted to the general reader. Two essays of more interest to the specialist discuss the peneplain, a term original with Professor Davis, tho not an original idea. Several essays trace the development of the rivers of Pennsylvania, Northern New Jersey and New England. It is interesting to note that the author has modified his earlier conclusions and attributes more power than formerly to glacial erosion.

God's Troubadour. The Story of St. Francis of Assisi. By Sophie Jewett. New York: Thomas Y. Crowell & Co. $1.25 net.



God's troubadour is St. Francis, who, even more than Saint Teresa of Spain, has captivated the Protestant no less than the Roman Catholic imagination. The story is simply told, and in the manner of romantic fiction, without, however, superfluous extravagance. It is told in a manner that children can enjoy and grown ups praise with honesty. The simple minded will be fascinated by the tale itself and its telling—the latter without knowing altogether why. The student of Italian culture and Italian tradition will recognize the fact that considerable learning has been joined to the writer's enthusiasm. The illustrations are well chosen and well reproduced, whether from familiar paintings or from often beautiful photographs of Italy as she is today—queenlike in ruins. Even without these pictures the reader could readily see for himself the boy Francisco, gloating over the romaunts; the youth Bernardone, soldier and prisoner of Perugia; then the soldier of Christ, who saw fit to preach "to his sisters the birds"; the friend of Brother Wolf. The song is sung in a minor key, like all Miss Jewett's, whose last work, we understand, this is.

A Guide to the Antiquities of Upper Egypt from Abydos to the Sudan Frontier. By Arthur E. P. Weigall. With 60 Maps and Plans. 12mo. Pp. xxiv, 594. New York: The Macmillan Co. $2.50 net.

Mr. Weigall is competent to write an intelligent guide for travelers up the Nile, for he is Inspector-General of Upper Egypt for the Department of Antiquities. He knows all the sites described, and has written his notes of them on the spot. His account extends as far as Wady Halfa at the Second Cataract, and few tourists go further, nor are there many important remains beyond. The volume opens with a chronological table of the dynasties, and we observe that the author supposes the First Dynasty under Menes to date at 3400 B. C. Descriptions of a hundred temples and tombs do not afford lively reading, but like a good guide book this volume is full of valuable information for the scholar as well as for the tourist and deserves a place in the library.

Cynthia's Chauffeur. By Louis Tracy. New York: Edward J. Clode. $1.50.

It seems a little strange in these days of airmen to come across a novel with so old-fashioned a theme as the automobile, and a resort to a bicycle at the end, but this is the only fault we have to find with the book. An automobile, altho it jolts and raises a dust, can yet make

FROM "CYNTHIA'S CHAUFFEUR." (Clode.)

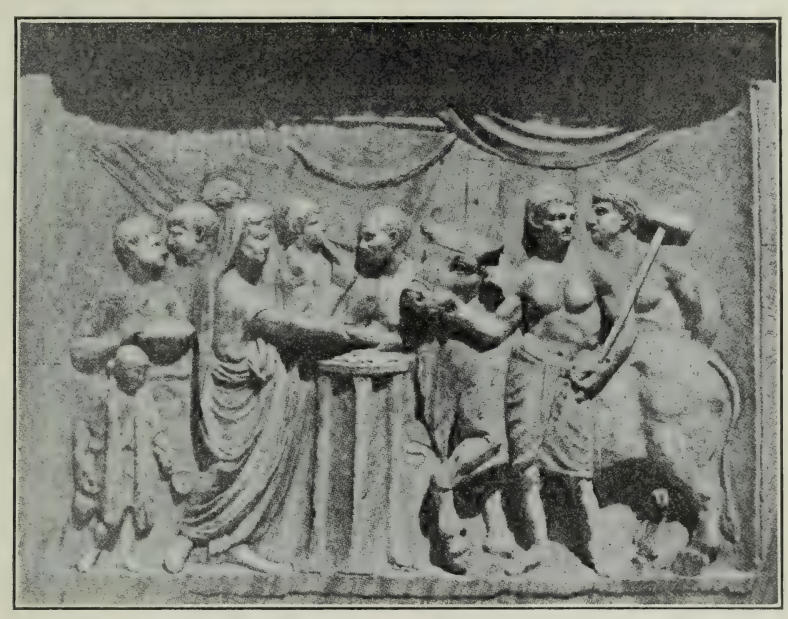
good speed with a competent chauffeur, whether amateur or professional, and this spins merrily thru England and the usual prematrimonial complications to its destined happy end.

Twentieth Century Socialism: What It Is Not; What It Is; How It May Come. By Edmond Kelly. New York: Longmans, Green & Co. $1.75.

The late Edmond Kelly aimed, in his last volume, to present, in small compass, a comprehensive statement of the indictment against capitalism, the scientific

and ethical arguments for Socialism, and the economic arguments for the practicability of the Socialist system. All these are given, and in a manner which is sure to gain for his book a secure place in Socialist literature. The manner is necessarily that of the advocate, but of the advocate blest with a sympathetic understanding of his non-Socialist readers. He studies their doubts and antipathies, anticipates their inquiries and objections, and replies to them with patient and tolerant exposition. So broad a view and so engaging a manner are rarely, if ever, found in Socialist writings. Not much can be said for his originality. He used the material which others have built up, much as it came to his hands—making it over, indeed, for a broader range of appeal, and informing it with a more gracious spirit; but he added little that is new. In his argument from the scientific basis he follows Huxley, whose social essays broke the back of the extreme individualism dominant in Europe forty years ago; and in his speculations of the future he builds upon the orthodox Socialist writers. It is doubtless in these guesses at the future and in his suggestion of methods that his book will win most favor. He sought to map out a practicable plan of transforming private into social property and to picture the operation of the Socialist state. Here his best labor was done, tho he took care to claim for the result no more than that it is a picture of what might be, instead of what is to be. Nor is it a Utopia of what necessarily ought to be, but a reasoned depiction of what current tendencies may actually bring. Tho during his last years a member of the Socialist party, Mr. Kelly was not unreservedly orthodox from the Socialist standpoint. He did not accept the class struggle in the form authoritatively preached by the faithful. It was to the enlightened public of all classes rather than to the enlightened and organized working class that he looked for the motive force to put Socialism in practice. "All the public needs," he wrote, "is a clear understanding of what Socialism really is; how it is certain to come eventually; and how it is best that it should come." The driving force of economic interests he acknowledged to the full, but he considered that other classes than the workers have, or may have, an equal interest with the workers in terminating the capitalist system. Holding this view, he was enabled to present the arguments for Socialism in a manner which will make them understandable to men who are repelled by the more rigorously exclusive view of most Socialist writers.

The American Civil War. A Concise History of Its Causes, Progress and Results. By John Formby. With 66 maps and plans. New York: Charles Scribner's Sons. $4.50.



This English account of our Civil War is in many respects one of the best. It holds well together the contemporary happenings in the various sections of the war zone, so that the reader sees the progress of the war as a whole; it keeps well to the front the political happenings and shows their relation to the campaigns and to the military leaders; it eschews minute details of the actual fighting in favor of the larger movements of the contending armies, and it is written from an unbiased standpoint, for exposition and not for argument. It has, indeed, plenty of faults. Its English is rugged and slipshod, and not infrequently the presence of a qualifying term in the wrong place confuses or contradicts the author's meaning. Then, too, a number of its minor statements are faulty. Pea Ridge (p. 142) is not in Missouri; Senator Hammond (p. 21) was not from Virginia; the figures of the strength of the armies at Antietam (p. 161) need revision; the Confederate strength at Chattanooga (p. 267) is put about 25,000 above its actual strength; and the reference to the Missouri Compromise (p. 8) requires considerable emendation. These are but a few of the slips. But unfortunate as they are, they do not greatly detract, in a volume so filled with concise statements, from the excellence of the work as a whole. The author's estimates of men are judicial and well based, his analysis of military maneuvers is keen and shrewd, and his caution in generalization keeps him on safe ground; he is free from the arrogant hit-and-miss manner of so many of our transatlantic commentators. It is a careful and fair account of our great war.

The Signs and Symbols of Primordial Man. Being an explanation of the evolution of religious doctrines from the eschatology of the ancient Egyptians. By Albert Churchward. With 186 illustrations. 8vo. pp. xxiii, 449. New York: E. P. Dutton & Co. $8.

The author has written much on one subject, and his best known work is "Origin and Antiquity of Freemasonry." The present large and handsome volume is a further development and elaboration of that work which has been criticised as unscientific and fantastic. He holds that "Freemasonry is the truest ritual we have of the past," and he finds its descent, thru the very earliest and rudest races of men, from the Architect of the world who made the universe on the principles of masonry and geometry. A large body of facts are here brought together, particularly from the Egyptian Book of the Dead, but also from Australia, Babylonia and Yucatan, whose pertinence will carry weight to those who believe the ritual of masonry, as understood by adepts of the thirty-third degree, to go back thirty thousand years or more to the earliest Stone Age. If its conclusions seem unjustified to students of ethnology and archeology this will hardly affect the faith of those for whom Dr. Churchward writes with the authority of assurance. To such alone we commend it.

Life in the Roman World of Nero and St. Paul. By T. G. Tucker. New York: The Macmillan Co. $2.50.

The period of the early empire, being one of especial interest in both secular and religious history, there are plenty of books about it but none that appeal to a wider public, the public, that is, which wants a straightforward and succinct description of the state of society, in accordance with the best scholarship but unhampered by critical scaffolding. This is the way to make classical learning fruitful, using it to give the general reader a clear vision of ancient life. The author shows us the whole life of the Roman from the ceremonies of his birth to his funeral in the Forum. The arts of politics, painting, music, building, war and cooking are duly described, and the survey is extended from the capital city to the frontiers of Gaul and Egypt. The author brings the subject home to us by frequent comparisons with modern traits and foibles, but he does not, like Ferrero, use his archeology as a weapon in present-day controversies.

A SACRIFICE.
From Tucker's "Life in the Roman World." (Macmillan.)

The Level Plan for Church Union. By William Montgomery Brown, Bishop of Arkansas, With an Introduction by the Rev. George Williamson Smith, and an Appendix on "The Chief Barrier to Christian Unity," by "Anglican Presbyter." 12mo, pp. xxix, 524. New York: Thomas Whittaker. $1.50.

We have here a fully developed argument for the federation of all Christian Churches which will consent on the basis of the Broad Church doctrine of the Episcopal Church, which gives up completely the theory that the episcopate is a third order in the Christian ministry, but holds that the bishop is chosen from the ministers, and is simply *primus inter pares*. Accordingly Bishop Brown entirely gives up the doctrine that by unbroken tactual succession the episcopacy has been maintained from the days of Peter, and that those who have not these bishops have not a True Church. He recognizes, as do the two writers who give him their support, that the interpretation usually given to the Lambeth Quadrilateral, namely the Historic Episcopate, as a basis for unity, quite naturally prevented other Churches from accepting the Anglican invitation; and he shows that no union is possible except on the "level plan" which recognizes equally the clergy of all the Christian Churches. The historic validity of this thesis of equality is ably and convincingly argued at length, and with great emphasis, as against the doctrine so widely, or generally, held in the Protestant Episcopal Church. The amazing thing in the book is that no one of the three writers seems to be aware that such a union as he urges already exists in the establishment of the Federal Council of Churches. It is not even referred to, and yet Episcopal bishops and ministers have taken part in it, altho unofficially. And it is only by a federation that the Bishop of Arkansas believes that union can be accomplished. Yet he is haunted by the notion that the federation will require some sort of bishops, whether of the Episcopal, Methodist or United Brethren type, to guide the federation. He seems yet to need to learn that the Baptists, Presbyterians and Congregationalists have as many bishops as they have pastors, and superintendents besides, who are of exactly the kind of bishop as the United Brethren possess.

Literary Notes

....In a small volume on *The Lord's Prayer* (Revell, $1), Dr. Aked, of the Fifth Avenue Baptist Church, has given a fresh and helpful presentation of its meaning and message for today.

....The *Century* this month celebrates its fortieth birth most appropriately by reproducing a series of illustrations from the wood engraving of the seventies to the color plate of the present, showing the progress which has been made in the art of illustrating, a progress in which this magazine has always been the leader.

....That aviation is "in the air" is shown by the number of juvenile books now appearing on that topic. The latest of them is *The Pilot of the Skylark*, by Isaac Russell, to be issued by the W. A. Wilde Company, Boston. The same publishers continue their "Six Girl Series," with *Betty Gaston—The Seventh Girl*, by Marion A. Taggart, and their "Happy Home Series" with *The Little Chum Club*.

....*Heavenly Heretics*, by Rev. Lyman P. Powell, Rector of St. John's Church, Northampton, Mass., treats of the life and character of five great religious leaders, who in their time were accused of heresy, Jonathan Edwards, John Wesley, Horace Bushnell, Phillips Brooks, and William E. Channing (Putnam, $1.25). The design of the author is not to contribute new facts, but to enable the ordinary reader to "visualize as well as understand."

....The third volume of Friedländer's *Roman Life and Manners Under the Early Empire* (Dutton, $1.50) completes the authorized translation of the seventh edition of the *Sittengeschichte Roms*, and is a welcome addition to English studies on the subject. Of special value is the long chapter on Religion, which contains a discussion of the conflict of Paganism with Judaism and Christianity. A supplemental volume of notes and excursuses is to follow shortly.

....In the matter of annual summaries of current events and progress we are far behind other countries, particularly Germany, yet with our habits of desultory reading such works are especially needed. We are glad to learn, therefore, that D. Appleton & Co. will next February launch an *American Year Book* under the supervision of a board of accredited representatives of twenty-nine national societies. This will assure authoritative reviews of all branches of sociology, industry, art, science and literature. A classificatory arrangement has been adopted instead of an alphabetical.

....There are hosts of writers about art, but Russell Sturgis is distinguished from the rest of them by his telling just what the lay reader wants to know and in a way that may be understood. He never shows off and is not afraid to lose a reputation for profundity by stopping to explain and illustrate. His *Artist's Way of Working in the Various Handicrafts and Arts of Design*, now issued by Dodd, Mead & Co. in a new edition of two

volumes at $5, is also remarkable for its variety of topics treated. He seems equally at home in lace and bronze, and a photograph of Roman stucco work comes next to one of a shingle house in Orange, N. J.

....The Houghton-Mifflin Co. publish several new volumes in their Riverside Educational Monographs, edited by Professor Suzzallo, of Columbia University (35 cents); of which Prof. G. H. Palmer's *The Ideal Teacher* has enough general interest to have made its first appearance, some months ago, in the *Atlantic*. Much of wisdom as well as of idealism is expressed in these thirty pages. Another contribution, by the president of Bowdoin College, Dr. William DeWitt Hyde, is entitled *The Teacher's Philosophy In and Out of School*. Part one, devoted to the teacher's philosophy in school, has its acknowledged debt to Prof. R. B. Perry's *Moral Economy*. The second part is a condensation and application to pedagogical problems of President Hyde's *From Epicurus to Christ*. The third of these well printed and easily handled pamphlets is Dr. David Snedden's *The Problem of Vocational Education*. In all ways the most concrete of the three contributions, this little book maintains that the demand for vocational education in American schools is widespread and deeprooted; and that, "rightly organized, vocational education will prove a profitable investment for society."

....Book-plate owners are easily divisible into two classes—those who use inscriptions and those who use a pictorial, library interior or other form, without a motto or anything of the kind. Richard Le Gallienne is a believer in the inscription. His book plate is in point of fact entirely made up of a clever inscription of which the following is a transcript:

EX LIBRIS R. Le G.

Multum ille et terris jactatus et alto,
Vi superum, saevae memorem Iunonis ob iram:
Multa quoque et bello passus, dum conderet urbem,
Inferretque deos Latio. . . .

Having no home, what should I do with these,
Tossed as I am about the sounding seas,
Sport of exiling winds of change and chance—
Feet in America, and heart in France.
Homeless, 't is meet I find my books a home;
Coffined in crates and cases long they lay,
Distant from me three thousand miles of foam,
Dungeoned in cellars cold and nailed away,
As in a sepulchre, till Judgment Day.
Lost to their gentle uses in the tomb,
Cobwebbed companions of the spidered gloom,
At last they rise again to live once more—
Dread resurrection of the auction room.

Books I have loved so well, my love so true,
Tells me 't is time that I should part from you,
No longer, selfish, hoard and use you not,
Nor leave you in the unlettered dark to rot,
But into alien keeping you resign—
Hands that love books, fear not, no less than mine.

Thus shall you live upon warm shelves again,
And 'neath an evening lamp your pages glow,
Others shall press 'twixt leaf and leaf soft flowers,
As I was wont to press them long ago;
And blessings be upon the eyes that rain
A tear upon my flowers—I mean on "ours"—
If haply here and there kind eyes shall find
Some sad old flower that I have left behind.

RICHARD LE GALLIENNE.

May, 1905.

Pebbles

"It's not the cough that carries you off;
It's the coffin they carry you off in."
—*New York American.*

He—I am crazy to kiss you.
She—Well, if you think so, you needn't.—*Harvard Lampoon.*

"Did you ride in Charley's automobile."
"Yes, it was lovely. The constant osculation didn't bother me a bit!"—*Evening Telegram.*

"Will you always be true?" asked the broker's suspicious daughter, when young Sportleigh had thrown himself at her feet and begged for her hand.
"As true as steel!" he cried.
"Common or preferred?" she inquired, still suspicious.—*Chicago News.*

Soon after the arrival of his first baby, his wife went upstairs one evening and found him standing by the side of the crib and gazing earnestly at the child. She was touched by the sight and tears filled her eyes. Her arms stole softly around his neck as she rubbed her cheek caressingly against his shoulder. He started slightly at the touch.
"Darling," he murmured, dreamily, "it is incomprehensible to me how they get up such a crib as that for 99 cents."—*The World's Work.*

AN INCIDENT IN A FARMER'S LIFE.

Albert Griggs is a farmer who lives near Eagleville, Ohio. He has a herd of cows. For a long time he has enjoyed a considerable revenue from the milk they give or which he takes from them. During the past month or so he has noticed a pronounced falling off in his herd's milk product. He was unable to account for it until last Monday when by chance he discovered a singular condition of affairs in his cow pasture. It will doubtless be received with incredulity by Easterners, but *The* (Cleveland) *Plain Dealer* vouches for it and so it must be true. Mr. Griggs, it seems, found a singular family living in his pasture. It was made up of sixteen milk snakes, his old cat and four kittens. These incongruous units had taken up quarters together under a pile of rails and, strange as it may seem, they all dwelt together in perfect harmony. When the evening shadows fell the snakes, under the direction of the old cat, would go forth and select cows. Four snakes would then attach themselves to each cow and while the kittens sat in a receptive attitude the snakes would milk the cows into the opened mouths of the kittens. It was all very interesting, but Mr. Griggs somehow failed to enter into the proper spirit of the thing. He even went so far as to kill all the snakes as well as the old cat and her kittens, so that now things have gone back to the humdrum on the Griggs farm in Ohio and there is nothing further doing there out of the ordinary farm routine.—W. G. B., in *The Evening Mail.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Issues and Men in the Campaign

In the course of a public address at Chicago, on June 5, 1909, Secretary MacVeagh, speaking of the pending tariff revision, said:

"The main point is to satisfy the people of the Middle West. If they are not satisfied, then the tariff question, unfortunately, will not be out of the way, and we shall not have rest or a clear field for currency reform."

On the same day the Senate was adopting, against the vigorous protests of the late Mr. Dolliver, Mr. Aldrich's tariff rates on cotton goods, and ten insurgent Republicans were voting in the negative.

Neither the people of the Middle West nor a majority of the people in other parts of the country were satisfied with the tariff revision of 1909. Because of that revision there has been no "rest" in national politics. The issue then raised by the Republican party's broken promise is the dominant national issue in the campaign now about to close. The insurgent revolt against the Payne-Aldrich tariff split the party. Continued denunciation of that revision by Republicans who stand for protective customs duties has assisted others who have assured the people that the same revision is responsible for the high cost of living. A multitude of voters who were accustomed to vote the Republican ticket decided months ago to vote this time for Democrats. Their purpose cannot be changed by stump speeches or party platform assertions.

Owing to the attitude of these voters, the Republican party is in danger, at least, of losing its majority in the House. There have been two Congressional district elections by which political tendencies may be measured. In one, the Fourteenth Massachusetts, which had never been represented by a Democrat, and which gave the late Mr. Lovering a plurality of 14,250 in 1908, a Democrat (Eugene N. Foss) was elected by a plurality of 5,640, and the Republican vote was cut down from 20,900 to 9,340. In the other, the Rochester, N. Y., district, which had sent Republicans to Congress continuously for twenty years, a Democrat was chosen. To the late Mr. Perkins, in 1908, it had given a plurality of 10,160. Turning about, it gave to the Democrat (Mr. Havens) a plurality of 5,440. In at least one of these districts the result was affected by the nomination of an unworthy Republican, but it is well known that a great many votes were changed in both by the tariff issue.

In Massachusetts Mr. Foss assured the voters that the high cost of living was due to the Republican revision of the tariff. After his election he spoke for Havens in the New York district, making the same assertion. It can now be seen in recent Democratic State platforms. The Democratic candidate for Governor of New York, Mr. Dix, declared in his letter of acceptance that by the revision of 1909 the Republicans had "increased the duties on all the necessaries of life." We must be permitted to think that Mr. Foss knew better; we are not sure that Mr. Dix really knew anything about it, altho we presume he did know that his company had asked the Republican tariff committee at Washington to increase largely the duty which protects the wall paper which he manufactures.

Now, it is not true that the Payne-Aldrich bill increased the duties on all the necessaries of life, nor is it true that it has increased the cost of living. Our

readers will recall THE INDEPENDENT's emphatic disapproval of a considerable part of that revision. We are satisfied, however, that the cost of the necessaries of life has not been perceptibly affected, one way or the other, by last year's revision of the duties on imports. But a great many voters believe that the revision raised prices. Their pocket nerves have been hurt, and they will show their resentment at the polls.

All signs point now to a Democratic House, or to the saving of only a very small part of the present Republican majority. It seems to us that a partisan division of Congress would be unfortunate. The Republicans have blundered. Many of their leaders are misrepresenting the effect of the revision, asserting that it reduced the average rate of duty by 11 per cent., altho the official reports of their own Administration show that the average now is 41.3 per cent., against 42.2, 42.8, and 42.4 per cent. in the last three years of the old law. But they do not deserve to be defeated by the false assertion that their new tariff increased the duties on all the necessaries of life. With a divided Congress, little or nothing would be done in the two years of its life. A Republican Congress, chastened by the reduction of its House majority and prodded by the President and his tariff board, would probably improve the present law.

A majority of our people, we think, want neither free trade nor a tariff for revenue only. They prefer reasonable protective duties. The action of many Democrats in Congress during last year's revision (like the application of Mr. Dix's company) indicates that ideal tariff legislation would not be assured if the Democrats should control both the House and the Senate. As for what is called Cannonism, it is dead or dying. Mr. Cannon will never again be elected Speaker, nor would a Republican House next year give the place to a man of his type.

If the Republicans should lose the House, the course of reform legislation with respect to railroads, Trusts, conservation, etc., would be checked; not because the Democrats are less earnest in desiring reform, but for the reason that Senate and House would not agree. The record of last session was a good one. There are additions to which the party is committed and for the enactment of which the President would exert his influence. The public interest requires that these additions shall be made before the end of the term of the next Congress.

We do not see that Mr. Roosevelt is an issue now. We remarked some time ago that he might be an issue if the Republicans should suffer serious reverses in these elections. Senator Root's speech last week shows that this is also his view. We believe that the ex-President is laboring now for Republican success and because he enjoys a strenuous political life. His evasive course with respect to the tariff revision of 1909 has not helped the Republican cause in the West, and we suspect that it has slightly impaired his popularity there. We remember saying several months ago that the leaders of the Republican party should insist upon the creation of a competent tariff board and should then emphasize the value of such a board or commission. It has been noticed, of course, that at present all of them are pointing to the tariff board. Mr. Roosevelt sees in its work the ideal solution of the tariff problem. But a great many persons would like to hear him frankly express an opinion about the recent revision. His failure to do so confirms the belief of a considerable number that he really knows very little about tariffs. He must know something about them, and exhibit his knowledge, if he is to retain their respect and admiration. As a campaigner in the State of New York he has not met all the expectations of his thoughtful friends. If he had been more thoroly informed about the tariff and its prominence as an issue he would have paid more attention to Mr. Dix's application for a higher duty on wall paper, and less to the assertion, which has not been proved, that Mr. Dix was connected with a Wall Paper Trust. But we still hold that the ex-President is not now an issue.

In State nominations, the Democrats, as a rule, have put forward good men. Mr. Dix is one of them, despite his inconsistency and ignorance concerning tariff duties. But we think Mr. Stimson

should be preferred, because of his achievements and ability. His political associations also are more directly in the public interest than those of his opponent. He and his whole ticket will suffer at the polls, however, by reason of the disclosures of legislative corruption at Albany and on account of party losses on the leading national issue. In New Jersey the Democrats have made an admirable nomination. We hope that Dr. Woodrow Wilson will be elected. The Massachusetts Democrats have probably thrown away their opportunity, owing to their factional and personal quarrels. Judge Baldwin, the Democratic nominee in Connecticut, is a candidate of the best type. Without disparaging his opponent, we may say that the people of the State can scarcely afford to reject a man so exceptionally qualified for the office of Governor.

In Ohio, Governor Harmon ought to be re-elected. He has served the people well, and a part of his service has been the exposure and prosecution of corrupt Republicans who held State offices before the beginning of his present term. Within a few weeks he has caused suits to be brought against a former Republican Treasurer (now chairman of the Republican executive committee) and a former Republican Secretary of State, to recover interest alleged to have been received by them for State funds deposited in banks. Ex-Senator Foraker is making speeches, and the Republican prospect is quite gloomy. If Dr. Wilson should be elected in New Jersey and Judge Harmon re-elected in Ohio, the Democratic party would have at least two fine candidates for its Presidential nomination in 1912.

The Express Companies' Strike

New York City is not given to riots, but in the Greater New York across the North River over in New Jersey, and in Manhattan's Fifth avenue, there has been a prolonged and vicious riot that has blocked traffic and has quite disorganized the business of the express companies, and a teamsters' strike threatens to extend over the country. The police do not seem to have been very successful in restoring order and protecting those who were at work. There seems to have been no pretense in the present case that the strikers were not the rioters. Violence has been their chief weapon. For the facts we refer to other columns.

But at present the strike offers another point of view than that of a difference between employers and employees. These are express companies against which the strike is waged. Now, the express companies are the banded enemies of the people. Again and again our Postmasters-General have recommended to Congress that they give the people the parcels post, such as every nation in Europe possesses, and such a privilege as the United States itself gives to foreigners abroad. A package weighing 11 pounds a German or Italian can have sent him from America at cheap postal rates, for that is an international privilege; but an American husband cannot send such a package to his wife by mail from New York to Philadelphia. The limit is 4 pounds, and the rate 16 cents a pound. It costs less by far to send a package to the end of Europe than from Boston to Salem. Everybody knows this evil, this injustice, and it is perfectly well known that it is the express companies that stand in the way and control Congress somehow. The president of a principal express company was for a dozen years United States Senator from New York, and was not likely to listen kindly to the urgency of the Postmaster-General that the people be served to the loss of the express company. We have been told that the reason for not giving our people the same advantage that other countries have is that the department stores would rob the country stores of their trade. But the country stores have no organization that has made any such complaint. They have been made a stalking horse by the express companies, which are the principal organizations that have a great interest to defeat the people.

At last, after long delay and great obstruction, we are to have postal banks for the savings of the people. Very soon they will be opened in a limited number of towns, but they will prove

popular and they must soon extend all over the country. Just so, the rural free delivery of mails has been a most popular success, and we shall yet have the mails carried to all those who live too far from any office to go for their letters and papers themselves. Here is hope that the remaining advantages of the post office will yet be allowed to the people, and probably next the parcels post. The telegraphs and the telephone, as postal adjuncts, look far off, altho familiar in Europe, for we have allowed them to be captured by enormous corporations, which more than rival the express companies. The riot of the last week may help along one reform.

Social Decorum

If the Church had outlived every other kind of usefulness it would still have an important function in our "up-to-date" social order, as an organ of decorum. In the swirl of hurried, ill-considered activities that make up our everyday life, in which not only formalities but the elementary courtesies are too often neglected, people still go to church in large numbers, and they still, when in church, or at least while the service is proceeding, behave with a certain reserve and dignity of manner. This is a survival from the days of reverence and decorum not to be lightly regarded.

Time was, as some of us who are now classed as "old fogies" can remember, when in the household children and servants bore themselves respectfully; when in the schoolroom politeness and consideration were regarded as habits proper and useful to inculcate; and when in courts of justice people were expected to behave as if they understood that the term "the majesty of the law" possessed significance. If such behavior and such views of education are not today reckoned among the things gone by, they at least are so often forgotten that one wonders whether they are now regarded as of any real importance.

For example, the other day an energetic young woman matriculated as a graduate student in one of our larger universities, entered a departmental room, and seating herself on a corner of a flat topped desk near which one of her instructors was standing, began swinging one leg back and forth and quite without self-consciousness opened a conversation on the subject matter of her dissertation with the unnecessarily sententions remark, "Say!" Invited to be seated in a chair she obviously regarded the attention as a waste of valuable time in a hurried life. The Western college from which she had brought her bachelor's degree, it is fair to presume, had not squandered its resources upon the mere urbanities.

The "woolly West" is not the only offender in these matters, nor is America in the large. While our newspapers were yet drawing contrasts unfavorable to the United States between an American murder trial and the trial and sentence of Dr. Crippen in an English court, the English newspapers were commenting severely upon what seemed to them to be the censurably undignified and spectacular character of the Crippen trial. A variety actress, it seems, had been invited, or at least permitted, to sit on the bench with the judge. Tickets of admission had been given out to favored men and women long before the empaneling of the jury began; and thruout the trial overdressed women wearing enormous hats simpered, whispered and smiled, and even while the return of the jury was awaited, behaved with scandalous disregard of the solemnity of the occasion.

The whole Western world, apparently, has suffered an extreme reaction from the excessive formality and perhaps somewhat ridiculous parade of dignity characteristic of other days. One need not inquire too curiously which evil is worse. It is enough that thoughtful and self-respecting men and women must regard the present day laxity as a serious loss of the essentials of civilized existence. Forms are less than substance, to be sure, but none the less they mark the distinction between brute and man, between boor and gentleman. If our secular education and our courts of justice have indeed ceased to regard these distinctions, and are content to lapse into crass incivility, let us be devoutly thankful that a utilitarian secularism has not yet succeeded in abolishing the churches.

Peace Between the Races

PERHAPS on no other subject of sociological interest and importance has THE INDEPENDENT, from its first issue in 1848, spoken so persistently and emphatically as on that of the injustice and unwisdom which so generally characterize the contemptuous and cruel treatment of other races, red or black, yellow or brown, by white Englishmen and Americans. One of the reasons for founding THE INDEPENDENT was the conviction on the part of the founders that negro slavery was a crime against God and man. When slavery was ended by war we continued to denounce the effort to keep the negro in a state of peonage, an effort prevented in good part by the adoption of the Fourteenth and Fifteenth Amendments to the Constitution; and we further pushed the obligation to treat the Indians justly. Then came the question of Chinese immigration and the refusal to allow Chinese to become citizens of the United States, and the sharp restriction of their admission to our shores. All this seemed to us another unjust and unwise case of selfish and cruel race prejudice. Ten years ago the United States was saddled with the duty and task of administering new dependencies, and with it came the fresh obligation to treat Porto Ricans and Filipinos as human beings, with the same courtesy, as well as justice, with which we treat those of our own color.

We do not assert that Anglo-Saxons are the only white people who are guilty of this blundering injustice—a blunder because it gives them infinite trouble—but their wide expansion as rulers of other races has made their arrogance especially obnoxious in history and troublesome in government. French and Spanish and Russians have been no less cruel, but they have somewhat more readily fellowshiped with subject races than have Englishmen and Americans. We have, as rulers of colonies, had a better sense of justice, but have more freely exprest our contempt for the races we ruled, as essentially inferior to us whom the Lord has created out of cleaner kaolin, and to whom he has given the commission to order all other people about, and kick them out of the way if they dawdled in the moving. It is this supercilious spirit, this personal conduct, and not wrongs of government, that has given us our difficulties in the Philippines and Porto Rico, and which is so disturbing the British in India and Egypt—this and nothing else. It is partly the military attitude; for in any country ruled by the army, the military sentiment rules society, and the military sentiment is not civil; it is uncivil to those who are ruled. It is greatly to be desired that our insular possessions should be taken out of the control of the War Department and given over to a special Colonial Department that has no army but simply police. Our own army has too much of the feeling toward all dark races which its large Southern contingent naturally has toward negroes. It is apt to think of brown people or yellow people as a kind of "nigger."

With this prevailing evil we are glad that there is to meet next July in London—the best place for it—a Universal Races Congress, to discuss the relation of the races to one another. The first suggestion for it came from so good a man as Dr. Felix Adler, and it was taken up warmly abroad. The list of those who will take part in it from all the world is imposing—Europeans, Americans, Asiatics, Africans. They will discuss race questions ethnologically, anthropologically, sociologically. Questions of equality or superiority of races will be considered, the influence of language and religion, inter-racial marriage, matters of immigration, commerce and trade, the ethical problems involved, in fact, in the light of modern knowledge and of the modern conscience, the general relations existing between the peoples of the West and those of the East, between the so-called white and the so-called colored races, with a view to encouraging between them a fuller understanding, the most friendly feelings, and a heartier co-operation. The gathering promises to be one of the most remarkable and influential in the history of international conferences. We are sure that America, which in both continents is the stronghold of the peace movement for settling international disputes amicably, will welcome and aid this Universal

Races Congress which will meet in the University of London July 26-29, 1911.

Improving the Breed of Aeroplanes

THE Belmont racetrack, Long Island, has undergone a transformation, a reformation. A hard-hearted Governor, heedless of the protests that he was interfering with the course of equine evolution, had put a stop to organized gambling. Nevertheless, all last week people flocked to the place by the hundred thousand as before, and a better class of people, too, for, instead of crowding underneath the grand stand out of sight of the track to watch the bookmakers' slates for the figures which would transfer the money from their neighbors' pockets to their own, they were all out upon the lawn with their eyes raised heavenward watching the new sport of the air.

It is a royal sport; nothing like it for beauty, interest, and thrill. For after all a horse race is only a horse race, but an aeroplane race is a man race. The jockey is a stunted and insignificant creature who hardly does enough to pay for his carriage. But the air man rides a hundred horses, and his will is the sole guiding force. There is no rival claimant for his victory. He is the true superman, a veritable *deus ex machina*. He is in a new element, an element that, like an ancient warrior, he has conquered and enslaved. He has become prince of the power of the air. He burns the air as he rides upon it. It both propels and supports him. Only half his fuel he takes with him. He puts a few drops of gasoline into the cylinder of his engine, fills it up with air and sets it on fire with an electric spark. The age of steam is past. It may still, to quote the words of one of its early prophets, "drag the slow barge," but it no longer "drives the rapid car."

Man has always dreamed of flying. Denied it in this life, he has hoped that in some future heaven he might be given wings like the angels. Now his dream is coming true. Man has at last wished himself wings. No wonder he delights in them. He is playing with the aeroplane now. By and by when he gets tired of the new toy he will set it to work.

In the meantime youth will have its fling. It will spend its time in sport and perhaps do a little fighting, too. For it is unfortunately true that war and its mimic, competitive sport, are about the only institutions we have to take up new things, to encourage novelty and develop inventions of no immediate practicality. But after all, war and sport, if left to themselves, spoil whatever they undertake to promote. They turn a ship into a dreadnought monster or into a toy yacht that is incapable of crossing the Atlantic to get a cup. The Wright brothers have done their best to prevent their gift to humanity from degenerating into a mere spectacle, a feat of daring or an excuse for betting. They do not allow their machines to give exhibitions on the racetrack on Sunday or to fly over cities. The Wrights look with an unenvious eye at Hoxsey and Johnstone, the star dust twins, cutting curleycues in the air in Wright biplanes a mile above the ground. They demonstrated their courage and the capability of the aeroplane years ago, and that is enough. They dislike to be forced into the racetrack. They say the aeroplane can go fast enough now. What is needed is not more speed, but more safety.

The public, however, demands speed and delights in danger—to others. A Bleriot monoplane makes 72 miles an hour at Belmont Park. What's the matter with the Wrights? So the Wrights are compelled to enter the lists against rival manufacturers. They have cut down their ample wings, increased the power of their engine and reduced the weight, consequently the strength, of the structure of the machine, and so produced a "racer."

The patronage of the racetrack, tho undeniably useful at this early stage in the development of the aeroplane, is, therefore, not a benefit in all respects. It demonstrates the powers of the new machine, and discloses its weaknesses, but it exaggerates its dangers. Aviation has twenty-four fatal accidents charged against it so far, most of them sacrificed to sport rather than the advancement of science, fewer at any rate than the number of lives contributed in America last

year to the sport of football. But, however counted, it is not a large number of victims considering the marvelous progress that has been made in the last few years. Doubtless many thousands lost their lives before men learned how to paddle about in a hollow log. This new art may be as important as navigation. At least it is as interesting and we all rejoice that it has been born to our generation. Even the poets, generally so unfriendly to a new invention, are inclined to welcome this if we may judge by M. Edmond Rostand, tho he may be suspected of a special fondness for flying things. The aviator, Tabuteau, passed over Rostand's country place at Cambo, in the Pyrenees, on September 23, and inspired the poet to the following sonnet:

J'avais sur la montagne un grand jardin secret.
Mais, ce soir, se levant du fond de la campagne,
Le long biplan que l'œil des bergers accompagne
Vint à ma solitude infliger un soufflet.
Car, doublant mon toit basque ou, presque, il s'éraflait,
Le monstre pour lequel il n'est plus de montagne
Passa sur mon jardin comme le vent d'Espagne,
Et mon sable eut son ombre, et mon lac son reflet!

J'aurais dû t'en vouloir, ô beau monstre de toile
Moi qui n'ayant cherché que l'aigle et que l'étoile
Suis venu sur ce mont, loin du plaisir humain,

Pour avoir à moi soul un ciel qui se déploie!
Mais j'ai crié d'orgueil et j'ai pleuré de joie
Lorsque j'ai vu mon ciel devenir un chemin!

We append a translation for the benefit of those who cannot read French and so cannot compare it with the original:

A high and secret garden was my own.
This evening, rising from the low champaign,
While shepherds stood astare, the long biplane
Above my sheltered seat was swiftly blown,
And buzzed about my Basque roof with its drone!
The linen monster, mountains bar in vain,
Passed o'er my garden like the wind from Spain;
A moment's shadow on my lake was thrown.
Fair monster! Should I not have wished you far;
I, who, to seek the eagle and the star,
To claim a space of heaven for my abode,
Had climbed this hight to human joy denied?
I wept with joy and shouted out with pride
To see this heaven of mine become a road!

Americans in Panama

In about four years from now the Panama Canal will probably be opened for traffic. The ships of all nations will meet and pass in the great fresh water lake of Gatun, overlooking both oceans 85 feet below its level. It will be an international crossroads and conceivably an important commercial depot and exchange for merchandise of all sorts. By that date or a little later the railroad from the city of Panama to David, now being constructed under joint direction of the United States and the Republic of Panama, will be in running order, giving access to the rich and fertile Chiriqui region. A stretch of country on the Pacific side of the watershed for 300 miles to the westward of the city of Panama has now been opened up for settlement to Americans as well as Panamanians on equal terms.

The reader of The Independent is acquainted with the agricultural possibilities of this region from Mr. Forbes-Lindsay's article on "Panama as a Field for American Enterprise," in our issue of October 23, 1909. Reference may also be made here to "Home Seeking in Panama," by D. M. Hazlett (February 23, 1909), and to the visits which members of our editorial staff have twice made to the Canal Zone (March 15, 22, 29, April 5, 12, 19, 1906, and April 22, 29, May 6, 1909).

Under the old regime land could be had for the asking, or, in fact, without the asking. It was a state of affairs such as the idyllic anarchist sees in his dreams. The land was free, its possession depending merely upon its use. The native cleared a patch convenient to his village, planted there his yams, rice and corn, and after a few seasons usually deserted it for another without troubling his head about title deeds. The leaders of a successful revolution were rewarded by a grateful country by grants of large and vaguely defined lands in the interior, which they perhaps did not take the trouble to cultivate or even inspect, but held in the hope of realizing a fortune when the Pan-American railroad should go thru the country.

But with the arrival of immigration the primitive system of squatter rights

and absentee ownership must be modified. The land law passed by the Panamanian Congress in 1909 and now in effect gives any person the right to take up land to any extent on the payment of a nominal price and obtain a title to it by actual cultivation within four years. The law is careful to define what degree of cultivation is necessary in different cases. For example, the ground must be cleared, plowed and prepared for field crops, or cleared and planted with cocoa, coffee, cocoanut, banana trees and the like, not more than ten meters apart, or uncleared and planted with rubber trees not more than four meters apart. A payment of fifty cents an acre is made to the Government at the time the claim is taken up, and at the end of four years the purchase is completed by the payment of fifty cents more, at which time the lands must all be fenced and four-fifths of it under cultivation. Land owners have unlimited use of the open range for their cattle. Forest lands on the Atlantic coast are purchasable at about 33 cents an acre. The September number of the *Bulletin of the Bureau of American Republics,* which will be sent free on application to the Bureau at Washington, contains an abstract of the new land laws.

It seems likely that South and Central America will in the future afford a field for pioneer energies similar to that of the West for the past generation. Certainly the hardships will be no greater, altho it cannot be foretold whether the rewards will be as great. Settlers in Panama will at any rate not be in any danger of starving or freezing as were the settlers in Kansas and Dakota. They will be sure of a living, tho what sort of a living remains to be seen. Bananas alone are said to be capable of sustaining life, tho none but a fruitarian monomaniac would adopt such a diet from preference. Malaria is not worse than in some parts of Missouri and Egypt in the early days, and may be still further reduced by local sanitation. Revolutions, political blackmail and confiscation of property are not to be feared under the supervision of the United States.

Of course, the chief deterrent to emigration is the dislike to leave one's fatherland to make a permanent home under a foreign flag. But it is quite possible that this objection may prove illusory. Obviously the two republics must be brought into continuously closer relationship as the years go by. The Canal Zone, ten miles wide, reaching from ocean to ocean, is for all practical purposes as much a part of the United States as the District of Columbia. Yet there has been surprisingly little friction between the Zone and the republic which it cuts in two. It seems probable that the native Panamanians, realizing the prosperity which the American occupation has brought them, and perceiving the advantages of the limited control exercised by the United States over their affairs, will in time petition for annexation. Of course, it must be left to the Panamanians themselves to initiate a movement for such action. It seems to us natural and inevitable that Panama should at some future time become a part of the United States. But, if so, it would be greatly to the advantage of both countries that this should take place within the next four years rather than later. If the canal at the time when it is first opened to the commerce of the world is exclusively an American concern, cut thru our own land and opening on our own harbors, it would greatly simplify its diplomatic status and remove many delicate questions of international relations which might otherwise interfere with its profitableness and usefulness.

The Impending War with Canada

As our readers know, plans are already on foot in England and the United States to celebrate in 1914 the centenary of peace between the two nations. The one shining example before the world of the way to limit armaments by international agreement is the Rush-Baghot Treaty of 1817, under which the United States and Canada have lived for all these years in mutual peace and security. In the September *Nineteenth Century,* however, Capt. Cecil Battine, in an article entitled "Canada Growing Up," apparently thinks the time has come to revise this mollycoddle policy. Says he:

"The British Navy will guarantee that the coasts of Canada are secure, but it is a sound instinct on her part to prepare thus early to

be self-supporting even in the matter of naval construction. Should Canada be threatened with war on her southern frontier, the military command of the great lakes would be of the most vital importance. An arsenal and dockyard must therefore be prepared to construct suitable craft for a struggle on the inland waters, as remote as possible from a possible raid, and having access to tne lakes by the waterway of the St. Lawrence. It is a striking example of the permanent principles of strategy that the valley of the St. Lawrence is the key to military supremacy in Canada now, as it was when Wolfe so gallantly won Quebec for England, and the valley of the Hudson still leads the way to the vitals of the United States, if a northern invader should be bold enough to take the initiative."

We think the Captain's ideas are sound, but he does not go far enough. Let the Rush-Baghot Treaty be denounced. Then Canada and the United States could make one continuous fortification along the shores of the St. Lawrence, and establish opposing army posts every five miles from Vancouver to Winnipeg. A thousand super-Dreadnoughts could also be built by each nation on the Great Lakes, so that no overt acts could take place there. Toronto and Chicago would, of course, have to be guarded by three lines of submarine mines, Montreal and Buffalo would need at least $20,000,000 for modern coast defenses, while it would be absolutely necessary for Quebec to double the hight of the cliffs on which she is situated, so as to prevent their being scaled a second time. Seattle and Vancouver might each keep balloons anchored a few miles up in the air to watch the war preparations of the other. In the meantime the Atlantic and Pacific squadrons of the British and American navies should have their decks cleared for action, and 10,000 aeroplanes in either country be put in commission to repel these mutual attacks in hot air. As probably all this would not be enough to preserve the peace, we might reasonably demand compulsory rifle practice in the public schools of England and the United States, and universal military service from all male citizens between twenty-one and forty-five, and all enrolled suffragets of whatever age. Thus and thus only, according to our Captain Battines, can be guaranteed that certain and perpetual peace, that blessed millennial peace, the peace that passeth *all* understanding.

Maryland Election Law Unconstitutonal

At last a judge of the United States Circuit Court has declared a law, confessedly intended to exclude negroes from the ballot, unconstitutional. The Maryland statute applied only to municipal elections, and it was claimed that therefore Federal law or Federal Constitution was not concerned with it. This claim was easily overruled, for the latest amendments to the Constitution were plainly intended to prevent State action in shutting out the negro vote. It is true that the grandfather provision and all other provisions in Southern laws which have the same purpose are careful to try to dodge the Fifteenth Amendment. They do not mention negroes at all, but their purpose to exclude them is not only clear, but it is openly confest. There is no secret about it, and it is strange if the fine technicality of the law should save its unconstitutional purpose. The decision of Judge Morris in the Maryland case will be appealed to the Supreme Court, but it is not clear that if his decision is confirmed it will necessarily annul the exclusion laws of other States. The grandfather law, as enacted in so many States, does not absolutely exclude negroes, for they can vote if they can read or own a certain amount of property. The offense of it is in large part in the liberty it gives registers to refuse to admit negroes to registration, while admitting equally illiterate white men, no matter whether their grandfather was a voter in 1867.

The Franking Abuse

The franking privilege is not abused so much as in the days when Congressmen sent home their washing; but Postmaster-General Hitchcock believes the existing abuse of the privilege costs enormous loss to the Government. The simplest plan to learn what and where the loss is will be to provide the departments and Congress with special stamps and envelopes for free use. As these are obtained on requisition, it will be easy to learn what is the amount that ought to be charged against each branch of the service, and where the privilege is

abused wastefully or illegally. The Post Office Department year after year reports a deficit of millions of dollars. Where it comes from cannot be known until the amount of service given gratuitously to Congress and the departments is known. If the Department of the Interior, for example, were charged for its use of the Post Office as other bodies are charged, and this amount added to its budget of expenses, the Post Office might make a much better showing. Its recurring deficit is due to the immense amount it does free, and this should be considered in any criticism of constant apparent failure to pay its way.

Del Val as Advocatus Diaboli

The Knights of Columbus have just got their first reproof from Rome. Their petition for his canonization, drawn up in utter ignorance of the facts of Pius IX's life, has fallen flat. And that hero of *la bonne presse,* of France, Abbé Magnien, who was the chief promoter of the rejected cause, has got the setback he so richly deserved. When he attacked the life of Father Hecker, by the Paulist Elliott, he was the elect of ultramontanes. His book, "Le Pere Hecker; est-il un saint?" was brought out in English with a fly-leaf, which gave as the publishers Benziger Brothers, of this city, who forthwith repudiated the work and threatened suit. The Roman Jesuits, however, know whence was issued "Father Hecker; Is He a Saint?" Not long ago THE INDEPENDENT printed a review of the "Life of Pius IX," by the Jesuit Ballerini, which brought out the important facts that the future Pius IX wished to enter Napoleon's service and had thrown off the cassock after being tonsured. Ballerini passed over in silence the disputed youthful years at Sinigaglia during which young Mastai was charged with Free Masonry and free living. Today, in steps the Cardinal Secretary of State, as *Advocatus Diaboli,* and throws out the process for his beatification, or in the words of the cablegram "indefinitely postpones" it, that is sends it to the Greek kalends. This, too, not because of the disputed misdeeds of his youth but because of the misdeeds of his episcopate. There may be some doubt of the youth Mastai, but there seems to be none of Bishop Mastai. Those *Lancelotti* documents as to his career as bishop in 1852 must be damaging. And Pius IX falls before Pius X, who took the same papal name because of his admiration of his predecessor.

Julia Ward Howe's Last Writing

On the day that the London Times noted the death of Mrs. Julia Ward Howe it received and published a letter from her on female suffrage, probably the last words she wrote for publication. Her letter is short and is worth our giving in full, as its testimony is important:

"There has been some discussion in your columns about the practical workings of equal suffrage in Wyoming, Colorado, Utah, and Idaho, the four States where women vote. I have lately sent out a circular letter of inquiry as to its good or bad results. The letter was sent to all the Episcopal clergymen in these four States, to all the Congregational, Baptist, Methodist, and Presbyterian ministers, to all the Sunday school superintendents among the Congregationalists (the other denominations do not publish the names of their superintendents in their religious year-books), and to the editors of the newspapers. Hundreds of answers were received. These have just been tabulated, and the outcome is very gratifying to the friends of equal rights.

"The replies of the Episcopal clergy are favorable, more than two to one; those of the Baptist ministers, seven to one; of the Congregational ministers, nearly eight to one; of the Methodists, more than ten to one; and of the Presbyterians, more than eleven to one. In each denomination a few are in doubt.

"Among the Sunday school superintendents replying, one is opposed and one in doubt. All the rest are favorable.

"Of the editors, a small fraction are in doubt. Those who express a positive opinion either way give favorable reports in the ratio of more than eight to one.

"These figures speak for themselves."

Mrs. Howe was president of the New England Woman Suffrage Association.

The Arms of U. S. A.

We the people of these United States and they the people of those United States which lay claim to the same initials are likely to mix up the mails. Since these three letters do not indicate which continent or hemisphere is intend-

ed, it may be necessary to resort to the pictographs of our medieval forefathers. Fortunately, the Union of South Africa has been granted a coat of arms which can be be readily distinguished by the naked eye from our spread eagle. We reproduce it here, so our readers may

THE ARMS OF SOUTH AFRICA.

paste it into their dictionaries. It contains no mythology, but is full of local color. There are in it five South African vertebrates, if we may include the lady of the rock and anchor, and besides, a knobby orange tree and an abandoned prairie schooner. But our readers will prefer to read the following authoritative description of the armorial ensigns and supporters, written by a gentleman who signs himself "George R. I.";

KNOW YE therefore that We of our Princely Grace and Special Favour have granted and assigned and do by these Presents grant and assign for The Union of South Africa the Armorial Ensigns following, that is to say: Quarterly per fesse wavy First quarter, gules a female figure representing Hope resting the dexter arm upon a rock and supporting with the sinister hand an anchor Argent, Second Quarter, Or Two Black Wildebeesten in full course at random both proper, Third Quarter, Or upon an Island an Orange tree Vert fructed proper, Fourth Quarter Vert a Trek Waggon Argent, And for the Crest, On a Wreath of the Colours A Lion passant guardant Gules. supporting with the dexter paw four staves erect alternately Argent and Azure and banded Or, And for the Supporters, On the dexter side A Spring Buck and on the sinister side An Oryx (Gemsbuck) both proper together with this Motto, "Ex Unitate Vires" as the same are in the painting hereunto annexed more plainly depicted to be borne for the said Union on Seals, Shields, Banners, Flags or otherwise according to the Laws of Arms.

Florida presents an interesting situation. It is the last of the States in the far South to pass on the liquor question, all the rest having voted against liquor, and it is also the only remaining State in that section which has not passed disfranchisement measures aimed at the colored voter. The amendment to the constitution proposing to bar the liquor traffic will be voted on this month, and the campaign in the State is growing heated. Both sides are, of course, anxious to secure the negro vote. Peculiar and critical responsibility rests on the negro voter in this instance, and we trust that he shall be so averse to corruption and so amenable to reasonable appeal that the question of the disfranchisement of the blacks in that State which is being more or less discussed will have the least show of reasonable excuse.

In Mr. Hamilton Holt's article on Mexico, published in our issue of October 13, it was stated that the United States marines did not participate in the military parade during the Centennial week "owing, it is said, to an unfortunate mistake of the American Embassy in not transmitting the invitation in time." Tho this statement was based on what seemed adequate authority, we are glad to learn from Ambassador Wilson that all matters relating to the Mexican Centennial were discussed in accordance with diplomatic usage thru the Mexican Embassy in Washington. It seems that Mexico did not invite the Government of the United States to send warships to participate in the Centennial Celebration, but merely "unofficially advised" us of the intention of other governments (tho uninvited) to send warships.

We regret that Ambassador Straus wishes to resign from his post at Constantinople. He was appointed our representative at the Porte three times, and under Presidents of both parties, and his service has been most distinguished and greatly appreciated by Americans in Turkey, by all the missionaries, altho he is a Hebrew. We trust he may be persuaded to serve out his term, for a man of wisdom and experience is much needed there.

Insurance

Boiler Insurance

THE use of steam, which has revolutionized manufacturing, has certain drawbacks. One of these is the hazard signified by possible boiler explosions. Every now and then we read of a boiler explosion that kills some one, sometimes more than one, and does varying amounts of damage. Often the cause of such an explosion is unknown. Even when the greatest care is exercised a boiler has been known to explode with tremendous force and carry wreckage in its train. Because of these facts boiler insurance has been instituted. This kind of insurance calls for the rigid periodical inspection of steam boilers by experts so as to minimize the risk they signify. Some idea of the magnitude of this work may be gathered when it is understood that nearly thirteen thousand dangerous deficiencies were reported to one company doing this class of business in a single year. Some boiler defects are, of course, beyond the reach of human scrutiny and consequently the element of danger can never be completely eliminated, but it goes without saying that fewer explosions occur with the supervision exercised by an insuring company than would be the case without such a safeguard. In certain cases it has been found true that water in some parts of the country that is apparently good, is nevertheless wholly unsuitable for use in steam production, since from it is sometimes deposited a scale or again the interior of the used boiler is corroded. In either case an established company engaged in the business of insuring steam boilers would be able to suggest the required counter-agents which would remedy such troubles. The expansive force of steam is more than sufficient to rend any boiler that can be constructed. The importance of always employing only a fully competent engineer altogether aside from the question of insurance and the indemnity it provides will therefore easily be apparent.

THERE are certain preliminary requirements made by all life insurance companies before any man may insure his life. In the first place, he must be shown to be morally and physically fit. A medical examination is always made by first-class companies, and if the prospect fails to pass there is no insurance for him. All men are not insurable. Second, the man must be financially able to pay the required premiums. Third, his occupation and surroundings must be satisfactory to the company. Life insurance policies would not be issued to men who propose to enter into extra hazardous occupations. Air men are not insurable. The agent who obtains applications without bearing these three points in mind not only wastes his own time, but he puts his company to useless expense. It is comparatively easy to find out if a man is insurable before getting an application that is bound to be rejected.

ACCORDING to *The Insurance Age,* the annual mortality among wage-earners because of the accidents of occupation is from 30,000 to 35,000, while the number of non-fatal accidents is in excess of 2,000,000. The highest percentage of mortality exists among the fishermen of Gloucester, Mass., it being nearly 12 per cent. of the total number of men employed. Among railroad trainmen, which is generally considered a hazardous occupation, the percentage was only about 8 per cent. for the decade ending in 1907.

PRELIMINARY Government estimates of the forest fire losses in Montana and Northern Idaho total $15,000,000 in round numbers. The aggregate area burned over in this district is placed at 1,250,000 acres. These forest fires destroyed nearly twelve years of supply and the incidental damage inflicted was incalculable.

Financial

National Credit Checking

An incorrect impression was at first given as to the scope of Comptroller Murray's new plan for what has been called a national credit bureau. It is not proposed that a national bank's customers shall be subjected to inquisitorial methods, or that there shall be undue official interference with a bank's credit business, but simply that the official examiners shall collect information as to heavy borrowers, shall exchange it among themselves, and shall forward it to the Comptroller for classification and confidential consideration. The exchange of such information by the examiners in one district with those in others may be of much service to the banks in protecting them against certain borrowers the full extent of whose credit operations they do not know. Recent explanations as to the actual limits and real purpose of the project appear to remove all ground for the objections that were at first raised in some quarters.

The Steel Report

Careful attention is always paid in financial circles to the quarterly reports of the United States Steel Corporation. The report issued on the 25th ult., for the quarter which ended with September, showed that the net earnings had been $37,365,187. This sum is less by $2,800,000 than the earnings of the June quarter, and less by about $900,000 than those of the corresponding quarter in 1909, but it fairly accords with the general expectation. After the payment of the usual dividends, $11,078,063 remained. The earnings by months were as follows:

	September Quarter.	June Quarter.
First month	$12,132,188	$13,414,956
Second month	13,132,755	13,229,289
Third month	12,100,244	13,526,715
	$37,365,187	$40,170,900

Owing to the condition of the steel trade, and to the very low tonnage of unfilled orders on hand (3,158,106 tons, the smallest quantity since September, 1904), a continuous decrease for the three months had been predicted. It will be observed, however, that August's net exceeded July's by $1,000,000, and that September's was about equal to July's. The Corporation is now operating only 65 per cent. of its blast furnace capacity. It is said that orders from the railroads are held back, so far as possible, awaiting the Commission's decision concerning the proposed higher freight rates. Arguments in the case are to be made in December, and the decision may not be announced until February.

In the stock market, Steel Common was at the head of the list last week, transactions amounting to 1,047,500 shares, out of a total of 3,379,000 for all securities. Sixty per cent. of the week's business was done in Steel, Reading and Union Pacific. Steel rose to 80¼, but closed at 78¼, with a net loss of 1¼ for the week. The recent very active speculation in Steel shares, accompanied by an advance in price, has not been explained.

....A new low record for British Consols was made last week, when the price fell to 78¾.

....Last year for the first time the foreign commerce of the port of New York exceeded $1,500,000,000, amounting to $1,587,977,314. The imports were $935,990,958, or 60 per cent. of the nation's total. Up to 1890, the nation's foreign commerce in any twelve months had never been so much as that of New York for last year.

....Samuel S. Campbell, for nearly three years past president of the Night and Day Bank, has been elected a vice-president of the Fourth National Bank. Mr. Campbell was for two years vice-president of the United States Mortgage and Trust Company. For eleven years he was connected with the Fifth Avenue Bank, and in the Merchants' National he was assistant cashier and cashier. Charles H. Patterson, for many years cashier of the Fourth National, has also been elected a vice-president.

The Independent

VOL. LXIX NEW YORK, THURSDAY, NOVEMBER 10, 1910 No. 3232

Survey of the World

End of the Campaign

At the close of the political campaign last Saturday night, a fair average of the many partisan and independent estimates and predictions indicated that if the Republicans should retain control of the House their majority would be very small. During the week Mr. Roosevelt continued to be the most prominent of the platform orators, and he spoke in Ohio and Iowa as well as in New York. His controversy with Judge Baldwin, the Democratic candidate for Governor in Connecticut, which began with his speech in New Hampshire on October 22, is not yet ended. It has been the subject of several long letters, and Judge Baldwin now says he intends to sue Mr. Roosevelt. It is understood that ex-Judge Alton B. Parker will be his counsel. There were signs that Mr. Roosevelt's attack upon Judge Baldwin had not aided the Republican party in Connecticut. The chairman of the State's Republican Committee, in a public address, declared that the quarrel was one for which the committee was in no way responsible. He also remarked that the new nationalism was not party doctrine. In New York Mr. Dix met Mr. Roosevelt's attacks upon himself by denouncing the ex-President as a wilful falsifier and an apostle of tumult. In that State the leading subjects of campaign speeches continued to be the record of Mr. Stimson as a prosecutor, the alleged connection of Mr. Dix with the Wall Paper Trust, and the latter candidate's treatment of the employees in his mills. On the one hand there was testimony that they worked under satisfactory conditions; on the other were allegations to the contrary. John Mitchell, the labor leader, stood with the opponents of Mr. Dix in asserting that the latter worked his men thirteen hours a day for low wages, and the president of the Stationary Firemen's Union aserted that the Dix mills had opposed the eight-hour day. Four Cabinet officers (Secretary Knox, Secretary MacVeagh, Secretary Wilson and Attorney-General Wickersham) made campaign addresses in Ohio, urging the people to support the President by carrying his own State for the Republican party. Their remarks were accepted as evidence that Mr. Taft desired a renomination in 1912. Mr. Knox highly commended the new tariff law, saying that it was the wisest and broadest measure of practical reciprocity ever enacted. Mr. MacVeagh called it "the first legislative step in the progress of actual revision," and asserted that the President was "the leader of this movement for tariff reform." The increase in the cost of living, he added, had not been caused by recent legislation, but it was the duty of the Republican party "to take up the intense situation created by this increase." Ex-Senator Foraker, after some days' silence, resumed his attacks upon the "new nationalism," but without repeating his sharp personal criticism of Mr. Roosevelt. His course had been modified by the intervention of the Republican candidate for Governor, Mr. Harding, owing partly to the protests of ex-Secretary Garfield and his associates. In Ohio, Mr. Roosevelt attacked Governor Harmon, saying that as receiver of a bankrupt railroad he had approved the indirect payment of rebates. Having been questioned about Judge Harmon's withdrawal from the Atchison rebate case, he asserted that the Judge had desired to indict Secretary Paul Morton without having a particle of evidence against him. Governor Harmon replied to Mr. Roosevelt, denying the charge relating to his receivership and reviewing the Atchison case.

In Iowa, Mr. Roosevelt spoke in behalf of Senator Cummins, but refrained from criticising the recent revision of tariff schedules. In Massachusetts, Eugene N. Foss, the Democratic candidate for Governor, whose chief topic is the tariff and its relation to the cost of living, called upon the President's aunt, Miss Delia Torrey. "You have been speaking for tariff revision," said she, "and Will [the President] is after that very thing. You have also been talking about the cost of living. If you are going to make things cheaper, I surely hope you'll be elected Governor." Congressman Butler Ames, a Republican who has been nominated for re-election in the Fifth Massachusetts District, has written a sharp letter to Senator Lodge, urging him to save the Republican State ticket from impending defeat by declaring that he will not be a candidate for re-election to the Senate in January next. He says:

"The reelection not only of our Governor but of the whole State ticket is in great jeopardy owing to the opposition of the voters generally to your reelection to the United States Senate and to your continued control of the party's machinery, convincing evidence of which lies in the fact that every Democratic speaker and every Democratic paper has made your bossism the issue of this campaign. All last winter, spring and summer I maintained that your control of the party's machinery was inimical to the party's success. It is now apparent to every one that such is the case."

Railroad and Trust Cases

By majority vote, on the 5th, the Interstate Commerce Commission upheld the increase of freight rates made about two years ago by railroads in the Southeast for goods passing between Ohio and Mississippi River points and the Southeastern seaboard. The complaints of the Alabama and Georgia State Commissions and of certain corporations were dismissed. Commissioners Lane and Clements dissented. It was held by the majority that the increase was neither unjust nor unreasonable, but was justified by the condition of the railroad companies and the need of improved facilities.——At Columbus, Ohio, last week, further evidence that the organized employees of the railroads will exert their influence in support of the general increase of rates which is now the subject of official investigation was shown when a resolution urging the commission to grant the increase was adopted by representatives of the national unions of conductors, engineers, firemen and trainmen.——The Hocking Valley Railroad Company and the Sunday Creek Coal Company have been indicted in Ohio for violating the Interstate Commerce law. It is alleged that the railroad company discriminated in favor of the coal company, giving it unlimited credit, until its freight debt amounted to $2,445,000, while it required other shippers of coal to pay cash. The coal company is controlled by the railroad company. Possible fines of $740,000 are involved in the indictments.——In complaints filed with the commission, the Marian Coal Company, of Wilmington, Del., asserts that the Delaware & Lackawanna Railroad Company, with the aid of the other anthracite roads, has discriminated against it, persecuted and harassed it in many ways, seeking its embarrassment and ruin.

Alaska Coal Frauds

Indictments charging conspiracy to defraud the Government of more than 20,000 acres of coal lands in Alaska, valued at $200,000,000, were returned by a Federal grand jury in Spokane, on the 3d, against six men who control the claims of 131 persons (160 acres each) in the Kayak mining field. Those indicted, and others to whom claims were assigned, are named below:

Harry White, formerly mayor of Seattle; Charles A. Mackenzie, real estate agent, Seattle; Donald A. Mackenzie, of Seattle and Washington, D. C.; Raymond Brown, of Spokane; William L. Dunn, of Spokane; Charles M. Doughton, of Seattle. Among those who were assignees of the original claimants were Governor James N. Gillett, of California; Ex-Governor John H. McGraw, of Washington, who died a few months ago; Congressman McLachlan, of California; and Henry T. Oxnard, of New York and California, President of the American Beet Sugar Company.

The Mackenzies and the McGraw estate owned the Alaskan town site Nelson, which was named in honor of Senator Knute Nelson, of Minnesota. It is charged that the indicted men employed many of the 131 men who filed claims, or had an agreement with them.——By order of the President, all the oil lands in

Alaska have been withdrawn from settlement. All the coal lands, except those located prior to 1906, have been withdrawn.——At Omaha, a Federal grand jury has indicted nine ranch owners for conspiring to drive homesteaders from their claims in Western Nebraska. One of them, Perry S. Yeast, was convicted two years ago of land frauds, and he served a term in jail. Two others are Dr. H. H. Huff, a prominent physician, and Henry Sutton, county attorney of Garden County. They are members of the county's insanity board. Yeast led a band of men who intimidated the homesteaders, threatened them with death and destroyed their property. They wrongfully procured the commitment of one of their victims to the county's insane asylum, and the indictments allege that they did this with the help of Huff and Sutton, as members of the insanity board.

Panama Not to Be Annexed

In one of the New York newspapers there was published, on the 2d, a long story in which it was asserted that President Taft, during his visit to Panama, would consider the question of annexation. He was unwilling to take steps toward annexation, it was said, but had been told by Government officers and other residents of the Isthmus that conditions would require annexation before the opening of the Canal. Authoritative denials were at once given to the press at Washington, where the Government pointed to the Hay-Varilla treaty, which declares that the United States "guarantees the independence of the Republic of Panama." Minister Arosemena promptly called at the White House. Afterward he sent to his Government the following message:

"President Taft authorizes me to say that neither he nor the authorities of the United States have ever had or have now any intention of trying to annex Panama."

He also gave the following statement to the press:

"The President authorized me to make a sweeping denial to my Government, and to any one who might inquire, of the statement that the American Government has formed any plans or has given any consideration to any idea of annexation of the territory of the Republic of Panama or of taking any action calculated to deprive it of any of its territory or of any of its constitutional rights as a free and independent republic. I am authorized to make this denial as sweeping as possible, pronouncing such statements as a wholly unwarranted and baseless fabrication. He assured me, and I emphasize this assurance as representing my country, that there has never been and is not now or prospective anything between the two Governments that would lead to any uneasiness on the part of my people as to any American interference in our independence. The relations between the two countries were never better than they are at present."

It was untrue, he added, that the President was uneasy about the financial condition of the republic, or that there was anything in the financial management to warrant criticism. Concerning the fortification of the Canal, Panama was in complete accord with the policy of the United States.——In Panama, Councilman Carillo, an official orator at the independence celebration on the 3d, has been removed from the Government service (in which he was employed), because of passages in his oration that were hostile to the United States. The oration has been disapproved by the Municipal Council, which he represented.

The Islands

Order was preserved thruout Cuba during the elections of the 1st inst., when half the members of the Senate, half the members of the House, and the provincial and municipal officers were chosen. The returns indicate a general Liberal victory, altho the strength of the Conservative party was increased. There was no popular condemnation of the present Administration in the result.——In the course of a lecture at Kansas City on the 2d, Col. Jasper E. Brady, who resigned from the army in 1899, said that he was one of four officers directed to make an inquiry after the destruction of the "Maine"; that they discovered that the explosion had been caused by Cubans who desired thus to bring on war between Spain and the United States; that the man who exploded the mine by an electric current was Jose Zavaldo, electrician at Morro Castle, who was afterward shot by the order of General Blanco; and that a piece of the cable used by him was in the custody of the Navy Department. At Washington, however, it is said that Colonel Brady was never a member of an investigating board. Rear Admiral Wainwright, a member of the

Naval Board of Inquiry, asserts that his theory was discredited during the investigation and that the Department has no such piece of cable.——Secretary Meyer, at the close of his tour of inspection, exprest the opinion that Guantanamo ought to be the naval base auxiliary to the defense of the Panama Canal. ——Additional raids have been made by rebellious tribesmen in Mindanao (the Philippines) and eight planters have been killed.——The Philippine Assembly, having elected Manuel Quezon delegate to Congress, has rejected Benito Legarde, the Commission's choice for associate delegate.——More than 3,000 deaths from cholera have been reported in the Philippines during the last five months.——Hayti's Senate has authorized the establishment of a bank to act as treasury for the loan of $16,000,000 recently negotiated in Paris at 71 per cent. Dispatches say that this action is not approved by our Government, which has pointed out the danger of the preponderance of French and German capital in the republic.

South and Central America

A revolutionary uprising in Peru has been prevented by the arrest, on the 1st, of many persons. There is evidence that plans had been carefully made for an outbreak in many places on one and the same day. The movement was due to complaints concerning the Government's course with respect to the boundary dispute with Ecuador.——Very little news about the revolutionists in Uruguay has been published. It is said that they have been defeated in one engagement.——Reports from Managua say that Juan J. Estrada will serve as Provisional President of Nicaragua for two years, a convention to this effect having been signed there on the 5th by Special United States Commissioner Thomas C. Dawson, General Estrada, War Minister Mena, and other members of the Cabinet.——There is more trouble at Amapala, the island seaport of Honduras, in the Gulf of Fonseca. Jose Valladares, the rebellious Governor, returned last week from the capital, where he had promised President Davila to retire peaceably. He was accompanied by General Carias, who had been appointed to succeed him. Upon his arrival he ignored Carias, sent a defiant message to Davila, and dared "the Yankee pig navy" to interfere with him. He also insulted the American Consul. The "Princeton" cleared for action and trained her guns on his residence. Whereupon he promised to restrain himself. As Davila has only a small army, it was thought that it might be necessary to land American marines. At the end of last week, however, it was reported that Valladares's soldiers were leaving him.

The Constitutional Conference

The conference between the leaders of the Government and Opposition in the British Parliament, which has been going on for about six months, is supposed to be entirely confidential, but now that the conference is apparently nearing its close, certain rumors of its action have been allowed to transpire. Possibly they have been put out as feelers to ascertain the drift of public opinion before the announcement of the decision of the conference. It appears that the conference has taken a much wider scope than was anticipated when it was appointed and that the wider the scope of the measures considered, the greater the agreement between the opposing parties. The conference had its origin in the so-called "Truce of God," when a conflict of unusual bitterness between the Commons and the Lords was interrupted by the death of King Edward. It was universally felt that the continuation of the conflict by the same partisan methods was as unfruitful as it was unseemly. Accordingly it was decided that the leaders of the parties in the House of Commons should meet informally and see if they could not arrange a compromise on the question at issue, particularly the veto rights of the House of Lords. It was agreed that the conference should be secret and that no political advantage should be taken in the future of any concessions made or views advanced during the session. The method seems to have worked so well that the conference was encouraged to continue and to take up the larger questions resulting from the situation. Whether the conference will issue a unanimous report or not the result will be the emergence into practical politics

of one or more plans for a federation of the British Isles and perhaps of the empire.

British Imperial Federation

One of the proposals now being publicly discussed is that of Earl Grey, which provides for the federation of the British Isles on a plan similar to that of the United States and Canada. England, Scotland, Ireland and Wales will have the management of local affairs in their own hands while imperial questions will come before the Parliament composed of a House of Commons and a Senate. The Commons will be composed of representatives of the four countries in some such proportion as the following: English members, 138; Irish, 25; Scotch, 25, and Welsh, 25. In the Senate the Lords will be represented by 100, and the colonists in proportion to their population, by Senators elected for six years. Many other schemes varying widely in their details but having a similar aim have been suggested. The idea of federation seems to be meeting with remarkable favor from all sides. It will in a measure satisfy the demand for Home Rule and at the same time it falls in with the imperialistic designs of the Conservatives. Whether it will appease the Irish leaders or not remains to be seen. John E. Redmond has been apparently vacillating in his opinion of the plan. He has been in the United States collecting money for the Nationalist cause and has been successful in securing pledges for $150,000. He has this week sailed for home and will hereafter be closer in touch with the movement of events and be able to speak with more confidence. The question arises whether the Unionists, whose very name implies opposition to Home Rule and who seceded from the Liberal party in 1886 when Gladstone announced his conversion to that policy, can without stultifying themselves support or acquiesce in such an arrangement. The London *Times* seems to be preparing a way for such an "about face" in a series of articles published over the signature of "Pacificus," assumed to be Lord Esher. This author argues that the Unionists can consistently favor a federation plan because conditions have changed since 1886; the Fenian agitation has died down and the landlord question has been practically settled by the Lords favoring the division of the larger estates among peasant proprietors. "Pacificus" recommends the holding of a large public constitutional convention composed of representatives from the whole empire to formulate a plan for imperial federation.

The New French Cabinet

Premier Briand continues to puzzle the French politicians by his unexpected actions. Last week he secured a vote of confidence from the Chamber of Deputies in the face of furious opposition. If he had been defeated, of course, his Ministry would have had to resign. He is triumphant and thereupon immediately presents to President Fallières the resignation of himself and of his Ministers. It appears that charges of disaffection in the Government were not altogether wrong. The two Socialist members, M. Viviani, Minister of Labor, and M. Millerand, Minister of Public Works, Posts and Telegraphs, were apparently not in sympathy with M. Briand's plans for preventing industrial outbreaks in the future, altho they were willing to stand by him during the railroad strike and the resulting parliamentary crisis. It is recognized that Briand is the only man who is able to command a parliamentary majority under present conditions, and the President requested him to form a new Ministry. Some of the old Cabinet will be retained, but M. Cochery is replaced as Minister of Finance by Louis Lucien Klotz. He is a lawyer of forty-two years of age, a radical Socialist and a strong protectionist. He presented the last budget and engineered the recent tariff bill thru Parliament. Since M. Klotz is a Hebrew, his appointment will infuriate the anti-Dreyfusards, as the inclusion of Louis Lafferre, a prominent Free Mason, will exasperate the Clericals. The new Government will formulate measures to prevent state employees from forming militant unions and disabling the commerce of the country for the purpose of advancing their personal interests. The Government claims to have proof that the leaders of the railroad strike encouraged violence and the

destruction of property—*sabotage,* as it is called in French. A pamphlet was published by one of the employees of the state railroad system explaining a plan of campaign for rendering the train service impossible for several days by destroying the line, the wires and the signals. This plan was carried out by the strikers. *Sabotage* was defended during the discussion in the Chamber of Deputies by M. Bouveri, a miner from Montceau. He held that the strikers were engaged in a social war and had the same right to destroy the property of the state as the Minister of War would have to blow up bridges and tunnels in order to check the advance of a foreign enemy.

Church and State in Spain

The first step toward carrying out the anti-clerical policy of the Government was taken on November 4, in the passage by the Senate of the Cadenas bill, prohibiting the formation of any new monastic establishments. The vote in the Senate was 149 to 85, and the Government will doubtless command a still greater majority in the Chamber of Deputies. In advocating the measure before the Senate on October 28, Premier Canalejas made it plain that it was an essential part of the Government's program, and stated that it was made necessary by the requirements of international policy. The Premier declared:

"You must realize that the most critical hour has struck for the Church in Spain. The moment has come to settle the clerical problem. If we do not solve it now the Liberal party will never solve it."

In opposition to the Cadenas bill the Bishop of Guadix argued that the Church could not submit to a foreign Power, for then the sovereign power of the Pope would become illusory. He said that disputes might arise over the application of the law, and quoted texts to show that the civil power could not legislate on religious matters. The bishop maintained that the clergy, at the moment when they took their religious vows, lost their Spanish citizenship in order to become subjects of the Church, and from this theory he deduced that the bill was aimed at persons who were no longer Spanish subjects. While the bill was under consideration in the Senate an amendment was made, limiting it to two years. This reduced the opposition of the Clericals and may open the way to a resumption of negotiations with the Vatican, which has hitherto held that the passage of such a measure was a violation of the concordat and precluded all possibility of an agreement with Spain. Before the two years are up Señor Canalejas will bring in a bill regulating the formation and control of all religious associations. In the preparation of this legislation the Vatican will be consulted and an effort made to avoid such a complete break as in France.——The position of the Government seems very strong. There is no indication that the republican fever will spread from Portugal. King Alfonso is more popular than ever, and the army appears to be loyal, in spite of efforts said to be made by the republicans to convert them to revolt. The Government has caused the arrest of Professor Ovejero, of Madrid University, on the charge of tampering with the loyalty of the soldiers. An anti-military mass meeting was held in Madrid to protest against this action, but Señor Blasquoz, president of the Federation of Young Socialists, was arrested for a violent speech he made on that occasion. Mayor Santos, of Badajoz, has been arrested for making disloyal proposals to an officer of the garrison at that post.——General Weyler is able to maintain order in the turbulent province of Catalonia, and that, too, without calling for the troops which have been offered him by the Government. The 6,000 striking miners of Sabadell had planned to march to Barcelona in a body, with their wives and children, and there unite with the striking metal workers in a great labor demonstration, but this was prohibited by the Government, for fear of an outbreak. Only 1,200 persons persisted in the attempt to carry out the demonstration, and these were easily dispersed by the civil guards.——The Government is relieved from another embarrassment by the settlement of the Morocco question. The country would hardly have stood for a renewal of the war in Africa. Barcelona certainly would not. And the

army would have been indignant if Spain had relinquished the indemnity demanded of Morocco. Fortunately El Mokri, representative of the Sultan of Morocco at Madrid, has at last consented to the payment of $11,000,000 to Spain on account of the war.

The Squeezing of Persia

Persia has been notified by the British Government that the southern trade routes must be made safe for traffic within three months, or it will take over the policing of them as far as Ispahan. The importance of this will appear when it is recalled that Ispahan is on the southern limit of the Russian sphere of influence. Negotiations with Russia began by Sir Edward Grey immediately after the conclusion of the war witl Japan and resulted in an agreement between Russia and England in regard to Persia and other Asiatic states. According to this agreement Russia was to have a free hand in the northwestern part of Persia as far south as Ispahan. England was to have a similar sphere of influence in the southeastern part of the country as far north as the head of the Persian Gulf. Between the two was a neutral strip in which neither country was supposed to attempt any commercial advantage or interfere in internal affairs. But according to the ultimatum now delivered to Persia by Great Britain, with the full approval of Russia, the entire trade route from Bushire thru Shiraz to Ispahan is to be protected by a local guard under some twenty officers of the Indian army, and the note adds that the area of action may be widened if necessary. Of course, the expenses of this protective service will be met by Persia, and for that purpose a charge of 10 per cent. will be made upon the customs. An opportunity is ostensibly afforded to Persia to escape this interference of a foreign Power by putting a stop to the disorder thru its own forces. This, however, is doubtless impossible. The power of the Government does not extend much beyond Teheran. The Persian Government is without money, and has not been able to secure a loan from either of its protectors, Russia or Great Britain. Ain-ed-Dowleh was appointed some months ago to go to Shiraz to keep the trade routes open, but he still remains at the capital because the Persian Government has not the necessary funds to equip his expedition. The Persian reply will make the claim that the disorders are due to the presence of foreign troops in the country, which encourages reactionary hopes of the restoration of the ex-Shah. The note will insist that the finances of Persia are sufficient to justify a loan, and will ask that the British Government should sanction an increase in the customs by 10 per cent., the surplus to be used for the maintenance of order. In spite of Persian protests the Russians still hold three towns to the northwest of the capital—Tabriz, Kazvin and Ardebil. There seems to be no excuse for the presence of the Russian troops, since Northern Persia is reasonably peaceful, but Russia has requested certain concessions as "tokens of good will" before consenting to withdraw her forces. Among these concessions are the protection of a copper mine in the Karadagh district, near the Russian frontier south of the Caucasus; another is the proposed establishment of a motor car service on the Russian road extending from Resht, on the Caspian, to the capital. In the southern part of Persia a very much worse condition of affairs prevails. Predatory tribes attack the caravans and levy their own tariffs and loot at will. As a consequence of this, the rates for transportation over the southern ranges have risen from $20 to $75 per ton. The direct route from Bushire to Shiraz is practically closed to caravans. Trade with the interior has been, therefore, diverted to the head of the Persian Gulf, at Mohamera. There has been, however, no falling off in the total amount of trade thru the Persian Gulf. On the contrary, the customs receipts for the last five months show an increase of $80,000. Azad-el-Mulk, acting as regent in the minority of the Shah, died the last of September, and the National Council has appointed in his stead Nasr-ul-Mulk, now in Vienna. Germany, of course, sees in the British note only the consummation of a nefarious bargain between Russia and Great Britain for the partition and annexation of Persia.

Knowledge and Education

A Letter to a Russian Peasant

BY COUNT LEO TOLSTOY

HAVING reflected much and long on what you have written in your letter, and realizing that my time is short, I will say now—as well as I am able—once and for all, what I think on this highly important subject.

You ask what one is to understand by knowledge and education; if both are not harmful at times; and wherein the harm lies? As an example, you then cite the case of a teacher, the son of a small farmer, who is ashamed of his father; that when the latter brought him various produce from the farm, he was told to stay in the kitchen, in order that the educated son might not be shamed in the presence of his guests by the rustic appearance of his parent.

This may be an isolated case, still it is a typical one, and it is worth while to consider it, in order that what is called "education" may be shown in a light in which it does not appear to most people.

On the day after receiving your letter I spent the evening with the lady principal of a school who rejoiced in the somewhat unusual name of Aculina Tarasovna. She had fine, beautiful white hands, with rings; was quite fashionably dressed, and had the pleasing appearance of an amiable, intelligent, "well-educated" woman of liberal views. This lady is a peasant's daughter, and was a poor orphan. By chance, a landowner's wife in the district took pity on the child, and gave her an education. And thus, instead of the little peasant girl whose mother had dragged her by the hair of her head for having allowed the calves to get into the oat field; instead of the rustic beauty, perchance courted by a farm laborer, and beaten by him in a fit of drunkenness; instead of a widow, left perhaps with five children, forced to beg, and moving every one to tears with her miseries; instead of a mother, who having reared and brought up a son of her own, is herself forced to eat the bread of charity with a son-in-law, and suffer all kinds of humiliation—instead of such a decrepit, dirty, ragged old woman, praying night and morning to the Virgin to take her to herself, a burden to all about her; instead of such a Tarasovna, we have an amiable, intelligent school principal, who shuffles the cards with her fine white hands; who prefers tea with lemon rather than milk; and who, when asked, "Do you take jam?" replies, "Yes, please, but very little; the doctor has forbidden it; but the jam is really excellent."

The difference between these two beings is as great as between heaven and earth. Why? Because Aculina has had an education.

Her benefactress was not wrong in giving her what she considered necessary for true happiness. She gave her *protegée* education. And this education had the effect of making the peasant girl, who would have been despised by all, a lady, respected by every one, and of removing her from the class of the oppressed to that of the rulers of society.

II

For some years hardly a day has passed in which I have not received from two to four letters asking for help. Sometimes they are from mothers asking on behalf of their children, or from young students who wish to finish their "education"—to satisfy their "long-felt desire for education," as they write. That is to say, I am to help them to pass from the class of hard physical workers to that of the educated. The most remarkable thing, and I might almost say, amusing, if the matter were not so tragic, is that all of these young men, girls, mothers, explain their desire for education by the wish to have the chance of devoting their lives to the "service of our unfortunate people."

It is as tho a number of persons were carrying a plank, and one of them stops

carrying and sits on it, explaining to the others who continue to carry it that he wants to help them.

The whole thing is very simple.

We say there are castes in India, but none in our Christian world. This is not correct. In our Christian world there are perhaps not many, but at any rate there are two sharply divided castes, that it would hardly be possible to find a greater distinction than between people with polished fingernails, false teeth, fine clothes, food, comfort, expensive tailors, who spend five, three, two roubles a day—not to speak of those who spend much more—and the half-naked, hungry, dirty, tired, ignorant, ever-suffering creatures who work as many as sixteen hours a day for two roubles a week. The only difference between the castes in India and these two classes, or castes, in the Christian world, is that in India it is forbidden by law and custom to go from one caste to another, while with us it is possible to do so, and moreover it is actually effected always by one and the same medium.

This medium is "education." It is education alone that enables people of the working class to enter official and other circles. Should, however, people of the working class rise to riches thru other means than by "education," they still need education in order to be counted among the higher classes.

Thus, the desire for education among the working class is frequently, if not always, actuated by the wish to free themselves from the toils of their class, and accordingly is not only unpraiseworthy, but for the most part betrays an evil endeavor.

III

"But granted that the aim of most of the working class who strive for education is not praiseworthy," say those who firmly believe in the beneficial results of knowledge, "education is, nevertheless, in itself invariably useful, and it is desirable that as many as possible should possess it."

In order to answer this, we must first answer the question you have asked, "What is it that we call education and knowledge?"

As education means only the command of the subjects comprising knowledge, I will speak of the latter only.

Knowledge? What is knowledge? According to the view formerly held, and still held by most people, it is the acquaintance with the things that are most important and necessary for human life.

Such knowledge was, still is, and cannot be other than of one kind, namely, the knowledge of what every human being should do in order to live as well as possible during the short space of time allotted to him by God, Fate or the laws of Nature. In order, however, to know how life can be spent in this world in the best possible way, one must first have a clear idea of what has always been, and what is, at all times, good and what is bad; that is, we must know what to do and what to avoid.

This is what true knowledge has consisted and still consists of.

This is the real knowledge, that is to say, a collection of the things man cannot possess intuitively, but which he must learn, and which the entire human race has always learned. It consists of a complete acquaintance with what the best and wisest of all men in the thousands of years that are past have thought about what we must do, and not do, so that life may be good not only for the individual self, but for all. And as this question has ever forced itself on all mankind, from the earliest times to now, there have been persons among all nations who have exprest their opinion as to what such a good life must consist of, *i. e.*, what mankind must do for its own benefit. Such persons have lived everywhere: Krishna and Buddha in India, Confucius and Lao Tse in China, Socrates, Epictetus, Marcus Aurelius in Greece and Rome, Christ in Palestine, and Mahomet in Arabia. Such persons have lived both in the Middle Ages as well as modern times, and in the Christian, Mohammedan, Brahmin, Buddhist and Confucian world.

This true knowledge consists, then, in the acquaintance with what has been said on this subject, for the most part in similar words, by the sages of all peoples.

IV

The knowledge of how we should live in order to end our days well touches several sides of human life. It teaches us how to deal with the society in which

we live; how to nourish one's self, to marry, to bring up children, to pray, to teach, and many other things. With relation to the various sides of human life, knowledge appears, therefore, to be extensive and complicated; its chief attributes, however, by which each of us may answer all questions of life, are short, simple and accessible to learned and ignorant alike.

This cannot be otherwise. Whether there be a God or not, at any rate it is impossible that the knowledge which is most necessary for human life should only be accessible to him who does not need to help himself, and who devotes twelve years of his life collecting learning at the expense of other people in different educational institutions. This must not be so. True knowledge, which every one needs, must be accessible and comprehensible to all, because its main attributes consist, as Christ exprest himself, in loving God and one's neighbors. To love God means, above all, to love goodness, and to love one's neighbor means to love other people as one's self. This same true knowledge was taught in the same simple form, before Christ by the Brahmin, the Buddhist and the Chinese sages, who regarded knowledge as goodness and love; and as the Chinese sage exprest it, the command was given to treat other people as one wished to be treated himself.

The people who busy themselves nowadays with knowledge, and who are considered learned, study everything under the sun. And there are so many subjects which come under the designation "knowledge" that no man can enumerate them, to say nothing of mastering them. They form a huge mass, and each day discloses new subjects of study. All these various branches of knowledge, with their curious Latin and Greek names, are considered equally important and necessary, so that one doesn't know with which branch to begin. People who firmly believe in knowledge are not only perfectly indifferent when told that their knowledge is useless, but they even assert that the most important and necessary branches of knowledge are those which are of no use in daily life; that is, entirely superfluous. In fact, in their opinion, this very uselessness is an evidence of its importance as a branch of knowledge.

It is obvious that to those who hold this view of knowledge, all branches are equally necessary. They study with equal zeal and attention the question of how much the sun weighs, and the possibility of the collision of two planets; where various kinds of beetles live and how they multiply; how the earth came into existence, and how the grass grows on it; what mammals, birds and fishes live and have lived in former times; what king waged a certain war and who was his wife; who wrote certain verses and songs; what laws are necessary and why we need prisons and gallows, and how they can be done away with; what the finer metals are composed of; how gases are engendered and volatilize; why the Christian religion is the only true one; how benzine motors, aeroplanes and submarines are made, etc. And all these branches of knowledge, with the most curious and complicated names, and all these researches and discoveries which are considered so important, have not and cannot have, any end. This is especially the case when these so-called branches of knowledge are studied by those who do not support themselves, but are supported by others, and therefore devote themselves to various recreations, out of sheer ennui. They seek out all kinds of games, amusements, entertainments, theaters, combats and tourneys, by way of pastime, under which may also be classed what they designate as "knowledge."

V

I know that my words will appear to the disciples of knowledge—and people believe in knowledge now more than in religion, while no one dares to call knowledge what it really is, simply a crude superstition—as a dreadful sacrilege; they will pay no attention to them and not even get angry, but will only feel sorry for the foolishness of an old man who passes such judgments. I realize that my judgments will be so considered; nevertheless, I shall say all I think about the so-called knowledge, without giving myself the trouble to say why I think so.

Knowledge, according to its aims, may be divided into three branches:

First, natural history: Biology with all its divisions; astronomy, mathematics, and theoretical, *i. e.*, unapplied physics, chemistry, etc., with all their subdivisions.

Second, the applied sciences: Applied physics, chemistry, mechanics, technology, agriculture, medicine, and others which seek to place the natural forces at man's service.

Third, all the sciences which aim at justifying and confirming the existing social systems. Such are all so-called theological, philosophical, historical, juridical and political sciences.

Those included in the first division—astronomy, mathematics, especially those branches of knowledge so beloved by the so-called educated people, such as biology and the theory of the genesis of organisms, and many other sciences whose aim is pure curiosity—cannot be called knowledge in the real sense of the word, for two reasons: In the first place, they do not fulfil our first demand, namely, to answer the question, "What must we do, and not do, in order to lead a good life?" In the second place, they do not even satisfy the requirements, based on mere curiosity, of those who study them. With the exception of mathematics, these subjects do not fulfil the requirements, because they take for granted that everything is as it appears to mankind. It is, however, quite arbitrary and uncertain to assume that the world is as it appears to the external senses of one of the innumerable creatures (namely, man) inhabiting it. It is arbitrary and uncertain, because the world appears quite different to every other creature endowed with different senses, for example, to a crab or a microscopical insect, and to millions upon millions of known and unknown organisms.

Thus the first assumption, on which all reasonings are based, appears arbitrary and incorrect. Consequently, all the conclusions from this assumption, which are based on the external impressions of the senses, contain nothing real and cannot satisfy a serious desire for knowledge. But even if we grant that the world is as it seems to any of the countless creatures in it, for instance, man; or that we, taking all the knowledge of the world, are content with that which appears to mankind to be true, even then the knowledge of this world cannot satisfy the requirements of a sensible desire for knowledge. For all the external appearances in this world are bound up with endless space and endless time. For this reason, both the causes and the effects of each appearance, and the relationship of each object to those surrounding it, can never be really ascertained. The cause of the origin of each appearance and also the effect of each appearance cannot be traced in the infinite past and future. It is also impossible for another reason to determine the relationship of an object to those surrounding it, because such object cannot be represented otherwise than in space and time, and because we cannot think of material things otherwise than in a fixed relationship to infinitely great and infinitely small things.

Man has evolved from lower animals; but where did the lower animals come from? How did the earth come into existence? Where shall we pause when we know that time is infinite, past and future? They tell me that the sun is many thousand times greater than the earth; but the sun is nothing in comparison with the stars of the milky way. Or, I am told that human blood contains corpuscles or cells, which in their turn contain molecules; but what do the molecules consist of?

Those who are exempt from necessary work may find amusement and interest in the so-called scientific investigations respecting the origin of the world, or of its organic life, or regarding the distance and dimensions of the planets, or the life of microscopic organisms; but for serious, thinking men these questions are of no importance, as they are only an idle, intellectual game, and are by no means of value as knowledge.

So much for the first division of so-called knowledge. The applied sciences—included in the second division—which teach us the way in which the forces of nature may best be overcome and used for facilitating human labor, have still less claim to be regarded as true knowl-

edge. For the object and aim of all true knowledge is the well-being of mankind, and all these applied sciences, physics, chemistry, mechanics, and even medicine, are just as often harmful as they are good for mankind. All successes of the applied sciences, under the present capitalistic system, only increase the power of the rich over the classes which have been reduced to slavery, and multiply the horrors of war. They can be regarded, therefore, as industries, or theories of various industries, but not as knowledge.

The third division, which comprises the so-called branches of knowledge which have for their object the justification of the existing order of life, remains. Not alone do these branches fail to fulfil the principal object of knowledge, namely, the welfare of mankind, but they have an exactly opposite aim, that of keeping the majority of mankind in the power of the minority; and to this end they make use of all kinds of sophistry, cunning and deceit.

Such knowledge, above all, is theology, homiletics, etc., which have wrongly been called God's command; and then, the pseudo-philosophic knowledge embodied in the doctrines of Hegel, Marx, Haeckel, Nietszche and others; further, legal knowledge, with its propædeutics, criminal law, international finance law, etc.; also history, with its patriotism and the representation of all kinds of crime as heroic actions.

I think it is not necessary to state at greater length that all of these subjects, which have to do with the misfortunes, and not the well-being of mankind, cannot be regarded as true knowledge.

My answer, therefore, to your question as to whether knowledge is harmful and wherein the harm lies, is as follows: There is nothing more necessary and blessed in the world than true knowledge, but there is nothing more harmful than the inanities regarded as knowledge by the leisured people of our time.

YASNAYA POLIANA, RUSSIA.

My Brother Lazarus and I

BY LOUISE DUNHAM GOLDSBERRY

We dwell without the wallèd town,
We twain:
Our drink the sweet uncisterned rain
The clouds let down;
Nor golden bowl with sapphired rim
Gives fairer drink than my hands brim:
For lo! within that humble cup
'Tis the brook's song that I drink up!

Our roof the star-horizoned sky
Alway:
The broodful cloud and azure day
Where prone I lie;
Nor in king's houses couch so fine
As the green grass that pillows mine:
For lo! the splendor of the year
Leaves all its gracious fragrance here!

Our beggar-bread we eat apart
The gate:
Yet in the rainbow's fringe we wait
God's hearing heart;
Nor care we, Lazarus and I,
The scorn of them that pass us by:
For lo! we, too, shall cry our plea--
"Thou pitying Jesus, pity me!"

WASHINGTON, D. C.

The Musical Situation.

WHEN Oscar Hammerstein announced his intention of building a new opera house in London even those who know that the erecting of theaters is his hobby felt inclined to think that he was simply letting off the steam which must have accumulated to the bursting point because of his sudden release from the multifarious duties and anxieties of an operatic manager in New York. But the latest advices state that the architects have already begun their labors on his opera house, and now those best informed are shaking their heads and predicting dire disaster. Two years ago there were a number of operas which Londoners had never heard; but the most promising of these have since been staged by the millionaire (or, to be more definite, the pillionaire), Thomas Beecham, who is said to have paid the piper to the tune of a $250,000 deficit.

Perhaps Oscar Hammerstein will have better luck; what many are asking, however, is: "If he has money enough to build a new opera house abroad, why did he have to give up the Manhattan in New York?" To be sure, the Metropolitan directors paid him for renouncing, for ten years, all his grand opera rights and plans in New York, Philadelphia and Chicago; but the sum given was not so large as reported.

That he did give up the Manhattan is almost universally regretted, because the performances there were unique, and often most enjoyable. Fortunately, we are to have almost exact duplicates of some of them at the Metropolitan when Mr. Dippel brings his Chicago Opera Company to Philadelphia.

Dippel's Plans Carried Out

When the war between the general manager and the administrative manager of the Metropolitan came to an end, Mr. Gatti-Casazza remained in possession of the fort. However, Mr. Dippel was by no means defeated; he was simply asked to carry out his own plans of establishing opera companies in other cities besides New York and Boston, complete in themselves, yet allied to the companies in those cities. With the incomparable Cleofonte Campanini as his conductor, he has gathered about him an excellent group of singers, including the best of those Mr. Hammerstein had at the Manhattan. After a three months' season in Chicago this company will be transferred bodily to Philadelphia, to occupy the Hammerstein Opera House (purchased by the Metropolitan); and during its ten weeks in the City of Brotherly Love Mr. Dippel will bring his singers to the Metropolitan every Tuesday. He will thus practically occupy a more influential position than his former associate from Milan, for he will have absolute control of the situation in Chicago and Philadelphia and partial control in New York. His Tuesday evenings, for which there is a special subscription, in groups of five performances, will doubtless enjoy special favor, as they will be devoted to "Thaïs," "The Juggler of Nôtre Dame," "The Tales of Hoffmann," "Samson and Delilah," and other operas that drew best

at the Manhattan, with the same artists, including Mary Garden, Maurice Renaud, and Charles Dalmores, and with Campanini at the helm.

Metropolitan Promises

The grand-opera season at the Metropolitan, which begins on November 14 and will last twenty-two weeks, will subject the powers that be to a severe test. The rival company having been eliminated, or rather absorbed, and the whole house having been practically sold out in advance by subscription, will the management take advantage of this situation and resort to the slovenly conditions of former years when there was no competition to stir the placid waters? The indications are that no such thing will happen. The roster of singers and conductors is as strong as usual—think what it means to have in one company ten sopranos like Alten, Destinn, Farrar, Fremstad, Gadski, Gluck, Lipkowska, Melba, Morena, Nielsen; nine tenors like Burrian, Caruso, Constantino, Jadlowker, Jörn, McCormack, Martin, Reiss, Slezak; and seven baritones like Amato, Campanari, Dinh Gilly, Goritz, Soomer, Scotti, Renaud! There would have been eight first class baritones had it not been for the untimely death of Charles Gilibert a few weeks ago—an artist who will be remembered particularly for his amusing Masetto in "Don Giovanni," his tragic Monterone in "Rigoletto" and his thrilling enactment of the enraged father in "Louise."

The list of tenors and basses is less remarkable. Unusual interest attaches to the repertory because it includes, besides the usual standard list, revivals of "Mefistofele," "Roméo et Juliette," "Amico Fritz," "Don Giovanni," "Manon Lescaut" and "William Tell," and no fewer than ten absolute novelties for this country. These are Dukas's "Ariane et Barbe Bleue," Humperdinck's "Children of Kings," Puccini's "The Girl of the Golden West," "Il Signor Bruschino," "Le Chemineau," "Versiegelt," "Le Donne Curiose" and "Quo Vadis." It is true that some of these were promised conditionally last year and not given (managers have a convenient way of saying in their prospectus that the operas to be presented will be "selected from the following"); and the same may happen this year; but the first three in the above list will certainly be given, and they are not only the most important of the ten, but they will be rehearsed under the personal supervision of their composers. What is more, "The Girl of the Golden West" and "Children of Kings" will have their first performances here before they are given in Europe.

A considerable amount of ill feeling has been aroused in Italy and Germany because their most popular composers did not give them the first opportunity to hear their latest scores. But the plain truth is that the Metropolitan is now the leading opera house in the world. Puccini and Humperdinck are glad to give us the first peep at their new wares because they know their operas will be sung by greater artists here than any foreign house could provide. "Madama Butterfly" was a failure when first produced in Milan, with an inadequate cast. "The Girl of the Golden West" could not possibly fail with a cast including Caruso, Destinn and Amato. With Geraldine Farrar it would be stronger still, but the management has discovered that it does not need Miss Farrar to fill the house when Caruso is in the cast; and besides, she is to enact the heroine of the other two important novelties, by Dukas and Humperdinck.

Bessie Abott and Victor Maurel

Puccini, Humperdinck, and Dukas are not the only composers who are coming over here to bring their latest works. Another popular maker of music, Mascagni, is crossing the ocean with a brand new opera, which not only is to see the light of the world first in New York, but has been written specially for an American soprano, Bessie Abott. A few years ago Miss Abott, who has a lovely voice, well trained by Jean de Reszke, was a member of the Metropolitan Company, but she left it because she was not appointed at once to the most important rôles on the most important nights. Now she will appear as *prima donna assoluta* in "Ysobel," not only in the metropolis but throughout the country. The outcome of this venture will be awaited with consid-

erable curiosity, all the more as "Ysobel" is to be sung at the New Theater, clashing with the opening week at the Metropolitan.

Getting rid of Oscar Hammerstein has thus not done away entirely with operatic rivalry. In addition to "Ysobel" there will be two or three performances a week at another theater by a company organized by Victor Maurel, who will himself appear once more as "Falstaff" and in other roles in which he used to have no rivals. These performances are to be given in English, and will serve as a test of the claims of those who are forever exclaiming—recently more loudly than ever—that operatic performances in this country would be much more appreciated if they were given in a language "understanded of the people."

Rival Concert Givers

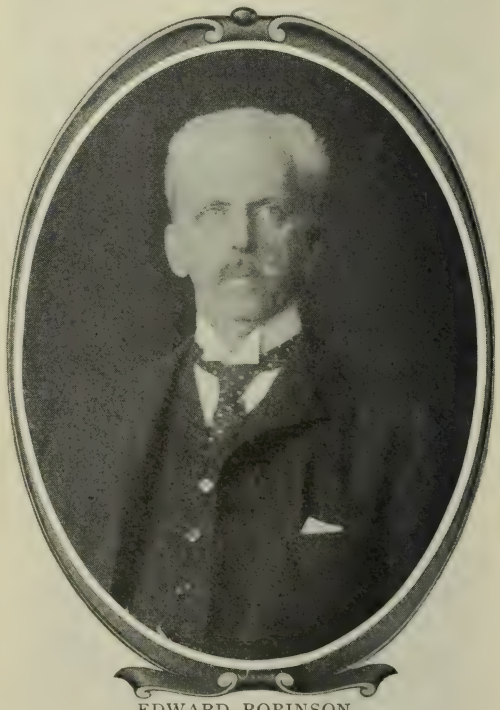
In the concert halls there will be somewhat less rivalry than last year, yet the critics will not be idle any day in the week, Sunday included. Indeed, there seems to be a perfect epidemic of Sunday concerts. Last Sunday there were four, all of them worthy of serious attention. In Paris the most important concerts have for many years been given on Sundays. London, a few years ago, began to follow suit, and now we are threatened with the same situation. Even the Philharmonic has entered this field, in Brooklyn as well as at Carnegie Hall. In Brooklyn, where Sunday concerts are an innovation, there was some clerical opposition at first, but it seems to have been silenced. The Philharmonic's program for November 13 at Carnegie Hall may serve to show the attractiveness of these Sunday concerts: "Freischütz" overture, Weber; fifth symphony, Tschaikovsky; three numbers from Berlioz's "Damnation of Faust," and Liszt's "Mephisto Waltz."

Copyright by Mishkin Studio.
MISS ALMA GLUCK.

BORIS HAMBOURG.

The Symphony Society also gives a series of Sunday afternoons for which Walter Damrosch has arranged programs in which novelties are included. He is paying more attention than formerly to French music, and has also discovered some good things in England, whose composers, Elgar and Sullivan excepted, are less well known over here than our leading composers are in England.

The concert season was opened by Alma Gluck, who gave a song recital which



brought her almost as much praise as her operatic impersonations at the Metropolitan did last year. She is doubtless one of the coming sopranos. Another singer who is coming to the fore, and deservedly so, is Reinald Werrenrath, a young baritone, who has a good voice and knows how to use it effectively and artistically. He had the good sense to include some Grieg songs in his Mendelssohn Hall recital and was rewarded by being compelled to repeat one of them—"Lauf der Welt."

Josef Hofmann, who is almost as popular as Paderewski in this country and in Russia and Mexico even more so, is the leading pianist in the field this season, and the only one heard up to the date of writing this. The violinists are hurrying to get a hearing before the opera begins, and there is also a new violoncellist of whom great things are expected—Boris Hambourg, brother of the famous pianist.

The Metropolitan Museum of Art and Its New Director.

Edward Robinson, the acting director of the Metropolitan Museum of Art since last June, when Sir Caspar Purdon Clarke resigned, and who had served as assistant director for the last five years, was last week unanimously elected director of the museum, the first American to hold that position. Dr. Robinson came to the museum at the time Sir Caspar Purdon Clarke was made its director and has been in full sympathy with the progressive policy that has been characteristic of this art institution.

Previous to his connection with the Metropolitan he had been director of the Museum of Fine Arts of Boston. He was born in Boston in 1858 and was graduated from Harvard University in 1879. Following his graduation he spent five years in Europe, fifteen months of which time was passed in Greece. He subsequently studied at the University of Berlin. He received the degree of LL.D. from the University of Aberdeen, Scotland. He has since then devoted himself entirely to art. He lectured some years on classical archeology at Harvard and has constantly manifested a keen interest in American art. He was a member of the committee on art exhibits of the Hudson-Fulton Celebration Commission. He was instrumental in selecting and arranging the collections in the Slater Memorial Museum at Norwich, Conn. The collection of casts for the Metropolitan Museum, of which he is now director, was made by him. He, with the aid of H. W. Kent, some time librarian of the Grolier Club, but now also on the museum staff, made the selection of casts for the Art Museum of Springfield, Mass. Dr. Robinson is a Fellow of the American Academy of Arts and Sciences, a corporate member of the Oriental Society, and an officer of the Prussian Order of the Red Eagle. He is the author of a number of works on Greek and Roman antiquities and the catalogs of Greek and Roman casts in the Boston Museum of Fine Arts were prepared under his immediate supervision. He has contributed many articles on art subjects to the leading magazines and to the Bulletin of the Metropolitan Museum of Art. He was active in the promotion of the Whistler memorial exhibition held at the Metropolitan Museum last spring.

EDWARD ROBINSON.

The Metropolitan Museum of Art had a small and unpretentious beginning and its first home was in a private house. It has grown by leaps and bounds and since the Rogers and other funds have become available it ranks with the great museums of the world. The present exhibition of antique Oriental rugs is of especial importance for New York, one of the greatest markets for modern Oriental rugs.

The Drama

As the playgoing public enlarges year by year and the character of the plays presented in America is more varied, criticism of the drama becomes more important. There is perhaps a greater difference in quality between plays than novels, and a person who is particular in his taste or scrupulous in his morals has greater difficulty in discovering just what he wants to see. It is the purpose of THE INDEPENDENT to pick out, from among the new plays presented in New York during the season, a few of the more significant and report month by month upon their character so that our readers throughout the country may become acquainted with them. Those who do not live in New York or visit the city may later in the year or next have an opportunity of seeing some of these plays, and a reference to our monthly numbers may save the loss of time and money or secure a dramatic treat that otherwise would be missed.

The most important event of the season so far is the presentation at the New Theater of Maeterlinck's fairy fable, "The Blue Bird." This has been so widely read during the past year that here it is only necessary to discuss it as a play. Whether one who has read it will be disappointed when he sees it depends upon the vividness of his imagination. He will probably find that he has in reading it failed to appreciate the humor of the grotesque characterization of the minor characters such as the Bread, Dog, Cat and Sugar, but on the other hand he will find that he had pictured to himself such scenes as the Palace of Night and the Kingdom of the Future much more splendid and impressive than they appear on the stage. In fact, the New Theater must be criticised for the inadequacy of its scenic effects, not merely in comparison with an ideal of the reader's imagination but in comparison with the play as presented at the Haymarket Theater in London all last year; a curious delinquency because American theaters in general and the New Theater in particular are usually distinguished by the lavishness and care of their stage settings. Such crisis moments as the opening of the Prison of the Wars and the transformation of the graveyard are in the New York production so handled as to appear ridiculous. The final appeal to the audience fell flat; so it did also in London. It is probably a mistake of the author. Nobody but Maude Adams could carry off a thing like that and it would be best to drop the sentence. The act in which all the trees and animals except the Dog join in a conspiracy against man is omitted both in London and New York, doubtless wisely, tho one would like to see it.

But on the whole the New Theater did well by Maeterlinck and we all are much indebted to it for introducing a play that will probably remain long in the American repertory. For "The Blue Bird" makes a wide appeal. It catches the fancy of the children almost as well as "Peter Pan" and it interests grown people by its symbolism and poetic suggestiveness. Its treatment of the themes of death, birth and immortality is delicate and reverent, tho pagan rather than Christian.

"The Blue Bird" would go best as an opera. We wish somebody would set it to music. The very impressive song of the mothers welcoming their children shows how much music might add to it. Debussy's dreamy and formless harmonies suited "Pelleas and Melisande," but the author of the "Domestic Symphony" alone could do justice to this kitchen drama. Only Strauss could fit Sugar and Milk with suitable motives, and give the proper orchestration to the quarrels of Cat and Dog, and Fire and Water.

That "The Blue Bird" and "Chantecler" should come out the same year is a noticeable coincidence, tho their resemblances are quite superficial, while their differences are fundamental. For example, the cat and dog appear in both and play the same rôle in relation to each

"THE BLUE BIRD" AT THE NEW THEATER, NEW YORK.
On the left, six Hours around Light. On the right, six Hours around Bread. In the center from left to right, Fairy Berylune, Mityl, Milk, Tiltyl (Fire in background), Dog, Sugar, Cat.

other and to man, but in other respects the two plays are as unlike as could be. Rostand's themes are often commonplace and trivial, but he uses thruout an elaborate poetic form, overloaded with verbal ornamentation, embroidered with curious metaphors, packed with local hits and far fetched witticisms. Maeterlinck uses thruout the simplest and baldest of prose, while his thought is often beautiful and profoundly poetic. Considered as stage performances "The Blue Bird" is superior because the characters are discreetly animalized instead of trying to look like poultry and absurdly failing. Maeterlinck's Dog and Cat, for example, are sufficiently suggestive of their prototypes, yet they could walk up Broadway without being unduly conspicuous if they kept their tails covered and did not get to fighting.

When Mrs. Kate Douglas Wiggin's story, "Rebecca of Sunnybrook Farm," was published it scored what the English universities call "a double first." It stood for months among the best sellers in both juvenile and adult fiction lists. Now as staged by Mr. Belasco it makes the same double appeal. It is a clean, wholesome and thoroly enjoyable play of coun-

"THE BLUE BIRD" AT THE HAYMARKET THEATER, LONDON.
From left to right, Dog, Tiltyl, Mityl, Berylune, Light, Sugar, Water, Cat, Milk, Fire, Bread.

try scenes and child life, realistic and idealistic, full of fun and sentiment. Rebecca improvises rimes as readily as when she was in print and she giggles more, much to the delight of the audience. Miss Taliaferro takes the part charmingly and grows up between the first act and the last in the most marvelous manner.

"The Scandal," by Henry Bataille, is such a play as only France can produce, admirable only for its technique. Every moment, from the rising of the curtain to its fall, is tense with tragedy, tragedy in a hobble-skirt, it might be called. Bataille's only rival at this sort of thing is Bernstein, whose "Thief" was one of the successes last year. The climax is placed properly in the third act, but the play is a succession of surprises, not the least of which is the forgivingness of the husband, a violation of the traditions of the French stage. There is not a bit of humor in it except when the audience laughs in the wrong places. The acting is very good, especially Mr. Kyrle Bellew and Miss Gladys Hanson in the leading rôles.

John Drew makes a hit again in the new comedy in four acts by the British dramatist, W. Somerset Maugham, entitled "Smith." The curtains are exceedingly happy and well timed and the play presents a vivid picture of a certain kind of modern English society that has gone card crazy. Amid the heartlessness and hollowness of it all the sincerity and honesty of Smith shines as a clear white light. Mary Boland is effective in her rendering of the rôle and deservedly shares the honors with Mr. Drew, fresh from his African farm.

"The Commuters" ought to be a good farcical comedy, because it is written by no less a craftsman than James Forbes, author of "The Chorus Lady" and "The Traveling Salesman." We are very sorry to say, however, that the cast as presented by Henry B. Harris was poor, and that Mr. Forbes has not "come back." The joys and sorrows of a commuter's life are satirized, somewhat stiltedly.

A Hymn

BY EDYTH HINKLEY

God of the forest and fen
God of the waste and wild,
God of the heroes of men,
God of the heart of a child;

God of the dawn and the day,
God of the stars' brooding host,
God of the spirits who pray,
God of the light that was lost;

God of the mist-haunted hills,
God of the day's dying breath,
God of the glory that thrills
Life with the meaning of death;

God of the cloud and the peak,
God of the thunderous sea,
God of the thousands who seek
Weeping, the vision of Thee;

God of the tempest and rain,
God of the doubt that began
Born in a twilight of pain,
Deep in the heart of a man;

God of the sun and the seed,
God of the whole and the part,
God of the great human need,
God of the penitent heart;

God of the secret that gleams
Soft in the eyes of the spring,
God of the heart's deathless dreams,
God of the promise they bring;

God of our love's lost desire,
God of the suns that have set,
God of the faith and the fire
Born in the heart of regret;

God, it is Thou that we seek!
Stoop from the Silence and see
Hearts that are weary and break,
Break with the longing for Thee.

TIVERTON, DEVON, ENGLAND.

The Plant of a Working Church

BY HARRY P. DEWEY, D.D.

Pastor of Plymouth Congregational Church of Minneapolis.

I AM asked to give a description of the church recently erected by the Plymouth Congregational Church, of Minneapolis. The appropriateness of the request from an editor of a leading periodical of extended circulation lies, I presume, in his thought that the building is a worthy illustration of the present-day attempt to rear ecclesiastical structures adequately equipped for the varied uses and activities of a parish.

From the standpoint of those Christian people who are of Puritan heritage, there is further appropriateness in the request, because this particular building in its style indicates a return to the native likings of the original Puritan worshipers. It is a recovery of that architecture which suffered at the rude hand of Cromwell, but was cherished by Milton, the greatest of Puritans. As one approaches the finely proportioned structure whose mass is dominated by an imposing tower, the religious feeling is at once excited, and passing within, if the time be the hour of service, one may very naturally recall the devout lines of "Il Penseroso":

"But let my due feet never fail
To walk the studious cloister's pale
And love the high embowered roof,
With antick pillars massy proof,
And storied windows richly dight,
Casting a dim religious light.
Then let the pealing organ blow,
To the full-voiced Quire below,
In service high and anthems clear
As may with sweetness, through mine ear,
Dissolve me into ecstasies,
And bring all Heaven before mine eyes."

The design of the building in its general character represents the late English Gothic of the perpendicular period. The material of the exterior walls is a seam-

CHANCEL IN MAIN AUDITORIUM.

faced, weather-proof granite from Minnesota quarries, which blends all the hues of yellow, red and brown, and presents a surface so smooth that it is quickly washed clear of dust by the rain. The warmth of the colors is admirably suited to the winter climate, and when snow covers the ground the building proclaims its hospitality by the genial color of its walls.

PULPIT IN MAIN AUDITORIUM.

The main auditorium is transeptal in form. It has a rear gallery only, and is crowned in a heavily trussed and gracefully arched roof. Daylight enters thru four great windows of beautiful stone tracery, one in the front and one in the rear wall, and one in each transept, and thru smaller windows of similar design in the side walls. The nave looks toward a chancel of moderate depth, where is presented a massive and richly ornamented oak screen, with bankings of organ pipes above. The organ seat is at the rear of the chancel in the center, and longitudinal rows of choir galleries with forward swells are disposed on either side. At the inner edge of the platform, in front of the choir rail, and resting upon the steps which extend across the entire chancel space, is a richly carved semi-octagonal pulpit, which, in obedience to the Protestant emphasis upon the office of preaching, without being obtrusive, constrains the eye to itself as the focal point in the room. The total effect, as one surveys the interior of the build-

ing, is exprest in that eloquent tribute of the Psalmist, "Strength and beauty are in His sanctuary."

This impression is deepened by the comprehensive scheme of window decoration. The subject of the chancel window is worship. In the lowest tier of lancets, shepherds and wise men pay homage to the Holy Child; in the middle tier historical biblical figures typify moods or attitudes of worship, such as reverence, prayer, praise, proclamation and dedication; and in the uppermost tier a company of angels suggests the heavenly consummations of devotional ascription. The purpose is to impress upon the congregation in the window which first strikes the vision the chiefest reason for their presence in the House of God.

As a logical development of this reminder, the themes of the windows in the transepts are Christian character and Christian service, and of the one in the front wall of the nave, the resurrection.

The organ, built by the Ernest M. Skinner Company, of Boston, is of the best modern construction and range, and is supplemented by an echo organ equipped with chimes, in the tower.

Integrally connected with the main structure is the parish house, which includes the commodious chapel, of Gothic design; the office for the church assistant; the minister's study; the minister's reception room; the library, which is gathering to itself biblical, theological and sociological reference books; the parlor; the men's club room, fitted with heavy oak wall settees, easy chairs, and a large, companionable, open fireplace; the kitchen and pantry, supplied with every most modern device for lightening the work of those who serve at tables; the banquet hall; the engine and boiler room, where is a heating plant, an electric fan that freshens and tempers the air in the chapel and main auditorium in all weathers, and an electric vacuum cleaning machine; and, in addition, many small rooms to which the classes of the bible school, graded after the plan of the

PILLSBURY HOUSE, NEIGHBORHOOD SETTLEMENT.

public school, repair after the general opening exercises in the chapel, each class to a room of its own. An accompanying picture shows a unique assembly room for the primary department. In memory of a child, the walls, above a handsome oak wainscoting, are lined with large photographs of famous paintings representing scenes in the life of Christ, from the Nativity to the Ascension, a gallery of noble art which impresses not only the children, but also the parents and other visitors who each Sunday are attracted to this room in great numbers. Over the stone fireplace is a cast of one of Della Robbia's Bambini, and underneath is the inscription, "Suffer the little children to come unto me."

PARISH HOUSE AND TOWER OF MAIN BUILDING.

The parish house was constructed with particular reference to the work of the bible school. Great emphasis, it was felt, should be laid upon the most effective means and methods of promoting religious education, and in pursuance of this conviction it is now the purpose of the church to employ a thoroly trained man, whose principal task shall be that of directing the Bible school and allied social and educational activities of the church, especially those among the young people.

An architectural feature, worthy of note because of its effect upon the church life, is the corridor or cloister, which extends from the spacious vestibule at the entrance to the auditorium, past the entire length of the chapel, to the remotest end of the parish house. It not only serves as a convenient passageway; it also ministers to the social exchanges, permitting a freedom of conversation and of movings to and fro without disturbance to meetings that are in process.

There is a system of telephones which puts the principal rooms in easy vocal contact with one another; and in the pulpit the minister has command of invisible electrical signals which enable him, without embarrassment to the dignity of the service in process, to communicate with the organist and with the ushers.

Since you are requesting me to mention distinctive features of the work done by Plymouth Church, I may instance a neighborhood settlement in one

of the more populous and morally needy sections of the city, for whose support the church is the chiefest sponsor. The building employed was a gift from two of the younger men of the congregation, made as a memorial to their father, the late Charles A. Pillsbury. The church has created an endowment fund for the settlement, and each year it raises a large sum of money for current expenses. Under the direction of its efficient head, Henry F. Burt, and his half dozen resident associates, reinforced by some four score volunteer helpers, Pillsbury House is doing much to transform the community in the midst of which it is placed. Its friends have been leaders in the fight against houses of ill repute infesting the neighborhood, and the desperate and long-continued battle has just resulted in a wholesale victory for purity and righteousness. Not least of the benefits accruing from the house is that it makes a varied opportunity for the kind of service which matter-of-fact churchgoers, especially those who are unwilling to be recruits at the prayer meetings and at the more evangelical mission sustained by the church, are glad to render.

Since Plymouth Church was among the very first churches in the country to apply business principles to church benevolence, and, indeed, originated a plan which is now widely known as "the Plymouth plan," it may be of value to state at this time of interest in laymen's missionary movements, that the plan of adopting a yearly budget of money to be given to benevolent objects and of meeting the demands of such budget by individual pledges, is incontestably demonstrating its efficiency. By the diligence of a committee appointed to prepare the budget and to increase the number of contributors to it, the total donations of the church are steadily augmented, with little consciousness of added strain, and the people are educated by sheer force of habit in the art of thoughtful and regular giving. Were all the churches in the land to adopt a similar plan, the missionary treasuries would quickly be filled to overflowing.

The Hispanic Museum

BY WILLIAM R. SHEPHERD

[Professor Shepherd, of Columbia University, is one of the authorities in this country on Spanish and Latin-American affairs. He was secretary to the American Delegation to the Pan-American Conference held this summer at Buenos Ayres.—EDITOR.]

THOSE who reckon the nation's greatness merely by its position in the world today cannot realize that there was a time when Spain stretched her rod of empire over a region more vast than any brought before or since under a single sceptre, a time when Spanish arms and art and thought were mighty forces in the doings of men. Still less would they understand how a tiny state like Portugal could have been a powerful carrier of the sea, ruling dependencies scattered around the entire globe. Yet out of the Spanish and Portuguese dominions in America alone have arisen nineteen republics possessing an aggregate area nearly three times that of the United States and resources incalculable in their richness. Upward of seventy millions of the human race speak Spanish and upward of thirty millions Portuguese, as their native tongue.

To have one's biography written by one's enemies has been the misfortune of many a deserving soul, and the nation, as well as the individual, thus treated, must wait until posterity has provided the means for its justification. Such has been the fate of Spain. Born amid adversities greater than those besetting the growth of other States, attempting a task of civilization beyond her strength and forced at last to yield to rivals who rejoiced at her downfall as much as they

profited from her weakness, Spain has lived to see her motives discredited, her actions misrepresented and her rightful place among historic nations denied. Portugal, on her own part, has been simply ignored.

With the exception of England, of all the countries of Western Europe Spain is the one with which our relations, friendly and otherwise, have been closest. Everywhere in the South and West "square deal" and in its very metropolis should be formed a nucleus of the means and materials by which a true estimate of Spain's greatness may be determined. Here also the achievements of the little mother country of the largest State in the Western Hemisphere may well be recognized.

About twenty years ago Mr. Archer Milton Huntington, whose studies and travels in Spain and Portugal had given

PAINTINGS AND OTHER OBJECTS OF ART IN THE WEST BALCONY OF THE HISPANIC MUSEUM.

the names of States and cities, of mountains, rivers and plains, and the survivals in speech and institution recall the deeds of the Spanish pioneer and the day when two-thirds of our land acknowledged the sway of the Spanish crown. To Spain, as well as to France, in large measure we owe our independence, and from her, directly or indirectly, we have gained the major part of our territory. Hence it seems fitting that in the land of the him an inkling of the wealth of culture that lay neglected in this corner of Europe, began a collection of rare books, maps, manuscripts, paintings and other materials of literary, artistic and archeological import bearing upon the past and present of the two nations. Mindful of its value to the world of scholarship and seeing in its widest use that promise of justification which had been so long deferred, he waited until the size of the

collection had become such as to warrant some act that would render it most fruitful. Accordingly Mr. Huntington resolved to form a society into whose hands the treasures might be committed. Since *Hispania* was the Roman name for the Iberian Peninsula, *Hispanic* seemed to be the name most appropriate for an organization devoted to the study of all that has proceeded from the two Romance nations of that peninsula. In realization of his purpose, on May 18, 1904, the Hispanic Society of America was founded in New York City and a board of trustees appointed to receive the grant. The deed of gift having been supplemented by a liberal endowment in land and money, a site was chosen in Audubon Park, between 155th and 156th street, west of Broadway, and ground broken for the erection of a building that should serve alike as the home and as the treasure-house of the society.

The building was formally opened in January, 1908. It is constructed of stone, brick, terra cotta, steel and bronze without the use of a particle of wood. On the frieze of its front façade are carved the names of Columbus the mariner, Cervantes the novelist, Lope de Vega the dramatist, Camoens the poet, Loyola the churchman and Velazquez the painter. Similarly on the frieze of the rear façade one reads the names of Seneca the Roman sage and of Trajan the Roman emperor, both of Spanish birth;

GENERAL READING ROOM OF THE HISPANIC MUSEUM.

of Averroes the Moorish scientist, and of Almanzor the Moorish warrior, both natives of Spain; the Cid the crusader, Charles V the statesman, Magellan the navigator, San Martin the soldier, and Calderon the dramatist. Within the building itself there is an ample reading and exhibition room constructed of terra cotta in the style of the Spanish Renaissance. The galleries surrounding the room are supplied with cases containing sculptures, pictures, manuscripts and the

like, while above the galleries are balconies along the walls of which are grouped the paintings and other objects that constitute the museum proper.

PAINTINGS AND OTHER OBJECTS OF ART IN THE EAST BALCONY OF THE HISPANIC MUSEUM.
The books in the cases are the "ejecutorias" to which allusion is made in the text.

Tho its headquarters are in the United States and its origin is American, the range of its membership as well as the scope and character of its work make the Hispanic Society an international organization. Far also from being merely a center for catering to the tastes of a private club of collectors and connoisseurs, the building and its contents are intended to be a distinctly public museum and library. With the exception of the month of August and of Christmas and Thanksgiving Day, the museum is open daily from 1 to 5 p. m. and admission is absolutely free. The library, however, is open on week days only from 10 a. m. to 5 p. m., and to use it readers' cards must be obtained in advance from the librarian. The building is reached most conveniently from the 157th street station of the Broadway division of the Subway.

While all intelligent and responsible persons are welcome to the privileges of the library and the museum for the general purposes of reading and study, the Hispanic Society is especially desirous of encouraging original investigation in its chosen field. Those who wish to undertake such work are assured of every possible aid. In fact, books and other materials relating to any particular subject of inquiry, but which are not actually in the collections at the time, are willingly procured if at all practicable.

The study and appreciation, then, of Hispanic culture in its broadest sense, of what the Spaniards and the Portuguese, the Spanish and the Portuguese Americans and the countries and peoples everywhere of Hispanic origin have accomplished in the development of civiliza-

tion, constitute the foremost objects of the Hispanic Society. The pecuniary value of its collections runs into the millions of dollars, whereas their scientific value is quite incalculable. No other single repository in existence has such a wealth of materials selected with so much discrimination to render them authentic, or offers such facilities for their use to the investigator in the special realm of Hispanic thought and deed.

A brief indication of its contents will give some idea of the character of the museum. The collections include wood carvings, silver work, iron work, ivory plaques and combs dating from Phenician times, Roman mosaics, pottery and domestic utensils, Hispano-Moresque plaques, examples of the famous Buen Retiro ware, "azulejos" or iridescent tiles, Spanish coins and medals, ecclesiastical vestments and embroideries, and sculptured tombs showing the development of ecclesiastical architecture, both Gothic and Renaissance. In one of the series of cases is a large number of old "ejecutorias" or patents of nobility with their elaborate initial pages painted in water-colors on parchment. Along the walls also are ranged many superb speci-

Copyright, 1909, by the Hispanic Society of America.

ZULOAGA'S "A BULL-FIGHTER'S FAMILY."
In the collection of the Hispanic Museum.

mens of the handicraft of Spanish artists. In the list are a "Portrait of a Little Girl," by Velazquez; a "Good Shepherd," by Murillo; a "Holy Family," by Domenico Theotocopuli, called "Il Greco"; a "Duchess of Alba," by Goya; a "Bull-fighter's Family," by Zuloaga, as well as numerous works by Sorolla. Indeed one of the most noteworthy exhibitions of pictures which has ever taken place in this country was that held recently in the Hispanic Museum when paintings of Sorolla and Zuloaga were shown to upward of 130,000 visitors.

The booklover in his turn will discover much to fascinate him in the treasures of the library. Here are something like a hundred and seventy Spanish, German and Italian incunabula, beginning with the works of Lambert Palmart, of Valencia, the earliest of known printers in Spain; Latin and Hebrew manuscripts of great age and interest; first editions of all the important Spanish authors; drawings by Vierge illustrative of Don Quixote, and many ancient maps, portolans, prints and facsimiles. These are supplemented by more than fifty thousand books relating to Spain, Portugal and Latin America. The chief periodicals of the Hispanic countries also are on file.

But the work of education does not stop at this point. The Hispanic Society issues a quarterly magazine called the *Revue Hispanique,* and from its press have been struck off upward of seventy distinct publications. These include facsimiles of rare books, maps and documents in Spanish, Catalan, Portuguese, English, Dutch and Latin, and scientific treatises of an archeological and literary character. Among them are elaborate editions of the works of Cervantes, Lope de Vega and Camoens. The critical edition of "Don Quixote" in particular, consisting of facsimile reproductions of the first Madrid edition of the First Part (1605), of the first edition of the Second Part (Madrid, 1615), and of the fourth Madrid edition (1605), forming three volumes and a critical text and glossary in four additional volumes, will be, when completed, one of the most

"PORTRAIT OF A LITTLE GIRL," BY VELAZQUEZ.
In the collection of the Hispanic Museum.

eminent contributions to literary scholarship ever produced under American auspices.

The foregoing sketch of the treasures preserved in the Hispanic Museum furnishes some idea of the public benefit which a unique example of private generosity has made possible. Here the scholar has at his command the sources from which he may draw freely for the encouragement of scientific research. Here the general reader may widen his range of knowledge by familiarizing himself with the evidences of a culture little understood and less appreciated. And here even the visitor who seeks to indulge his curiosity alone will find much to reward him.

Spain and Portugal are vastly more than the traditional lands of the Inquisition, the fandango, the castanet and the bull-fight. Those who may think otherwise should set their minds aright by a visit to the Hispanic Museum.

New York City.

The Supreme Court of the United States

BY J. F. HAIG

[Mr. Haig was the private secretary of Justice Brewer until the latter's death. He therefore speaks with full knowledge of the routine of the United States Supreme Court.—EDITOR.]

THE Supreme Court of the United States, the court of last resort and possessing the power to overthrow an act of Congress by merely declaring it to be unconstitutional, is tucked away in a small room in the middle of the Capitol, between the Senate and the House of Representatives. The space within the rail reserved for counsel is so limited that when a big case is being argued there is barely room for the dozen counsel at the tables. It would be difficult to find even a police court in any city so poorly provided.

Every few years a bill is introduced into Congress to provide the court with a suitable building, but proceeds no further than the committee room. However, on one occasion, a bill progressed so far that tentative plans were drawn. On this being submitted to one of the Justices of the Court, after the rooms assigned to the Department of Justice and the Court of Claims, as well as the other United States courts, had been pointed out, the Justice asked, "But where is the room for our court?" "Oh," was the reply, "we thought it would do well over here; in this corner." They had placed the court room in the space that was left after providing for everything else.

The room the court now occupies was prior to 1859 used by the Senate, but was abandoned on account of the echoes, which were unable to be gotten rid of. A whisper at one end of the room was heard at the other, apparently under one's feet. The court at that time occupied the room directly beneath, in the basement, now its library. The room now used by the court has been remodeled and modernized, a fire occurring a few years ago giving the opportunity.

When the court is in session a doorkeeper guards the door, to prevent the bringing in of a satchel or package. The doorkeeper occupies an easy chair, has attached a rope to the handle of the door, and so is spared the exertion of standing from 12 to 4.30 p. m. and politely opening it for visitors.

The court sits from October to June. The justices sit on a raised platform, with a long bench in front of them, on which is laid the records, briefs and papers of the cases to be considered during the day.

One of the rules of the court is that all records, briefs and papers in a case must be printed. Another is that dark clothes are required in the court room. If an attorney arrives in Washington arrayed in gay colors he must don black before he will be permitted to address the court.

On either side of the chief justice sit four associate justices, the two eldest in commission next to him. On the stroke of twelve o'clock, when the court is not taking a recess, out of the robing room just opposite the court room starts a procession of the black-robed justices, headed by the chief justice. Ropes are stretched across the hall to keep back the curious. As the chief justice appears in the court room the crier of the court raps with a gavel, when all present rise and remain standing until the justices have reached their stations, when, with a bow from the chief justice, all are seated. During this the crier has been calling out that the honorable Supreme Court of the United States is in session and ready to try cases. Attorneys who desire to be admitted to the bar of the court are openly vouched for by well-known attorneys and presented to the court, after which they take the oath of allegiance. Then are heard miscellaneous motions, and when all routine business is disposed of the call of the calendar for the day proceeds. The counsel for each side of a case are allowed a stated time for argument, which, however, can be extended by the chief justice, if the importance of the case demands it.

The court sits for the hearing of

arguments from 12 to 4.30, excepting Saturday, and when the hands of the clock point to the hour of adjournment down comes the gavel, and tho the greatest lawyer may be in the middle of a sentence the court adjourns. The case having been argued to the court, it is all over so far as counsel are concerned, and the case is taken under advisement by the court. During the argument some of the justices may have made frequent notes and asked many questions concerning the case.

There is no argument heard on Saturday, the court taking that day for consultation and discussion of the cases heard during the week. On Saturday evening each justice receives from the chief justice an envelope, containing the names of the cases the chief justice has decided to allow the justice to write the opinions in, and the chief justice also notifies the justices of the hour of the conference on Monday morning. The conferences are usually held in the conference room, under locked doors. The chief justice presides, and cases are taken up or postponed, according to the wishes of the justices or their readiness to consider them. Some cases remain under advisement for months after being argued in court and are even carried over from one year to another. Each justice is furnished with a lock book, in which he may enter the details of a case, the record of the vote on conference and the final disposition. On a case being assigned by the chief justice to a justice to write the opinion of the court, the opinion when written must be agreeable to the justices. If not, the dissatisfied justice will promptly write a dissenting opinion. In some instances four of the justices have each written a dissenting opinion, but the usual custom is for one to write it, and announce that the others concur.

Before a case is reached for argument the justices familiarize themselves with its records and briefs, and when one is directed to write the opinion, he makes a study of the case, long or short, as its gravity demands. This may take a few days or months. The opinion is dictated, and after being typewritten it is corrected, boiled down and revised; another copy is then made, further revised, and sent to the printer. In order that the compositors who set the type may not know the decision of the case, the foreman sets up the last few lines of the opinion, locks them in a safe, and after the opinion is set up he adds them to it, takes two proofs and forwards them under lock and key to the justice. It is again read and revised, and sometimes completely altered, and returned to the printer, corrected by the latter and nine revises sent to the justice. If the opinion is now satisfactory to the justice a copy is mailed to each member of the court. These are returned to the justice with the notations of the justices, and the opinion is revised or changed, if need be, to conform to their views. If there be a dissenting opinion the justice writing the majority opinion holds it until the dissent is completed. Then on some Monday, the court being in session, the justice announces an opinion in the case, giving its number and title, and then proceeds to read it at length to the dozen people who may be present. If there be a dissenting opinion the justice writing the dissent reads it and announces the names of the justices who concur with him. Afterward the official reporter of the court sends a verified copy of the opinion to the publishers of the United States Supreme Court Reports, and the case finally becomes one of thousands in the law libraries, to be read and re-read if of moment, or to be forgotten if mere detail.

For many years the docket of the court was so overloaded with undecided cases that litigants were dying before their cases were reached. To relieve the congestion Congress instituted the Circuit Courts of Appeal, which took from the court the hearing of thousands of cases, and gradually their work resulted in a reduced docket. The growth of litigation, however, is fast placing the docket in its former crowded condition.

RIVERDALE, MD.

Literature

Webster's New International Dictionary*

THE title indicates the extent of the departure from this intention of Noah Webster. He called his first edition (1828) "An American Dictionary of the English Language," and intended, with good reason, to make it represent the speech and literature of his countrymen, on equal terms with those of the mother country. The title was retained in all the editions of Webster's own work. Its elaborated successor, the weighty volume of 1864, known as the "Unabridged," in allusion to its many diminutions for the learned schoolboy (who seldom buys quartos) and his teachers, was still "An American Dictionary of the English Language." In its next setting (1890) it became "Webster's International Dictionary," and now (1910) we have *Webster's New International Dictionary*. What will it be called in its next avatar?

It is new. There has been a full revision, and there have been changes of arrangement. The type has been reset, but the same face has been retained. It still looks like the "Webster" which gave so many Americans their first sight of ponderous learning. And let us say here that it will well fulfil, for the next few years, the purposes which its predecessors have filled for three generations. There are other good dictionaries, of the kind, large and small; but any man may buy this, and be sure of a picnic in many agreeable fields of information and learning.

There is one defect involved in the very plan of the dictionary. It does not present the historic side of the language, except in a sparse and curt way. Space forbids. There are too many houses to allow any garden. There are too many words to permit of history, etymology, or discourse, except with a brevity that does not serve the scholar, and can hardly benefit the man who comes for net information. The quotations, in which especially the nuggets of history abound, are few, meager, and lack the prime credential of exact reference. It is something, and it may be enough, to cite "Shakespeare," "Milton," "Pope," "Burns," "Tennyson." There are concordances to these words. But it means almost nothing to cite "Hooker," "Jeremy Taylor," "Dryden," "Addison," "Swift," "Bolingbroke," "Carlyle," "Bancroft," "Prescott," and the like. The search would be long, and it may be vain; for these "references" by the author's name only are in all books doubtful, and acquire by repetition, without the means of verification, the value of zero. The Oxford Dictionary has many entries of the type "1864 WEBSTER cites Swift," or "1846 WORCESTER cites Browne."

As the catholic vocabulary of these popular dictionaries deprives them of any claim to be regarded as records of only the "best" usage, it is of little use to cite "Dryden," or "Addison," or "Burke" as "authorities," in the sense that they justify the word or meaning so distinguished; even if the amiable belief that all our "great writers" always wrote "good English" is to be continued for pedagogic purposes.

It is better to leave the general citation of quotations to the larger historic dictionaries, and to give, in the Webster or Worcester type of lexicon, only a few hundred quotations of special pertinence and illustrative quality. And these should be given with exactness, in words, spelling, date, work, edition. Nothing so certifies the value and sincerity of a work, as these acts of worship at the brazen altar of Fact.

There is a marked change of arrangement in this new Webster. The appendix is cut down, and most of the separate vocabularies and lists have been poured into the cistern of the main vocabulary. All but the lists of geographic and biographic names, and of Christian or given names, and a few groups of "arbitrary

*Webster's New International Dictionary of the English Language. W. T. Harris, Editor-in-Chief; F. Sturges Allen, General Editor. Springfield, Mass.: G. & C. Merriam Company. $10.

signs" intractable to vocabulary regimen, are gone from the appendix. The same notion, that everything should be in one vocabulary, has been followed, with a difference, in another marked change of arrangement. All the words and spellings which the editors regard as relatively unimportant, or uncommon, or antiquated, or insufficiently authorized, are printed in very small type, and set, in six columns, under the three columns of the main vocabulary, on the same page; so that each page is divided, as it were, between the sheep and the goats—tho the goats are kids. Thus economy of space is made consistent with the abundance of words; and the consulter may find on the same page all the words beginning with a given sequence of letters, the preferred words and forms above, the others below. There are, of course, some advantages in this arrangement. It remains to be seen whether the public will find it permanently convenient.

In the notation of pronunciation, this new edition of *Webster's New International* is still the old Webster of 1864. The changes of addition and omission in the accented types, are insignificant, and do not remove the fundamental faults of the notation. The whole system is hopelessly unscientific. Does any pupil ever learn this system? Does any teacher really know it? Would any philologist, in the whole round world, think of using this system, or anything like it, in his own work? It is wholly out of accord with all accurate work in phonetic notation, in any language. The very children are now taught Latin with an accurate pronunciation; and this old notation (it seems medieval, tho it is younger than many of the scholars who still live to condemn it) cannot continue. Probably the main reason for undertaking the next revision of "Webster's New International" (and we can not have too many revisions) will be the desire of the publishers, as it was of the late editor, and will certainly be of the next editor, to bring the work into accord with modern scholarship in this important particular. Perhaps the existence of a number of textbooks which use the old notation to some extent has been the reason for hesitation in this matter. But stereotype plates should not be permitted to hinder an important educational reform. Meantime, teachers who understand the matter will learn to substitute in their teaching the modern notation used by philologists, and reject the undigested schemes which the popular dictionaries have continued from the uncritical age of lexicography.

American Industrial History

The fifth and sixth volumes of Professor Commons's great work* are given to the documents of the labor unions and the workingmen's political movements of the period 1820-1840. The supplement of the fourth volume is taken up with the records of the strike and subsequent trial of the carpet weavers of Thompsonville, Conn., 1834-36.

The unusual ferment in the labor world from about 1828 to the time of the panic in 1837 manifested itself in the organization and development of unions in most of the industrial centers, and in a general resort to political action. The immediate cause of the New York political movement of 1829-30 would seem to have been the attempt of the employers to extend the ten-hour day; but quite as efficient a cause was the fact that the break-up of the New Harmony colony in Indiana had brought to the metropolis a number of gifted agitators, such as Robert Dale Owen and Miss Frances Wright (afterward Madame d'Arusmont). Thru the efforts of these, and of such local agitators as Thomas Skidmore, the author of what is generally considered the first Socialist book published in America (1829), the movement rapidly grew, and for two years exerted no small influence. It faded away in 1831, but in 1836 again came forward, under the name of the Equal Rights party, and during two years succeeded in drawing a considerable part of the working class to its support. Similar movements were carried on at the same time in Philadelphia, in New England and in New York State.

The General Trades' Union of New York (1833-36) seems to have been the first central labor union of the metropolis. It had a vigorous existence while it

lasted. It "supported strikes of the bakers, hatters, ropemakers, sailmakers, cabinet-makers, stonecutters, shoemakers, weavers, curriers, leather dressers, tailors and other trades in New York, and strikes of various trades in Poughkeepsie, Brooklyn and Newark." On its initiative the first national trades union was formed in New York City in August, 1834. Before the new body could get fairly well started, however, the panic of 1837 fell upon the country, and labor unions and labor parties were blotted out, hardly to be so much as heard of again for more than a decade.
